ANCIENT CONCERTS.—The programme of the *Fourth Concert* contained many features calling for remark. One of these was the appearance of Herr Staudigl, who sang the song from 'Die Zauberflöte,' which he has made his own—another *aria*, by Mozart, with clarinet *obligato*, less familiar to us, besides taking part in some concerted pieces. Though he produced an unusual effect upon his lethargic audience, we never heard him to less advantage: this we attribute to the dragging and mechanical style of accompaniment prevalent at these Concerts—a drawback hardly to be overcome by the most peremptory singer, and not to any failure in his voice, or any deficiency of his wonted expressiveness. We know not how enough to reprobate the concoction which immediately followed Herr Staudigl's first song. This was one of Beethoven's sacred songs with pianoforte accompaniment,—transposed, scored, tagged with a chorus, and, of course, as ineffective as music so treated *must* be. We had hoped that the day of such experiments was gone by, at least at the Ancient Concerts, the repertory of which embraces all the classical music of Italy, Germany, France, and England. A German Hymn (author unmentioned), and sung by Madame Brambilla, with chorus, to Italian words, was another piece of manufacture, we suspect; at all events, it was not better worth performing than one of our own Tabernacle tunes, which would throw Orthodoxy into fits—so much is there in a name! But we could almost forgive the puerility of the above, for the sake of Gluck's exquisite solo and chorus from 'Armida,'—"E l'amor che ritien in catene." How this writer has escaped being placed among the highest order of melodists we cannot comprehend, save on the hypothesis that the world is unwilling to recognize two gifts in the same man, and hence Handel is always "*giant*" for the million, and Mozart *expressive*, &c. &c. Assuredly there are no tunes by any tune-monger ancient or modern, which will wear longer than Gluck's 'Che faro,'—no outpouring of sweetness more delicate, more fresh, or withal more luxurious than the strains of enchantment belonging to his chivalresque opera. The hearing of this delicious chorus, the very perfection of picture-music, and the eloquent enthusiasm of our Berlin correspondent, have revived an idea worth throwing out, which must, sooner or later, be realized. Why should not the management of Drury Lane give us 'Armida'? The work comprises every choral and scenic effect, in which that theatre is so strong, the drama has the old established charm of familiar romance; the music is as new to the English public, as if it had been written yesterday; and how full of beauty let every musician declare! We are confident that the suggestion is worth serious consideration for the sake of art as well as of profit. Returning to the Ancient Concert, we can now only record our delight in the repetition of the magnificent 'Credo' of Hummel's mass in D, and say that Mr. Phillips never declaimed his recitative from 'Belshazzar' with greater force and dignity,—and that Miss Birch, Madame Caradori Allan, and Mr. Bennett worthily filled their parts in the Concert. Callcott's glee, 'With sighs, sweet rose,' made us wish for Miss Hawes to lead it; the male counter-tenor, above all as a *solo* voice, bids fair to become a curiosity; but we are impatient of the last days of its reign.

CONCERTS.—The Concert Season may be said to have fairly set in with the entertainments given last week by Mr. Muhlenfeldt and Mr. Mudie, which seem to have given satisfaction to the clients of the two professors. The want of a commanding tenor singer admitted, London has rarely been so rich in the materials for a concert as this year: yet rarely have musical affairs looked more stagnant. The reason, we suspect, lies near the surface. The time is not far distant when the public will again call for orchestral accompaniment, to relieve the monotony of one operasong or instrumental *solo* after another. In proportion, too, as the taste for choral music advances, the desire for full performances must revive. Why then should not some competent and enterprising person prepare to meet the want, by *getting up* an orchestra, which should be exclusively at the service of concert-givers, especially for due rehearsal, without the chance of interference from theatrical engagements? It is needless to point out, that were such a body efficiently organized, not only would its performances stand a chance of attaining that precision which is not to be looked for from the heterogeneous bands now so rarely collected, but that the trouble of arrangement, &c. would be essentially simplified; while, thanks to the increased facilities of railway communication, there could be no want of occupation for a well-proportioned and well-trained body, to whom the most favourite and newest compositions of the classical masters of Germany and France were familiar.

HER MAJESTY'S THEATRE.—Acting upon the signal and unexpected "hit" made by Sig. Fornasari in 'Belisario,' the ruling powers at Her Majesty's Theatre have hastened to produce him in a repertory of parts, with few of which, it is to be presumed, he was practically familiar, thus gratifying public curiosity at the expense of the permanent reputation or further progress of the artist. We have had *Assur* and *Figaro* in rapid succession: and *Don Giovanni* was announced for last night. The result of such thriftless extravagance is already manifest: the enthusiasm of the town is cooling with respect to the new *basso*. Not a few have discovered that in 'Semiramide' he was not equal to the brilliancy of Rossini's music: not a few have perceived, that in 'Il Barbiere,' the *vis comica*, which ought to animate the creation of Beaumarchais and Rossini, was lacking: hence, on Tuesday, the greatest applause was given to the *Don Bartolo* of Lablache, while there was more talk of Tamburini than ought to have been current so soon after the brilliant appearance of his successor. For this we are sorry. Signor Fornasari owns certainly one of the most magnificent voices ever heard within the walls of any theatre: his person is prepossessing: there is an appearance, too, of zeal and conscientiousness in his performance, which is the best acknowledgment an artist can make for public favour. He deserves, therefore, to have had time given him, as well as opportunity,—time to reconsider defects and to heighten excellencies—and a judicious attention to this on the part of the management, would have been good, though long-sighted policy. As it is, the reputation which has so suddenly started up, may run down as suddenly: and it is well that the case should be fairly stated while there is a chance of retaining matters *in equilibrio*. Nothing that industry can do is wanting to the *Figaro* of Signor Fornasari: and inasmuch as the music is less figurative than that of *Assur*, he sings it with greater finish; but well-a-day for the merriment of the part! The opera would have been dull as a Requiem, but for the frolicsome activity of Father Lablache, who was never more whimsically droll, never more musically effective, but for the *smorfie* of Grisi, that comeliest of *Rosinas*, and blithe as comely, who was never airier in her executive flights. Signor Mario is a very graceful *Lindoro*, almost the best in our recollection, singing with greater refinement and flexibility than he has done this season. Signor F. Lablache is the least satisfactory of *Don Basilios;* but, on the whole, the opera is strongly cast, and admirably conducted. An odd proof of Signor Costa's entire command over his band was given on Tuesday—at the expense, we must add, of his musical scrupulosity. The well known duett, 'All' idea,' was begun in F, for the accommodation, we presume, of Signor Fornasari; towards the middle, however, of the final *stretto* the orchestra very unceremoniously resumed the original key of the composition: an effect which, though it passed unperceived by the audience, was, to our ears, more comical than welcome.

ST. JAMES'S THEATRE.—The engagement of M. Vernet has come to a close, without his inimitable farcical powers exciting the sensation which might reasonably have been anticipated. He has been well received, but not, as at home, eagerly followed; it was hardly to be expected, indeed, that a courtly London audience should thoroughly relish his broad Paris fun. Then, too, he has wanted playfellows. At home his irritability or joviality or ancient coxcombries break out in the worshipful company of such admirable supporters as Madame Moore, and Madame Bressant, and Odry, and Lafont, and Levassor. Here the one swallow has been expected "to make a summer," for M. Cartigny, clever though he be, and Madame Doche, were she twice as pretty and ingenuous, are hardly up to "his mark;" while M. Levassor, who has arrived to introduce the broadest Parisian *polissonerie*, has been exhibited by himself "as a star." By this time, however, the latter is joined by Mdlle. Déjazet, and their united gambols—more pleasant, we fear, than profitable—ought surely

Digitized by Google

to stir up mirth, this dullest of dull springs, if it be in the power of witty Impudence to do it!

COVENT GARDEN.—The precipitate closing of Covent Garden Theatre, after all the magnificent announcements made by the lessee, is a catastrophe which will occasion small surprise, either to the artists or the public. The disadvantages under which any person labours, who undertakes the management of one of those gigantic tombs (not temples) of the Drama are heavy enough; and if to these be added want of system and want of capital, the issue is certain. When we read that Madame Ronzi de Begnis was to appear after Miss Kemble contemporaneously with Madame Grisi in 'Norma,' that Madame Eugenie Garcia was to personate the hackneyed character, made her own by Malibran, and that Staudigl, by being thrust into a second-rate Italian part, was denied due opportunity of exhibiting his powers as a classical vocalist and a first-rate actor, we felt sure the undertaking was fast "nodding to its fall." But the end has come sooner than even we expected; too soon, indeed, to allow an opportunity of reporting on these ill-chosen novelties.

MISCELLANEA

Paris Academy of Sciences, April 17.—A paper on the voltaic pile was read by M. Delarive.—M. Cahours made a communication respecting an oil used in perfumery, which is obtained from the heath called *Gaultheria procumbens.* The interesting portion of this communication is that the spirit of wood, which has been found only in pyroligneous products, exists in this heath under the influence of vegetation.—A communication was received from M. Hommaire-Dehel, on the difference of the level between the Caspian Sea and the Sea of Azoff. Several scientific men have been charged by the Russian government to ascertain the level between these two seas; but the results have differed so much that a verification was necessary, and this was undertaken by M. Hommaire-Dehel, in 1838; but it was not until September, 1839, that he could establish his points of survey. M. Hommaire-Dehel, now reports that 18.30 metres is the difference of level between both seas. It results, from the observations made by M. Hommaire-Dehel on the shores of the three seas of Southern Russia, at the mouths of the different rivers and streams in the steppes of Astracan, and at the sea of Azoff, that the Caspian sea had formerly a much higher level, and that it was united with the Black Sea, at a period anterior to any existing historical records. Already this idea as to the junction of the two seas has been maintained, but it was said that the Black Sea had become lower by piercing its way through the Bosphorus, and shedding its waters into the sea of Marmora. The sinking of the Caspian Sea has been accounted for by the lowering of the basin, but M. Hommaire-Dehel gives an explanation of this, which he conceives more natural, by observing that the Caspian Sea has very few tributaries, and that a diminution in the waters of the Oural and the Volga has been a sufficient cause for the lowering of the level of this sea.—*April* 24.—A second paper was read by M. Delarive on the voltaic pile.—A paper on the torpedo was received from M. Matteuce. The author states that he has tried a number of experiments, the result of which is to show the analogy between the electric organs of the torpedo and muscular contraction. —M. Becquerel read the report of a communication from M. Duport, on the silver mines of Mexico.—M. Regnault read a report on the apparatus of M. Chuart, for indicating the presence of gas in mines or elsewhere, so as to enable persons to guard against explosions. The report states that, from the delicacy of the apparatus, it will not answer the purpose contemplated.—A paper was received from MM. Dangin and Flandrin, on a series of experiments, for the purpose of ascertaining whether lead and copper really exist in the blood and intestines of man in a normal state; and they reported that they have come to a conclusion that they do not. As regards poisoning by either of these metals, the authors of the paper state that they are able to discover it, if mixed only to the extent of a hundred-thousandth part with organic matter.

M'Pherson's China.—In the review in your paper, of the 5th November, 1842, of my 'Two Years in China,' I observe you remark on the striking similarity between certain portions of my narrative and that of Capt. E. Bingham's. The cause of this will, at once be obvious when I tell you, that the gallant captain has pirated whole passages from articles I had contributed to the 'Chinese Repository,' and transferred them verbatim to his work as his own. In justice to myself, as well as to the public, it is but fair that you give insertion to this letter in your valuable journal.

I remain, &c.

Mucktul Hydrabad. D. M'Pherson, M.D.
23rd Feb. 1843. Madras Army.

Metropolitan Improvements.—A Bill has been brought into Parliament by the Earl of Lincoln, "for the better regulating the buildings of the metropolitan districts, and to provide for the drainage thereof." The principal enactments relate to strength of walls, construction of foundations, &c., but those of most interest are to secure proper ventilation and drainage in the dwellings of the poorer classes. These set forth that the walls of no house shall be built higher than ten feet from their foundations before its drains shall have been built and made good into the common sewer, or if there be none, into proper and sufficient cesspools; that with regard to houses already built, and not properly drained, the Commissioners of Sewers shall be empowered to require their owners to construct such drainage as the proposed act will require of the builders of new houses; that no house, built or to be built, shall be without that accommodation, which, for the sake of health and decency, every house ought to have; that there shall be no underground room, or cellar occupied as a dwelling-place, unless it shall contain 100 square or superficial feet, shall have an open space or area adjoining its front, back, or external side, of three feet in width, and unless it shall have a window opening into such area, together with a fire-place and proper flue; and that no street shall be formed of less width in every part than 30 feet; no alley, with one entrance, of less than the same width; no alley, having two entrances, of less than 20 feet in width; and "that every dwelling house which shall be hereafter built on any old or new foundations shall have an enclosed back-yard, or an open space of at least one square (that is, 100 square or superficial feet), exclusive of any building therein, except where such dwelling-house shall be built on foundations either wholly or partly old, then such open space may have buildings thereon, but not to be carried up beyond the level of the ceilings of the underground and ground floors."

The Temple Church.—The very necessary addition of a font has recently been made to the Temple Church, which is placed on the south side of the entrance in the Round Church. It is cut out of one fine block of Caen stone, after a beautiful example in Alphington Church, near Exeter. Its form is circular, narrowing towards the base. The middle and lower part consists of interlaced arches springing from twelve columns in low relief. The upper portion has a rich continuous flowing frieze, containing twelve compartments; within these, mingled with the scrowl, are grotesque representations of man, dragons, birds, and various animals, mostly at war with each other. An allegory is thought by some to lurk in these grotesques, intended to represent the state of nature induced by the fall, in contradistinction to a state of Grace which follows Baptism.

Two Antique Stone Coffins have been found by the excavators employed on the Rouen Railroad, each covered by an enormous semi-circular stone lid, and having immediately above them a layer of vegetable earth, though buried to a depth of three metres in the sand of the plain. The first, which was in all respects sound, contained only a phial and a little dust. In the second, which was broken, and had evidently long been so, notwithstanding the consequent admission of moisture, the skeleton was found entire, and in such high preservation, that not a tooth was gone. The figure is a woman's, with the feet turned towards the west, at once rebutting the presumption of Christian burial. The tomb has neither sculptured ornament nor inscription; but between the thigh bones of the skeleton were two small rings of copper, and two bronze Roman medals, on one of which it is believed, that the head and name of Constantine may be traced. At the feet were a small vase, in reddish earth, and five glass vases, two of which were broken in the getting out, and the remaining three are remarkable for their dimensions and elegance.

TO CORRESPONDENTS.—The numbers for January have been reprinted, and may now be had, by order through the customary channels.

In 1 vol. post 8vo, price 10s. 6d.
PAST AND PRESENT.
By THOMAS CARLYLE.
Chapman & Hall, 186, Strand.

Just published, price 1s. 6d. sewed and gilt,
A PAPER LANTERN for PUSEYITES.
London: Smith, Elder & Co. 65, Cornhill. Dublin: J. Cumming. Liverpool: W. Grapel.

Just ready, in 3 vols.
ROSE OF WOODLEE:
A TALE.
By MARIA BAINBRIDGE.
Edward Bull, Publisher and Librarian, 19, Holles-street.
Agents—Bell & Bradfute, Edinburgh; John Cumming, Dublin.

TITMARSH IN IRELAND.
In two vols. post 8vo., price 21s.
THE IRISH SKETCH-BOOK.
By Mr. M. A. TITMARSH.
With numerous Engravings on Wood, from the Author's Designs.
Chapman & Hall, 186, Strand.

Just published, in demy 8vo., price 12s. cloth.
MODERN PAINTERS: their superiority in the Art of Landscape Painting to all the Ancient Masters proved by examples of the True, the Beautiful, and the Intellectual, from the Works of Modern Artists, especially from those of J. M. W. Turner, Esq., R.A. By a Graduate of Oxford.
London: Smith, Elder, & Co. 65, Cornhill.

This day is published, post 8vo. price 6s. 6d.
With Illustrations by D. O. HILL and FLEMING.
THE HIGHLANDS, the SCOTTISH MARTYRS, and other POEMS.
By the Rev. JAMES G. SMALL.
Edinburgh: William Whyte & Co. Glasgow: W. Collins. London: Longman & Co., and Nisbet & Co. Dublin: W. Curry, jun. & Co.

SECOND AND CHEAPER EDITION.
Now ready, in 2 vols. 8vo. with Portrait, &c., 16s. bound,
LIFE and TIMES of PETRARCH,
With NOTICES of BOCCACIO and HIS ILLUSTRIOUS CONTEMPORARIES.
By THOMAS CAMPBELL, Esq.
Author of 'The Pleasures of Hope,' &c.
"This work must take its place in our libraries as one of the most interesting and important historical works of our time."—*Sun.*
Henry Colburn, Publisher, 13, Great Marlborough-street.

Price 1s.
THE REVENUE in JEOPARDY from SPURIOUS CHEMISTRY.
By ANDREW URE, M.D. F.R.S. &c.
James Ridgway, Piccadilly; and all Booksellers.

Now ready, price 4s. 6d.
RURAL CHEMISTRY.
By EDWARD SOLLY, Esq., Jun. F.R.S.,
Experimental Chemist to the Horticultural Society of London, Hon. Mem. of the Royal Agricultural Society, and Lecturer on Chemistry at the Royal Institution.
London: 3, Charles-street, Covent-Garden.

Bound in cloth, price 6s.
CHYMICAL EXPERIMENTS, illustrating the Theory, Practice, and Application of the Science of Chymistry, and containing the Properties, Uses, Manufacture, Purification, and Analyses of all Organic Substances, with numerous Engravings of Apparatus, &c. By G. FRANCIS, F.L.S.
Dictionary of Commerce, Part 5, price 7d., now ready.
G. Berger, Holywell-street, Strand; and all Booksellers.

Just published, price 1s.
A CORRECTED REPORT of the SPEECH of SIR GEORGE THOMAS STAUNTON, BART., on LORD ASHLEY'S MOTION on the OPIUM TRADE, in the House of Commons, April 4; with introductory Remarks, and an Appendix.
London: Lloyd & Co. Harley-street; and Simpkin, Marshall & Co.

ROYAL ASTRONOMICAL SOCIETY.
Just published, price 20s.
MEMOIRS of the ROYAL ASTRONOMICAL SOCIETY, Vol. XIII, containing the Catalogues of Ptolemy, Ulugh Beigh, Tycho Brahé, Halley, and Hevelius, deduced from the best authorities; with various Notes and Corrections, and a Preface to each Catalogue. By FRANCIS BAILY, Esq., President of the Society.
Vol. XIV., containing "Experiments with the Torsion Rod for determining the Mean Density of the Earth." By Francis Baily, Esq., is also published, price 20s.
To be had at the apartments of the Society, Somerset House.

Now ready, in 8vo. with numerous Illustrations, price 14s. handsomely bound,
COOMBE ABBEY: an Historical Tale of the Reign of James I. By SELINA BUNBURY.
"It is a book of no common merit."—*Bridal Mirror.*
"Warmly indeed do we recommend it to those of our readers who delight in historical works of fiction."—*Yorkshireman.*
"The scenes are covered with the deepest interest of description, and are evidently the offspring of a mind stored with the soundest truths of religion, interwoven with a matured judgment."—*Enniskillen Chronicle.*
Dublin: William Curry & Co.; W. S. Orr & Co. London; and all Booksellers.

Will be published next Wednesday,
LIEUT. V. EYRE'S SKETCHES of his fellow Prisoners, in a form adapted to bind up with LADY SALE'S JOURNAL and LIEUT. EYRE'S NARRATIVE. Amongst the Portraits, &c. will be found SIR W. M'NAGHTEN, SIR A. BURNES, LADY SALE, MAJOR E. POTTINGER, CAPTAINS M'KENZIE, BYGRAVE, LAWRENCE, TROUP, CONOLLY, &c., LIEUTS. EYRE, HOUGHTON, &c., AKBAR KHAN, SHAH SOOJAH, PRINCE FUTTY JUNG, &c. &c., Alexander's Column, Caves of Bameean, Prison Scenes, and Fort where Gen. Elphinstone died. Most of the officers are represented in the Afghan costume, which they were compelled to assume. In all there will be 36 Plates, Lithographed by Lowes Dickenson. Price 21s.; Coloured, 2l. 12s. 6d. There will be a few Proofs taken of these beautiful Drawings.
Dickenson & Son, 114, New Bond-street.

BINGLEY'S USEFUL KNOWLEDGE—SIXTH EDIT.

In 2 vols. 12mo. (with 150 new Illustrations), price 16s. cloth lettered.

USEFUL KNOWLEDGE; or, a Familiar Account of the various PRODUCTIONS of NATURE. By the Rev. WILLIAM BINGLEY, M.A. F.L.S. Author of 'Animal Biography.'

This edition has been thoroughly revised, enlarged, and adapted to the present state of Science, by Mr. DANIEL COOPER, Associate of the Linnæan Society, and late of the British Museum. It forms a Text-Book of Mineralogy, Botany, and Zoology, and a Manual of general reference, describing the various Natural Productions employed either as the Food of Man or in the Arts and Manufactures.

London: Rivingtons; Longman & Co.; Harvey & Darton; Baldwin & Cradock; Whittaker & Co.; Simpkin, Marshall & Co.; and Houlston & Stoneman.

On Monday, May 8, will appear, price 1s. 6d. plain, or 3s. coloured, demy 8vo.; and 4s. 6d. coloured, royal 8vo., No. I. (containing 60 figures) of

LAMARCK'S SPECIES of SHELLS, comprising the whole of the recent additions in Deshayes' last French Edition, with numerous species not noticed by that naturalist, accompanied by accurate delineations of almost all the Shells described, and forming the 3rd edition of the INDEX TESTACEOLOGICUS.

The letter-press by Sylvanus Hanley, B.A., the Illustrations by W. Wood. To be continued monthly.

London: published by W. Wood, 39, Tavistock-street, Coventgarden.

On the 1st of May was published, price 10s. coloured, (size quarto), No. IV. of the

CONCHOLOGIA ICONICA, a complete Repertory of Shells. By LOVELL REEVE, A.L.S. F.Z.S. &c. The Figures being drawn by him upon Stone from original pencil sketches by Mr. G. B. SOWERBY, jun.

The advantages which are offered by this elaborate work of Conchological Illustration are, first, it will contain figures and descriptions of every known species and remarkable variety of shell, whether previously described or not; secondly, a complete illustration of the animal inhabiting the shell will be given with each genus; thirdly, (and this is important), every shell will be drawn of the natural size; and fourthly, (and this is not less important), the drawings will be all expressly copied from nature.

Every public and private cabinet of any note is open (almost exclusively) to the author of the 'Conchologia Iconica,' and the work having obtained a remunerative issue, will now proceed with regularity and despatch: a number of eight large quarto plates on the 1st day of every month.

Lovell Reeve, Conchologist, 8, King William-street, Strand.

CHURCH MUSIC—THE GREGORIAN PSALTER.

Now ready, beautifully printed (red and black) in 12mo. price 4s.

LAUDES DIURNÆ: the PSALTER and CANTICLES, set and pointed to the GREGORIAN TONES; with a PREFACE on CHANTING. By the Rev. FREDERICK OAKELEY, M.A.

*** As the number of the Notes in the several Chants vary, it is evidently impossible to point the Psalms, so as to admit of the discretionary use of the various Chants; and the special advantage of this work consists in the notes of the Chant being printed on the same page as the Psalm or Canticle which is set to it.

The Canticles (published separately from the above). Price 6d.; or 2l. 2s. per 100.

Confirmation. Just published, with a Preface, price 6d.

Questions for Self-Examination, designed primarily for the Use of Young Persons.

"Are most valuable and opportune,—the object of which is to promote the habit of careful conscientiousness from the first, and to furnish aids towards it."—*British Critic*, April, 1843.

London: James Toovey, 35, St. James's-street.

ENGINEERING SCHOOL CLASS-BOOKS.

In cr. 8vo. 4s. 6d. bd. with 220 Diagrams engraved for the work,

EUCLID'S ELEMENTS of PLANE GEOMETRY: with EXPLANATORY APPENDIX, and SUPPLEMENTARY PROPOSITIONS for Exercise. Adapted for the Use of Schools, or for Self-instruction.

By W. D. COOLEY, A.B.

Author of the 'History of Maritime and Inland Discovery,' 'The Negroland of the Arabs,' &c.

"This is the best edition of the Elements which has yet appeared"—*Athenæum*—"which, for brevity, clearness, and discerning attention to the wants of learners, cannot be easily surpassed."—*Dublin University Mag.*

Uniform with the 'Elements,' price 3s. 6d.

COOLEY'S GEOMETRICAL PROPOSITIONS DEMONSTRATED; or a Supplement to Euclid: being a KEY to the Exercises appended to the 'Elements,' for the use of Teachers and private Students. Upwards of 120 Propositions deduced from the First Six Books of Euclid, are illustrated in it by new Diagrams.

"Will be found of considerable value as an aid to teachers of the Mathematics."—*New Monthly Mag.*

In fc. 8vo. price 1s. 6d.

COOLEY'S FIGURES of EUCLID; being the Diagrams illustrating the 'Elements,' with the Enunciations, printed separately for Use in the Class-room.

Whittaker & Co. Ave Maria-lane, London.

*** Orders received by all Booksellers.

This day is published, in 4to., with 6 Plates, price 15s., Vol. XIX. Part 2, of the

TRANSACTIONS of the ROYAL IRISH ACADEMY.

Contents:

SCIENCE.—Rev. Dr. Robinson on the Constant of Refraction, determined by Observations with the Mural Circle of the Armagh Observatory—Dr. Andrews on the Heat developed during the Combination of Acids and Bases—Rev. Dr. Lloyd, Supplement to a Paper on the Mutual Action of Permanent Magnets, considered chiefly in reference to their best relative Position in an Observatory—George J. Knox, Esq., Supplementary Researches on the Direction and Mode of Propagation of the Electric Force, and on the Source of Electric Development—Sir William R. Hamilton on Fluctuating Functions—Dr. Macartney on the Minute Structure of the Brain of the Chimpanzee, and of the Human Idiot, compared with that of the perfect Brain of Man, with some Reflections on the Cerebral Functions—Sir William R. Hamilton on Equations of the Fifth Degree, and especially on a certain System of Expressions connected with those Equations, which Professor Badano has lately proposed—Sir David Brewster on the Compensations of Polarised Light, with the Description of a Polarimeter for Measuring Degrees of Polarisation—Dr. Andrews on the Heat developed during the Formation of the Metallic Compounds of Chlorine, Bromine, and Iodine.

POLITE LITERATURE.—Rev. Dr. Hincks on the Egyptian Stele or Tablet—Rev. Dr. Hincks on the True Date of the Rosetta Stone, and on the Inferences deducible from it—Rev. James Will's Essay upon Mr. Stewart's Explanation of certain Processes of the Human Understanding—Rev. Dr. Kennedy Baillie, Memoir of Researches amongst the Inscribed Monuments of the Græco-Roman era, in certain ancient Sites of Asia Minor.

ANTIQUITIES.—Dr. Smith on the Irish Coins of Henry the Seventh—George Downes, Esq., on the Norse Geography of ancient Ireland.

Sold by Hodges & Smith, Dublin; and by T. & W. Boone, London; from whom members residing in London may procure their copies.

8, New Burlington-street, May 6, 1843.

MR. BENTLEY WILL IMMEDIATELY PUBLISH *THE FOLLOWING NEW WORKS:—*

1. GEORGE SELWYN AND HIS CONTEMPORARIES, with MEMOIRS and NOTES. By J. HENEAGE JESSE, Esq. Author of 'Memoirs of the Court of England under the Stuarts,' and 'The Court of England under the Houses of Nassau and Hanover.' 2 vols. 8vo. with Portraits.

2. THE FALSE HEIR. By G. P. R. JAMES, Esq., Author of 'Darnley,' 'The Gipsy,' 'Forest Days,' &c. In 3 vols. post 8vo.

3 THE RHONE, the DARRO, and the GUADALQUIVIR: a Summer Ramble in 1842. By Mrs. ROMER. In 2 vols. 8vo. with Embellishments.

4. THE BUSY BODY; a Novel. In 3 vols. post 8vo.

5. EGYPT AND THE HOLY LAND in 1842; with Sketches of Greece and the Levant. By W. DREW STENT, B.A., Wadham College, Oxford. In 2 vols. post 8vo.

6. CHRONICLES of GRETNA GREEN. By PETER ORLANDO HUTCHINSON. In post 8vo.

NEW WORKS NOW READY:—

1. HISTORY of the REVOLUTIONS, INSURRECTIONS, and CONSPIRACIES of EUROPE. By W. C. TAYLOR, L.L.D. Trinity College, Dublin, Author of 'Romantic Biography of the Age of Elizabeth,' &c. 2 vols. 8vo.

2. TRAVELS in the GREAT WESTERN PRAIRIES, the ANAHUAC and ROCKY MOUNTAINS, and in the OREGON TERRITORY. By THOMAS J. FARNHAM. 2 vols. post 8vo.

3. THE FRENCH GOVERNESS; or, the EMBROIDERED HANDKERCHIEF. A Romance. By J. FENIMORE COOPER, Esq., Author of 'The Pilot,' 'The Spy,' &c. In post 8vo.

4. THE EARL of ESSEX. A Romance. By CHARLES WHITEHEAD, Author of 'Richard Savage,' 'The Solitary,' &c. In 3 vols. post 8vo.

COMPLETION OF THE POLAR VOYAGES.

By Authority of the Lords Commissioners of the Admiralty.

5. VOYAGE to the NORTH POLE, performed in His Majesty's Ships *DOROTHEA* and *TRENT*, under the Command of Capt. BUCHAN, R.N. By Capt. BEECHEY, R.N., one of the Officers of the Expedition. In 8vo. with Engravings.

MUNSTER TALES.

6. THE LAST of the O'MAHONYS, and other HISTORICAL TALES of the ENGLISH SETTLERS in MUNSTER. In 3 vols. post 8vo.

7. THE HAND-BOOK of CHEMISTRY. By W. RALEIGH BAXTER, L.L.D., Lecturer on Materia Medica and Pharmaceutic Chemistry. Price 2s. 6d.

NOW COMPLETE.

8. THE FORTUNES of HECTOR O'HALLORAN. By W. H. MAXWELL, Esq., Author of 'The Life of the Duke of Wellington,' 'Wild Sports of the West,' &c. In 1 vol. 8vo. with numerous Illustrations by Leech. Price 14s. bound.

A FULL REPORT of the PROCEDURE at the TWENTY-NINTH ANNUAL GENERAL COURT of the SCOTTISH (Widows' Fund) LIFE ASSURANCE SOCIETY, held on the 7th March, 1843, may be obtained at the Head Office, No. 5, St. Andrew's-square, Edinburgh; or of any of the Society's Agents.

The total amount of assurances effected since the commencement of the Society is very nearly		£6,000,000	0 0
The capital accumulated and invested is now upwards of		1,270 000	0 0
The annual revenue of the Society is upwards of		200,000	0 0
Other sums in proportion	£1,000, assured in 1815, is this year increased to	1,745	18 10
	£3,000, assured in 1825, is this year increased to	4,157	0 3
	£5,000, assured in 1835, is this year increased to	5,940	0 0

Later assurances have proportionate additions.

Whole profits divisible among the assured.

London Office, 7, Pall Mall, April, 1843.

HUGH M'KEAN, Agent.

COMMERCIAL and GENERAL LIFE ASSURANCE, ANNUITY, FAMILY ENDOWMENT, and LOAN ASSOCIATION, 112, Cheapside, London.

Every description of Life Assurance entertained, premiums payable quarterly, half-yearly, or yearly; loans advanced from 25l. to 500l. for three or more years, on approved personal or other security, on the borrower assuring his or her life for a moderate amount.

Endowments for children to receive a stated sum of money on arriving at 14 or 21; in case of death the whole of the money returned to the parents. Annuities, immediate or deferred. Prospectuses and every information to be had of

FRED. LAWRANCE, Resident Sec. 112, Cheapside.

ECONOMIC LIFE ASSURANCE SOCIETY, No. 34, Bridge-street, Blackfriars, London: established 1823. Empowered by Act of Parliament, 3 William IV.

Lower Rates of Premium than those of any other office that entitle the assured to participate in the profits.

The bonus declared in 1834 amounted upon an average to 16l. per cent. on the premiums then paid; and in 1839 a second bonus was awarded, amounting on the average to 31l. per cent. on the premiums paid during the preceding five years.

Prospectuses and other particulars may be obtained at the Office, between the hours of ten and four, or will be forwarded to persons resident in the country, on application.

LOW RATES.—PARTICIPATION IN PROFITS.

THE MANAGERS OF THE SUN LIFE OFFICE beg leave to inform the public that their Rates, on Young Lives, are much lower than those of many other Offices, and that the Assured are entitled to a participation in the Profits of this Society.—Persons having Life Interests, such as Clergymen, Medical Men, and others deriving Incomes from their Professions or Trades, also those holding Estates on Lives, will see the advantage of effecting Insurances in the Sun Life Office.

Tables of Rates may be had at the Sun Life Office, in Cornhill, at the Sun Fire Office in Craig's-court, and at No. 63, Welbeck-street, Cavendish-square, London; also of any of the Agents for the Sun Fire Office.

ANNUITIES.—In the AUSTRALASIAN COLONIAL AND GENERAL LIFE ASSURANCE AND ANNUITY COMPANY, Annuitants *participate in the profits of the Company*, and receive a rate of ANNUITY much more favourable than can be granted by any Company making its investments wholly in England. The Company is enabled securely to grant these favourable terms from the advantage it possesses of investing a portion of its funds at a high rate of interest.

Directors.

UNIVERSAL LIFE ASSURANCE SOCIETY.

LONDON, CALCUTTA, MADRAS, and BOMBAY.

Directors—Sir Henry Willock, K.L.S. *Chairman.*
John Stewart, Esq. M.P. *Deputy Chairman.*

Colonel Sir Richard Armstrong, C.B. K.C.T. & S.
John Bagshaw, Esq.
Augustus Bosanquet, Esq.
Charles Deshwood Bruce, Esq.
Ellis Watkin Canliffe, Esq.
Raikes Currie, Esq. M.P.
William Kilburn, Esq.
Francis Macnaghten, Esq.
Charles Otway Mayne, Esq.
Robert Saunders, Esq.
James Duncan Thomson, Esq.
Capt. Samuel Thornton, R.N.

The Directors of the Universal Life Assurance Society invite attention of Assurers to the returns afforded to Policy holders by their office, as detailed in the statement below, and having every reason to expect that the returns in future years will be equally favourable, the Directors recommend an early application to secure so important a benefit.

The following Table will show the operation of the Reductions made by the Society:—

Age when Policy was issued.	Date of Policy.	Sum Assured.	Original Premium.	Reduction.	Annual Premium payable in 1840-41-42.
20	May 1834	£1,000	£19 6 8	£11 12 0	£7 14 8
30	—	1,000	24 8 4	14 13 0	9 15 4
40	—	1,000	31 10 0	18 18 0	12 12 0
50	—	1,000	43 15 0	25 13 0	17 2 0
60	—	1,000	66 11 8	39 19 0	26 12 8

Physician—Charles J. Roberts, M.D., 31, New Bridge-street, Blackfriars.

Surgeon—James M. Arnott, Esq. 3, New Burlington-street.

Solicitor—Thomas Burgoyne, Esq. 160, Oxford-street.

Bankers—Messrs. Cocks, Biddulph & Co. 43, Charing-cross.

A DIVIDEND OF THE PROFITS OF THIS SOCIETY WAS DECLARED ON THE 1st JANUARY, 1842, by which an addition, amounting on the average to 45 PER CENT. on the Premiums received was made to all Policies entitled to share therein.

FOUR-FIFTHS, or 80 PER CENT. of the total profits, are divided among the Assured at intervals of five years; and all Policies on which two payments have been made, participate in the division.

The Profits respectively allotted may be received by the Assured in present money, by a reduction of the Annual Premium, or by adding to the Policy an equivalent reversionary sum.

All Persons Assured on their own lives for 1,000*l.* or upwards, have the right (after two Annual payments) to attend and vote at the General Meetings of the Society.

W. M. BROWNE, Actuary.

LONDON, EDINBURGH, and DUBLIN LIFE ASSURANCE COMPANY, No. 3, Charlotte-row, Mansion House, and 55, Chancery-lane, London.

Trustees—K. Kingsford, Esq.; B. Hill, Esq.; J. Bidden, Esq.

A more complete knowledge of the effects of different systems of Life Assurance enabled this Company, in 1839, to introduce various important improvements, all tending to the greater security, convenience, and ultimate advantage of the assured.

This is the only Company who are bound by their Deed of Constitution not to dispute any policy, unless they can prove that it was obtained by fraudulent misrepresentations; and numerous cases have shown how worthless may be a policy obtained from the most influential office, which is unrestrained by this equitable principle, which removes all anxiety as to future dispute or litigation, and enhances immeasurably the value of the policies as documents of security.

This is the only Company who give to the assured on the mutual principle the whole of the mutual accumulations, and also guarantee the sums assured.

This is the only Company who bind themselves to pay the sums in the policies, although the debts for which they were effected shall have been liquidated before the claims arise.

This is almost the only Company who grant in favour of creditors whole world policies, whereby the debt is secured, although the debtor should go beyond the limits of Europe.

The premiums, calculated according to the Carlisle tables, are lower than usual upon young lives where participation in the profits is not required; and for short assurances, which at the option of the assured may be continued for life, the rates are as low as a due regard to complete security will permit.

Triennial Ascending Scale to assure 100l.

Age.	First 3 Years.	Second 3 Years.	Third 3 Years.	Fourth 3 Years.	Remainder of Life.
25	£1 2 7	£1 9 9	£1 16 11	£2 4 1	£3 11 3
35	1 9 9	1 19 6	2 9 3	2 19 0	3 8 9
45	2 1 0	2 14 10	3 8 8	4 2 6	4 16 4
55	3 11 1	4 10 9	5 10 5	6 10 1	7 9 9
60	4 8 11	5 17 4	7 5 9	8 14 2	10 2 7

By the Half Premium plan only one half of the first seven years premium is required, the other half being payable at the convenience of the assured; thus allowing a policy to be continued for seven years at one half of the usual rate, or to be dropped at one half of the usual sacrifice, and entitling the assured, seven years hence, when loss of health may prevent him from effecting a new assurance, to continue a policy at a rate of premium applicable to an age seven years younger.

To assure 100l. on Half Premium System.

Age.	£. s. d.	Age.	£. s. d.
15	0 16 1	40	1 11 5
20	0 18 0	45	1 16 6
25	1 0 7	50	2 3 9
30	1 3 6	54	2 12 5

Prospectuses and Schedules are forwarded to applicants, free of expense, by the Manager and Agents.

ALEX. ROBERTSON, Manager.

EUROPEAN LIFE INSURANCE and ANNUITY OFFICE, No. 10, Chatham-place, Blackfriars, London. Established January, 1819.

President—Sir James Rivett Carnac, Bart. Rook Cliff, Lymington.
Vice-President—Geo. Forbes, Esq. 9, Fitzroy-square.
With Twelve Directors.

FACILITIES are offered by this long-established Society to suit the views and means of every class of insurers. Premiums are received yearly, half-yearly, or quarterly, or upon an increasing or decreasing scale. The insured for life participate septenially in the profits realized. A liberal commission is allowed to Solicitors and Agents.

DAVID FOGGO, Secretary.

N.B. Agents are wanted in towns where none have yet been appointed.

BRITISH EMPIRE LIFE ASSURANCE, ANNUITY, and ENDOWMENT COMPANY, 5, Whitehall, and 36, Old Jewry, London.

Directors—Sir George Staunton, Bart. M.P. *President.*
Sir Herbert Compton, *Vice-President.*

Charles Forbes, Esq.
James Mackillop, Esq.
J. Phillimore, Esq. D.C.L.
W. Wilkinson, Esq.
Arthur Helps, Esq.
Thomas E. Headlam, Esq.
Robert J. Grigg, Esq.
G. Bicknell, Esq. (Resident).

Bankers—Messrs. Coutts & Co.

Solicitors—Messrs. Ogle & Younghusband.

The peculiar advantages offered by this Company are:—

1st. That where the assurance is for life, one-half of the premiums may remain unpaid for seven years.

2nd. A Table peculiarly fitted for policies for loans, the premiums commencing very low, and varying every three years.

Age.	1st period of 3 years.	2d period of 3 years.	3d period of 3 years.	4th period of 3 years.	Remainder of Life.
27	1 3 7	1 8 7	1 15 9	2 4 6	2 14 10

3rd. For Survivorship Annuities, on a principle peculiar to this Office, avoiding the loss of the premium paid, if the party does not survive to take the annuity.

Every information may be obtained at the Offices, at Whitehall, and 36, Old Jewry.

The usual Commission to Solicitors and Agents.

GEO. BICKNELL, Resident Director.

PELICAN LIFE ASSURANCE OFFICES,

70, Lombard-street, and 57, Charing-cross.—Established 1797.

Directors.
Matthias Attwood, Esq. M.P.
W. Stanley Clarke, Esq. F.R.S.
John Coope, Esq.
William Cotton, Esq. F.R.S.
Sir William Curtis, Bart.
William Davis, Esq.
J. A. Gordon, Esq. M.D. F.R.S.
Sir W. Heygate, Bart. and Ald.
Kirkman D. Hodgson, Esq.
R. Henshaw Lawrence, Esq.
J. Petty Muspratt, Esq.
George Shum Storey, Esq.
C. Hampden Turner, Esq.
Matthew Whiting, Esq.

The Plan of this Office will be found to comprise all the Solid Advantages of Life Assurance.

Persons have the option of insuring upon the Return or Non-Return Systems; and the Tables, which include Ascending and Descending Scales of Premium, have been framed to suit the convenience of all parties.

The Rates have recently been reduced agreeably to the most approved calculations, and these being verified by the experience of the Office during Forty Years, are as low as consistent with safety; those adapted to the RETURN SYSTEM entitle its assured to an equitable participation in the surplus premium, according to the plan detailed in the Company's prospectus.

The Assured under both Systems will possess the guarantee of a large PAID-UP Capital, and the further security of a responsible body of Proprietors, without being exposed to the liabilities of partnership.

Policies are purchased on liberal terms when the object of an assurance is effected;—or, loans will be granted thereon to the extent of five-sixths of such purchase-money.

Prospectuses and every information obtained on application at the Offices as above, or to the Agents of the Company appointed in every City and principal Town in the Kingdom.

R. TUCKER, Secretary.

WALKER'S NEEDLES (by authority the Queen's Own), in the illustrated Chinese Boxes, are now in course of delivery to the trade. The needles have large eyes, are easily threaded (even by blind persons), and have improved points, temper, and finish. Each paper is labelled with a likeness of Her Majesty or H.R.H. Prince Albert, in relief, on coloured grounds. Every quality of needles, fish-hooks, hooks and eyes, steel pens, &c. for shipping. These needles or pens for the home trade are sent free by post, by any respectable dealer, on receipt of thirteen penny stamps for every shilling value. H. Walker, Manufacturer to the Queen, 20, Maiden-lane, Wood-street, London.

GILDING REVIVED.—The success of ROSSELET'S INSTANTANEOUS GILT, GOLD, and SILVER REVIVER, and which has been used and approved at the Palace, has induced the discoverer to establish a Depôt, 207, 209, Regent-street. Chimney and Table Ornaments, Picture Frames, Jewellery, Military Accoutrements, *Or-molu*, whether bright or frosted (mât), and however discoloured, are by a single application instantly revived. In Bottles, 5*s.* 6*d.* for Wood; 7*s.* 6*d.* for Metals. Orders per post attended to.—Depôt, 207, 209, Regent-street, where French and English are spoken, and specimens may be seen.

METCALFE'S NEW PATTERN TOOTH-BRUSH and SMYRNA SPONGES.—The Tooth-Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose—1*s.* An improved Clothes-Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-Brushes, with the durable unbleached Russian Bristles, which do not soften like common hair. Flesh-Brushes of improved graduated and powerful friction. Velvet-Brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment, 130 B, Oxford-street.

CAUTION—Beware of the words "From Metcalfe's" adopted by some houses.

PATENT PERRYIAN GRAVITATING INKSTAND, as cheap as the common Inkstand.—This neat and novel invention is exceedingly well adapted for general use; it preserves the ink in great perfection for months together, without the trouble of refilling; it excludes dust, &c., and at any moment the writer is supplied with ink in the most perfect state. The Patentees strongly recommend it to the notice of Bankers, Merchants, Solicitors, Government Offices, Public Companies, Shops, Schools, &c., as a great improvement over the ordinary inkstand, both as regards convenience and considerable saving of ink. This inkstand will be found invaluable in keeping the ink always clear and fit for use in every climate. It is of a cylindrical form, with a gravitating action, adjusted so as to supply the dipping cup with ink, which can be returned into the cylinder when not in use. Economy, cleanliness, and usefulness are secured by it, and it cannot get out of order.—Sold by all Stationers, &c. throughout the Empire.

Manufactory, 57, Red Lion-square, London.

JOSEPH FOX, Hair-cutter, Perfumer, and Ornamental Hair Manufacturer, No. 32 and 33, Burlington Arcade, embraces with pleasure this opportunity of returning his sincere and respectful acknowledgments to his extensive and distinguished connexion for the patronage so liberally bestowed upon him for the last sixteen years. He begs to inform them and the public in general, that he continues in the same premises which he has occupied for so many years, and he is desirous of drawing particular attention to this fact, as a person of the same name and business has recently opened an establishment nearly opposite, which circumstance, without this announcement, is likely to lead to mistakes detrimental to the interests of J. F.—The celebrated Nutritive Cream, which has obtained so just a preference over all other articles, for strengthening and beautifying the hair, is still prepared and sold by Joseph Fox, No. 32 and 33, Burlington Arcade, where only it can be had genuine.

WATCHES by WEBSTER & SON, Chronometer Makers to the Lords of the Admiralty (Established 133 years), 2, BIRCHIN-LANE. The largest assortment of fine Second-hand Watches of any house in London, by the most eminent makers—many nearly equal to new, and at little above half their original cost, all of which W. & Son warrant. They consist of fine Repeaters, Duplex, Lever, and Horizontal Escapements, all of superior manufacture. New Watches of the most elegant patterns upon the principle of their Chronometers, to which the Government awarded the prizes three years in succession, with compensation balances to counteract the variations of temperature. Also a large assortment of Lever and elegant Horizontal Watches, for Ladies and Gentlemen, at considerably reduced prices. Old Watches taken in exchange. The most experienced workmen are employed on the premises in the repairing department.

Webster & Son, 3, Birchin-lane, Cornhill.

H. PAPE, Pianoforte-maker to his Majesty the King of the French, 106, New Bond-street.—PATENT GRAND, SQUARE, CONSOLE, and TABLE PIANOFORTES.—H. PAPE, in opening the above establishment, trusts that his instruments will command in this country the same preference they have enjoyed on the Continent for the last 25 years. The sale of nearly 4,000 of them is the best proof of the superiority of his new system of construction, in which the hammer, contrary to the usual mode, strikes the string downwards. The excellence of these instruments for keeping well in tune, for obedience and elasticity of touch, and for their great solidity, is now well known, and a FAIR examination will prove that they are also far superior to all pianofortes of the ordinary construction in power and sweetness of tone. Amongst those at present in the ware-rooms may be seen a Grand Piano of eight octaves, as well as a very remarkable Square, covered with one single sheet of ivory. This was the most remarkable pianoforte present at the Grand National Exhibition at Paris; and for it H. Pape obtained the Gold Medal, and was created, by His Majesty, Chevalier of the Legion of Honour.

CHARLES F. BIELEFELD respectfully informs ARCHITECTS, BUILDERS, DECORATORS, &c. that he has re-published his Quarto Volume, with a Tariff at a very reduced price, viz. 20*s.* (formerly 3*l.* 3*s.*) containing nearly 1000 patterns of ARCHITECTURAL ORNAMENTS in every style, principally from designs by eminent architects. The ornaments may be had manufactured in the improved PAPIER MÂCHÉ, at the Works, 15, Wellington-street North, Strand. The book will be forwarded to the country on receipt of a Post Order for 20*s.*

"This is unquestionably a most valuable invention."—*Literary Gazette.*

"We deem it a duty to make as widely known as possible one of the most admirable inventions of the present day: we allude to the Papier Mâché of Mr. Bielefeld," &c. &c.—*Court Journal.*

"A large Quarto Volume on the use of the improved Papier Mâché in Furniture, the interior Decoration of Buildings, &c., has been placed in our hands; and certainly until we had perused its preface, and glanced over its pictured contents, we had no conception of the number of purposes for which paper was available. Every possible description of Ornaments for ceilings, cornices, panelling, mouldings, &c., which, from the lightness and durability of the material, and susceptibility of high finish, are more than twice the value of any composition."—*Observer.*

"Mr. Bielefeld has shown not only the use of Papier Mâché, but its beauty, so clearly, as to make his volume a sad temptation to persons of more taste than fortune."—*Athenæum.*

"Its lightness, sharpness of outline, and flexible tension of substance, render it, at all events, of incalculable value as a substitute for plaster and wood-carving, or rather as a *vast improvement* on either."—*Polytechnic Journal.*

Papier Mâché Works, 15, Wellington-street North, Strand.

DELICACY OF COMPLEXION.—The use of GOWLAND'S LOTION is speedily followed by the disappearance of every species of cutaneous defect and discolouration, and the establishment of a pure surface of the skin, accompanied by the brilliant circulation which constitutes the tint of beauty; whilst as a refresher it preserves the most susceptible complexion from the effects of heat, freckle, and sallowness, and sustains in all cases to a protracted period the softness of texture and vivacity peculiar to earlier years.—'Robt. Shaw, London,' is in white letters on the Government stamp, without which it is not genuine.—Prices, 2*s.* 9*d.*, 5*s.* 6*d.*; quarts, 8*s.* 6*d.* Sold by all Perfumers and Medicine Venders.

BUTLER'S COMPOUND CONCENTRATED DECOCTION, or FLUID EXTRACT of SARSAPARILLA, is the original of the now numerous concentrated preparations of the kind. A dessert spoonful of it, diluted with water, makes half a pint of the compound decoction, of the same strength and composition as that ordered by the British Pharmacopœias. It is prescribed as an alterative in scrotula, scurvy, eruptions of the skin, and all cutaneous diseases; also has been found extremely useful in chronic rheumatism, in secondary symptoms, and after an improper use of mercury.

Prepared and sold in pint bottles 20*s.*, half-pints 10*s.*, and quarter-pints 5*s.* 6*d.*, by Thomas Butler, Chemist, 4, Cheapside, (corner of St. Paul's Churchyard,) London; and may be obtained of J. Sanger, 150, Oxford-street; Davenport & Co. Waterloo-place, Edinburgh; or, by order, through any respectable Druggist.

*** No. 4, Cheapside, the corner of St. Paul's Churchyard, No connexion with any other establishment of the same name.

ROWLAND'S ODONTO, or PEARL DENTIFRICE.—This is an efficient White Powder for the Teeth, solely prepared from *Oriental Herbs* of the most *delightful odour*, and of sovereign virtue for *strengthening, preserving, and thoroughly cleansing the Teeth.* It eradicates *Tartar* from the Teeth, removes *spots of incipient decay, pollishes* and *preserves* the enamel—to which it gives a *pearl-like whiteness*; and, above all, from its *disinfecting* properties, gives SWEETNESS TO THE BREATH. As an *anti scorbutic*, the *gums* also share in its transcendant powers. *Scurvy* is eradicated from them, a healthy action and redness are inoculed, that offer to the notice of the medical practitioner the most indubitable signs of their *healthful state.* Price 2*s.* 9*d.* per box, duty included.

☞ NOTICE—The Name and Address of the Proprietors, *A. ROWLAND & SON, 20, HATTON GARDEN, LONDON,* are engraved on the Government Stamp, which is pasted on each. Be sure to ask for "ROWLAND'S ODONTO." Sold by Chemists and Perfumers.

JOHN MARTIN, Secretary.

EXHIBITION of SPECIMENS of NATURAL HISTORY, CURIOSITIES, and WORKS of SCIENCE and ART, to be held at the ATHENÆUM, in DERBY, in the Summer of 1843, for the Improvement of the TOWN AND COUNTY MUSEUM.

Patrons.

His Grace the Duke of Devonshire (Patron of the Museum).	
The Most Hon. the Marquis of Hastings.	The Hon. G. H. Cavendish, M.P.
The Right Hon. Earl Howe.	W. Evans, Esq. M.P.
The Right Hon. the Earl of Burlington.	Edward Miller Mundy, Esq. M.P.
The Right Hon. the Lord Viscount Melbourne.	Charles Robert Colvile, Esq. M.P.
The Right Hon. the Lord Scarsdale.	The Hon. J. G. B. Ponsonby, M.P.
The Right Hon. Sir Robert Peel, Bart. M.P.	Edward Strutt, Esq. M.P.
William Mundy, Esq. High-Sheriff of the County.	The Venerable W. A. Shirley, Archdeacon of Derby.
Sir George Crewe, Bart. (President of the Museum.)	Edward S. Chandos-Pole, Esq.
Sir Henry S. Wilmot, Bart.	William Palmer Morewood, Esq.
Sir Henry Fitzherbert, Bart.	Godfrey Meynell, Esq.
	&c. &c. &c.

The Committee will be glad to receive such articles as the following, for the purpose of Exhibition, *viz.*:—Paintings; Sculpture; Statues, Busts, Castings in Brass, Iron, Bronze, and Plaster; Carvings in Wood, Bone, Ivory; Groups, Vases, and Models, in Alabaster, &c.; Medallions, Cameos, Intaglios, Gems, Coins, Medals, &c.; Porcelain, Coloured Glass (especially Bohemian); Papier Mâché; Electro-Metallic Works: and other Ornamental Manufactures, British or Foreign; Antiquities; Curiosities; Arms, Armour; Objects of high Historical Interest; Self-acting Musical Instruments, Timepieces, and other automatic machines; small and neat Models of Buildings, Bridges, Ships, and other Mechanical Structures, Steam Engines, Carriages; Optical and Mathematical, and other Philosophical Instruments and Apparatus; Choice Specimens in every department of Natural History; and other objects suitable for the purpose.

Great care will be taken of all articles that may be sent, and special precautions taken to prevent injury to such as are of peculiar value. All expenses of carriage and removal will be paid.—The Committee are willing to receive the offer, from Artists and others, of very good Paintings, and other Works of Art, for sale, and from Manufacturers, of articles of an ornamental character, as specimens; but they must not be removed before the close of the Exhibition; and in these cases the expense of carriage and removal must be paid by the contributors.

Articles may be sent, and letters addressed, to T. P. BAINBRIDGE, Esq., *Athenæum, Derby*.—To allow time for arrangement, the Committee are desirous of receiving the articles which may be entrusted to their care, as soon as possible; but to save the trouble of sending such as they may not be able to find room for, it is desirable that a list of intended contributions should be sent previously to the articles themselves.

N.B. The Exhibition is intended to OPEN on the 1st of JUNE, and will include the period of the Meeting of the Royal Agricultural Society of England, to be held in Derby in July.

CUYP AND PAUL POTTER.

A FINE Specimen of each of the above Masters is now ON VIEW at T. N. BROWN'S, 40, FETTER-LANE; where may be obtained a printed Catalogue of a choice assortment of valuable ARTICLES of VIRTU.

CHANGE OF AIR.—To the SICK, PARALYZED, or any other infirmity where change of scene or air, or where kind treatment, good nursing, and constant attention would be beneficial. A very respectable family accustomed to Invalids, and medically connected, and very pleasantly situated about two miles from Town, would be happy to RECEIVE into their family an INMATE. Terms moderate. No objection to a Child.—Address to H. D., Rice's, Post-office, Old Brompton.

TO ADVERTISERS.—THE EASTERN COUNTIES HERALD is the leading Hull Newspaper, as is proved by the following Parliamentary Return of the number of Newspaper Stamps issued to, and Advertisement Duty paid by, each of the Hull Newspapers, during the *Year* ending December 31, 1842:—

	Newspaper Stamps.	Advertisement Duty.
Eastern Counties Herald	153,000	£496 6 6
Hull Advertiser	93,000	299 19 0
Hull Packet	51,950	169 5 6
Hull Rockingham	25,000	96 9 0

19, Holles-street.

It is likewise sent Gratis and Post Free to READING SOCIETIES and FAMILIES who may also desire to know the ADVANTAGEOUS SYSTEM and TERMS on which they can regularly be supplied with whatever NEW and STANDARD WORKS, MAGAZINES, and Reviews, they may wish for perusal, which are sent in any quantity to all parts of England, Scotland, and Ireland. Apply to Mr. Bull, English and Foreign Public Library, 19, Holles-street, London.

TO READING and BOOK SOCIETIES, CLERGYMEN and FAMILIES throughout ENGLAND, SCOTLAND, and IRELAND.

New Plan for obtaining all the NEW PUBLICATIONS and STANDARD WORKS for Perusal, without purchase.

Now READY, Gratis and Post-free,

HINTS for the FORMATION of READING SOCIETIES.

The plan advocated in this little pamphlet will effect two important objects—that of adding to the supply of the current literature the choice of all the most valuable Works in the various languages; and that of extending the choice of *New Books* to the entire productions of the press. It is especially adapted to provincial readers, as by a small annual subscription the perusal of all the New Works, as they appear, may be obtained.

Saunders & Otley, Publishers, Conduit-street.

J. MADDEN & CO.'S CATALOGUE of ORIENTAL BOOKS and MANUSCRIPTS for 1843, is now ready.

This Catalogue contains nearly all the Works in Oriental Literature obtainable at the present day. Gratis to written or personal application.

8, Leadenhall-street.

Messrs. J. C. & S. STEVENS beg to announce they will SELL by AUCTION, at their Great Room, 38, King-street, Covent-garden, on MONDAY NEXT, 15th May, and two following days, at 12 o'clock, AN INTERESTING

COLLECTION of MINERALS, the property of H. HEULAND, Esq.; including the finest Slab of Malachite in England. Also many rare and valuable Substances, and the latest Novelties. Two handsome Mahogany Cabinets, &c.—May be viewed, and Catalogues (price 1s.) had at the Room.

ORGANIC REMAINS.

Messrs. J. C. & S. STEVENS have the honour to announce they will SELL by AUCTION, at their Great Room, 38, King-street, Covent-garden, on THURSDAY, 25th May, at 12 o'clock,

A COLLECTION OF THE REMAINS OF

THE MASTODONTOID ANIMALS of North America, imported from the United States by Mr. A. Kock, of St. Louis, and consisting of Skulls, Jaws, Teeth, Tusks, and Bones of every Part of the Trunk and Extremities, greatly surpassing in the number, value, and magnificence of the specimens all previously formed Cabinets of these most interesting relics, and its formation has constituted almost the exclusive occupation of its enterprising and zealous proprietor for several years in the great alluvial plains of the Mississippi, the Missouri, and other parts of the New Continent.—The Collection is now on view at the Egyptian Hall, Piccadilly; and Catalogues of the Sale are now ready.

THE FINE ARTS—TO AMATEURS, PICTURE-DEALERS, AND OTHERS.

Entirely unreserved Sale of Two Hundred valuable Paintings—Classical Sculpture—a Select Library—Choice Engravings, &c., the genuine property of a Gentleman who is leaving Manchester.

Mr. FLETCHER has received peremptory instructions to SELL by AUCTION, without the slightest restriction, at the New Exchange Gallery, Ducie-place, Manchester, on TUESDAY, WEDNESDAY, THURSDAY, and FRIDAY, May 30 and 31, and June 1 and 2, 1843,

A MAGNIFICENT and very extensive Collection of PAINTINGS, which presents many highly appropriate for altar-pieces and large galleries. It is also rich in Landscapes, Interiors, Waterfalls, Cattle Pieces, River Scenes, Views in Ancient and Modern Capitals, Battle Pieces, Portraits, and interesting Historical Subjects. Among them are undisputed Originals, by the following Old Masters:—

Rembrandt	Dietrick
Correggio	Romano, Giulio
Rubens	Poussin, Gaspar
Carracci, Annibale	Panini
Vandyck, Sir Anthony	Brill, Paul
Caravaggio	Rosa, Salvator
Stenwyck	Kobel, Ferdinand
Canaletti	Scorza, Sinibaldo
Berghem, Nicholas	Bourseois, Sir Francis
Baroccio, Federig	Honthorst (named Gherado della Notte)
Mieris, Francis	Richter
Dolce, Carlo	Mommers, Henry
Hoet, Gerard	Brauwer
Giordano, Luca	Gessner, Solomon
Ostade, Adrian	
Guercino	

The ENGRAVINGS are by eminent artists, and the subjects have been selected from the best paintings in the Gallery of Dresden.

Several valuable and scarce LITERARY WORKS in the English, French, German, Italian, and Spanish languages.

The SCULPTURE is of the purest, finely-polished Carrara marble, and the figures were executed expressly for the present proprietor, after subjects selected from the works of those master minds, Canova, Thorwaldsen, Bertolini, and Flaxman, R.A., and cannot fail to call forth the admiration of the enlightened and refined observer. These sublime productions merit the highest terms of panegyric; there is evinced in them a thorough knowledge of composition, faultless form, anatomy, expression, grace, and perfect beauty; they are full of sedate grandeur, and abound with all the purity and simplicity of the ancient Greeks.

The Sale will commence at Eleven o'clock in the morning of each day.

The entire may be viewed on Friday, Saturday, and Monday, May 26th, 27th, and 29th, and Catalogues may be obtained on application to Mr. D. MacFarlan, No. 16, St. Mary Axe, London; or from Mr. Fletcher, Auctioneer, King-street, and Exchange-street, Manchester.

Office, 198, Strand.

This day is published, in 3 vols. royal 8vo. price 5*l.*

A TREATISE on the CRIMINAL LAW of IRELAND; comprehending all Crimes and Misdemeanours punishable by Indictment, and Offences cognizable summarily by Magistrates, with the mode of proceeding upon each.

By JOSEPH GABBETT, Esq., Barrister-at-Law, Author of 'The Digest of the Statute Law.'

The Author's object has been to embrace the whole science and practice of the criminal law; and it is confidently expected that the volumes will be found to contain much matter which will not only be found useful to magistrates, and others connected with the administration of justice in Ireland, but also to the bar, and the various members of the profession of the law; and from the author's experience as a magistrate, it is hoped that this work will be found to embrace every matter which would be most useful to justices of the peace, whether called upon to administer justice in their chambers, or at petty or general sessions.

Dublin: printed for John Cumming; and Simpkin, Marshall & Co. London.

DICKENSON & SON, 114, New Bond-street.

Unpublished Letters of Horace Walpole.

In the press, 3 vols. 8vo. with numerous Portraits from Original Paintings, &c.

LETTERS OF HORACE WALPOLE

(EARL OF ORFORD)

TO SIR HORACE MANN,

H.B.M. RESIDENT AT THE COURT OF FLORENCE,

From the Year 1760 to 1785.

NOW FIRST PUBLISHED FROM THE ORIGINAL MSS.

CONCLUDING SERIES.

"I sometimes think I have lived two or three lives. My thirteen months at Florence was a pleasant youth to one of them; seven months and a half at Paris, with four or five journeys thither since, was a middle age, quite different from twenty-five years in Parliament which had preceded—and an age since; besides, as I was an infant when my father became minister, I came into the world at five years old, knew half the remaining Courts of King William and Queen Anne, or heard them talked of as fresh; being the youngest and favourite child, I was carried to almost the first operas, kissed the hand of George the First, and am now hearing the frolics of his great grandson (George Prince of Wales),—no, all this cannot have happened in one life! I have seen a mistress of James the Second (mother of the Duke of Berwick), the Duke of Marlborough's burial, three or four wars, the whole career of victories, and death of Lord Chatham, the loss of America, the second conflagration of London by Lord George Gordon,—and yet I am not as old as Methusalem by four or five centuries."—*Horace Walpole to Sir H. Mann.*

RICHARD BENTLEY, New Burlington-street,

(*Publisher in Ordinary to Her Majesty.*)

In 8 vols. post 8vo. price 6s. each,

HISTORY of SCOTLAND.
By PATRICK FRASER TYTLER, Esq.
2nd Edition. And lately, VOLUME VIII. of the First Edition. 8vo. 12s.
"One more will complete the work, which we venture to predict will then become, and long remain, the Standard History of Scotland."—*Quarterly Review.*
William Tait, Edinburgh; Longman & Co. London.

Now complete in 22 Parts, 9d. 18s.—THE
WORKS of JEREMY BENTHAM; with MEMOIRS of the AUTHOR, by JOHN BOWRING; an ANALYTICAL INDEX to the Works and Memoirs, and an INTRODUCTION to the STUDY of Bentham, by JOHN HILL BURTON, Advocate, one of the Editors.
The INTRODUCTION may be had separately, price 2s. 6d.
William Tait, Edinburgh; Simpkin, Marshall & Co. London.

In the press, in a handsome volume, imperial 8vo.
Illustrated by a large Map of the *Mer de Glace* of Chamouni, Lithographed Views and Plans, and Engravings on Wood,
TRAVELS THROUGH the ALPS of SAVOY and other Parts of the PENNINE CHAIN, with Observations on the Phenomena of GLACIERS.
By JAMES D. FORBES, F.R.S., Sec. R.S.E.
Corresponding Member of the Royal Institute of France, And Professor of Natural Philosophy in the University of Edinburgh.
Adam & Charles Black, Edinburgh.

TO TEACHERS.—JUST PUBLISHED, price 2s. 6d. bound, LE COMPLEMENT du 'Trésor de l'Ecolier Français,' by F. DE POSQUIER. Those who have been accustomed to use the 'Trésor' will find this an invaluable appendant to that work, and well calculated to expedite, and carry out more fully, the method of teaching languages which has proved so eminently successful in those popular works of the Author already long before the public.
11, Tavistock-street, Covent-garden.

SUPERIOR SCHOOL BOOKS.

BUTTER'S GRADATIONS in READING and SPELLING, upon an entirely new and original plan, by which Dissyllables are rendered as easy as Monosyllables. To which are now added numerous entertaining and instructive Reading Lessons in Prose and Verse, and Spelling Tables, leading to a knowledge of Grammar and Derivation. 25th edition. 1s. 6d. bound.
Butter's Gradual Primer. 17th edit. Price 6d.
Butter's Etymological Spelling-Book and Expositor. 63rd edition. 1s. 6d. bound.
London: Simpkin, Marshall & Co.; Whittaker & Co.; Longman & Co.; Hamilton & Co. Edinburgh: Oliver & Boyd.

MARY HOWITT'S NEW WORKS FOR YOUTH.
In one handsome pocket volume, price 2s. 6d. bound,
NO SENSE LIKE COMMON SENSE: a Tale for Young People. By MARY HOWITT. Forming part of a Series of Tales for the People and their Children.
London: printed for Thomas Tegg, 73, Cheapside; where may be had, printed uniform, ALICE FRANKLIN, a Tale by MARY HOWITT. Price 2s. 6d. bound.

REID'S ACTIVE POWERS, BY WRIGHT.
In a large volume, octavo, bound in cloth, price 12s.
ESSAYS on the ACTIVE POWERS of the HUMAN MIND; an Inquiry into the Human Mind on the Principles of Common Sense; and an Essay on Quantity. By THOMAS REID, D.D., F.R.S.E., and a Memoir of the Author by DUGALD STEWART. A new edition, with Notes, Sectional Heads, and a Synoptical Table of Contents, by Rev. G. N. WRIGHT, M.A.
"There is a master merit in Reid's writings—an unrivalled charm that leads young minds to think and reason."
London: printed for Thomas Tegg, 73, Cheapside, where may be had, just published, Mr. WRIGHT'S Improved Edition of REID'S ESSAYS on the INTELLECTUAL POWERS of MAN. Octavo, price 12s.

ENCYCLOPÆDIA BRITANNICA.
SEVENTH EDITION.
Edited by PROFESSOR NAPIER.
The Work is now completed in Twenty-one Volumes quarto, and may be had in every variety of binding.
*** The Publishers have observed that, in some instances, the temporary Title-page partially issued, at the request of some of the Subscribers, while the work was in progress, has been bound up with it, instead of being cancelled and replaced by the Title-page as finally adjusted and distributed with the Editor's Preface, at the close of the publication. The former may be easily distinguished by a Latin Motto, copied from the earlier editions, but which the Editor did not continue in the final Title-page. The Publishers will on application supply Sets of the Title-page intended to be bound up with the completed Work.
Adam & Charles Black, Edinburgh; and sold by all Booksellers.

This day is published, in 4to., with 6 Plates, price 18s., Vol. XIX. Part 2, of the
TRANSACTIONS of the ROYAL IRISH ACADEMY.
Contents:
SCIENCE.—Rev. Dr. Robinson on the Constant of Refraction, determined by Observations with the Mural Circle of the Armagh Observatory—Dr. Andrews on the Heat developed during the Combination of Acids and Bases—Rev. Dr. Lloyd, Supplement to a Paper on the Mutual Action of Permanent Magnets, considered chiefly in reference to their best relative Position in an Observatory—George J. Knox, Esq., Supplementary Researches on the Direction and Mode of Propagation of the Electric Force, and on the Source of Electric Development—Sir William R. Hamilton on Fluctuating Functions—Dr. Macartney on the Minute Structure of the Brain of the Chimpanzee, and of the Human Idiot, compared with that of the perfect Brain of Man, with some Reflections on the Cerebral Functions—Sir William R. Hamilton on Equations of the Fifth Degree, and especially on a certain System of Expressions connected with those Equations, which Professor Badano has lately proposed—Sir David Brewster on the Compensations of Polarised Light, with the Description of a Polarimeter for Measuring Degrees of Polarisation—Dr. Andrews on the Heat developed during the Formation of the Metallic Compounds of Chlorine, Bromine, and Iodine.
POLITE LITERATURE.—Rev. Dr. Hincks on the Egyptian Stele or Tablet—Rev. Dr. Hincks on the True Date of the Rosetta Stone, and on the Inferences deducible from it—Rev. James Will's Essay upon Mr. Stewart's Explanation of certain Processes of the Human Understanding—Rev. Dr. Kennedy Baillie, Memoir of Researches amongst the Inscribed Monuments of the Græco-Roman era, in certain ancient Sites of Asia Minor.
ANTIQUITIES.—Dr. Smith on the Irish Coins of Henry the Seventh—George Downes, Esq., on the Norse Geography of ancient Ireland.
Sold by Hodges & Smith, Dublin; and by T. & W. Boone, London; from whom members residing in London may procure their copies.

Black's Guide-Books
AND TRAVELLING MAPS FOR TOURISTS.

Published this day, price 4s. 6d.
Beautifully coloured, in a neat portable case,
BLACK'S ROAD AND RAILWAY
TRAVELLING MAP OF SCOTLAND.
Size 32 inches by 22½, carefully constructed from the best authorities, with all the Railroads and other Topographical Information required either by the Tourist or Traveller on Business.
*** From the care bestowed on the construction of the present Map, and the means which have been used to correct the original drawings, by reference to individuals conversant with the Topography of their respective localities, the Publishers are satisfied that this will be found the most accurate and beautiful Map of Scotland extant.

Uniform with the above, price 4s. 6d.
BLACK'S ROAD AND RAILWAY
TRAVELLING MAP OF ENGLAND AND WALES.
Carefully constructed from the Maps of the Ordnance Survey, with all the Roads and Railroads accurately laid down.
"A beautifully executed Map of England and Wales, which we have no hesitation in pronouncing one of the most unique that has been brought out for a long time, and which, after careful observation and reference, we can also characterise as being among the most correct ever issued."—*Mining Journal.*

The following smaller Maps, although so moderate in price, are engraved with the same beauty and accuracy as those of larger size, the only difference being, that the larger Maps are necessarily more minute in their information.
Black's Pocket Map of England. 2s. 6d.
Black's Pocket Map of Scotland. 2s. 6d.
Black's Pocket Map of Ireland. 2s. 6d.

In a compactly printed volume, price 8s. 6d.
Containing an accurate Travelling Map; Engraved Charts of Roads, Railroads, and Interesting Localities; Plans of Edinburgh and Glasgow; numerous Views of the Scenery on Wood and Steel; and a copious Itinerary,
THE SECOND EDITION OF
BLACK'S
PICTURESQUE TOURIST OF SCOTLAND.
"A comprehensive, intelligent, and well-arranged Guide-book. We have been furnished with an incidental proof of the remarkable accuracy of the Charts and Descriptions in the personal testimony of a pedestrian, who has traversed a considerable space, book in hand."—*Spectator.*
"Of all the Tour-books and Guide-books addressed to home scenery, this is, in our estimation, the best."—*Atlas.*
"The Second Edition of 'Black's Picturesque Tourist of Scotland' seems, as nearly as possible, what a Guide-book ought to be—sensible, concise in its information, with that touch of poetry which is no less indispensable in such a haunted land than details of distances and historical facts, but which requires sound taste in its introduction."—*Athenæum.*

In a neat pocket volume, price 5s., with a Map of the Lake District by Sidney Hall; Charts of the Lakes, and Views of the Scenery on Wood and Steel; and an ample Itinerary of all the Routes,
BLACK'S
PICTURESQUE GUIDE TO THE ENGLISH LAKES.
"This Guide to the Lakes has been compiled upon the same elaborate plan, [as 'The Picturesque Tourist of Scotland,'] governed by the same resolution to spare no cost or trouble to achieve a successful result. It needs no higher commendation. It is a Picturesque Guide in every sense—its descriptions are charmingly written—its intelligence is ample and minute—and its illustrations are admirable specimens of art."—*Atlas.*

In the press, and shortly will be published,
Containing a General Travelling Map, with the Roads and Railways distinctly laid down; besides Sections of the more important districts on an enlarged scale, and engraved Charts of Roads, Railroads, and Interesting Localities,
BLACK'S
PICTURESQUE TOURIST
AND ROAD-BOOK OF
ENGLAND AND WALES.
Besides a copious Itinerary, with the distances accurately indicated, the volume will contain descriptions of the picturesque and interesting scenery in the vicinity of the road, illustrated with numerous Views, engraved in the first style of the art by Miller, Forrest, and Chapman, after Drawings by Montague Stanley, T. M. Richardson, jun., and Sargent.
It is intended that this publication shall at once serve as a guide to the man of business and a companion to the tourist; and although it is brought out at a great expense, the Publishers, trusting to an extensive sale rather than to a high price for their remuneration, propose to limit the price to 10s. 6d.

Recently published, in 2 vols. post 8vo. price 21s., profusely illustrated with Etchings and Woodcuts,
A VOYAGE ROUND THE
COASTS OF SCOTLAND AND THE ISLES.
By JAMES WILSON, F.R.S.E. M.W.S. &c.
Author of the Treatise on Angling in 'The Rod and the Gun.'
ADAM & CHARLES BLACK, Edinburgh;
Longman & Co. London; and sold by all Booksellers.

8, *New Burlington-street, May* 13, 1843.

[*On Thursday next, the 18th instant.*

2.

The Rev. Hugh White's New Work.

THE GOSPEL PROMOTIVE of TRUE HAPPINESS. By the Rev. HUGH WHITE, M.A. Small 8vo. 6s. cloth.

"A great variety of subjects, all treated with the Christian wisdom, decision, and sweetness that characterise the numerous works of this true man of God, render the present volume peculiarly attractive."—*Christian Lady's Mag.*

3.

MEMOIR of the late Rev. PETER ROE, A.M. Rector of Odogh, and Minister of St. Mary's, Kilkenny. By the Rev. SAMUEL MADDEN, A.M., Prebendary of Blackrath. 8vo. 14s. cloth.

"A work I would warmly recommend to all who desire to become more intimately acquainted with the heavenly character and devoted life of that eminent saint and servant of God."—*Rev. Hugh White.*

4.

OF THE APOSTACY PREDICTED BY ST. PAUL. By MORTIMER O'SULLIVAN, D.D., Rector of Killyman. 8vo. 14s. cloth.

"This is a most able production, raising, as was well observed by the Dean of Ardagh, the character of the author as high for scholarship as it before stood for eloquence."—*Achill Herald.*

5.

MEMOIR of the late ALBERT BLEST, for many years Agent and Secretary for Ireland of the London Hibernian Society. By the Rev. MAIBEN C. MOTHERWELL, A.B., Curate of Tamlaght-O'Crilly, Diocese of Derry. Small 8vo. with Portrait, 5s.

"This memoir is most interesting, and comes out at a most interesting crisis."—*Statesman.*

6.

BLOOD-LETTING, as a Remedy for the Diseases incidental to the HORSE and other ANIMALS; the peculiar cases in which it is indicated; the extent to which it should be carried; the injurious effects of its injudicious application; and the peculiar derangements which loss of blood is capable of producing in the animal economy. Also, a description of the different characters of the Horse's pulse in health and disease. Forming a Treatise for which the Medical Association of the Royal Veterinary College, London, lately awarded their First Prize Medal to HUGH FERGUSON, Lecturer on the Anatomy, Physiology, and Diseases of Animals, &c. 8vo. 3s. 6d. cloth.

7.

THE PRESENT DISTEMPER AMONG CATTLE, with full Directions for its Treatment, (the Medicines, their Quantities, &c.) and Mode of Prevention; also, a Means of rendering Permanent the Secretion of Milk from the Cow. By HUGH FERGUSON, late of the Royal Veterinary School of Alfort, near Paris; Lecturer on the Anatomy, Physiology, and Diseases of Animals. 12mo. 1s.

8.

CONDENSED NOTES ON ST. LUKE'S GOSPEL. Intended chiefly for the Use of Divinity Students. By the Rev. JOSEPH D'ARCY SIRR, D.D., Rector of Kilcoleman, &c. Small 8vo. 4s. 6d. cloth.

By the same Author,

THE LAW of SINAI and of ZION: an Act Sermon preached before the University of Dublin; to which are added Two Essays, the first on Regeneration; the second on the Righteousness of God. Small 8vo. 1s. 6d.

9

AN EXPOSITION of the DOCTRINE of the UNITED CHURCH of ENGLAND and IRELAND concerning Regeneration and Baptism, collected from the Book of Common Prayer and the Homilies and compared with the Holy Scriptures. By the Rev. WILLIAM NAPPER, Rector of Tamlaght-O'Crilly, Diocese of Derry. Small 8vo. 3s. 6d.

10.

Repeal of the Union.

THE SUBSTANCE of a SPEECH delivered in the CORPORATION of DUBLIN, on the 28th of February, 1843, on Mr. O'Connell's motion to petition for a Repeal of the Legislative Union. By ISAAC BUTT, Esq., Alderman of St. George's Ward. 8vo. 1s. 6d.

New Works

PRINTED FOR

LONGMAN, BROWN, GREEN AND LONGMANS.

Just published:

1.

ARTS, ANTIQUITIES, AND CHRONOLOGY OF

ANCIENT EGYPT.

From Personal Observations in 1839. By G. H. WATHEN, Architect. Royal 8vo. with numerous Plates and Woodcuts, from Drawings made by the Author. 16s. cloth. [*This day.*

2.

THE LIFE OF ADDISON.

Illustrated by many of his Letters and Private Papers never before published. By LUCY AIKIN. Author of 'Memoirs of the Courts of Queen Elizabeth, and King James I,' &c. 2 vols. post 8vo. with Portrait of Addison, engraved from the Picture by Sir Godfrey Kneller, 18s. cloth.

"To all who would understand the literary history of the period in which Addison flourished, we recommend Miss Aikin's book; and if we cannot promise them any very exciting interest, they are sure to find very agreeable reading, and to rise from the perusal with a feeling of obligation to the accomplished author, for the manner in which she has communicated the desired information."—*Inquirer.*

3.

THE RAMBLES OF THE EMPEROR CHING TĬH.

A Chinese Novel. Translated by TKIN SHEN. With an Introduction by Dr. JAMES LEGGE. 2 vols. post 8vo. 21s. cloth.

"Recent events, and the consequently extended intercourse between England and China, would, it was to be anticipated, speedily remove some of the seals from the envelopes which concealed the mysteries of that extraordinary empire, and lay open to view far more distant visions of her literature, customs, and manners, than it had been possible to catch through the glimpses heretofore afforded by her jealous and exclusive policy. The present remarkable and entertaining production is among the first fruits of this expectation; and we can cordially recommend it to the favour of the reading public as an historical romance of no common interest, inviting literary curiosity in a direction absolutely new."—*Literary Gazette.*

4.

THE LIFE OF A TRAVELLING PHYSICIAN,

From his First Introduction to Practice. 2 vols. post 8vo. 21s. 6d. cloth.

"This is a very amusing book. The Physician is worthy of his calling, being a highly-accomplished, good-natured, and agreeable companion. He does not intrude anything but the graces of his profession upon his readers. There is as little of Physic in the Travelling Physician as there was of the Bible in the Bible in Spain."—*Examiner.*

5.

THE HOME;

Or, FAMILY CARES and FAMILY JOYS.

By FREDERIKA BREMER, Author of 'The Neighbours.' Translated by MARY HOWITT. 2 vols. post 8vo. 21s. bds.

6.

THE NEIGHBOURS;

A SWEDISH STORY of EVERY-DAY LIFE.

By FREDERIKA BREMER. Translated by MARY HOWITT. Second edition, revised and corrected, 2 vols. post 8vo. 18s. bds. [*This day.*

Just ready:

REVIEWS

Past and Present. By Thomas Carlyle. Chapman & Hall.

HAVING, in our review of Mr. Carlyle's 'Chartism' (*Athen.* No. 637), given our opinion at large of that gentleman's mode of writing English, we shall abstain from formally re-entering upon that subject. But the peculiarities of his style are so closely identified with his thoughts, that it is impossible wholly to avoid touching upon them on any occasion on which he offers himself to criticism. In our former notice, we stated, as the immediate result of these peculiarities, that they have led him to mistake originality of expression for novelty of thought; and that if his book had been translated into ordinary English, he himself must have been satisfied that his leading ideas were already *publici juris*. The remark no less directly applies to the volume before us. It is the besetting sin of Mr. Carlyle to imagine himself in advance of his age, when he is only disguising its most familiar thoughts under a quaint phraseology, which obscures their import and drift. In 'Chartism,' the error was further manifested by an oversight of the real difficulties of the subject; and the author was thus led to abuse sciences, systems, and writers (he never attempted to confute them) for not having reached the root of evils, which he was himself equally unable to lay bare and eradicate. 'Chartism,' therefore, added nothing to the knowledge of the public; or, if the phrase be more pleasing to its author, detracted nothing from the public ignorance. The same precisely is the defect of 'Past and Present,' which (formal differences apart) is substantially a sort of *rifacciamento* of 'Chartism.' It contains the same set of ideas (or images?) revolving in pretty nearly the same circle. There is a like repudiation of statistics, political economy, of all investigations tending to appreciate and define; a like substitution of picture writing for analysis; a like affection for metaphysical generalities; a like intense and challenging opening, followed by the same lame and impotent conclusion.

Coinciding, for the most part, with Mr. Carlyle, in his view of the political and economic position and prospects of the country, we are not often directly opposed to his detached opinions, as far as he succeeds in giving them intelligible utterance; yet we contend that in his hands they lead to nothing. We agree with him that there is a formidable rottenness in the political, moral, and social condition of all classes of our countrymen. We hold with him, that great and immediate reforms are necessary to the very permanence of the nation. We go along with him to the full extent of believing that abolition of the corn laws would relieve the existing pressure but for a limited period; and that, if advantage be not taken of the interval, to abolish other vices of class legislation, and to provide a moral existence for the labouring classes—in one word, to do justice by all—we shall, after a short feverish prosperity, be again reduced to the same dead lock in which we now stand, and from which the chances of escape will be small indeed. Nay, if we may venture to translate Mr. Carlyle's expressions of "a godless people," "a people without a soul," a race of "unreasoning phantasms," "unrealities," and the like, by the more ordinary terms of a nation without education (in any wholesome sense of the word), a nation without courage to think freely, or to act consequently with its thought, a nation fast sinking into the luxury and egoism incidental to high civilization, without acquiring the knowledge and the virtues which civilization should bring with it, we have for years endeavoured to show that something like these phrases, is to a great degree applicable to existing circumstances.

It is therefore with pain and vexation we witness our premises turned to no better conclusion; and find ourselves compelled to censure defects in a writer, whose aim is the same as our own, and of whose mind, in despite of all its oddities and whims, we must still think with respect. It is to little purpose that Mr. Carlyle revolves in an atmosphere of generalities, if he will not strive, by individualizing and analyzing, to arrive at particular and practicable results; if he contents himself with vague declamations, and imagines that he is progressing, when he is only treading the same barren circle, his case is desperate. Our pain on this occasion is the greater, because we cannot hope to convince Mr. Carlyle of his mistake. The vice has become a habit, if indeed it be not innate and constitutional. Mr. Carlyle seems to be, by instinct, a poet more than a philosopher—more a metaphysician than an observer; and the haste with which he gallops through a string of musty images, to an inference half formed, and of unfruitful generality, is in all likelihood the result of a temperament readily excitable beyond the control of patient judgment. But hopeless as we may be of turning talents of no mean and ordinary power into more useful channels, and of persuading Mr. Carlyle to subordinate his glowing though disorderly rhetoric to the service of pure reason, we cannot, must not, disguise the truth, that his book is a failure,—and is so, precisely from those very causes which he considers as his distinctive excellencies and beauties.

The foundation on which Mr. Carlyle has built a goodly octavo, is such a one as could only have been adopted by a poetical mind, and the edifice itself is all high imaginative. The Camden Society not long ago published a journal written in the 12th century, by a monk of St. Edmondsbury, (*Athen.* No. 689)—a scanty narrative *de rebus ad eum pertinentibus*, but containing some interesting illustrations of the manners of the times. This narrative Mr. Carlyle has read with a poet's eye; and its contents, filled out, commented on, amplified, and analogized, form the belauded "Past" of his volume, offered by him as a contrast to the wholly vituperated "Present." In this part of his work, the author has exhibited very considerable powers of romance-writing: nothing can be more lively, more amusing, and more real, than the clothing which he has cast over old Jocelin of Brakelond's dry skeleton. We feel as if the hero of the tale, "Monk Samson," stood before us in the flesh. But let us listen to Mr. Carlyle's own view of monks and monkery:—

"We have heard so much of Monks; everywhere, in real and fictitious History, from Muratori Annals to Radcliffe Romances, these singular two-legged animals, with their rosaries and breviaries, with their shaven crowns, hair-cilices, and vows of poverty, masquerade so strangely through our fancy; and they are in fact so very strange an extinct species of the human family,—a veritable Monk of Bury St. Edmunds is worth attending to, if by chance made visible and audible. Here he is; and in his hand a magical speculum, much gone to rust indeed, yet in fragments still clear; wherein the marvellous image of his existence does still shadow itself, though fitfully, and as with an intermittent light! Will not the reader peep with us into this singular *camera lucida*, where an extinct species, though fitfully, can still be seen alive? Extinct species, we say; for the live specimens which still go about under that character are too evidently to be classed as spurious in Natural History: the Gospel of Richard Arkwright once promulgated, no Monk of the old sort is any longer possible in this world. But fancy a deep-buried Mastodon, some fossil Megatherion, Ichthyosaurus, were to begin to *speak* from amid its rock-swathings, never so indistinctly! The most extinct fossil species of Men or Monks can do, and does, this miracle,—thanks to the Letters of the Alphabet, good for so many things."

Jocelin, as the author says, was a veritable Boswell, recording more than he could understand or justly appreciate, but recording much less than the reader desires to know. "Jocelin, though he talks with such clear familiarity, like a next-door neighbour, will not answer any question: that is the peculiarity of him, dead these six hundred and fifty years, and quite deaf to us, though still so audible! The good man, he cannot help it, nor can we." But our author does strive to help it. Many of the questions Jocelin cannot answer, Mr. Carlyle answers for him; and in his answers, he conjures up such a vision of the past, as Jocelin himself could never have dreamed.

"Behold therefore, this England of the Year 1200 was no chimerical vacuity or dreamland, peopled with mere vaporous Fantasms, Rymer's Fœdera, and Doctrines of the Constitution; but a green solid place, that grew corn and several other things. The Sun shone on it; the vicissitude of seasons and human fortunes. Cloth was woven and worn; ditches were dug, furrow-fields ploughed, and houses built. Day by day all men and cattle rose to labour, and night by night returned home weary to their several lairs. In wondrous Dualism, then as now, lived nations of breathing men; alternating, in all ways, between Light and Dark; between joy and sorrow, between rest and toil,—between hope, hope reaching high as Heaven, and fear deep as very Hell. Not vapour Fantasms, Rymer's Fœdera at all! Cœur-de-Lion was not a theatrical popinjay with greaves and steel-cap on it, but a man living upon victuals,—*not* imported by Peel's Tariff. Cœur-de-Lion came palpably athwart this Jocelin at St. Edmundsbury; and had almost peeled the sacred gold '*Feretrum*,' or St. Edmund Shrine itself, to ransom him out of the Danube Jail."

Here, again, is another picture, more in detail:—

"These clear eyes of neighbour Jocelin looked on the bodily presence of King John; the very John *Sansterre*, or Lackland, who signed *Magna Charta* afterwards in Runnymead. Lackland, with a great retinue, boarded once, for the matter of a fortnight, in St. Edmundsbury Convent; daily in the very eye-sight, palpable to the very fingers of our Jocelin: O Jocelin, what did he say, what did he do; how looked he, lived he;—at the very lowest, what coat or breeches had he on? Jocelin is obstinately silent. Jocelin marks down what interests *him*; entirely deaf to *us*. With Jocelin's eyes we discern almost nothing of John Lackland. As through a glass darkly, we with our own eyes and appliances, intensely looking, discern at most: A blustering, dissipated, human figure, with a kind of blackguard quality air, in cramoisy velvet, or other uncertain texture, uncertain cut, with much plumage and fringing; amid numerous other human figures of the like; riding abroad with hawks; talking noisy nonsense;—tearing out the bowels of St. Edmundsbury Convent (its larders namely and cellars) in the most ruinous way, by living at rack and manger there. Jocelin notes only, with a slight subacidity of manner, that the King's Majesty, *Dominus Rex*, did leave, as gift for our St. Edmund Shrine, a handsome enough silk cloak,—or rather pretended to leave, for one of his retinue borrowed it of us, and *we* never got sight of it again; and, on the whole, that the *Dominus Rex*, at departing, gave us 'thirteen *sterlingii*,' one shilling and one penny, to say a mass for him; and so departed,—like a shabby Lackland as he was! 'Thirteen pence sterling,' this was what the Convent got from Lackland, for all the victuals he and his had made away with. We of course said our mass for him, having covenanted to do it,—but let impartial posterity judge with what degree of fervour! And in this manner vanishes King Lackland; traverses swiftly our strange intermittent magic-mirror, jingling the shabby thirteen pence merely; and rides with his hawks into Egyptian night again."

We must add the morality drawn by Mr.

Digitized by Google

Carlyle, if only for its appositeness to his own book:—

"It is Jocelin's manner with all things; and it is men's manner and men's necessity. How intermittent is our good Jocelin; marking down, without eye to *us*, what *he* finds interesting! How much in Jocelin, as in all History, and indeed in all Nature, is at once inscrutable and certain; so dim, yet so indubitable; exciting us to endless considerations. For King Lackland *was* there, verily he; and did leave these *tredecim sterlingii* if nothing more, and did live and look in one way or the other, and a whole world was living and looking along with him! There, we say, is the grand peculiarity; the immeasurable one; distinguishing, to a really infinite degree, the poorest historical Fact from all Fiction whatsoever. Fiction, 'Imagination,' 'Imaginative Poetry,' &c. &c., except as the vehicle for truth, or *fact* of some sort,—which surely a man should first try various other ways of vehiculating, and conveying safe,—what is it? Let the Minerva and other Presses respond!"

Oh, how grievously must all judicious admirers lament that the author of this passage has not tried some other "way of vehiculating" truths, of which this our English world requires to be rendered more intimately conscious, and which, "in other ways" than those he has affected, might have been presented, to some good and practical purpose.

Putting on one side the general argument, and taking the distinct paragraphs and individual opinions, each by itself, there will be found in Mr. Carlyle's pages an abundance of matter of a suggestive character; striking truths, originally (too originally) expressed, and many of them of deep and general import. Opening the chapters on the past with a picturesque description of the ruins of St. Edmundsbury Abbey, he takes occasion to expatiate on the small amount of really useful knowledge preserved by annalists and antiquarians. The remark may be useful to the English student; but the modern historians of France have long been strenuously employed in removing some part of the reproach, by diligent researches tending to the revival of decayed intelligences concerning popular habits and modes of thought.

"The *Burg*, Bury, or 'Berry' as they call it, of St. Edmund is still a prosperous brisk Town; beautifully diversifying, with its clear brick houses, ancient clean streets, and twenty or fifteen thousand busy souls, the general grassy face of Suffolk; looking out right pleasantly, from its hill-slope, towards the rising Sun: and on the eastern edge of it, still runs, long, black and massive, a range of monastic ruins; into the wide internal spaces of which the stranger is admitted on payment of one shilling. Internal spaces laid out, at present, as a botanic garden. Here stranger or townsman, sauntering at his leisure amid these vast grim venerable ruins, may persuade himself that an Abbey of St. Edmundsbury did once exist; nay there is no doubt of it: see here the ancient massive Gateway, of architecture interesting to the eye of Dilettantism; and farther on, that other ancient Gateway, now about to tumble, unless Dilettantism, in these very months, can subscribe money to cramp it and prop it! Here, sure enough, is an Abbey; beautiful in the eye of Dilettantism. Giant Pedantry also will step in, with its huge *Dugdale* and other enormous *Monasticons* under its arm, and cheerfully apprise you, That this was a very great Abbey, owner and indeed creator of St. Edmund's Town itself, owner of wide lands and revenues; nay that its lands were once a county of themselves; that indeed King Canute or Knut was very kind to it, and gave St. Edmund his own gold crown off his head, on one occasion: for the rest, that the Monks were of such and such a genus, such and such a number; that they had so many carucates of land in this hundred, and so many in that; and then farther that the large Tower or Belfry was built by such a one, and the smaller Belfry was built by &c. &c.—Till human nature can stand no more of it; till human nature desperately takes refuge in forgetfulness, almost in flat disbelief of the whole business, Monks, Monastery, Belfries, Carucates and all! Alas, what mountains of dead ashes, wreck and burnt bones, does assiduous Pedantry dig up from the Past Time, and name it History, and Philosophy of History; till, as we say, the human soul sinks wearied and bewildered; till the Past Time seems all one infinite incredible grey void, without sun, stars, hearth-fires, or candle-light; dim offensive dust-whirlwinds filling universal Nature; and over your Historical Library, it is as if all the Titans had written for themselves: DRY RUBBISH SHOT HERE!"

We should, however, have begun by stating that Mr. Carlyle's illustration of the past is preceded by "a proem," in which, among other things, we find some just reflections on the unblessed condition of the wealth of England, a wealth which, circumstanced as we are, is productive of no happiness to any class. The destitution of millions is horrible enough to contemplate; but that is not all: there is still to be added the mockery of enjoyment, obtained by those to whom Plutus has been more liberal.

"Nor are they of the St. Ives workhouses, of the Glasgow lanes, and Stockport cellars, the only unblessed among us. This successful industry of England, with its plethoric wealth, has as yet made nobody rich; it is an enchanted wealth, and belongs yet to nobody. We might ask, Which of us has it enriched? We can spend thousands where we once spent hundreds; but can purchase nothing good with them. In Poor and Rich, instead of noble thrift and plenty, there is idle luxury alternating with mean scarcity and inability. We have sumptuous garnitures for our Life, but have forgotten to *live* in the middle of them. It is an enchanted wealth; no man of us can yet touch it. The class of men who feel that they are truly better off by means of it, let them give us their name! Many men eat finer cookery, drink dearer liquors,—with what advantage they can report, and their Doctors can: but in the heart of them, if we go out of the dyspeptic stomach, what increase of blessedness is there? Are they better, beautifuller, stronger, braver? Are they even what they call 'happier'? Do they look with satisfaction on more things and human faces in this God's-Earth; do more things and human faces look with satisfaction on them? Not so. Human faces gloom discordantly, disloyally on one another. Things, if it be not mere cotton and iron things, are growing disobedient to man. The Master Worker is enchanted, for the present, like his Workhouse Workman; clamours, in vain hitherto, for a very simple sort of 'Liberty:' the liberty 'to buy where he finds it cheapest, to sell where he finds it dearest.' With guineas jingling in every pocket, he was no whit richer; but now, the very guineas threatening to vanish, he feels that he is poor indeed. Poor Master Worker! And the Master Unworker, is not he in a still fitaller situation? Pausing amid his game-preserves, with awful eye,—as he well may? Coercing fifty-pound tenants; coercing, bribing, cajoling; doing what he likes with his own. His mouth full of loud futilities, and arguments to prove the excellence of his Corn-law; and in his heart the blackest misgiving, a desperate half-consciousness that his excellent Corn-law is *in*defensible, that his loud arguments for it are of a kind to strike men too literally *dumb*."

This, as we have said, is not new; but we must concede that it is, on the whole, vigorously put.

If the fault of Mr. Carlyle's book be, that it works out no ultimate and practical truth, its merit is, that it perpetually starts partial truths, which, albeit in the author's hands they lead (like the poet's passages)—to nothing, may yet assist other more methodical minds in advancing a step nearer to something like a practical conclusion. To some of these we may advert hereafter.

Gabrielle: or Pictures of a Reign. A Historical Novel. By Louisa Stuart Costello. 3 vols. Newby.

"A romance" is the proper designation of this tale, since Miss Costello avails herself of her familiarity with wild French scenery, to relieve the formal splendours of French court-life under Louis Quatorze. Nor is the connexion of the horrors of the Puy de Dôme with the pomps of Paris too violent for the reality. Beneath the gold and purple of the festivities with which Le Grand Monarque (arch-pageant master!) dazzled France, flowed an under-current of crime and of savagery, the far-off springs of which must have been in the hiding-place where the poisoner and the sorcerer gathered materials for carrying on their foul and mysterious trades. But we think "the lady doth protest too much" in making the saintly Maintenon the central point by which the palace and the haunt of brilliancy communicated. That gentlewoman, if we have read her aright, was ambitious, heartless, prudent;—but not unscrupulous. On the contrary, nothing in her career seems to us more painfully instructive, than the manner in which she took refuge in the formalities of devotion, to appease the achings of her hollow heart, to silence the whispers of a conscience accusing her of ingratitude, falsity, and conformity, for gain's sake, to the selfish baseness of a crowned profligate. We are not prepared, however, to set up our intimacy with the French annalists of the time against Miss Costello's; and therefore she may have warrant for the "inky suit" in which she hath clothed the widow Scarron. Of course, in a record of such a time, we have other royal favourites—the haughty De Mortemar, and the exquisite Fontanges, a portrait of whom, decked in the piquant knot of carnation ribbons, which so long bore her name, is one of the fairest things in the galleries at Versailles. We have also a glimpse at *the* Ninon. The fame of this frail lady, by the way, has of late risen in the market; and she has here, strange to say, fascinated an Englishwoman into a "gentle construction" of her misdeeds!

The thread of domestic interest upon which 'Gabrielle' is founded has been well worn, but is still not quite worn out. An innocent and beautiful girl is married by a nobleman, under the disguise of an artist. The end, however, is not, as in our own Lady of Burghley's case, joy and exaltation. There is another wife! Further to point out the tragical issue of events would be indiscreet. With this is intertwined the tale of the fortunes of a gipsy hero, to the needless entanglement of the story. The long episode, too, of 'the Voyage of the Sea Star' is redundant. In short, the want of 'Gabrielle' is construction. That descriptive power abounds may be gathered from one scene, which we shall detach—the execution of the infamous charlatans, by whom, through the agency of the Count Lomaria, De Maintenon wove her subtle web, and the tragedy which succeeded the sacrifice:

"Madame de Sevigné records in her famous letters that she was fortunate to get a sight of the procession as she sat at the hotel de Sully, with numerous ladies of rank, her friends, all of whom appear to have been equally gratified. Through many of the streets thus lined, the bridegroom Lomaria, and his intimate and inseparable friends de Sevigné, de Grammont and the rest, rode on their superbly caparisoned horses towards St. Germain de l'Auxerrois. Lomaria's dress was one which had excited great admiration, and it was pronounced by those excellent judges an inimitable one. His mantle and doublet were of violet velvet, with an embroidery of diamonds—the first lined with black satin, strewed all over with small diamond stars, said to surpass in richness that of the Prince de Conti on his wedding day. His hat was surmounted with a white plume, and fastened with jewels of great value, and, as he rode along, the grace and ease with which he managed his fiery steed were the theme of admiration in many a crowded balcony, whence fair hands were waved to the gallant party as they paced along. As they had to pass near the Place de Grève, it was proposed by the bridegroom's friends, and readily assented to by him, that they should turn down that way, and see the preparations

Digitized by Google

for the execution: they accordingly directed their horses heads' down a little alley, which leads into the square, and had soon gained the opening. In the centre stood a high stake, surrounded by huge logs of wood, and light brushwood and straw spread over them. A band of guards stood close to it, preventing the near approach of the populace, who were pouring in by every avenue. Presently, from the opposite side from that at which Lomaria's party had entered, a cart was seen advancing, in which stood the condemned—La Voisin and de Rouville. They were dressed in white, and in their hands, tied together with cords, each held a torch. La Voisin was very red, and had all the appearance of being intoxicated—she violently repulsed the priest who was by her side, and refused to look at the crucifix he held up to her. De Rouville remained motionless, with her head bent down upon her breast, her brows strongly knit, and her lips pressed closely together. 'Let us leave this place,' said Lomaria, turning pale, 'I had no idea the victims had arrived. I have no taste for an *auto da fé*.' 'We must halt a moment,' said de Sevigné, 'for the mob is so great that we shall scarcely be able to pierce it. Look at La Voisin, they say she has been drunk for several days, and is resolved to die merrily. The other is de Rouville—poor things, how they must feel the jolting of that odious cart! they who had so much taste too—it is really a pity. But see—the fair Pole recognizes us—she gesticulates—she would fain wave her hand but that it is tied. Lomaria, it is surely you she is addressing.' Lomaria looked in the direction his friend pointed, and met the eye of the unfortunate woman who was addressing herself to him. The crowd rushed on, their howlings and hootings as the prisoners were hurried along became fearful, but above them all the bridegroom heard the curses of his nurse de Rouville, as she tore her hair with her manacled hands, and strove to break from the guards who held her. 'There!' cried she, 'there he rides, flaunting and gay—to church to his bride—he who is a greater sinner than us all—a murderer and betrayer. He told me he would save my life at the last, but he abandoned his poor nurse, he turned a deaf ear to her prayers—he would not speak one word to Scarron to keep her from the stake—but he will not escape. Go—go to the bridal—enter the church and shine in beauty and wickedness—but beware of leaving it—the Aire Neuve! the Aire Neuve! Bretons do not forgive!' Lomaria spurred his horse—his companions did the same, and they soon cleared the crowd, and heard only at a distance the shrieks of the condemned and the execrations of the mob. 'The fair Poles,' said de Grammont, 'who deceived us all so well, deserved a better fate, it must be exceedingly painful to die in this way.' 'Oh!' remarked de Sevigné, 'I am assured that they will be strangled before the pile is lighted—one of their own band who is experienced in the art, and says he practised it in the East, has been accepted for the office, his dexterity is wonderful—he is a gipsy—we will go one day, Lomaria, and see some of his performances—it must be very curious—he will exhibit on animals, as it is thought wrong to take human subjects—though heaven knows our jails are full enough to spare some as specimens.' Lomaria laughed hoarsely. 'We shall be late,' said he, 'and the bride will be kept waiting. Poor Angelique! she is no doubt already on her way; in a few minutes I shall be a rich man.' 'What an agreeable sensation that must be,' said de Sevigné, 'I really think I shall give my mother carte blanche to marry me to some fortunate heiress—if they could arrange it all without my appearing in the business, I really would not object.' Talking thus, the friends arrived at the church door, where they took their stations, and waited till the bridal cortège appeared, which it shortly after did, and all entered together. There was a great crowd in the square before the church, and it was with difficulty a way could be made through the concourse of people. Many artisans and persons of a low class were mingled with well-dressed groups, all eager to gaze on the scene. Amongst them might be observed two men of rather singular appearance, who stood together and gravely looked on: they were dressed nearly alike, and wore large black hats, very much flapped over their faces, their long hair hanging over their shoulders, their nether garments of great amplitude plaited in large folds round their waists, and fastened by a girdle, in which were stuck the long knife peculiar to their nation: their costume at once proclaimed them as Bretons, and the singular patois in which they uttered a few words to each other at intervals, left no doubt on the subject. They seemed quite careless of the jibes of the mob, who cut many jokes on their outlandish appearance, but continued to keep close to the door of entrance, one on each side, maintaining their post with great perseverance, as if determined to be the first to see the bride and bridegroom when they came forth as man and wife. Their apparent desire was soon about to be accomplished, for, the ceremony over, the folding doors were thrown open, and the bridal party began to walk forward: the Queen, and many of her ladies, had been witnesses of the ceremony, and when it was finished, Mary Therèse, unable to suppress a tear, stooped down and imprinted a kiss on the bride's forehead. A strain of solemn music filled the aisles as Lomaria gave his hand to Angelique, and led her down the centre aisle to the door, where stood a magnificent carriage covered with gilding, and the panels richly painted with emblematic figures and devices. Plumes nodded at each corner of the gilded roof, the horses were caparisoned in dazzling colours, and the numerous attendants were clothed in liveries of the richest description. The pair reached the door, and Lomaria handed his bride into the resplendent chariot, a present from the king, and substituted, as a surprise, for the travelling carriage which was to have borne the new married lovers to St. Germain, where a grand fête awaited them. Angelique smiled as she observed the change, and paused an instant as she placed her foot on the step, turning to Lomaria with a gratified expression. At that moment the two Bretons darted forward, their knives gleamed in the air, and before the flash was scarcely observed both were buried in the body of the bridegroom. 'L'Aire Neuve!' shrieked Lomaria as he fell on the steps of the carriage, dying the white garments of his bride crimson with his blood. The crowd, paralyzed with amazement and horror, pressed forward—many had seen the blow, but no one had presence of mind to seek for or seize the assassins, who had disappeared, and were nowhere to be found, when, the confusion having subsided, inquiry was made for them. As de Sevigné, de Grammont, and the rest returned with the body of the murdered man to his residence, they again crossed the Place de Grève—the crowd had deserted it—all had hurried to the wedding, but in the centre were still seen a few smouldering ashes—a strong smell of fire filled the space, heavy masses of smoke rolled sluggishly away, and all told the tale that Les Amis had expinted their crimes, and that the catalogue of their dangerous revelations was hushed, by the frightful death to which they had been condemned."

We had marked the elaborate and graphic account of a ballet at court, the striking description of the old town at Gwerrand, in Brittany, which closes the novel, but the above is possibly a fairer specimen of our author's powers as a novelist. While reading 'Gabrielle' we have chanced also to run through Madame Dudevant's last novel, 'Consuelo,' a fantastic art-romance, in which Porpora, and Haydn, and Metastasio, and Maria Theresa, and Frederic of Prussia, and Baron Trenck figure, besides less famous imaginary persons, conjured up by the genius of the authoress. In the power of painting historical characters, we cannot but think Miss Costello comes nearest the truth, while her delineations fall little short, in force, of those of the famous French novelist—no despicable proof, we think, that 'Gabrielle' deserves a good place among contemporary works of light literature.

The Irish Sketch-Book. By Mr. M. A. Titmarsh. With numerous Engravings. 2 vols. Chapman & Hall.

Reader, you know Titmarsh? "Excellent well, he's a fishmonger." Then there is no necessity for prologizing concerning him, further than to say, that he has been pencilling and penning it in Ireland, and that here are the results. We always prefer, *when we can*, to let authors speak for themselves; just intercalating a word or so, here and there, of criticism or comment, as necessity or whim may suggest; so let us e'en to it at once, "like French falconers."

First, then, as to the choice of subject, thus sayeth Mr. Titmarsh:—

"The little tour we have just been taking has been performed, not only by myriads of the 'car-drivingest, tay-drinking, say-bathingest people in the world,' the inhabitants of the city of Dublin, but also by all the tourists who have come to discover this country for the benefit of the English nation. 'Look here!' says the ragged-bearded genius of a guide, at the Seven Churches; 'this is the spot which Mr. Henry Inglis particularly admired, and said it was exactly like Norway. Many's the song I've heard Mr. Sam Lover sing here—a pleasant gentleman entirely. Have you seen my picture that's taken off in Mrs. Hall's book? all the strangers know me by it, though it makes me much cleverer than I am.' Similar tales has he of Mr. Barrow, and the transatlantic Willis, and of Crofton Croker, who has been everywhere."

The above, although referring only to a description of two days' tour in Wicklow, is strictly applicable to the whole work. Ireland has been served up to the notice of John Bull in more ways than Frenchmen dress eggs, and has been discussed by more varieties of the species "Traveller," than have been enumerated by Sterne; so that we were a little out of temper with the author on taking up his book; but a few chapters sufficed to satisfy us that if Ireland be one, temper and disposition are manifold; and that all shivering in unrepaled nakedness, as the green island stands, objectively, (or, as Hibernia herself would say,) "on the floor of the creation,"—subjectively, and "in the mind's eye," she may have as large a wardrobe of parti-coloured suits of clothing as would establish a masquerade warehouse,—as many as there are eyes to see, and minds to reflect; why not, therefore, Titmarsh with the rest? No one, indeed, has more subjectivity (we thank thee, Germany, for teaching us the word,) in his own way; and that way is pleasant,—coarse now and again, but honest and kindly on the whole; above all, free from hypocrisy. In the very outset he falls foul of an established cant, which we think far more honoured in the breach than the observance, the cant of the black cap; and from this vice, illustrated by a flourish of the Chief Justice, Mr. Titmarsh elaborates an additional argument against capital punishments, worth listening to:—

"Long ere this is printed, for instance, Byrne and Woods have been hanged: sent 'to face their God,' as the Chief Justice says, 'with the weight of their victim's blood upon them,'—a just observation; and remember that it is *we who send them*. It is true that the judge hopes Heaven will have mercy upon their souls, but are such recommendations of particular weight because they come from the bench? Psha! If we go on killing people without giving them time to repent, let us at least give up the cant of praying for their souls' salvation. We find a man drowning in a well, shut the lid upon him, and heartily pray that he may get out. Sin has hold of him, as the two ruffians of Laffan yonder, and we stand aloof, and hope that he may escape. Let us give up the ceremony of condolence, and be honest like the witness [who apathetically witnessed the murder], and say, 'Let him save himself or not, it's no business of ours.'"

This bold piece of criticism was suggested by a newspaper report of the judge's charge; and we should have begun by stating that the author, on his arrival at Dublin, had taken up the journals of the morning in search of Irish characteristics to direct his future inquiries. For this purpose he goes at once to the advertisements:

"Some hundred years hence, when students want to inform themselves of the history of the present day, and refer to files of *Times* and *Chronicle* for the purpose, I think it is possible that they will consult,

Digitized by Google

not so much those luminous and philosophical leading articles which call our attention at present both by the majesty of their eloquence and the largeness of their type, but that they will turn to those parts of the journals into which information is squeezed into the smallest possible print, to the advertisements, namely, the law and police reports, and to the instructive narratives supplied by that ill-used body of men who transcribe knowledge at the rate of a penny a line. The papers before me (the *Morning Register*, Liberal and Roman Catholic, *Saunders's News-Letter*, neutral and Conservative,) give a lively picture of the movement of city and country on this present fourth day of July, and the Englishman can scarcely fail, as he reads them, to note many small points of difference existing between his own country and this. How do the Irish amuse themselves in the capital? The love for theatrical exhibitions is evidently not very great. Theatre Royal—Miss Kemble and the Sonnambula, an Anglo-Italian importation. Theatre Royal Abbey-street,—the Temple of Magic and the Wizard, last week. Adelphi Theatre, Great Brunswick-street—the Original Seven Lancashire Bell-ringers, a delicious excitement indeed! Portobello Gardens—THE LAST ERUPTION BUT SIX, says the advertisement in capitals. And, finally, 'Miss Hayes will give her first and farewell concert at the Rotunda, previous to leaving her native country.' Only one instance of Irish talent do we read of, and that, in a desponding tone, announces its intention of quitting its native country. All the rest of the pleasures of the evening are importations from cockney-land. The Sonnambula from Covent Garden, the Wizard from the Strand, the Seven Lancashire Bell-ringers from Islington, or the City-road, no doubt; and as for The last Eruption but Six, it has *erumped* near the Elephant and Castle any time these two years, until the cockneys would wonder at it no longer."

Passing over the "commercial" advertisements, we proceed to the author's comment on the academic announcements:—

"The most active advertisers are the schoolmasters. * * Of all these announcements that of Madame Shanahan (a delightful name) is perhaps the most brilliant. 'To Parents and Guardians.—Paris.—Such parents and guardians as may wish to intrust their children for education *in its fullest extent* to Madame Shanahan, *can have the advantage of being conducted to Paris* by her brother the Rev. J. P. O'Reilly, of Church-street Chapel,' which admirable arrangement carries the parents to Paris and leaves the children in Dublin. Ah, Madame, you may take a French title; but your heart is still in your country, and you are to the *fullest extent* an Irishwoman still! * * A century hence some antiquary may light upon a Dublin paper, and form marvellous calculations regarding the state of education in the country. For instance, at Bective-House seminary, conducted by Dr. J. L. Burke, Ex-Scholar T.C.D., no less than *two hundred and three* young gentlemen took prizes at the Midsummer examination. A Dr. Delamere, Ex-Scholar T.C.D., distributed three hundred and twenty rewards to his young friends; and if we allow that one lad in twenty is a prizeman, it is clear that there must be six thousand four hundred and forty youths under the Doctor's care. Other schools are advertised in the same journals, each with its hundred of prize-bearers; and if other schools are advertised, how many more must there be in the country which are not advertised! There must be hundreds of thousands of prizemen, millions of scholars: besides national schools, hedge-schools, infant schools, and the like."

On returning to his hotel, a respectable, and, on the whole, comfortable house, the author is taken all aback at finding his bed-room window unprovided with pulleys, and propped open with a hearth-broom (a common state of things in second-rate Irish houses). We wish we could give his vignette in illustration of the ingenious process; but failing in that, we present our readers with the moral *drawn* from this eloquent bit of still life:—

"As I came up to it in the street, its appearance made me burst out laughing, very much to the surprise of a ragged cluster of idlers lolling upon the steps next door. * * You don't see such windows commonly in respectable English inns—windows leaning gracefully upon hearth-brooms for support. Look out of that window without the hearthbroom and it would cut your head off; how the beggars would start that are always sitting on the steps next door! Is it prejudice that makes one prefer the English window, that relies on its own ropes and ballast (or lead if you like), and does not need to be propped by any foreign aid? or is this only a solitary instance of the kind, and are there no other specimens in Ireland of the careless, dangerous, extravagant hearthbroom system!"

Our readers will perceive that we spare them all mere local description, selecting those passages for notice that relate to manners and personalities, in which Titmarsh is ever at home, vigorous, rapid, and, above all, faithful. Here is a character by no means uncommon in country parts, and sketched *con amore*:—

"And likewise, in the midst of this wild tract, a fellow met us who was trudging the road with a fish-basket over his shoulder, and who stopped the conch, hailing two of the gentlemen in it by name, both of whom seemed to be much amused by his humour. He was a handsome rogue, a poacher, or salmon-taker, by profession, and presently poured out such a flood of oaths, and made such a monstrous display of grinning wit and blackguardism, as I have never heard equalled by the best Billingsgate practitioner, and as it would be more than useless to attempt to describe. Blessings, jokes, and curses, trolled off the rascal's lips with a volubility which caused his Irish audience to shout with laughter, but which were quite beyond a Cockney. It was a humour so purely national as to be understood by none but natives, I should think. I think it rather served to frighten than to amuse; and I am not sure but that I looked out for a band of jocular cut-throats of his sort, to come up at a given guffaw, and playfully rob us all round. However, he went away quite peaceably, calling down for the party the benediction of a great number of saints, who must have been somewhat ashamed to be addressed by such a rascal."

As a *pendant*, we give an Irish species of the genus gentleman, for all whose havings and sayings, as Isaac Mendoza would say, "we will schwear:"—

"There was [in an inn coffee-room] a neat, handsome, correct young English officer warming his slippers at the fire, and opposite him sate a worthy gentleman, with a glass of mingled 'materials,' discoursing to him in a very friendly and confidential way. * * The speaker was dressed in deep black, worn however with that *dégagé* air peculiar to the votaries of Bacchus, or that nameless god—offspring of Bacchus and Ceres, who may have invented the noble liquor called whiskey. It was fine to see the easy folds in which his neckcloth confined a shirt-collar, moist with the generous drops that trickled from the chin above,—its little per centage upon the punch. There was a fine dashing black satin waistcoat that called for its share, and generously disdained to be buttoned. * * 'Sir,' says he, 'as I was telling you before this gentleman came in (from Westport, I preshume, sir, by the mail; and my service to you!), the butchers in Chume (Tuam)—where I live, and shall be happy to see you and give you a shake-down, a cut of mutton, and the use of as good a brace of pointers as ever you shot over—the butchers say to me, whenever I look in at their shops, and ask for a joint of meat—they say: "Take down that quarter o' mutton, boy, IT'S NO USE WEIGHING IT for Mr. Bodkin. He can tell with an eye what's the weight of it to an ounce!" And so, sir, I can; and I'd make a bet to go into any market in Dublin, Tchume, Ballinasloe, where you please, and just by looking at the meat decide its weight.'"

What follows is so "rich and rare" that we must continue:—

"The honest gentleman proceeded with his personal memoirs; and (with a charming modesty that authenticated his tale, while it interested his hearers for the teller) he called for a fresh tumbler, and began discoursing about horses. 'Them, I don't know,' says he, confessing the fact at once, 'or, if I do, I've been always so unlucky with them that it's as good as if I didn't. To give you an idea of my ill-fortune: Me brother-'n-law Burke once sent me three colts of his to sell at this very fair of Ballinasloe; and, for all I could do, I could only get a bid for one of 'em, and sold her for sixteen pound. And d'ye know what that mare was, sir?' says Mr. Bodkin, giving a thump that made the spoon jump out of the punch-glass for fright,—'D'ye know who she was? she was Water-Wagtail, sir,—WATER-WAGTAIL! She won fourteen cups and plates in Ireland before she went to Liverpool; and you know what she did *there?*' (We said, 'Oh! of course.') 'Well, sir, the man who bought her from me, sold her for four hundre' guineas; and in England, she fetched eight hundre' pounds! Another of them very horses, gentlemen, (Tim, some hot wather—screeching hot, you divil—and a sthroke of the limin)—another of them horses that I was refused fifteen pound for, me brother-in-law sould to Sir Rufford Bufford for a hundre'-and-fifty guineas. Wasn't *that* luck? Well, sir, Sir Rufford gives Burke his bill at six months, and don't pay it when it come jue. A pretty pickle Tom Burke was in, as I leave ye to fancy, for he'd paid away the bill, which he thought as good as goold; and sure it ought to be, for Sir Rufford had come of age since the bill was drawn, and before it was due, and, as I needn't tell you, had slipped into a very handsome property. On the protest of the bill, Burke goes in a fury to Gresham's, in Sackville-street, where the baronet was living, and (would ye believe it?) the latter says he doesn't intend to meet the bill, on the score that he was a minor when he gave it. On which, Burke was in such a rage, that he took a horsewhip, and vowed he'd beat the baronet to a jelly, and post him in every club in Dublin, and publish every circumstance of the transaction.' 'It *does* seem rather a queer one,' says one of Mr. Bodkin's hearers. 'Queer indeed; but that's not it, you see; for Sir Rufford is as honourable a man as ever lived; and after the quarrel he paid Burke his money, and they've been warm friends ever since—but what I want to show ye is our infernal luck. *Three months before, Sir Rufford had sold that very horse for three hundre guineas.*"

In this extract there is a whole national history involved, if the reader will take the trouble to reflect upon it.

The following description is purely Titmarshian, as those who remember Glendalough and its seven churches will allow:—

"I think the Irish scenery just like the Irish melodies—sweet, wild, and sad even in the sunshine. You can neither represent one nor other by words; but I am sure if one could translate 'The Meeting of the Waters' into form and colours, it would fall into the exact shape of a tender Irish landscape. So, take and play that tune upon your fiddle, and shut your eyes and muse a little, and you have the whole scene before you. I don't know if there is any tune about Glendalough; but if there be, it must be the most delicate, fantastic, fairy melody that ever was played. * * Here is a little lake and little fords across it, surrounded by little mountains, and which lead you now to little islands where there are all sorts of fantastic little old chapels and graveyards; or again into little brakes and shrubberies where small rivers are crossing over little rocks, plashing and jumping, and singing as loud as ever they can. * * There are seven churches, whereof the clergy must have been the smallest persons, and have had the smallest benefices and the littlest congregations ever known. As for the Cathedral, what a bishoplet it must have been that presided there!—the place would hardly hold the Bishop of London, or Mr. Sidney Smith—two full-sized clergymen of these days—who would be sure to quarrel there for want of room, or for any other reason. There must have been a dean no bigger than Mr. Moore, and a chapter no bigger than that chapter in Tristram Shandy which does not contain a single word, and mere pop-guns of canons, and a beadle about as tall as Crofton Croker, to whip the little boys who were playing at taw (with peas) in the yard."

Here is another pleasant bit of exaggeration, relative to Westport, one of the remotest parts of the West of Ireland:—

"There was a long, handsome pier (which, no doubt, remains at this present minute), and one solitary cutter along side it, which may or may not be there now. There were about three boats lying near the cutter lying alongside it, and six sailors, with long

Digitized by Google

shadows, lolling upon the pier. As for the warehouses, they are enormous; and might accommodate, I should think, not only the trade of Westport, but of Manchester too. There are huge streets of these houses, ten stories high, with cranes, owners' names, &c., marked Wine Stores, Flour Stores, Bonded Tobacco Warehouses, and so forth. The six sailors that were singing on the pier, no doubt are each admirals of as many fleets of a hundred sail, that bring wines and tobacco from all quarters of the world to fill these enormous warehouses. These dismal mausoleums, as vast as pyramids, are the places where the dead trade of Westport lies buried—a trade that, in its lifetime, probably was about as big as a mouse. Nor is this the first nor the hundredth place to be seen in this country, which sanguine builders have erected to accommodate an imaginary commerce. Millowners over-mill themselves, merchants over-warehouse themselves, squires over-castle themselves, little tradesmen about Dublin and the cities over-villa and over-gig themselves, and we hear sad tales about hereditary bondage and the accursed tyranny of England."

Every subject, it is said, has two handles at the least, and hence one benefit of a plurality of travelling authors for the same locality. Those who remember some former glowing description of the Trappists of Mount Meilleraie, will be ill prepared for the Titmarsh view of the same subject:—

"They have among themselves workmen to supply all their frugal wants, ghostly tailors and shoemakers, spiritual gardeners and bakers, working in silence, and serving Heaven after their way. If this reverend community, for fear of the opportunity of sinful talk, choose to hold their tongues, the next thing will be to cut them out altogether, and so render the danger impossible—if, being men of education and intelligence, they incline to turn butchers and cobblers, and smother their intellects by base and hard menial labour; who knows but one day a sect may be more pious still, and rejecting even butchery and bakery as savouring too much of worldly convenience and pride, take to a wild-beast life at once? Let us concede that suffering, and mental and bodily debasement, are the things most agreeable to Heaven, and there is no knowing where such Piety may stop. I was very glad we had not time to see the grovelling place; and as for seeing shoes made or fields tilled by reverend amateurs, we can find cobblers and ploughboys to do the work better. By the way the Quakers have set up in Ireland a sort of monkery of their own. Not far from Carlow we met a couple of cars drawn by white horses, and holding white Quakers and Quakeresses, in white hats, clothes, shoes, with wild maniacal-looking faces, bumping along the road. Let us hope that we may soon get a community of Fakeers and howling Dervises into the country. It would be a refreshing thing to see such ghostly men in one's travels, standing at the corners of roads, and praising the Lord by standing on one leg, or cutting and hacking themselves with knives like the prophets of Baal. Is it not as pious for a man to deprive himself of his leg as of his tongue, and to disfigure his body with the gashes of a knife, as with the hideous white raiment of the illuminated Quakers?"

Notwithstanding the undeniable truth of this general remark, and notwithstanding the equally undeniable truth, that there is nothing in the political economy of the thing so very miraculous, that men possessing such resources should make a paradise in a desert,—writers of a more catholic spirit (we intend no villanous pun on the word,) would perhaps say, every man to his liking,—if such austerities amuse the parties, and relieve the mind from the "perilous stuff" that may be weighing on it, there is no great harm done; and better calculators might add, that the example of useful industry set to a wild and miserable population by these monks, has a money value, that may perhaps fully compensate for the cost. The truth is, that Mr. Titmarsh, though an honest, is far from an unprejudiced man. A close observer, and often a shrewd reasoner, he is still somewhat decided in his party views; and he does not possess that enlarged and grasping philosophy which is necessary to the perfect understanding of the "case of Ireland:" we think, therefore, he has done wisely in abstaining from any general summary of the results of his inquiry.

The Home: or, Family Cares and Family Joys. By Frederika Bremer. Translated by Mary Howitt. 2 vols. Longman & Co.

THE translation of a tale like the above, by an English wife and English mother, is good service done to her country. We prefer 'The Home' to 'The Neighbours.' It does not, indeed, contain any character so original and high-toned as '*ma chere mère*,' nor, perhaps, any passage equal in its humour to the autobiography of Miss Hellevi Hausgiebel; but it is more consistent, more probable, and less sentimental. As an illustration of northern life and manners, too, the tale has great value. Not even the recollections of Danzig by Madame Schopenhauer, reveal a more primitive state of society than that disclosed by Frederika Bremer. To touch upon only one whimsically characteristic point, it is a book which would have killed Byron, who hated to see women eat. Hardly a heart-sorrow is recounted, which admits not of alleviation by "roast veal and patties"—sisterly affection is cemented over "citron soufflets" and "large pears"—a brother's college triumph to be solemnized by a liberal emission of sugar-beer—and the early illusions of a dear mother in waning health, revived by the delicious ministry of a coffee feast and hot cakes. The Franks, (and we may presume the Swedes of the middle class,) are not among those unhappy ones described by Lady Morgan, "whom God hath joined, and family dinners put asunder." They have wholesome appetites as well as healthy affections; and the narrative of their discussions might claim a place upon Gunter's as well as Hookham's counter.

But to lay aside *badinage*, and to speak more to the purpose of the novel—we have here no "hair-breadth-'scapes" nor extravagant vicissitudes—but simply the every-day trials befalling a Judge's family of five daughters and a son: the originals of which are our familiar friends. Who has not known a Louise, "our eldest," with her thrifty ways, her sound principles and her grave airs—as good a manager as she is a wise lecturer? Who has not been acquainted with a Petrea, disturbed by genius enough to render her uneasy without making her distinguished? This time, however, she has a large nose which is openly alluded to by her family, as a trial to be borne along with her eccentric ways and unworldly notions. These are our favourites: and the portions of the book devoted to their affairs, we have found the most amusing. Louise, "our eldest," is much sought after by lovers; and, indeed, seeing that the youth of Sweden have hearty digestions, so excellent a housewife could not lack humble servants. But Louise prefers Poverty in a parsonage, offered to her by the family tutor, to Worldly Comfort in a palace: as our female readers will hardly wonder, when they are admitted to see the wooing of the latter:—

"'Cousin Louise, are you fond of fish? for example, bream?' asked the Landed-proprietor one evening as he seated himself beside Louise, who was industriously working a landscape in her embroidery frame.—'O yes! bream is very good fish,' replied she very phlegmatically, and without looking up from her work.—'O, with red-wine sauce,' said the Landed-proprietor, 'delicate! I have magnificent fishing on my estate at Oestanvik. Big fellows of bream! I catch them myself.'—'Who is that great fisher there?' asked Jacobi, with an impatient sneer, 'and what matters it to him whether Louise likes bream?' * * 'Cousin Louise, are you fond of birds?' asked the Landed-proprietor.—'O yes, particularly of fieldfares,' answered Louise.—'Nay, that's capital!' said the Landed-proprietor. 'There are innumerable fieldfares on my estate of Oestanvik. I often go out myself with my gun and shoot enough for dinner; piff-paff! with two shots I have killed a whole dishful!' * * 'Cousin Louise, are you fond of roast hare?' asked the Landed-proprietor.—'Master Jacobi, are you fond of roast hare?' whispered Petrea waggishly to the Candidate.—'Bravo, Petrea!' whispered her brother to her.—'Cousin Louise, are you fond of cold meat?' asked the Landed-proprietor, as he handed Louise to the supper-table.—'Should you like to be a landed-proprietor?' whispered Henrik to her as she left it. Louise answered exactly as a cathedral would have answered,—looked very solemn, and was silent."

"The family is assembled in the library: tea is just finished. Louise, at Petrea's and Gabriele's urgent request, has laid out the cards on a little table to tell them their fortunes. The Candidate seats himself near them, and appears determined to amuse himself with them, and to be lively; but Louise assumes all the more her 'cathedral air.' The Landed-proprietor steps in, bows, snorts, and kisses the hand of the 'gracious aunt.'—*Landed-proprietor.* Very cold this evening; I fancy we shall have frost.—*Elise.* It is a gloomy spring. We have lately read a most affecting account of the famine in the northern provinces. It is the misfortune of these late springs.—*Landed-proprietor.* O yes, the famine up there. No, we'll talk of something else—that's too gloomy. I have had my peas covered with straw. Cousin Louise, are you fond of playing Patience? I am very fond of it too; it is so composing. At my seat at Oestanvik I have little, little patience-cards. I fancy really that they would please my cousin.—The Landed-proprietor seats himself on the other side of Louise: the Candidate gives some extraordinary shrugs.—*Louise.* This is not patience; but a little witchcraft, by which I read fate. Shall I prophesy to you, Cousin Thure?—*Landed-proprietor.* O yes, prophesy something to me. Nothing disagreeable! If I hear anything disagreeable in an evening, I always have bad dreams at night. Prophesy me prettily—a little wife—a wife as lovely and as amiable as Cousin Louise.—*The Candidate* [with a look as if he would send the Landed-proprietor head over heels to Oestanvik]. I don't know whether Mamselle Louise likes flattery.—*Landed-proprietor* (who seems as if he neither heard nor saw his rival). Cousin Louise, are you fond of blue?—*Louise.* Blue? That is truly a lovely colour; but yet I prefer green.—*Landed-proprietor.* Nay, that is good! that is excellent! At Oestanvik, my dressing-room furniture is blue, beautiful light blue silk damask; but in my sleeping-room I have green moreen. I fancy really, Cousin Louise, that—— The Candidate coughs, and then rushes out of the room. Louise looks after him, sighs, and then examines the cards, in which she finds so many misfortunes for Cousin Thure, that he is quite terrified: the peas frosted, conflagration in the dressing-room, and last of all a rejection! The Landed-proprietor declares, notwithstanding, that he finds nothing of this unpleasant. The sisters smile, and make remarks."

It is much to Miss Bremer's credit that she makes the young lady "give the basket" to one who tempts so liberally "with rich viands and the pleasurable wine." We will now allow the reader a glimpse of the genius of the Home—the poor Petrea. This damsel burns with an ardent desire to distinguish herself, being vexed with the *stragglings* of a crude and busy imagination. A festival at Axelholm offers her a brilliant opportunity. After sundry abortive efforts to manage her natural defect—the nose!—she is now to be seen in the ball-room. But partners do not come. She looks at her mother, and fancies her ashamed of her; feels herself neglected, and must set about amending her condition with alacrity:—

"At this moment an old gentleman rose up from a bench opposite Petrea, with a tea-cup in his hand. In a mania of officiousness she rushed forward in order to assist him in setting it aside. He drew himself back and held the cup firmly, whilst Petrea, with the most firm and unwearying 'permit me, sir,' seemed determined to take it. The strife about the cup continued amid the unending bows of the gentleman, and

Digitized by Google

the equally unending courtesies of Petrea, until a passing waltzing couple gave a jostle without the least ceremony whatever to the compliment-makers, which occasioned a shake of the tea-cup, and revealed to Petrea the last thing in the world which she had imagined, that the cup was not empty! Shocked and embarrassed, she let go her hold, and allowed the old gentleman, with what remained of his cup of tea, to go and find out for himself a securer place. Petrea seated herself, she hardly knew how, on a bench near an elderly lady, who looked at her very good-naturedly, and who helped very kindly to wipe off the ablution of tea which she had received. Petrea felt herself quite confidential with this excellent person, and inquired from her what was her opinion of Swedenborg, beginning also to give her own thoughts on spectral visions, ghosts, etc. The lady looked at her, as if she thought she might be a little deranged, and then hastened to change her place. A stout military gentleman sat himself down ponderously, with a deep sigh, on the seat which the old lady had left, as if he were saying to himself, 'Ah, thank God! here I can sit in peace!' But, no! he had not sate there three minutes and a half, when he found himself called upon by Petrea to avow his political faith, and invited by her to unite in the wish of speedy war with Russia. Lieutenant-Colonel Uh—— turned rather a deaf ear to the battery by which his neighbour assailed him, but for all that he probably felt it not the less heavy, because after several little sham coughs he rose up, and left our Petrea alone with her warlike thoughts. • • Petrea now cast her eyes on a young girl who seemed to have had no better dancing fortune than herself, but who seemed to bear it much worse, appeared weary of sitting, and could hardly refrain from tears. Petrea, in whose disposition it lay to impart to others whatever she herself possessed—sometimes overlooking the trifling fact that what she possessed was very little desired by others—and feeling herself now in possession of a considerable degree of prowess, wished to impart some of the same to her companion in misfortune, and seated herself by her for that purpose. 'I know not a soul here, and I find it so horribly wearisome,' was the unasked outpouring of soul which greeted Petrea, and which went directly to her sympathising heart. Petrea named every person she knew in the company to the young unfortunate, and then, in order to escape from the weight of the present, began to unfold great plans and undertakings for the future. She endeavoured to induce her new acquaintance to give her her *parole d'honneur* that she would sometime conduct a social theatre with her, which would assist greatly to make social life more interesting; and further than that, that they should establish together a society of Sisters of Charity in Sweden, and make a pilgrimage to Jerusalem; furthermore, that they would write novels together; and that on the following day, or more properly in the night, they would rise at half-past ten o'clock, and climb to the top of a high mountain in order to see the sun rise; and finally, after all these, and sundry other propositions, Petrea suggested to her new acquaintance a thee-and-thou friendship between them! But, ah! neither Petrea's great prowess, nor her great friendship; neither the social theatre, nor the pilgrimage to Jerusalem, least of all the thee-and-thou friendship, availed anything towards enlivening the churlish young girl. Petrea saw plainly that an invitation to dance would avail more than all her propositions, so, sighing deeply because she was not a man to offer so great a pleasure, she rose up, and left the object of her vain endeavours."

We can make room for no more of these minikin distresses; but there are many to whom they will occur with all the unlovely truth of a daguerreotype.

It would be "omitting the part of Hamlet" were we to close this invitation to 'The Home' without speaking of the central figure in all its joys and sorrows—the Mother. Nothing more delicate, or womanly, or beautiful, is to be found in domestic fiction than her character: and we like it none the less for a certain touch of romance and sentiment not altogether English. She is of finer clay than any of her daughters;—was born with tastes and aspirations which she has been compelled in her intercourse with trial to conceal or to leave uncultivated. For a while we see her misplaced and discontented; for the tale begins at that epoch, known to every one, when the mind, being in a transition state, is peculiarly open to wandering thoughts and vain imaginations. But the sense of duty harmonizes these: Time and Thought make her just, sensible, sympathising, and tolerant. Madame Frank always stands out distinct from her family, by a certain placid and poetical elegance: there is fancy as well as fondness in her love for "her summer child;" and the slight warning at the close of the record, that the hour of her rest is at hand, saddens us like the knell for a dear friend. It is impossible, indeed, to read this book as a piece of *make-believe*. We have had nothing so simply life-like since Galt's 'Annals of the Parish'—no pictures of female nature so finely touched, since Miss Austen's.

On Vision, and the Action of Light on Bodies.—Some Remarks on Invisible Light.—On the Power which Light possesses of becoming Latent.—Poggendorff's Annalen, Vol. LVI.

In the above Memoirs M. Moser has called attention to a series of experimental researches on the action of light on bodies, which have, from the really extraordinary nature of many of the phenomena observed by him, excited an unusual degree of inquiry. Moser's reasoning does not appear to us very satisfactory, and we are inclined to think, that many of the results of his experiments would be materially modified if the pure prismatic rays were used, instead of coloured glasses, to which alone he has trusted. The first of the above Memoirs is occupied in endeavouring to show by analogy, that light produces material changes on the retina. It is a curious and interesting fact, that at the last meeting of the British Association, Sir John Herschel, when speaking of some of the remarkable photographic phenomena which he had observed, of fading, dormant and restorable pictures, should, in ignorance of Moser's labours, have suggested the possibility of the eye, in the act of vision, becoming photographically impressed by luminous images. This idea, at once so new and startling, created great interest, and it certainly appears to us, that amidst the numerous speculations to which the discoveries of modern science have given rise, few or none of them are so replete with all that tends to awaken curiosity as this, which promises to lead towards the developement of the mysterious operations of that agent which gives life and beauty to the universe, on that wonderful piece of mechanism, the eye, without which the world would be to all animated creation a dreary wilderness.

The observations of Mariotte, D'Arcy, and Brewster, all go to prove that an interval of time is required for the impression of an object to be made on the retina; and the simple experiment of twirling a lighted stick shows that the impression does not fade immediately with the removal of the body. Every one must have experienced the effect of looking fixedly on a bright or highly-coloured body, and then turning the eye to a dark or colourless space, on which a distinct image of the illuminated object will be for some time visible. Sir Isaac Newton relates that having gazed for some minutes on a reflected image of the sun, his eye became so strongly impressed with it, that whenever he looked upon the clouds, or a book, or a bright object, he saw upon it a round bright spot of light, like the sun, and this effect lasted for three or four days. Æpinus has described similar experiments and like results.

Moser has proved, what was indeed very distinctly stated by Niepce, that light acts upon all bodies, but he does not allow that this action produces a separation of chemically combined bodies. We need only refer to the researches of Sir John Herschel, Mr. Fox Talbot, and others, to show how decidedly wrong the Königsberg professor is on this point. That light acts upon all bodies, we are inclined to allow, and we see but slight reasons for objecting to the conclusion, that the images of objects are impressed by the light radiated from them, either on the retina or on the choroid coat. It has been shown by Mr. Hunt that a plate of copper may be made to receive a series of impressions, which may be kept for a long time invisible, but which can be restored one after another by the agency of electricity. May not then the seat of vision, so delicate, and to us so complex in its structure, be capable of receiving even millions of impressions, and retaining them until revived by the mysterious influences of the mind, acting through the wonderful organism of the nerves? Moser's experiments on the influence of light on the iodide of silver, formed on the surfaces of silver plates, as in the daguerréotype processes, have certainly been made with considerable attention, but from the circumstances above alluded to—the use of coloured glasses, instead of the pure prismatic rays—we cannot place much confidence in the results. Indeed, most of the experiments have been previously made by Herschel, Becquerel, and others, with whose labours in general Moser appears to have been unacquainted.

The discovery of the remarkable fact, that the effects of light on solid bodies may be imitated in perfect darkness by mere juxtaposition, or simple contact, is without doubt one of the most extraordinary discoveries of modern science. The polished surfaces of the metals, of glass, and of glazed leather, receive in a short time virtual impressions of similar or the most dissimilar bodies. It matters not if these be of metal, of glass, of wood, or of paper—a mysterious connexion is established between them when they are brought together, and a molecular change is effected, not only on their surfaces, but to some depth within their substances. It has been found that repeated surfaces may be removed, and that still the impression was to be rendered visible. It is only in a few cases that the impression is rendered evident from the mere contact. It is to be evoked by a process similar to that used in the daguerréotype; it is to be subjected to the influence of a vapour, that of mercury giving a more permanent picture than any other.

Moser considers all bodies as being self-luminous, and therefore concludes that the above phenomena are the result of the action of the *invisible light* constantly radiated from their surfaces. It is to be regretted that any term should be used in science which has a tendency to confuse our general ideas on the subject. Now we conceive the idea of *invisible light* is one which cannot be easily entertained. Light is universally understood as that element which is *perceived* by its effects upon the optic nerve, and if this is not excited by the operating agent, we cannot with propriety call that agent light. We well know that the sunbeam brings to the surface of our planet rays, having, as it at present appears, each a distinct property. One class of these rays are luminous; they are light: another class are calorific and non-luminous; these are heat-rays: and a third class are neither luminous nor sensibly calorific; and these have been called—and perhaps for the present it is the wisest course still to call them—chemical rays. Dr. Draper has recently proposed for this last class of rays a name coined, as it appears to us rather fancifully, from some imagined similitude between the fable of Tithonus and Aurora, and their chemical influence. *Tithonic rays*,

Digitized by Google

however, will not, we believe, be likely to be accepted by philosophers as the distinguishing name of this class. Whether or not the phenomena observed by Moser, Draper, and others, are to be attributed to either of the above classes of solar rays, we have not, we think, as yet a sufficient amount of experimental evidence to decide. That some connexion exists between the strength of the impression made, and the heat-conducting powers relatively of the two bodies, has, we think, been proved. The phenomena are, however, so complex that we must patiently await the result of the unwearying researches of our natural philosophers, before we attempt to assign them to the influences of a known or of an undiscovered agent.

M. Fizeau imagines that a slight layer of organic matter, analogous to fatty bodies, clothes all surfaces, and that the irregular removal or condensation of this volatile matter, fits the surface for the reception of vapour in different degrees; and that hence results the images to which we have called attention. This might explain the phenomena if the effects were merely superficial, but it certainly does not account for the changes produced in the solid particles of the metal or glass. These notions are therefore quite untenable.

The doctrine of latent light, which is now advocated as a part of Moser's hypothesis, is by no means new. Sir Isaac Newton believed that light was absorbed by some bodies, and many physicists since him have brought forward observations apparently in proof of this. Whether this be admitted or otherwise, although it must materially influence the theories of light, it cannot affect the objections we have made to the improper use of received modes of expression.

The three Memoirs published by Moser have been translated by Mr. Croft, and printed in the 'Scientific Memoirs,' to which valuable publication we must refer those of our readers who are desirous of a more intimate acquaintance with the subject.

Professor Ludwig Moser has achieved for himself a European celebrity. We must hope that his future researches will be less liable to the objections we have made. The incompleteness of a series of researches in science, however striking may be the results obtained, is ever to be regretted, as thereby we lose those connecting links, by which alone we are enabled to trace with any certainty the truth we desire to lay hold of.

The Burgraves: a Trilogy—[*Les Burgraves*]. By Victor Hugo. Paris, Michaud.

THIS is a strange compound of power and self-conceit. We will accept it, however, on the showing of the author, not as a caprice of fantasy, but as a link in a chain connected with antecedent productions, and others still to come, —receive the stilted aphorisms, enunciated in his preface, for plain truths, and put our trust in the dramatist of the *Place Royale* as in a leader and a regenerator. The idea of 'The Burgraves,' which, to borrow Scott's phrase, had been long *simmering* in the poet's mind, was matured, M. Hugo informs us, by his tour along the Rhine; and he has affixed to the separate acts, and sometimes, even, to the separate scenes, distinguishing titles, in hopes that the bat-blind public might be furnished with a glimmering of their hidden meaning. But M. Hugo's self-distrust, as regards the clearness of his narration, is compensated for by his self-assertion, when he tells the public what it is to expect from the word "Trilogy."

Here, as elsewhere (says he) trilogy means only and essentially a poem in three cantos, or a drama in three acts. Only, in employing it, the author was desirous of awakening a noble remembrance, of glorifying, as much as lay in him, the old poet of the *Orestie*, who, slighted by his contemporaries, said with a haughty sadness, "*I consecrate my works to Time!*" and also, perhaps, of indicating to the public, by this sufficiently perilous appropriation, that what Æschylus did for the Titans, he—poet unfortunately too unequal to the task—has attempted to do for the Burgraves.

Being in an acquiescent mood, we must yet a little further take the author on his own word, and allow him yet more distinctly to indicate the master idea of this drama:—

In fact, [continues M. Hugo, when approaching the close of his preamble, and after vindicating himself from caprice in the choice of his former subjects], there is to-day an European nationality, as there was a Greek nationality in the times of Æschylus, of Sophocles, and of Euripides. The entire circle of civilization, whatever has been, whatever is its compass, has always been the wide country of the poet. * * Thus,—proportion duly taken into the account, and supposing that it is permitted to compare small things with great,—if Æschylus, when recounting the fall of the Titans, made, of old, a national work for Greece, the poet who, to-day, narrates the strife of the Burgraves, constructs for Europe a work equally national, in the same sense and in the same signification. Whatever be the momentary antipathies and jealousies of frontiers, all enlightened nations belong to the same centre, and are indissolubly united by a sacred and profound union.

The reader of M. Hugo will hardly fail to remark, that to prove the relationship of this play with 'Marion de l'Orme,' 'Hernani,' 'Angelo,' and 'Cromwell,' our author rebukes severely the entire spirit of his Rhine journals and the political pamphlet thereunto appended. But let this pass: and we care not, further, to display the inconsistencies and pretensions of so gifted a man. The reader has had enough of our and M. Hugo's overture. Let the curtain rise.

The time is the thirteenth century: the scene the portrait gallery of the *Burg* of Heppenheff: a corridor surrounding a donjon, on the walls of which the fading remains of old frescoes are seen. Sounds of revelry are heard from within the castle, and an old grey-haired woman, clothed in rags, and chained, is discovered listening with mockery to the jovial strain. This is Guanhumara, whom, on a first glance, the spectator will discover to be a *replica* of Ulrica, in Scott's 'Ivanhoe;' and who, during the greater part of the drama, wanders distractedly up and down, listening and plotting in dumb show, but saying little. To her enter a troop of chained slaves, who descant on the miseries of their captivity by the Burgraves, take the audience into their confidence, hint their suspicions that Guanhumara wanders about for no good purpose, and acquaint us with the family story of the *Burg*. In this the three generations are presiding: Job the Cursed, aged one hundred—a model of ancient bravery, wisdom, prejudice, and cruelty: Magnus, his son, aged sixty, in whom the virtues and vices of "the strong hand" are presumed to have degenerated; Hatto, his grandson, an inferior personage—more luxurious, more villanous—in love with Regina, the niece of Job. Regina, it is presently disclosed, prefers a certain Othbert, a nameless adventurer; there are fears, however, that she will never live to belong to either rival, since her health is feeble to extremity. Then we are told a long and intricate history about a murder and a Corsican slave. Rumours, too, are counted up touching the death of Frederic Barbarossa and the early history of himself and of a bastard brother. The slaves retire, and a love scene between Regina and Othbert ensues; after which Guanhumara (which is German for Ginevra) presents herself to the young lover, initiates him partially into the mystery the slaves have been telling *us;* declares that she is at Heppenheff for the purpose of avenging a murder long since committed; that it is she who has practised upon the bloom and strength of Regina; and who will restore that maiden to health if Othbert will swear to do her bidding and minister to her vengeance, when "the hour and the man" are pointed out to him. The lover agrees, and the tempter disappears. Then come out, on the one side Hatto and the revellers—on the other the two aged Burgraves. The olden and the modern time are skilfully brought into contrast:—we have also a *tirade* of Magnus against the missing Emperor Barbarossa. Lastly occurs the incident of a mendicant, who arrives to ask charity and shelter: Hatto commands that he should be stoned thence—but the old men interfere,—and Job, the patriarch, for the first time raising his voice to assert his authority, insists that the antique usage of their profuse hospitality shall be revived, and the wanderer received with as much honour as though he were the lost Emperor himself. This is done; and the first part of the trilogy closes, as the reader is aware, behind no impenetrable veil of mystery.

Whatever doubts, however, any credulous person might have entertained on the subject, are at once dissipated by the soliloquy of the mendicant, which opens the second part of the trilogy. He there mourns over the desolation of his Germany, and declares that one last blow must be struck for its deliverance and regeneration. To this succeeds a love scene between Othbert and Regina; Guanhumara has kept her part of the compact—the maiden enters buoyant and blooming, miraculously restored. But in the midst of their joy, the sorceress surprises the lovers, claims her reward, and demands that Othbert shall, that very night, strike down the person on whom she will be avenged. Regina reappears, followed by Job, who is so melted to gentleness at the sight of her renewed health and her lover's ecstacy, that he sanctions their marriage and flight. At this point we shall exchange abstract for paraphrase, claiming the reader's indulgence.

SCENE THE FIFTH.

Othbert—Regina.

Oth. (*wildly looking after Job*)—Just heaven! the whirling thoughts that vex my brain!
Fly with Regina!—fly this dismal tower!
O, pity, lady! if 'tis all a dream,
Wake me not. Yet 'tis thou, my soul's own love!
Angel! mine own!..we fly ere evening fall—
This blessed instant!..could'st thou only know....
There, glowing Eden!..here, the yawning pit!—
I fly to bliss!—I fly from hideous crime!
Reg. What say'st?
Oth. Fear nought!—Regina! I *will* fly!
Yet I have sworn!—Regina! Heavens! mine oath!
What then? I fly....God, judge my cause aright!
Can yonder old man err—so grey, so wise?....
And then, I love!..Come! All things bid us go.
There's nought shall bar our way!.. [*forcing Regina off. Enter at the back of the stage* Guanhumara, *leading* Hatto, *who is followed by the princes, Burgraves, and soldiers; she then disappears.*

SCENE THE SIXTH.

Hat. Ha! dreamest thou so?
Reg. Hatto! Great Heaven!
Hat. (*To the soldiers*)—Lay hold on yonder pair.
Oth. (*Drawing his sword and keeping the soldiers back*)—Lord Hatto, well I know thine infamy!
Know thee a traitor, godless, odious, vile!
I would learn, too, if haply there be found
In that base heart, that sink of filthiest things,
The slime which vices fling behind them—FEAR.
For shrewdly do I guess thou art a coward;
And that these lords—thy betters, noble chief!
When I have plucked thy mask of courage off,
Will see thy craven nature bared to day!
Here, by her choice supreme, I represent
Regina, maiden-Countess of the Rhine.
She hates thee, Prince! is my affianced bride!
I challenge thee on foot:—for place, the strand
Beneath the Wisperthal, three miles from hence.
What arms thou wilt—close quarters—no delay—
No mercy—visor up—by yonder stream;
There be the vanquished flung! Conquer or die!
[*Regina swoons.—Her women bear her out.—Othbert* (*withstanding the archers who approach him.*)
No step this way. To you, my lords, I speak.
Hear me, ye noble guests....Duke Gerard, hear!
Sire Uther—hear, Pendragon of Bretagne!

Digitized by Google

Hear me, ye Burgraves, Darius and Cadwalla!
Lo! yonder lord I strike before your eyes,
And here do claim, his baseness to chastise,
Free archers' right before free counts like you....
[*Throws his glove in the face of Hatto.*
Enter the Mendicant, *who mixes among the crowd unperceived.*
Hat. I have let thee speak.
(*Aside to one of the lords*)—Heaven knows, Giannilaro,
My eager sword is quivering in its sheath....
Now is my turn....Tell me thy name, my champion—
Son of a king? a Margrave's, at the least,
Who darest defy me? Speak—declare thy name,
If name thou knowest....*Thou* art the archer Othbert!
Thou liest!
(*To the lords*)—He lies!—no Othbert this.
(*To Othbert*) I'll tell thee
From what rare stock thou comest—what thy worth.
A gentleman! go to....even less than that.
I know thee: thou art Yorghi Spadaceli;
Thy sire a Corsican, thy dam a slave;
And thou, impostor base, their lawful child.
Stand back!....
Sirs—we have princes in this presence:
Let any take his part—let all—I'll meet ye
Where'er ye choose—now, in that avenue,
And foot to foot, and naked breast to breast.
For thee, brave fugitive! most well-born brigand!
Thy gauntlet to my slaves!
Oth. Craven!
Men. (*Advancing*) Lord Hatto,
Old though I be, I'll hold thee to this quarrel.
A sword!....
[*He throws by his staff and snatches a weapon from the wall.*
Hat. This goodly masque but lacked a fool!
Look on him, sirs. Whence hath this comrade fallen?
First, gipsy: next, a beggar: good!—Thy name?
Men. Frederick of Swabia, Emperor of Almain.
Magnus. The Red Beard!
Fred. (*Drawing from beneath his rags a relic*)—Lo, the Cross of Charlemagne! [*A pause.*
I, Frederick, by my mountain birth-right Prince
O' th' Romans, chosen king, crowned Emperor,
Heaven's sword-bearer, Monarch of Burgundy
And Arles—Charles his tomb I dared profane:
I have repented me on bended knees;
Done penance in the desert twenty years;
My drink the rain—the herbage of the rock
My food..a ghost the shepherds fled before..
And the world named me as among the dead.
But I have heard my country call—come forth,
Lifted the veil—broken the sepulchre.
The hour is now when dead men needs must rise.
Ye own me?
Mag. Let me look upon thine arm.
Fred. To seek the brand by thee imprinted there?
Behold it....
Mag. 'Tis even so....Before ye stands
The Emperor Frederic.... [*A pause.*
Emp. (*Leaning on his sword*)—Of yore ye heard me marching through these vales,
When golden spur was ringing at my heel.
Now know ye what I am, your Master,—Earls!
Who conquered Europe, and anew revived
The Othos' Germany, a calm-eyed queen!
He whose award as knight and emperor true,
Three kings in Merseburg and two popes in Rome
Chose and obeyed; who, when he raised a hand,
Touching their foreheads with his sceptre gold,
Made Sweno king—bade Victor wear the tiar,
He who the Herrmanns' antique throne o'erthrew;
And vanquished—now in Thrace, in Syria now,
The Emperor Isaac and the Calif Arslan:
The same who, curbing Genoa, Milan, Pisa,
And stifling clamorous wars and treasons vile,
Grasped Italy with all her thousand towns!
Hath left his shroud and speaks!.....
[*He advances a step, and all retire.*
I have judged kings! shall wolves escape my chace?
I to the gibbet gave seven Lombard chiefs!
Albert the Bear arrayed his thousand spears—
I brake them! Every path hath heard my feet;
The Lion Henry with these hands I tore,
His duchies ravished, snatched his lands away,
And thrice seven princedoms of his wreck I made.
For forty years, these talons, stone by stone,
Have strewn your crumbled donjons on the Rhine!
Bandits, ye know me!—know the Empire's grief
Weighs on my heart,—know I am come to save it,
To raze ye from the roll of living men,
And cast your ashes to the winds of Heaven!....
Your bands will hear me. They are mine! *I* know them,
They followed glory ere they served disgrace!
Mine was their homage ere these evil days,
And many a heart still loves his ancient Kaiser!
Does it not, veterans? Comrades, is't not so?
Ha! miscreants! felons! village-ravagers!
My death restored ye then? Approach! behold!
Touch! listen! lo! 'tis I!....
You deem yourselves
Brave knights, be sure! You say, "The sons are we
Of puissant barons and great noblemen,
Whose honours we prolong." You *do* prolong them?
Your sires were soldiers brave, not prowlers base,
They made great wars—they rode like heroes forth;
Bestrode the bridge when foemen broke the arch,
Would battle man to man, or host to host,
And gay with trumpets sounding proud before,
Withstood whole armies—dauntless kept the field,
Nor tower was e'er so high, nor hill so steep,
That more they asked to seize the strongest hold
Than a frail ladder bending 'neath their weight,
Reared 'gainst the walls that streamed with molten fire;
Or swayed on knotted cords athwart the abyss,
Swang the bold warriors, demons more than men,
Whirled by the night-wind 'gainst the rocky walls!
Dared any blame such onslaught,—in full day
The chiefs defied their Emperor to the field,
And waited, armed, afoot, the long night through,
Till the sun rose, and brought their sovereign foe:
'Twas thus they won broad lands and towers and towns,
So firmly won, that thirty years of strife,
Made of their followers Dukes, their leaders Kings!
While you! like jackal and the bird of prey
Who lurk in copses or 'mid willow beds—
Prostrate and hushed with dagger ready drawn,
Hide in the noisome marsh that skirts the way,
Trembling, lest passing hound snuff out your lair!
Listen at even-tide on lonesome path
For traveller's footfall, or the mule-bell's chime,
Pouncing by hundreds on one helpless man,
To strike him down, then back to your retreats—
You dare to vaunt your sires?—I say, your sires,
Bravest of brave and greatest 'mid the great,
A line of warriors! you, a herd of thieves!

Long as this *tirade* is, it is still incomplete; but we have quoted enough to show, that a romanticist can equal in long-windedness the harangue of an *Agamemnon* or a *Semiramis* in the hoop-and-toupet days of classical French tragedy. The momentary effect of the Emperor's harangue upon the rebellious princes whose degeneracy he rates so soundly, is dissipated by a burst of bravery and defiance on the part of Magnus, who reviles Barbarossa in language as violent as his own, and threatens him with instant death. The Burgraves press around the old king with drawn swords, when Job cleaves his way through the crowd, and telling the Emperor that his hatred is still unchanged but that he loves the well-being of Germany better than his private quarrel, or even the existence of his order, compels the hot-blooded spirits around him to submit and do homage; commands that the prisoners in the *burg* be set free: and ordering himself to be chained (his guests following his example!), abases himself before Barbarossa. The Emperor commands the imprisonment of the Burgraves, all save Job, whom, calling him by a name we have heard among the slaves in the first act, he bids await his presence at the patriarch's usual nightly haunt. With this the second and the most striking division of the trilogy closes.

The third is devoted to the developement of the domestic interest of the plot. Of course the patriarch is the person whom Guanhumara hates, and Othbert has sworn to murder. At first, in a passionate scene between the two, the hag tramples over the old man, and openly informs him of the fate preparing for him, with the alternative of Regina's sacrifice; and an interchange of remembrance and accusation follows, in which Othbert's parentage is revealed; ending in Job's consent that the old life shall ransom the young one, on condition that the avenger is left in ignorance of the name of his victim. To this succeeds the encounter between Othbert and the old man, strangely resembling one in Serjeant Talfourd's 'Ion;' in which Othbert,—after a terrible struggle, quickened by Guanhumara's threats that Regina shall die within the hour,—at the very instant when his hand is raised, is again succoured by the Emperor, who interposes in time to avert the crime, to declare that *he* was the supposed victim, and brother to the Burgrave, whose death the Corsican woman was bent on avenging. Guanhumara withdraws her curse: but having sworn that that hour and that place should be marked by blood, stabs herself: and the drama closes with Regina in Othbert's arms, and by the Emperor announcing, that having secured the empire to his grandson Frederic, he is about again to retire to the desert. We have somewhat hurried over the events of this act, because it is the least characteristic and most melodramatic of the three.

It may be doubted whether, after all due allowance has been made for the disadvantages of haste in the above sketch, and of paraphrastic translation in the above specimen, the reader will admit the existence of any grandeur or originality in this last of Victor Hugo's creations. It contains no character so masterly in its truth as the sensual, handsome, profligate archer of 'Notre Dame de Paris'—no passion so intense as may be found (to seek no further) in the author's simple ballad of

Gastibelza, l'homme à la carabine—

no scenic surprise so brilliant and rivetting as some of those in 'Le Roi s'amuse,' or 'Lucrece Borgia.' Nevertheless, the drama has still a certain grim passion of its own, not wholly unbefitting the ruins and rocks it is meant to re-people, nor unworthy of the author's intimate knowledge of bygone times.

But this play possesses an adventitious, as well as an intrinsic, interest. If it be curious as a specimen of French treatment of a German subject, the history of its production, as recorded in the police journals, is also noticeable, as throwing light on the secrets of the world of Parisian Art and Criticism. There is an unobtrusive tragedy in it: a sorrow not so ferocious, but perhaps as deep as the sorrow of Guanhumara. A few lines will recapitulate the story. At the time when Mdlle. Mars was ejected from her throne at the *Théâtre Français*, owing, as her partizans said, to the unworthy cabals of Mdlle. Rachel's admirers, there was thrust forward in rivalry of the young tragedian, a Mdlle. Maxime, a clever and ambitious actress, but coarse and unfinished in her style. No matter, *Le Journal des Débats* took up her cause warmly; and for a twelvemonth or more we read of nothing but Mdlle. Maxime's force and intelligence—of the injustice of the public and of the parsimony of the management towards her. An alluring prospect of fame all this praise for the poor actress! which must have seemed about to be converted into reality, when M. Hugo selected her to enact the difficult and leading part of Guanhumara, "that walking statue," to quote his own words, "with a serpent's eye." The play was rehearsed thirty-two times, and *then* the dramatist discovered that the lady's voice wanted a sort of ventriloqual fascination, and the lady's eye the requisite sting of malice, and, what was worse, that the lady was *too short!* Her empire was taken from her. The victim of false encouragement went into a court of law to claim restitution—an ill-advised step. Mdlle. Maxime's claim was negatived—she was charged with the costs of her action—her future prospects in the theatre closed, and, "unkindest cut of all," her extravagant champion of the *Débats* "whistles her down the wind" as a ridiculous pretender, and follows unblushingly in the wake of Madame Melingue, an actress fetched in at the eleventh hour, from the Boulevards, and bribed, with a life appointment, to attempt the part at which another had toiled so severely, and with such hard requital!

Travels in the Great Western Prairies, the Anahuac, and Rocky Mountains, and in the Oregon Territory. By T. J. Farnham.

We saw last week an announcement of a work under this title, about to be published by Mr. Bentley, and were startled to find a review of it, with copious extracts, in a contemporary journal; the more so as we appeared to be familiar with the writer's style, and inclined to cry out with the good Vicar, "surely we have read all this before!" On turning to our library shelves we forthwith drew out a thin pamphlet, one of a series published at New York, called 'Useful Knowledge for the People,' and lo! there was the identical Mr. Farnham. So far well—at least thus far the proceeding is intelligible. But observe, we have been told over and over again, and have adduced the fact as strengthening our argument in favour of an international law of copyright, that an English bookseller is compelled to sell comparatively dear, because he has usually a large sum to pay for copyright; now here is an American copyright work, which has printed on the face of it, "PRICE TWENTY-FIVE CENTS," about ONE SHILLING;

Digitized by Google

and this Mr. Bentley, piratically, as we believe, republishes, paying not one farthing to the author, and yet sells to the English public price ONE GUINEA! The book itself, be it observed, is a pleasant book, and when we have a little vacant space we shall notice it. Meantime, those who are anxious to possess it had better order the American edition, which will probably cost, freight, duty, and charges included, about eighteenpence!

ROYAL ACADEMY.

Professor Howard's Lectures on Painting.

CONCLUDING LECTURE.

AN important consideration in the composition of a picture, is the *background;* by which term may be understood everything seen beyond the plane on which the principal figures are arranged. In continuation of the subject of my last lecture, I proceed, therefore, to offer some remarks on the nature of backgrounds, and on the mode in which they have been treated by the best artists. The Poet is relieved from any such demand upon his invention, by presenting all the parts of his design in succession, which enables him to bring forward as many accessories as he may think desirable, when and where they may best serve to enrich or explain it, while he can keep out of sight everything trivial or unfavourable; the Musician, too, may compose a delightful melody without any accompaniment whatever. To the Painter alone a background of some kind is unavoidable; the nature of his art requires him to fill up the intervals of his groups with some object or other, which he must necessarily suppose to appear beyond, and whatever he may introduce for this purpose should at once serve to relieve his figures, explain the story, and complete the picture, without attracting more attention than its subordinate office may fairly claim. The grand style avoids this difficulty in a great degree, by introducing the least possible background—a sky, a rock, a wall, and few or no accessories; and Sculpture, which systematically excludes them, owes much of its impressive character to this mode of treatment. Michael Angelo, a sculptor as well as painter, generally pursued the same course in both arts, and gave his compositions their full and undisturbed value, by suffering nothing extraneous to interfere with the figures. The ill effect of intricate backgrounds is conspicuous in two of the cartoons, the 'Delivery of the Keys,' and the 'Miraculous Draught of Fishes;' where, in spite of the admirable arrangement of the groups, and their animated characters and expressions, the eye can scarcely forbear wandering over the expanse behind them, instead of resting, as it should, upon the subject. The scenery is appropriate and pleasing in itself, but is objectionable in overlaying the picture with a multiplicity of details, which add nothing to its interest. In the latter of the two, the birds in the foreground of the lake, from their size and obtrusive situation, challenge nearly as much attention as the human figures themselves.

The background and accessories in our copy of the 'Last Supper,' though they were hardly to be avoided, detract somewhat from the simplicity and quiet solemnity befitting that sublime drama. It is possible that by dwelling for some minutes on the great intellectual merits of these admirable works, the mind may abstract itself from such interruptions, but it requires an effort like that which is necessary while reading a book in the midst of a number of persons talking aloud. Sebastian del Piombo's 'Raising of Lazarus,' in our national collection, the design of which has been ascribed to Michael Angelo, is still more offensive in this particular. If any part of it be his besides the principal figure, the background certainly is not: when he has adopted any, it is strictly in accordance with the subject, and explanatory or illustrative. In his cartoon of 'Pisa,' the multitude of combatants on horse and foot at a distance, mentioned by Vasari, were no doubt seen between the intervals of the main group, with the effect of which they were too small to interfere, while they accounted for and added to the energy, haste, and bustle of the whole; in the small copy at Holkham the background figures are omitted. In his 'Holy Family' at Florence, he has introduced a group of Baptists behind, which equally illustrates the subject without detracting from the importance of the principal actors. Unmeaning and inappropriate backgrounds were too frequently adopted by the artists of that period; Correggio seems to have been the first to estimate their real value; his highly poetic fancy perceived how powerfully they might be brought in aid of the sentiment as well as the chiaroscuro of his delightful compositions, in all of which they are happily subservient. Rubens followed in the same track, and with his usual success; although he considered this to be one of the chief difficulties of the art. In his 'Descent from the Cross,' the background is entirely subordinate, and blended with the figures in a very masterly manner, like a well adapted musical accompaniment, supporting and assisting the melody, which is in all cases the true desideratum. If the background be sometimes a troublesome and dangerous companion, it is nevertheless capable of being rendered a most valuable ally, for though in general it should be flat, negative, and retiring, in order to give prominence and force to the figures, it often affords the painter an opportunity of showing his original power in the introduction of striking associations or ingenious allusions, which may add a grace and interest to the subject, explain the story, or enforce the intellectual aim of the work; while technically, it may be of the greatest use in giving vigour and point to some parts, softness and repose to others, union, harmony, and effect to the whole. To whatever extent background may be carried, it is indispensable that no object or circumstance be introduced which is not in perfect agreement with the poetical feeling and character of the subject. The chief technical resources of *background* are to be found in Landscape, Architecture, and Drapery. Of landscape backgrounds, that of the 'St. Peter Martyr,' by Titian, is perhaps the finest example. Nothing can be more grand or more happily appropriate than the mountain scenery in which the savage massacre is taking place, nor better managed than the union of the upper and lower parts of the composition by means of the tall trees on the right. Here the background combines so well with the figures that the landscape appears to be a constituent element of the subject, and not merely a contrivance to help out its picturesque effect. It may be remarked, that the grandeur of this justly celebrated work is evidently owing, in great measure, to the adoption of a low horizon, which makes everything in the picture tower above the eye, while the objections which have just been stated to two of the cartoons arise chiefly from the choice which Raffaelle has made of a high horizon; for the scene being out of doors, a multitude of objects must naturally occur in the large space represented beyond the figures, or it would appear empty, and in the 'Delivery of the Keys,' none of these objects, if we except the sheep, has anything to do with the story.

The practice of giving such an elevation to the horizon, so common in the works of the earlier artists, (which perhaps arose from their studies having been made at too short a distance from the model,) has the effect, as Fuseli observes, of lengthening the appearance of the feet, and throwing the figures on tiptoe; the high horizon affords an opportunity, sometimes desirable in extensive compositions, of bringing in the heads of figures on a second or third plane, appearing above those in front, as in the 'Sacrifice at Lystra,' for instance, and in the 'St. Paul preaching at Athens;' but an unfortunate instance of its application occurs in the 'Raising of Lazarus,' before mentioned, where the subject is entirely overpowered by the multitude of spectators above the principal group, and sunk into a hollow. The contrary choice (probably first suggested by Leonardo's 'Battle of the Standard,') may be considered as much fitter for composition of figures on a large scale, and has since been very usually adopted. I may remark, however, that in landscape painting there will often be cases in which an elevated horizon will be indispensable, and that character is given to a picture by making the point of sight very high or very low.

It is not from Nature only that the painter may derive materials for his backgrounds and accompaniments; the sister art of Architecture will supply him with a fund of appropriate forms, simple or rich, particularly calculated to give effect and grace to the figures, and an air of dignity to the picture, as well as often to afford opportunity for a variety of explanatory circumstances and interesting associations. Its great value and importance is nowhere more apparent than in the 'School of Athens,' where it becomes a distinguishing and imposing feature of the composition, gives ample space for the collocation of so numerous an assembly, and sufficient ornament with great simplicity. Raffaelle (like many of the celebrated painters of his day,) was also an architect, and this fine work is invented quite in the spirit of that noble art; the symmetry of the building accords with the symmetrical arrangement of his groups, and happily connects the whole: the unity of this grand and extensive composition could not, perhaps, have been so well effected by any other means. The architectural background of the 'Elymas' is simple and appropriate, combines agreeably with the figures, and is set off by a masterly chiaroscuro. That of 'St. Paul preaching at Athens,' and the 'Sacrifice at Lystra,' are also good examples of subserviency and general propriety and effect in the background. Instances of the great assistance which architecture offers to the painter are everywhere to be found, as in the 'Martyrdom of St. Lawrence,' and many other works of Titian and his school, in most of the pictures of Paolo Veronese, and in the 'St. Bavon' and other compositions of Rubens. It may be observed, too, in many of the beautiful works of Claude how much dignity they derive from the same source. Poussin, in his backgrounds, has carried the union of landscape and architecture to great perfection; in his classical works on a small scale, he may be said, with their combined aid, to have originated a new and highly imaginative class of painting, in which he appears to me to be not only superior to all other painters, but to display greater powers than in any other of his productions. Its very merits disqualify it from vying with the superior grandeur of genuine historical art, on its true scale: but there is so much of invention, historical or poetical propriety in these works, such a happy selection of objects, natural and artificial, such consistency and character in everything he introduces, that they are entitled to very high consideration. The French school have, in many respects, closely followed Poussin, and shown great skill and judgment in the management of their backgrounds; in the composition of which they offer many of the best examples:

Digitized by Google

those of Sebastian Bourdon are admirable. The French have made much use of flat walls and suspended draperies, which gives largeness and simplicity to the general design, and sets off the richer accumulation of parts in the figures—a treatment which might perhaps have been advantageously resorted to in the 'Last Supper.'

After these examples of its great utility, I need scarcely point out to the student the importance of making himself acquainted with at least the general principles of Architecture, as well as with the modes in which the great painters have availed themselves of its assistance.

Other arts also become a kind of secondary nature to the painter, and furnish him with those materials for composition which are termed accessories, and are frequently necessary to the story. It is therefore essential that the Historical Painter should make himself acquainted with the civil, military, and religious costumes of different nations, as it must occasionally be requisite to introduce various objects, dresses, and implements, which, in the hands of a tasteful artist, may be turned to great advantage. In the *picturesque* style these accessories often become prominent features, but in proportion as the work aims at great grandeur or expression, they must be few and simple.

Having now laid before you such observations as I conceive may be useful, respecting the *inventive* and *scientific* divisions of Painting, though I am but too well aware how much they fall short of what the subject deserves, I must briefly advert to the *imitative* or practical part. As excellence in this division of the art must obviously depend on accuracy of eye, dexterity of hand, and a wide acquaintance with the forms and effects of natural objects, which can only be obtained by diligent application and repeated experiment, it is clear that the precepts of the professor must here be of much less value than the persevering efforts of the student himself: considering how much he has to learn, and how important it is that from his first step he should be put in the right way, his studies should, for some time, be conducted under the superintendence of an experienced artist, whose daily advice and example will assuredly spare him much fruitless labour, prevent his contracting bad habits, and greatly advance him in his progress. The student's assiduous endeavours will first be directed to acquire the power of making out the forms, tones, and effects, of whatever may be placed before him, with deceptive correctness, however taste and science may afterwards lead him to use or modify that power; for although, as I have shown, deception is not the true end of Painting as an art, an *illusive* character is its peculiar attribute and condition; without a due attention to which, however ingenious his conceptions, however great his knowledge, he can never produce a legitimate picture.

Imitation in Painting admits of very various degrees of approximation to the exact truth, and great diversities of treatment; from the microscopic minuteness of Denner, Breughel or Vander Heyde, to the breadth of Titian, Vandyke, or Reynolds. A strict copy of all the complicated details of Nature is evidently impossible. We cannot represent the individual hairs of the head, or leaves of a tree—nor if we could, would the effect be agreeable. The reflection of Nature herself, in a camera obscura, will never satisfy the eye as a picture—Art requires a more decided subordination of the parts to the whole.

In proportion as his scale is diminished, the painter finds it necessary to generalize and omit details. Mengs says justly, "all the refinement of the art consists in selecting the beautiful and the necessary, and in leaving out the superfluous and the minute," though in all cases some definite touches of individuality are desirable, which may be immediately recognized, and persuade us of the truth of the rest. We should remember, too, that in proportion as the work becomes refined, and abstract, it will have fewer admirers, while the pleasure afforded by illusive *imitation*, even when employed on the most ordinary subjects—mere transcripts of still life,—will always render this property of our art the most generally attractive: all are in some degree judges of it; the cobbler in his own line may triumph in criticizing Apelles—and for this reason, the judicious artist even in his loftiest flights will endeavour to introduce some portion of those qualities which are intelligible and agreeable to all, as a passport for those of a more intellectual character.

The painter's substitute for light being a white pigment which can never approach to the force of light itself, it is obvious that except under peculiar circumstances, he can, after all, produce only a modified and relative imitation of many of the appearances of Nature. The round white patches, by which Claude represents the sun's disk are, in fact, merely symbols; but we recognise so much imitative truth in the sunny effect of the picture generally, that we fancy the whole to be true. Rembrandt, in his etching of a 'Man reading by Candlelight,' endeavoured to render the flame very brilliant by making it almost the only thing visible in the midst of darkness. This, of course, proved unsatisfactory, and in a second experiment he found it necessary to give less comparative value to the candle, by spreading more light on the surrounding objects; in a third essay he carried this still further, and very properly sacrificed the brightness of his candle, to the more natural effect of the whole. Here, as in Claude's sun, the source of light becomes a mere symbol, though we do not remark it as such from perceiving so much truth in the greater part of the work. The *imitative*, therefore, like every other division of the art, has its natural limits, and is, to a certain degree, *ideal* and conventional.

The particular process employed in Painting, will more or less affect the completeness, extent and character of the imitation; accordingly a great variety of methods and materials have been made use of in the operative part of our art.

The early Italian masters painted in water-colours and generally on fresh plastered walls—i. e. in fresco—a mode of proceeding which requires a number of previous studies as well as a careful outline, traced with a hard point on the plaster. It is attended with considerable difficulty, as it admits of no alteration, and unless finished at once, the mortar must be removed and that part of the work recommenced. The great purity, freshness and durability of fresco, may be seen in many very fine specimens extant in Italy; among the most vigorous and effective of which are those of the Carracci and Guercino, in the ceilings of the Sampieri Palace, at Bologna. Those of Raffaelle, in the Vatican, have been lately carefully examined, and are found to have been painted on and strengthened by a different process. The introduction of oil painting may be said to have changed the aims and character of the art, and to have rendered colouring its prime object and attribute—and though Michael Angelo considered it as a method only fit for women or children, it has unquestionably led to greater transparency, variety and force; a much closer imitation of the surfaces of things than was before attempted, but also perhaps to some neglect of form.

Leonardo invented that rich amalgamated texture of his colours called *pastoso* (afterwards adopted by Giorgione), combining juiciness with solidity, which Correggio pursued with so much success, and has rendered an example ever since for the best schools of Art.

Some have painted on light, some on dark grounds, some with opaque colours afterwards tinted with diaphanous tints; some have aimed at the smoothness of polished ivory, like Vanderwerf; others have heaped on colours, like Rembrandt, till by repeated touches they had brought out not only the effects, but something of the texture and surface of the things represented: all these modes are deserving of consideration, for the refinement and beauty of colour often depend as much on the preparation of the ground and particular manipulation, as on the pigments employed. I would here take the opportunity of urging the students in the Painting School not to disregard the texture and execution of the specimen before them, and especially not to load their canvas where it is thinly covered in the original, or the converse, but to make their copies as faithful as possible in all respects, or they will be wasting their time; for the chief advantage to be obtained by copying a picture lies in acquiring the particular process and handling, whatever they may be, of some great master, and in having this to refer to. The different modes of Titian or Correggio, of Rubens or Rembrandt, should by no means be confounded; they are all more or less desirable on different occasions, which the well trained artist will be aware of, and apply as taste may suggest them to be most applicable to his subject.

The best Italian Masters endeavoured to convey the essential character, forms, and appearances of objects, without minute details, or an ostentatious display of illusive imitation. The Dutch and Flemish, on the other hand, strove to attract admiration by elaborate finish and beauty of pencil.

Some have supposed that to represent Nature with fidelity, we should have the type immediately before us; and no doubt pictures produced under that advantage are apt to possess a greater vivacity, freshness of colour, vigour of relief and execution; and may be carried further than where it has been wanting; as we see in fine portraits from the life, which, in these respects, excel most historical works even by the greatest masters; but this can never extend to all the parts of a complete picture, for, after all, Painting is in truth an act of memory, for though the model be present, we cannot see it while putting the colour on the canvas: as the work proceeds we may compare it with the original again and again, and its impression on the mind will be renewed, rectified or strengthened at every look; we should, therefore, avail ourselves of the model whenever we can. But it is obvious, that in subjects of a higher aim—an Achilles or a Helen,—models fit for the artist's purpose are rarely, if ever, to be found, in which case without previous science and great caution, individual Nature may put the artist out. In such emergencies he must draw more deeply on taste and science, and make use of preparatory studies collected from whatever will assist him most, which has always been the practice of the best masters. The Painter is scarcely deserving of that name who has not stored up in his mind, or at least in his portfolio, such memoranda of the more characteristic features of Nature, and such a knowledge of style as may enable him to produce considerable works without having constant recourse to a model. Guido is said to have painted his Madonna heads from an old man. If the story be true, we must suppose that he found something in the colour or expression before him, from which he took a hint, and science and taste furnished the rest. Sir J. Reynolds conceives that Guido, by his practice, meant to inculcate the expediency of constantly having Nature before our eyes—but unsuitable Nature must necessarily serve to confuse, unless science be able to supply the truth wanting in the model. Raffaelle, when he could not find a fit model for his Galatea, tried to supply the want from his own conceptions of the beautiful; and though he was not eminently successful on that occasion, the result is probably better than it would have been if he had painted his Nymph from the Fornarina.

The Roman and Bolognese schools felt the insufficiency of casual models in such cases, and endeavoured to rectify their defects. The Venetians in general were content with mere portraits, without attempting to raise them in style, even when they meant to represent historical or poetical personages. Murillo degraded the characters of Scripture still more, by making them faithful transcripts of still more vulgar models. In these, and in the ludicrous travesties of the Dutch, we cannot bring our minds to acknowledge such caricatures for the persons they assume to be. The want of that indispensable quality of art, poetical propriety, destroys the effect of their imitative truth, and leaves us mortified and disappointed with some of the finest specimens of pictorial skill. But it would be useless to dwell any longer on this part of my subject.

The principles of the Fine Arts exist originally in the deep recesses of our nature, waiting for genius to discover and apply them. Many of these the great masters in painting have gradually brought to light, which having been recognized and approved wherever they have been most investigated, become an invaluable stock of science for after ages, and the foundation of our theories or systems. Some have asserted, that as our stock of science accumulates our genius diminishes; I prefer the axiom of Reynolds, "that genius begins where rules end." Precepts are valuable only as they are founded on what is "truly Nature," as they teach the true idea or theory of our art. Those works which have for ages maintained their reputation as *chefs-d'œuvre*, must be held to have supplied us with a great portion of that real instruction, and the artist, in the beginning

Digitized by Google

of his career, will act far more wisely in adopting the most approved rules than in attempting to form them immediately from Nature; for unless he avail himself of the science of his predecessors, he can have no chance of advancing far in his art; as he proceeds he will endeavour to think like Raffaelle, Titian, or Correggio, to imbibe their taste and feeling; he will travel on the roads which they have opened without servilely treading in their footsteps, and extend his researches wherever fancy may point out an opportunity of enlarging the boundaries of the art, ever the aim of true genius. There are certain fundamental rules in Nature and in Art, such as variety, harmony, proportion, which must be considered to be of universal application. Others admit of relaxation, where any advantage is on the whole to be obtained. Precepts, the most general, must occasionally be modified, or abandoned, as every subject, in some respect, requires an especial mode of treatment, and may be said to exist in an atmosphere of its own; hence, every succeeding work the painter may undertake should be made a new test of the principles he has collected, and where they may appear to clash they must be accommodated to the particular demands of the subject. It is often in the happy adjustment of such discordances that the artist best displays his taste and ingenuity, and arrives at those "nameless graces which no methods teach"—those beauties of the art which may be seen and felt, but are communicable in no language but her own.

With the study of theory I should recommend a constant reference to Nature, in whose school the student's hand, eye, and mind should never be idle. Every object or effect he sees may afford the true artist a lesson, and should be fixed as strongly as possible on his memory; for many of the happiest combinations, such as are capable of suggesting his finest conceptions, may never present themselves a second time. A sketch-book, therefore, should be his inseparable companion, in which he may note down on the spot every interesting figure, group, action, fall of drapery, or other characteristic circumstance which may interest his fancy in his daily haunts. This practice will increase his facility of drawing, stimulate his imagination, and gradually supply him with stores of incomparable value. It is only in thus collecting ideas fresh from the endless varieties of Nature, to be afterwards arranged on sound principles of Art, that a painter can hope to produce original and striking works. This was the habit of Da Vinci and Michael Angelo, of Flaxman and Stothard, and it has doubtless led to some of their most exquisite inventions and compositions. The beautiful familiar groups which decorate the lunettes of the Sistine Chapel are evidently taken immediately from Nature, though assisted by science; and so are probably the attitudes of the prophets and sibyls in the same place, as well as many of the figures in the 'Last Judgment' itself. The practice needs no further proof of its utility and importance.

In these lectures I have been endeavouring to advocate (as my office requires) the higher styles of Art, but I wish to guard myself against being thought adverse to the more familiar, when they do not descend to the vulgar and revolting. I have already remarked, that Painting, like Poetry, may be allowed its range of styles, from the epic to the doggrel; and his taste must be either narrow or tyrannical who cannot feel and allow their respective claims. Our own school has produced examples of very various kinds, which in many of their best qualities have scarcely ever been surpassed, and such as it would be a reproach not to admire. Whatever is carried nearly as far as its peculiar properties will admit of, is entitled to its share of praise; the artist has accomplished his purpose, and great excellence, in an inferior style, may be preferable to mediocrity in a higher. Yet ours would ill deserve the appellation of a refined and elegant art, if it were generally occupied on low and trivial subjects, and an exclusive fondness for such must lead to its degradation. The legitimate object of all Academies, and their chief utility, I conceive, is to follow and promote its highest aims, to secure its true principles (as they have been deduced from the acknowledged masterworks of all times and countries) against the temporary fluctuations of fashion, caprice, or neglect, and preserve them, as in an ark, for a more propitious era.

The history of Painting has been so amply and ably treated by those who have preceded me in this chair, that I think it unnecessary to enter into any detailed relation of what is known, or supposed, of its rise and progress. Fuseli has brought before the student everything curious or important respecting ancient Art that his learning and industry could glean from the scanty and often improbable accounts that remain, and has referred to all the classic writers who may be consulted on the subject with any advantage; my observations on this head will therefore be very brief, and chiefly introductory to some comments on its present condition and prospects in this country.

Attempts in painting, more or less rude, indigenous or transplanted, have been found wherever civilization has begun to show itself; the first seeds of the art may perhaps originate spontaneously in all countries, from man's instinctive love of imitation. Accidental appearances in Nature, such as stains upon rocks, impressions of forms in the sand, the shapes of clouds, or shadows of objects on the ground, may in various places have been sufficient to excite his fancy and furnish him with hints for his first rude efforts. The earliest pictures mentioned on good authority are perhaps those of the Canaanites, which Moses was commanded to destroy, three hundred years before the Trojan war; though there are remains of painting and sculpture in Egypt which, if the learned are right in their conjectures, were produced two or three centuries after the flood, and probably those in the British Museum are nearly as ancient.

Some painted vases found a few years since in the tombs of Etruscan cities, known to have been in ruins before the foundation of Rome, evince a considerable progress in style and composition. But Greece seems to have been the soil pre-eminently suited to the developement of the Fine Arts, and in that favoured country they attained a degree of perfection unknown perhaps before or since. Here we may pause for an instant to look back upon the palmy state of our art. The few specimens of ancient painting which remain are almost confined to the decorations of some of the houses at Pompeii and Herculaneum, and of a few Roman tombs, probably works of Greek artists; many of which possess great elegance of design and purity of colour; and if we consider them as the works of provincial decorators, would dispose us to give full credit to what is related of Apelles, Zeuxis, and Parrhasius. But exclusively of these and the vivid descriptions which the writers of antiquity have given of their great works in painting, from the age of Pericles to that of Alexander and Augustus, the admirable productions of their sculpture still preserved, leave no reasonable doubt that the Greeks equally excelled in the sister art. It is evident that their painters paid a similar attention to style in forms, and successfully cultivated beauty of tone and colour. With these, their powers of invention, composition, and expression were doubtless commensurate, and although they do not appear to have had a decided perception of some of those imposing qualities which give relish and effect to modern painting, various anecdotes prove that they successfully cultivated illusive imitation, and spared no pains in the completion of their pictures. From the philosophical acuteness with which the Greeks investigated the causes and principles of every subject that came before them, it is deeply to be regretted that none of their treatises on Art have reached us. They would probably have thrown much light upon the subject, and it would assuredly have been highly gratifying and instructive to have compared the opinions and doctrines of Pamphilus, Apollodorus, and Apelles with those of Da Vinci, Reynolds, and Fuseli.

Painting was held by the Greeks in much higher estimation than it has been by any nation since—and was publicly proclaimed by Alexander to be the chief of the liberal arts. Employed as the ally of religion and government, to commemorate heroic examples, and promote patriotic feeling, its productions, like those of Sculpture (which it generally accompanied), were regarded by that tasteful and sensitive people with enthusiastic delight, and considered above all price. The great artist was looked upon as the property of his country, and one of its chief ornaments; and he showed himself entitled to its affection and veneration by the great moral and social benefits he conferred upon it in return, sharing with its statesmen and philosophers in the cultivation of his fellow citizens. Unhappily Art continued at this elevation for too short a period, and gradually began to sink when the dominion of the world passed into the hands of the Romans. The comparative incompetency or indifference of that people for such refined objects even at the Augustine era is admitted in the well known disclaimer of Virgil; and though Pliny speaks of Painting as having been "early honoured among the Romans," in telling us that it was once a noble art, sought after by kings and nations, he sufficiently shows that it had ceased to be so considered even in his time. I shall not pursue Art to its decline, but hasten to its revival in the Italian States towards the middle of the 13th century, when after a sleep of ages, Painting once more awoke, and again began to challenge admiration. At that period of renovation, the human mind seemed at once to expand, the lights of genius began to appear in every direction, and the whole circle of the liberal arts rose together, like a beautiful constellation, to shed sweet influence on social life. About the close of the 15th century, and during the interesting Cinque-Cento, Leonardo, Michael Angelo, Raffaelle, Titian, Correggio, shone out with a splendour perhaps equal to that of the greatest painters of antiquity, and produced such powerful works in their different styles of excellence, as would have done honour to the ancient world, in its most fortunate periods. The princes and people of Italy seem to have welcomed the productions and fostered the talents of these surprising men with delight and affection, and to have assisted with fervour in developing their energies, as if anxious to share in their glories. They employed the arts, as in earlier times, to illustrate religion, adorn the temples and public buildings, perpetuate great events and stimulate patriotic feeling. We find the efforts of painting at this period directed chiefly to elevated subjects; scriptural and profane history, poetry, or the portraits of those great public characters whose actions and talents entitled them to be transmitted to posterity by the pencil of the artist as well as by the pen of the historian.

Having already brought before the student the characteristic excellencies of the fathers of modern painting, I will not here enlarge upon them, but I may notice one fact which seems deserving of remark. Such was the force of genius and of a noble ambition in these great men that they aimed at possessing all the liberal arts in conjunction, painting, sculpture architecture, poetry and music—while in our degenerate times we seem to have become persuaded, not merely that "one science only will one genius fit," but that painting alone is an art too complicated to be possessed in all its parts by any individual; and that whatever his faculties, the extent of his hope must be to distinguish himself in some one particular division of it, as design, colour, or chiaroscuro. One feels reluctant, however, to receive as a sound conclusion an opinion so degrading as it would appear to the talents of the present age. Painting in those days was still young; much was to be sought out, and it should have appeared a more difficult art then, than now, when we have our great predecessors to guide us, and more leisure to arrange and classify, refine and extend, what they had accumulated; and this was the aim of the celebrated school of the Carracci, which half a century later was established at Bologna. They thought that to carry on and complete the art it was but necessary to unite all the different excellencies of which it had shown itself capable in the works of the most admired painters, and avoid their faults. No man had hitherto been master of all the parts of painting in an equal degree of perfection. Michael Angelo excelled in composition and drawing, but not in colour; Raffaelle was distinguished for expression, and grace, but had neither the greatness of style of his rival, nor the sweetness and union of Correggio; and Titian, a perfect colourist, was deficient in form. The theory of the Bolognese appears to point out the only way in which painting can have a prospect of advancing. Fuseli, however, seems to treat their project with some degree of ridicule; and as his opinion has met with opposition, I shall digress a little to inquire into his true meaning, which may afford an opportunity of offering some further hints to the student. The question I think should be, whether or not, on this eclectic principle, painting is likely to acquire an increase of power over the mind or affections, and whether the qualities which the

Digitized by Google

Carracci were anxious to combine do not belong to distinct classes, and are not incapable of a closer union without suffering respectively.

A very little experience is sufficient to show that many qualities, in themselves desirable, may be incapable of coalescing, and that what forms the principal charm of one picture may become a blemish in another. The brilliant colour of Paolo Veronese, as I before suggested, so far from assisting the Cartoons, would undoubtedly strip them of all sentiment, and the more subdued hues and imitative truth of Titian would as certainly injure rather than improve the 'Last Judgment': colour could never form any part of its attraction. In works of so elevated an aim, it may be sufficient that the sense is not offended; the graces of the art would be impertinent in what is meant to be sublime. But let us advert to that distinguished eclectic, Rubens, by whom the principle of the Carracci has been carried farther than by any other painter. With extraordinary natural gifts, this great artist had pursued his studies upon the widest scale, and we find him early endeavouring to combine in one splendid system all that he had found admirable in Leonardo and M. Angelo, in Titian and Correggio, whom he may be said to have rivalled in their different excellencies. But have those energetic compositions of the 'Fallen Angels,' and others of the same class at Munich, which have been so justly held up to admiration for their marvellous powers, surpassed the 'Last Judgment' in sublimity or pathos? who is tempted to believe that the latter could have gained any assistance from the florid tints of Rubens? or does not at once see that the sublime repudiates such an alliance?—I say nothing of the inferiority of these works in style of design, for this great mannerist (though he could expatiate on the beauty of the antique) seems to have felt that its simplicity and refinement would not accord with that daring exuberance in which he is always consistent, and is himself alone; nor could he have amalgamated his own artificial style with the pure feeling and affecting expression of Raffaelle, and he knew it too well ever to make the attempt. They are obviously "spirits of another sort," and their spheres widely distinct.

It cannot be denied that Rubens has displayed a more comprehensive union of technical powers and a more picturesque genius than any other painter; but he has not advanced on the colour of Titian, or the charm of Correggio, or raised the art by any invention of his own. By combining the merits of others in a high degree, he has somewhat enlarged the boundaries of Painting, and seems to have fairly experimented the eclectic system, but he has not placed himself at the head of the art. The qualities we admire in the finest works are always relative, and must be measured out in due proportion: by attempting to make them all equally important we weaken the effect of each. Thus it has been observed, that the immense fabric of St. Peter's at Rome appears at first sight neither lofty, nor wide, nor long; the proportions are so justly balanced that you are not struck with its vastness, till you begin to compare its parts with the objects around you. But has not the architect sacrificed character to this supposed accuracy (which might have been beautiful in a smaller building); and has he not employed enormous means to produce an ordinary and inadequate effect? On the contrary, have not the authors of many of our Gothic cathedrals shown more skill and judgment, who by adopting bolder proportions have produced grander effects on a much smaller scale of real magnitude and at much less cost? Character, which is the soul of Art, can hardly be obtained without lowering the value of some things in order to give greater importance to others; some predominant principle will always be more striking and effective than an uniformity of qualities, however desirable in themselves. This, I apprehend, was the lesson Fuseli meant to convey. That able critic could not wish to deter the student from endeavouring to acquire in the utmost perfection all the parts of the art, because they cannot always be combined in equal degrees; for no one appreciated more than himself the value of those extensive acquisitions which afford so broad and solid a basis to the art of our great leaders. He could not intend to object to the consistent assemblage of great qualities to be found in the 'Transfiguration' of Raffaelle, nor to the mode in which that admirable artist aimed at carrying on his studies, uniting in just proportion all the excellencies compatible with his subject. In that great work, according to Menga, "Raffaelle exhibited a new degree of perfection, and opened the true road to art;" but I may add, that he was still advancing in the same direction, and subordinating everything to expression.

To return to history. If the Carracci school did not much extend the boundaries of the art, or add to its power, (unless we except in the twilight sobriety of tone of Lodovico,) it produced a number of very considerable painters, whose names I need not enumerate. The times, however, grew unfavourable to the farther progress of Fine Art. The Popes and other Princes of Italy became less able, or less willing, to adorn churches and palaces with extensive works, and Painting, instead of rising, gradually descended from its height, and accommodated itself to the less elevated taste of wealthy individuals, who became its patrons in the great commercial cities of Europe. Rome, Florence, and Bologna, however, long produced works of a high class, and sank with dignity; while at Venice colour soon became the paramount, or rather only attraction, and technical bravura began everywhere to be accepted as a substitute for mind. In Germany, Flanders, and Holland, colour, chiaroscuro, and finish were early acquired, and, aided by the fascinations of oil painting (which had re-appeared at Bruges), were soon found sufficient to attract admiration, though employed on the coarsest and most homely subjects; till at length Painting condescended to luxuriate in transcripts of dunghills and beggars, or the revels of drunken boors, which, from their great truth, and beauty of execution and effect, found their way into all the collections of Europe. Louis Quatorze was the first among her princes to perceive this degraded state into which the art had fallen, and endeavoured to restore it to its former elevation. He ordered the 'Magôts' of Teniers to be removed from the royal cabinet, and employed the talents of his countrymen on worthier themes. He founded at Paris an Academy of Arts on a magnificent scale, with an auxiliary establishment at Rome, equally splendid, to which a number of those students who gain prizes in the parent school are annually drafted off, to complete their education among the great works of antiquity and of the Cinque-Cento. To these, on their return to Paris, further encouragement and patronage is immediately afforded, to embark them honourably in the exercise of their profession.

On the many distinguished painters which France has reared by these judicious means I will not here dilate. The names of Poussin, Le Sueur, Le Brun, and many others, will ever do credit to the French school, and furnish valuable examples to the world.

Paris and Rome have long been considered the two great universities of Art, to which students from all parts constantly resort. The other sovereigns of Europe have since perceived the value of such institutions, and have gradually adopted them in their respective dominions. At this time scarcely a principality is to be found on the continent that has not its Academy of Arts, supported by the government with liberality and effect. But let us now glance at the history of Painting in this country, which presents so strange a contrast to what I have just stated. Zucchero and More, Holbein and Vandyke, Lely and Kneller, helped to introduce the art of portraiture into England, and it found a congenial soil. We know with what success it has since been cultivated; the names of Reynolds and Lawrence may rank with the most eminent in this class, of whatever place or period. In the highest styles of art we have been less fortunate, and various causes have combined to prevent the naturalization among us of what is generally included under the name of "Historical Painting." Rubens had been employed to adorn the Banqueting House at Whitehall, and in other great works, and in the display of his wonderful powers had shown what are the capabilities of the art. In more propitious times the ill-fated Charles (whose taste far exceeded that of any sovereign who had previously filled the English throne) might have drawn forth the talents of the nation in this direction. Guerrio, Laguerre, and other foreign *macchinisti*, subsequently came over to ornament the houses of the nobility with extensive compositions, and their technical powers were considerable. These works being on a large scale, and affording great scope to the imagination, kept alive in some degree the higher qualities of the art, as it rendered necessary a competent study of the human figure, as well as of invention and technical science. Kent and Sir James Thornhill seem to have been the only native artists of any eminence employed in this way. The latter produced many respectable works at Greenwich and elsewhere, (the copies of the Cartoons around us are by his hand); but this style of decoration soon went out of fashion, and from the reign of Queen Anne to the accession of George the Third, Painting was sinking into the lowest state of neglect, and scarcely produced a single historical effort worthy of record.

Brighter prospects dawned upon Art with the commencement of the reign of George the Third, whose name will descend to posterity as that of the first British monarch whose paternal care was extended to the Fine Arts.

At the request of the principal artists of that period, he adopted them under his protection, and founded the Royal Academy, for the cultivation of Painting, Sculpture, and Architecture, allotted them apartments in his palace of Somerset House for carrying on the schools, and, while it was necessary, assisted the Society from his privy purse. He took Mr. West, then just returned from his studies on the continent, under his immediate patronage, allowed him a liberal salary, and employed him to paint an extensive series of historical pictures on a princely scale. It was hoped that this illustrious example, and many of the fine works it gave rise to, would have had a favourable influence on the public taste, but the sovereign and the artists were equally doomed to be disappointed in the result. Another attempt was made some years since by several noblemen and gentlemen to revive and foster historical painting in the establishment of the British Institution, in support of which they raised a considerable subscription, but their laudable endeavours have not hitherto been attended with the success they so well deserved.

It was at the request of these lovers of art and real patriots, that a plan was drawn up by a highly distinguished member of this Academy, which, had it met with the encouragement of the Government to whom it was submitted, must have given a great impulse to the higher styles of painting, and, by this time, have produced a number of original works which would have done honour to the country, and amply repaid, in its consequences, the trivial sum that would have been annually requisite to carry it into effect. But like all attempts that have hitherto been made in favour of this class of art in England, it proved abortive, and we still remain the only civilized country in Europe that affords no public demand for the great works of painting. How are we to account for this repugnance in the English nation to a species of art, which elsewhere has always been considered one of the most indubitable marks of a highly refined state of the public mind? It cannot be said that the artists have been wanting to themselves, or to their country, in the efforts they have made to assert the noble powers of British Art and to promote the favourable reception of historical painting. Above seventy years ago some of the principal artists of that time united in presenting to the Foundling Hospital, then recently opened, a series of scriptural pictures. Soon after, Reynolds, West, Dance, and others, made an offer of decorating St. Paul's Cathedral at their own expense, but the offer was declined. Barry, with a noble enthusiasm, undertook and carried into execution the decoration of the great room of the Society of Arts, in the Adelphi, on being provided only with canvas, colours, and models. In fine, this Academy has, for above half a century, supported from its own resources a national school, the only one of its kind for the gratuitous instruction of young artists; and if its success has not been complete, it is some consolation to reflect that, under every disadvantage, Art has in many styles made a more rapid progress in England than it ever did in any other country in the same period of time. Great works are not produced, because great works are not wanted. Hence design, the true basis of graphic art, ceases to be studied as it deserves, and the deficiency is felt in every branch of it, down to the patterns of our manufactures.

Considering the present unfriendly feeling towards historical art, the student may be disposed to ask, what is to tempt him to enter upon a long and laborious career, which affords so little prospect of en-

Digitized by Google

courngement, when patronage and reputation are to be obtained more easily in humbler walks. In reply to this, the best hope I can suggest, is in the recent establishment of our National Gallery, which, viewed as the first recognition on the part of the Government that the art of Painting is deserving the consideration of the country, may be welcomed as a favourable omen; and if the works of the living are not yet thought worthy of being placed side by side with those of the dead, it surely cannot long remain unperceived, that the only mode of stimulating modern Art to rival that of former days, would be the gradual, and select admission, of the best specimens to be obtained at the time present, and not to wait for perfection. Were this adopted, it would infallibly rouse the talents of the country; and if conducted under judicious and impartial regulations, such as may be found suggested in the plan which I have just mentioned, would render it indeed a national gallery, and soon redeem our national credit.

To excel in Art, a portion of enthusiasm is essential, and this cannot be excited by trivial causes. The being appointed to decorate a Capella Sistina and a Vatican, brought to light the energies, before unknown, of Michael Angelo and Raffaelle, for the admiration of their own age and of posterity. Works intended to remain as national monuments will ever awaken considerable powers, and stimulate genius to its utmost exertions.

> Fame is the spur that the clear spirit doth raise,
> To scorn delights, and live laborious days.

And such noble aspirations would again be called forth by great occasions, and be attended with commensurate results, would lead to the general dissemination of taste, and the gradual formation of a great school. No commercial speculations nor Art-Unions can supply its place. Without public patronage Painting can never arrive at any great eminence.

Such encouragement as is wanting here, is now going on to very considerable extent in France, Bavaria, and Prussia. A number of large pictures are annually purchased for the public collections of Paris; and the Historical Gallery, recently formed at Versailles on a grand scale, and devoted to the military glory of the nation, has already placed Art on a higher elevation there than it occupies anywhere else. The public works now going on in the small town of Munich in the decoration of churches, palaces, and public buildings, is truly surprising, among which there are productions of very marked excellence in the epic style; but any detail of this would contrast too painfully with the neglected condition of Painting here. A gleam of hope, it is true, has just broke forth, in the establishment of a Commission to consider if the New Houses of Parliament in progress may not afford an opportunity for promoting the Arts; and no doubt every lover of art will wish success to their deliberations, and their efforts to retrieve the reputation of the country.

In the absence of sufficient inducement much effort cannot be looked for, yet I would fain believe that some among us may always be found who will love the art, as they love virtue, for its own sake; and support to the utmost its intellectual and moral character and credit.

I am aware that none but strong and well regulated minds will be able to bear up long against the neglect, not to say hostility, which Classical Painting in this country has hitherto been fated to encounter. But high Art was never mercenary. No great works of invention ever were or will be produced from sordid or mercenary motives. They require the artist to be influenced by other and better feelings—a fondness for his vocation, a sense of its capabilities and worth—a wish to be useful in his generation, must be his main incentives.

"The art has fallen on evil days and evil tongues," yet let the student "hold right onward, nor bate one jot of heart and hope." Let him proceed in the noble and determined spirit of Milton. Let him by industry and study endeavour to qualify himself for great undertakings, and be ready, when called upon by happier circumstances, to sustain the honours of his art, and perhaps help to add to the other glories of England that of a distinguished school of Historical Painting.

AURORA BOREALIS.

Collingwood, May 7.

Last night (Saturday, May 6) having been remarkable for one of the most brilliant displays of aurora borealis which it has ever been my good fortune to witness, it occurs to me that a notice of the principal phases of the phenomenon, as observed from this place, may not be unacceptable to your meteorological readers. The day had been overcast and showery, and between 5 and 6 P.M. a heavy fall of rain took place, after which the sky cleared gradually, and at length became perfectly serene and cloudless, a calm, or very gentle air from the westward prevailing. It was at 10 P.M., or a few minutes after, that, looking out towards the south, my attention was attracted by a small luminous patch, unlike an ordinary moon-lighted cloud, in the constellation Leo, and going out where an uninterrupted view of the north horizon could be obtained, a pretty strong auroral glow was observed, in spite of the bright moonlight. But what chiefly attracted my attention was a large and exceedingly luminous white nebulous mass, in form something like an inverted comma, occupying a space from about the altitude of ϵ Cassiopeiæ (which its eastern border nearly touched), to the Pole Star. At a cursory glance it might have been taken for a cloud, but that its light was much stronger than any cloud simply illuminated by a moon in the first quarter could have emitted. It differed also from any ordinary cloud, in the exceeding softness of graduation of its light, and the regularity of its condensation towards the middle, but, above all, in the continual changes it underwent of general form, size, and brightness, without perceptibly shifting its place, (at least, in a short time, though, on the whole, it kept slowly ascending). At 10 h. 15 m. this mass had almost completely disappeared, being reduced to a faint streak of light traversing the interval, from α Cassiopeiæ to η Ursæ Majoris, but its disappearance was only temporary, as at 10 h. 17 m. it reappeared in the form of two large nebular and rounded patches of unequal size, running together, and occupying the middle of the interval abovementioned, the streak still subsisting. At the same time a faint horizontal streak began to be observed below the moon and the stars Castor and Pollux. At 10 h. 18 m. the southward progress of the nebulous mass was very evident, as it now occupied the region about the head of Draco and legs of Hercules, being very bright and large. In another minute, however (10 h. 19 m.), it had again entirely disappeared: meanwhile, the streak or streamer above alluded to still subsisted (10 h. 20 m.), proceeding apparently from a most vivid glare in the north horizon, under Cassiopeia. At 10 h. 22 m. the nebulous mass again appeared under Lyra, near Cerberus, to the east, (having, therefore, drifted, on the whole, and supposing it to have been the same mass in its successive appearances and disappearances, nearly along the course of a parallel to the solstitial colure in the then position of the starry hemisphere. At this time faint streamers were rising from the northern auroral glare. 10 h. 23 m. a faint nebular mass is now formed near the moon, and touching on α Hydræ, which, for distinction's sake, we shall call B, denoting that where movements have been hitherto followed by A, another (C) is forming near β Leonis.

10 h. 25 m. A is now exceedingly bright, round, and well insulated; C is faint, as is also B, and there seems a tendency by the connexion of the two latter to form an arch. A very brilliant streamer now issues from the northern glow, of a reddish hue, the nebulous masses remaining purely white.

An interruption now took place in the observations while looking over the maps and charts. At 10 h. 37 m. resumed: the streamers were now of exceeding brilliancy. At 10 h. 38 m. another nebulous mass, D, had formed on Corona Borealis. It enlarged rapidly towards the south, and at 10 h. 40 m. had become a great two-lobed cloud of white and very intense light. Meanwhile the northern glare went on increasing, darting forth superb reddish streamers, some of which nearly reached the zenith. At 10 h. 43 m. the nebulous mass A has shifted still more to the south, being now near α Ophiuchi, and appears to be dilating westwards, as if tending to form an arch by union with the other masses. About this time the furnace glow in the north horizon, which had long been acquiring intensity, began to grow tremendous, and for the next ten minutes had all the appearance of an immense conflagration. Broad and vivid streamers burst forth from a ragged and broken central black mass, not all from one edge, but as if emitted from various depths within its substance; several were extremely concentrated and luminous; others diffuse, and of a very evident crimson colour. No undulatory movements were however observed, or pulsations of light. The crimson colour above alluded to was not confined to the visible lines of streamers, but was diffused over a very large space in the north-east quarter of the heavens.

10 h. 55 m. After an interval of extinction, the nebulous mass B bursts forth again of great intensity half way between $\alpha\,\alpha$ Hydræ and Corvus. A is also bright, and now stands a little to the south of β Ophinchi, having drifted southwards.

10 h. 58 m. B and D are vanished. A extends from ζ Serpentis, westwards, in an oval form. The northern streamers are now grown faint, but there is now formed an *upper* line, or low arch of broken auroral glare. From this period the intensity of all the phenomena rapidly relaxed. At 11 h. 0 m. a patch of irregular figure, with descending oblique dashes of light, was formed over the moon, which faded in a couple of minutes, and was speedily succeeded (at 11 h. 4 m.) by a luminous appearance, having the aspect of a mixture of auroral gleam and actual cloud, over Castor, Pollux, and the moon, involving the latter.

11 h. 7 m. All grown fainter. The nebulous mass A alone remains, and very faint: it occupies, as an ill-defined oval, the middle of the triangle formed by β, η, and ζ Ophiuchi. The northern glow is faint and breaking up.

11 h. 11 m. All the nebulous masses have vanished, except one in Camelopardalus, which may be cloud, but there is yet a glow in the north horizon (11 h. 20 m.), in a low, regular, and concentrated arch, whose crown is in the magnetic meridian, and whose eastern portion is much the brightest.

11 h. 22 m. After a long pause a streamer breaks forth, somewhat west of Capella, from what is *now* the brightest part of the glow. From this time the auroral phenomena, with exception of a low glow, and very faint occasional streamer, disappeared. But at 11 h. 33 m. a formation of hazy clouds took place in the region occupied by the moon, accompanied by what might be regarded as auroral streaks perpendicular to the magnetic meridian. I had always hitherto doubted of the often-alleged connexion of aurora with cloud streaks, but on this occasion I felt disposed to consider that connexion as real. Certain it is, that from the constellation Crater, through β and δ Leonis, up to β and α Ursæ Majoris, a luminous streak extended, which, in one part of its extent, was undoubtedly moon-lighted cloud, in others *hardly* doubtful aurora. The prolongation of this arc beyond α Ursæ also encountered another small cloud, which seemed to resolve itself into auroral nebulosity, and at last disappeared. But as at lenght the haze assumed a decided *watery* appearance, and actually dimmed the moon, I will not venture to speak decidedly on this point.

I am, &c.,
J. F. W. Herschel.

FOREIGN CORRESPONDENCE.

Carlsbad, Easter Sunday, 1843.

The brightest of suns, the bluest of skies, look down on this day of solemn festivity, and make, what is the most gladsome sight on earth, the innocent enjoyment of the laborious poor, still gladder. One cannot but feel as if Heaven smiled upon its humble children with a peculiar brightness. This year it is especially striking. The elements have harmonized with the solemn time. The whole of the days of mourning as the Germans call them (*trauertage*), were bitterly cold and stormy. We shall have "a white Easter," said my little Bohemian maid, as she shivered before the snow breeze (*schneeluft*), in Dresden last Sunday. On Tuesday and Wednesday we crossed the Erzgebirg amidst eddying snow-storms, and accompanied by predictions that we should have to be dug out of the drifts. These were not verified; but at intervals we met men with spades who had been clearing the road. The scene was altogether Alpine. Another resemblance to the passage of the Alps was the change on reaching the Bohemian side of the ridge. We had left the Saxon side entirely

Digitized by Google

covered with snow. As soon as we began to descend we found the pretty gorge of Joachimsthal perfectly green. The brook bounded triumphantly along by our side, and only here and there a shady nook concealed a patch of snow. Nevertheless, till yesterday Carlsbad was bitterly cold; then the weather brightened, and to-day the sun asserts all his might.

I am just come from the church, which on holidays is always crowded with the peasantry from the whole country round. To-day it could not contain all who tried to enter. I must have stood the whole time, had it not been for the courtesy of a respectable looking peasant, who offered me his seat, which, after some scruples and some resistance, I took. And here I must confess, that I am always impressed with the enormous superiority the Catholic Church possesses over our own, in the outward equality it maintains within the walls of its sanctuaries. I am perfectly aware how distasteful such a doctrine or practice must be in England; and I ask myself where we are to find the piety, humility, or charity, which would enable us to bear the close contact with coarse garments and toil-hardened hands, or to endure with patience to see the peasant woman, who has risen before the sun, and trudged leagues to enjoy this, the greatest pleasure she has in the year, seated in a comfortable place while we are standing ill at our ease. Yet whenever Christianity is more than a name, the existence of distinctions of rank in the place where we affect to believe ourselves in the more immediate presence of God, must be regarded as a fable. There, where, if we mean anything by what we say, we invoke the more direct inspection, would not any one think we must feel all the trifling accidents which distinguish one perishable coil from another fall into nothingness, and the souls of all stand in their naked and ungarnished worth, or worthlessness, before Him? And secondly, if there were the least soundness or consistency in our talk about "one brethren" of mankind, should we not feel that justice and charity commanded us to render the day of rest most easy to those who have little rest on other days? to render the house of prayer pleasant and inviting to those who have so few pleasures elsewhere? Never can I see the aged, the thinly clothed and toilworn, exposed to cold, and placed where the least is to be heard and the most to be suffered, while those whose whole life is ease and indulgence kneel on soft cushions, and sit screened from every draft, without a feeling of shame and humiliation at our hypocrisy and self-delusion. It may be greatly doubted whether the most eloquent sermon that ever flowed from the lips of the most accomplished divine, gives so impressive and affecting a lesson on the abrogation of worldly distinctions in the sight of God, as the simple act of kneeling down by the side of one who is of another land, another tongue, another station in life, another faith even, an alien and a stranger, in all and everywhere but here, and here a brother. No place is so holy that it can inspire hearts which bring no heavenward and humane thoughts and feelings with them. "Illæ autem mulieres angelos vident quæ cum aromatibus venerunt," says St. Augustine, in his poetical way. But I am writing a sermon instead of a description. I am the more inclined to enlarge on the beautifully democratical arrangement of a Bohemian church, after seeing the inhospitable exclusiveness of those of Berlin, where the pews are as relentlessly locked as those of any fashionable chapel in London. You can imagine nothing more cheerful than the sight to-day. Carlsbad, "the most aristocratic of baths," as Mr. Murray calls it, is now, as far as the fashionable world is concerned, a desert. It is the peasantry who make it gay. They are passing my door in one unbroken stream. The men wear the long blue coat, which is the most prevailing dress of the German peasantry, and a hat peculiar, I think, to Bohemia; the top of the crown considerably larger than the bottom, which is surrounded by a broad black ribbon, or band, fastened by a gold buckle, full as large as a lady's waist-buckle. In this many have a bunch of artificial flowers of the gayest colours. They are generally decent, quiet, good-humoured looking men. There is little, I may say no beauty to be seen in either sex. The women wear a petticoat of a sort of shot stuff, not unhandsome; a body of silk of another colour, often flowered or brocaded, and an apron of shot silk. This is evidently the favourite part of the dress. It is long and wide, and often of very rich quality and colour. I remember passing through Buchan, a stage or two from hence, on the feast of St. Michael, the patron of the church, and being quite dazzled by the brilliancy of the silk aprons. They were much gayer than here. The favourite colour was a sort of flame or saffron colour, a silk woven for Hymen's wear; and every kindred shade, yellow, orange, and red. I never saw so gay a bed of tulips. As to shape, there is not much to be said: All women's dresses are (throughout Germany) made by tailors, and I should imagine the village tailor makes for both sexes, and, as far as the upper part of the raiment goes, on the same pattern. Little or no allusion is made to the supposed peculiarities of the female form, and the square high shoulders and broad flat waists seem to justify the tailor in ignoring them. Some of these jackets are ornamented with buttons, some with embroidery, and the smartest with gold or silver lace. The women wear a cap, fitting close to the head, with a lace border set on plain, and an immense bow of ribbon, with long ends behind. Such are the people who hew the wood and draw the water about Carlsbad; and whom on a Sunday or saint's day you see trooping in, each with a prayer-book neatly folded in a handkerchief. It is very common for them on Easter Sunday to go very early in the morning to the various little chapels on the surrounding hills to pray, after which the men used to fire off guns. This is now forbidden: I do not clearly understand why. I cannot hear of any accident or mischief that occurred, and it is the loss of a great pleasure to the people. "*Ach! das war ein knall!*" said one to me with a melancholy air; I am surprised at this in the Austrian government, which in these things is wiser than its neighbours. In a town one sees the reason of such a prohibition, but the hill tops and the fir trees would not be annoyed. Firing off guns is a favourite way of expressing joy in Germany, or of doing honours. At weddings this forms an important part of the festivity. I was invited last year to the wedding of the daughter of a *reicher Bauer*, or, as we should say, small farmer, not far from Dresden. Unfortunately I could not go, but I made one of the bridesmaids give me all the details. For months before, the females of the family were busy preparing the "*ausstattung*," or dowry, which is given not in money but in kind, *i. e.* furniture, linen, clothes, and, in this case, cattle. For many days before, all hands were at work baking, boiling, and stewing. On the morning of the *hochzeit*, my informant's task was to braid the bride's hair and to put on the myrtle wreath (orange flowers are French, and do not prevail here). The party went to church in open carriages, escorted by a numerous body of young men on horseback. On their way home this guard of honour continually fired off guns. The bride and bridegroom stayed three days in the house of the bride's father, during the whole of which time the junketing was going on. The bridesmaids and near relations stayed, and neighbours and friends came in and partook of the hospitality. On the fourth day was the *Heimsuchung*, the fetching home. This was even a greater solemnity than the marriage, and the assemblage of friends more numerous. The bride and bridegroom were seated in an open carriage, followed by as many more as the family and friends could fill. These were again escorted by the young horsemen, and the train was closed by the cows, which formed part of the bride's fortune, and the waggons filled with household gear. The bridesmaid told me, with great exultation, of all the magnificence of the scene; but I observed that she dwelt with peculiar satisfaction on the incessant firing kept up by the horsemen: "*Es war ernendlich viel geschossen*," she repeated with great emphasis. Ought not this, thought I, to make us tolerant of each other's pleasures? To ride slowly three or four leagues under an incessant popping of guns close to my ear, is about the last thing I should find agreeable; but call it a mark of good will and respect, associate it with the joys, the honours of the young matron going to take possession of her future home, and it becomes music.

I once met one of these processions. We were driving slowly up a gentle slope, I think it was somewhere in Saxe-Weimar, and at the crown of the hill I saw moving masses, which I could not make out. It was evening, and the sunset behind them rendered them more huge and mysterious. On applying to the usual authority, the Lohnkutscher (I should like to write a book in honour of Lohnkutschers), he said, 'Oh, that is a heimsuchung,' and proceeded to explain the scene. As we approached, we saw the carriages in front, four or five in number, containing well-dressed people, a number of respectable and well-mounted young men, and last, the waggons piled to a prodigious height, with tables and chairs, large presses, kitchen utensils, and every kind of farm-house furniture, the whole crowned with a mass of mattresses, and feather beds, in their bright new red and white checked covers. I saw no cows and heard no firing. Perhaps these are not indispensable in Saxe-Weimar, or perhaps the bride's father was not rich enough to give the cows. As the train turned off into a bye-road, and wound along through fields towards a small farm-house in the distance, pleasantly situated among trees, my fancy gave this to the bride as her new home, and I felt all the solemnity which the prospect of a human life never fails to inspire. There, thought I, is the scene, perhaps, of daily recurring and welcome duties, of healthy successful activity, of simple pleasures and contented affections; perhaps of eating and unrewarded cares, disappointed hopes, a sick body, or a wounded heart. All this may be found and felt within those narrow walls, and under the shadow of those few pleasant trees. My eyes followed them till they were out of sight, and my thoughts and cordial good wishes much longer. There is a description worthy of Walter Scott or Manzoni, of a wedding in the house of a Westphalian free peasant in that most strange and beautiful book, Immerman's 'Neuer Munchausen.' I know few books in the German language more worthy to be translated than half of this; but it would be difficult to do it; and if not done with great judgment and taste it had better be let alone. It is half satire, half idyllic romance. The satire I think bad, far-fetched, and tiresome; at all events wholly unintelligible to English readers. The description of peasant life and character in that most primitive part of Germany is extremely interesting and beautiful; and I have the authority of one or two distinguished Westphalians for saying, true. To separate the two parts would not be easy, but I think it is practicable.

A still more valuable and interesting work is, I hear, in progress; Mdlle. Annette von Droste, of the ancient and highly respected Westphalian family of that name, is writing a book on the character, habits, and traditions of the peasantry among whom she lives. Those who know Mdlle. de Droste concur in saying, that she unites, in a remarkable degree all the qualities necessary for her task. I was delighted to hear of so important a contribution to our small stock of information on this, the most interesting of all subjects, the life of the working man. Shall we ever learn how the toil, which is the condition of his existence, can be made least painful to the body and depressing to the soul, and what are the circumstances by which his character is exalted or degraded? In this first of sciences we have pretty nearly everything to discover; and till some progress is made in it, we may cry "Peace, peace," but there will be no peace.

I meant to tell you some of the superstitions and traditions of my Bohemian neighbours, but I have no room left.

OUR WEEKLY GOSSIP.

THE suggestion which we threw out some short time since (*ante*, p. 264), about establishing FREE EXHIBITIONS OF OBJECTS ILLUSTRATIVE OF FINE ARTS, NATURAL HISTORY, EXPERIMENTAL PHILOSOPHY, MACHINERY, MANUFACTURES, &c., has brought us several letters from gentlemen who approve of the idea, and offer assistance, but who request us to take the initiatory step in the proceedings. This is impossible, and may as well be stated clearly and at once: we have but little time to spare even for necessary relaxation: but we promise our hearty support to those benevolent parties who will do themselves the honour of setting the project afloat; and, once started, it will go alone. There have arisen no difficulties in the great towns where these Exhibitions have already been tried. One is now preparing at Liverpool, and another, as advertised in this day's paper, is about to be opened at Derby. Any large unoccupied building might be hired, say for three months. The mere announce-

Digitized by Google

ment that the Committee would be willing to receive models, specimens, &c., would be sufficient; inventors and discoverers, and ingenious manufacturers and mechanicians, are always eager to bring their several inventions and improvements before the public, and such exhibitions are the best and cheapest advertisement. The collection should include everything that is useful, novel, beautiful, instructive, or interesting, in Art, Science, or Manufactures. No one who has not attended these Exhibitions can conceive the amount of instruction derived from or the interest which attaches to them. We never passed hours more delightful than at Birmingham, in examining the specimens sent in to the Exhibition there by the different manufacturers. Hundreds went direct from the Exhibition to the manufactory—for the name and address of the exhibitor was affixed to, and ought to be affixed to, every article—and they bought specimens of those things which had most interested them, and thus, from the publicity given, the exhibitor found his remuneration. The Committee, of course, should announce that they are not responsible for the works sent in, but will take all reasonable care of them; but this is almost needless; thousands passed through the exhibition rooms at Birmingham, and no accident occurred: indeed, Sir Robert Peel, when he lately moved for a grant to the British Museum, observed, "that last year 540,000 more persons visited the Museum than had entered its walls the year previous. During the last seventeen years not a single article in the Museum had sustained any injury from the public, and the only accident which had occurred was a fracture of two panes of glass by a little boy who had fallen against them. He mentioned this circumstance not more to show the good conduct of the visitors, than to caution those who had the charge of public institutions against arguing in opposition to free admission on the ground of any fear of injury proceeding from the public misconduct." Another encouraging circumstance is, that the Exhibition once established, the models, specimens, &c., might, after a time, be removed to another part of London, and thus the Exhibition make a progress all round the great wilderness. It only requires a little co-operation and forethought.

Since the above was written we have seen in the daily papers a letter from Rochdale, which mentions the startling circumstance, that some person who had visited an exhibition of Mr. Danby's picture, 'The Opening of the Sixth Seal,' had cut out a large piece from the centre. The writer is naturally indignant, and says the thing is felt to be a disgrace to the town. Not so: the people of Rochdale are no more disgraced by such an act of wantonness, wickedness, or fanaticism, than by any other isolated act of criminality or madness. But be it observed, that this was a private and not a public exhibition—an exhibition at which money is charged for admission. We mark the distinction emphatically, because there is no example of injury done to property at exhibitions to which the public are freely admitted.

The fifty-fourth Anniversary Dinner of the Literary Fund Society, went off with excellent spirit. The Duke of Sutherland, as we announced last week, was in the chair; and, among the company present, we noticed the Russian, Prussian, United States, and Danish Ministers, the Prussian Consul General, the Bishops of Lincoln and St. David's, the Earl of Arundel and Surrey, Lord Francis Egerton, Archdeacon Hare, Sir W. Chatterton, Hon. W. Leslie Melville, Sir Benjamin Heywood, Bart., Sir R. P. Jodrell, Bart., Mr. Neeld, M.P., Sir Harris Nicolas, Sir George Lefevre, Sir H. Ellis, Messrs. Hallam, Seymour Tremenheere, Gally Knight, G. P. R. James, Lever, Ainsworth, G. Cruikshank, Auldjo, G. R. Porter, R. Bell, &c. The galleries were well filled with ladies, who seemed to take great interest in the proceedings. Among the donations announced were—Her Majesty the Queen, 105*l.* annual; Emperor of Russia, 1,000 silver roubles, amounting to 155*l.* 18*s.* 5*d.*; the Chairman, the Duke of Sutherland, 100*l.*, the Duke of Somerset, annual, 10*l.* 10*s.*; the Governor General of Canada, annual, 10*l.*; Lord Francis Egerton, annual, 10*l.*, and a donation of 10*l.* in addition; Baron Brunow, 10*l.* 10*s.*; Chevalier Bunsen, 5*l.* 5*s.*; Mr. Everett, 5*l.* 5*s.*; Count Reventlow, 5*l.* 5*s.*; Bishop of Lincoln, 10*l.* 10*s.*; Bishop of St. David's, 10*l.* 10*s.*; Archbishop of Dublin, third donation, (being 10 per cent. on the profits of his published works,) 8*l.* 18*s.*; W. Simpson, Esq., eighth donation, 20*l.*; Thomas Tegg, Esq., 20*l.*; the Stationers' Company, 20*l.*; Baron de Rothschild, 10*l.*, &c. The subscription altogether amounted to 877*l.* 5*s.* 5*d.*

The following is a list of the English Associates (the Foreign associates are limited to six) and the Correspondents of the Royal Institute of France for the year 1843:—*Associates:* Lord Brougham, Robert Brown, John Dalton, D.C.L., Henry Hallam.—*Correspondents:* The regulation of the 6th June, 1808, assigns to each Section the following number of Correspondents, viz., Mathematical Sciences — *Geometry* (6) — *Mechanics* (6): Sir M. Isambard Brunel—*Astronomy* (16): Geo. B. Airy, Francis Baily, Sir Thomas Brisbane, James Dunlop, Sir John F. W. Herschel, Captain W. H. Smyth, R.N.—*Geography and Navigation* (8): Capt. Beaufort, R.N., Sir W. E. Parry, R.N., Wm. Scoresby—*General Physics* (9): Peter Barlow, Sir D. Brewster, Chas. Wheatstone—*Chemistry* (9): Michael Faraday, Chas. Hatchett—*Mineralogy* (8): Rev. W. Buckland, Rev. W. D. Conybeare—*Botany* (10): Dr. Wallich—*Rural Economy* (10): Bracy Clark—*Anatomy and Zoology* (10): Richard Owen—*Medicine and Surgery* (8).—Fine Arts: Benidetto Pistrucci, C. R. Cockerell, Thos. L. Donaldson.—Moral and Political Sciences—*Philosophy:* W. R. Hamilton—*Morals:* Dr. Chalmers—*Legislation:* John Austin—*Political Economy and Statistics:* Wm. Jacob, Wm. R. Porter, James MacCullagh, Nassau Senior—*General History:* Dr. Lingard.—Inscriptions and Belles Lettres: Sir Graves C. Haughton, Lieut.-Col. W. M. Leake, — Millingen, — Gainsford, Thos. Wright.

List of Foreign Members (French) of the Royal Society of London, viz.: Louis Agassiz, F. J. D. Arago, Elie de Beaumont, A. C. Becquerel, J. B. Biot, H. M. D. de Blainville, A. Bonvard, A. Brongniart, Le Comte de Cassini, A. L. Cauchy, M. E. Chevreul, Le Baron de Damoiseau, J. B. Dumas, P. Fleurens, Baron Humboldt, J. B. Gay-Lussac, C. F. B. Mirbel, J. V. Poncelet, G. de Pontecoulant, J. C. F. Sturm, Le Baron Thénard. The Royal Society, by their charter, can only elect fifty Foreign Members.

The Scotch papers announce the death, on the 28th ult., of Mr. William Wallace, a distinguished mathematician and for many years Professor of Mathematics in the University of Edinburgh, which office he resigned in consequence of declining health.—The foreign journals record the death, at Copenhagen, of Rear Admiral Wulff, the translator of Shakspeare.

In a late number (806) we mentioned that a projected sale of certain public Records had been stopped, and the Records themselves delivered to the Public Record Office. We also threw out an opinion, that if parties possessing public records were willing to restore them to the authorities, there was a sort of moral obligation on the part of the Government to pay a fair market value for the same. We are happy to find that this is the course which the Treasury has adopted with respect to the records before alluded to. The party who delivered them up, as we are informed, memorialized the Lords of the Treasury, setting forth that he at least came honestly into possession of them; and the Treasury rewarded him for his conduct by paying him a full market value for the public property he had thus restored. It is hoped that the publicity of this case will induce the owners of what is, legally, still public property, to surrender up any public records they may be in possession of.

It is with great satisfaction we announce that Prince Albert has given a commission to certain of our artists, to paint a series of Frescoes to adorn the summer-house recently erected in Buckingham Palace Gardens. We are informed that the services of Messrs. Eastlake, Maclise, Edwin Landseer, Stanfield, and Uwins, have been sought on this occasion, and that the subject chosen to inspire their pencils is 'Comus.'

In the late Mr. Cave's collection of pictures, sold last Saturday at Messrs. Christie & Manson's, there was but one remarkable work, 'The Triumph of Flora,' by *Brueghel* and *Van Balen*. It is a very different production, indeed, from *Nicolas Poussin's* classic illustration of the same theme, and might well make us doubt if the well-known adage be applicable to painters' heads, or their hands either; what first-rate picture has ever been painted by two artists? But fourth-rate pieces, like this under review, sometimes gain from such partnerships. Encircling a small group of human and other anthropomorphous characters, which represent the Horticultural Society as then constituted, in full occupation, is the veritable triumph—*Velvet Brueghel's* floral wreath: yet it would prove no very pleasant or attractive head-dress for any lady, not to say Flora herself, being studded with birds of splendid plume, begemmed with brilliant insects; moreover, animated with graceful little reptiles and other diminutive zoologic specimens among the foliage—all proper enough to a garland where it grows, however unsuited to it on either a Pagan or Christian gentlewoman's brow. Proprieties apart, the whole resembles a bed of jewels and flowers in vivid sparkle and lustrous bloom. But if the grand Colourists took a "bunch of grapes" as their model for effect, Brueghel seems to have chosen a bunch of currants—the effect he produces, though great, has a littleness about it notwithstanding. We have elsewhere spoken of painters who can reduce Nature into photograph dimensions, yet leave her all her grandeur of character still; there are many others besides Velvet Brueghel who, even when they give natural objects their full size, by over-elaborate treatment make them look as if reduced to miniature copies. Van Balen's figures, in a smooth, hard style, agree well with Brueghel's manner; but such a free exposure of "the naked" requires Rubens's delicate flesh-tints and spiritual handling to appease our veritable modesty at the sight of such indecorums.

In the present number, we publish the last of Prof. Howard's Lectures, and thus close our record of the series of discourses this year delivered at the Royal Academy. We cannot do so, without offering our cordial thanks to the Professors by whose kindness they have been placed at our disposal. With a view of giving the series in as unbroken a form as possible, and also, to clear off sundry miscellaneous matters, which had accumulated by the pressure of the season, we defer till next week our notice of the Royal Academy Exhibition.

The past week has been remarkable for a rush of musical novelties and rumours: not a day's post or paper, which did not bring us a fresh cargo. In addition to the singers already here, and in full song, we may mention the coming of Mde. Dorus-Gras; the promised return of Mdlle. Bildstein, whose voice should, by this time, have ripened into something very charming; and the arrival of Mdlle. Nissen, for whom the lovers of classical music would do well to inquire. Then, for instrumentalists, Paris has sent us Sig. Camillo Sivori, the violinist, and is going to send us M. Flitsch, a pupil of Chopin—and (report adds) a fac-simile of his master—to say nothing of M. Servais, the violoncellist, who is talked of as on the way—and M. Demunck and M. Garreau, two other *virtuosi* on the same noble instrument, who are come. M. Döhler, too, is announced as intending to pay us another visit. Nor must the more "sober certainty" of Spohr's approaching visit be forgotten.

Our readers may be glad to know that a Bazaar, for the sale of fancy work, will be held at the Hanwell Asylum on Wednesday next. The gates will be opened at twelve o'clock, and tickets may be obtained at the Asylum or from any of the visiting Justices. All the fancy work has been made by the female patients, and the profits will go in aid of a fund established for the assistance of the convalescent on their discharge.

The Pasha of Egypt has received the Gold Medal of Merit voted to him some time since, for protecting the persons and property of subjects of the Allied Powers during the war in 1840, and for keeping open the overland route to India. The following letter from Boghos Bey has been transmitted to the Honorary Secretaries:—

Alexandrie, Avril 3, 1843.

Messieurs,—Je me félicite d'avoir à vous informer que le Vicerol, mon maître, a reçu, avec la plus vive satisfaction, la Médaille et l'Adresse que vous avez été chargés de lui présenter au nom de plusieurs notables d'Angleterre. Son Altesse ne pouvait qu'être extrêmement sensible à l'expression des sentimens qui lui prouvent qu'au sein de la grande nation Britannique, on ne se méprend pas sur le but constant de ses efforts, et qu'on lui tient compte des difficultés qu'elle a surmontée pour donner un nouveau développement aux transactions commerciales dont l'Egypte est l'objet, ouvrir des voies plus larges au commerce Européen, et lui rendre l'importante route de la Mer Rouge, qu'un long-temps de barbarie lui avait fermée. Au nombre des encouragemens

Digitized by Google

qui doivent le soutenir dans cette laborieuse entreprise le Vicerοi est flatté de compter les suffrages des notables Anglais, auteurs de l'Adresse. Je suis heureux, pour ma part, messieurs, que Son Altesse, en me chargeant d'être auprès de vous et de vos honorables mandataires l'interprète de sa gratitude et de ses bienveillantes dispositions, me fournisse l'occasion de vous offrir l'assurance de ma haute considération. (Signé,) BOGHOS YOUSSOUFF.

A Messieurs Lieut. Waghorn, R.N.,
et C. Roach Smith, F.S.A., &c.

We direct the attention of our readers to a communication with which we have been favoured by Sir John Herschel, containing an account of a remarkable meteorological phenomenon, witnessed by him at Collingwood on the 6th inst.

Letters from the Pyramids, dated the 18th of April, have just arrived. We have only time to say that Dr. Lepsius and the party were all well, and proceeding vigorously and successfully with their explorations—that the locusts had left the neighbourhood, and Prince Albert of Prussia arrived—and that there had been a night attack on the camp, of which we shall publish an amusing account next week.

ROYAL ACADEMY OF ARTS, TRAFALGAR SQUARE.
The EXHIBITION of the ROYAL ACADEMY is NOW OPEN. Admission (from 8 o'Clock till 7), 1s. Catalogue, 1s.
HENRY HOWARD, R.A., Sec.

The NEW SOCIETY of PAINTERS in WATER COLOURS.—The NINTH ANNUAL EXHIBITION of this Society is NOW OPEN, at their GALLERY, 53, PALL MALL, next the British Institution, from 9 till Dusk, daily. Admittance, 1s. Catalogue, 6d.
JAMES FAHEY, Secretary.

DIORAMA, REGENT'S PARK.
JUST OPENED, with a NEW EXHIBITION, representing the CATHEDRAL of NOTRE DAME at Paris, with effects of Sunset and Moonlight, painted by M. RENOUX, and the BASILICA of ST. PAUL, near Rome, before and after its destruction by Fire, painted by M. BOUTON. Open from Ten till Five.

SCIENTIFIC AND LITERARY

GEOLOGICAL SOCIETY.

April 26.—Mr. Warburton, President, in the chair.

1. 'On changes in the temperature of the Earth, as a mode of accounting for the subsidence of the Ocean, and for the consequent formation of Sea Beaches above its present level,' by Mr. R. Harkness.—In this communication, the author distinguishes two kinds of raised beaches; 1st, such as are often highly inclined, appear to have been formed during the historical period, and to owe their elevation to subterranean action; and 2nd, such as are almost always horizontal, and truly post-tertiary. To account for the latter, he proposes a theory based on the conclusion, derived from the appearances which the diluvium and the alpine boulders present, that during the post-tertiary period, the temperature of the earth was lower than it is at present. Considering the mean temperature of sea-water as not far remote from 40°, and inferring from the observations of Capt. Sabine, that sea-water follows nearly the same law as fresh-water, in expanding, with a reduction of temperature below 40° of Fahrenheit, he argues, that if, during the post-tertiary period, the mean temperature of the earth was lower, the mean temperature of the sea was also lower than it is at present; and this reduced temperature of the sea below 40° would cause it to occupy a greater volume than it now does, and consequently to rise on all the sea-coasts to a higher mean level than it now rises, though not exactly in proportion to its expansion, since it would then not only be deeper, but also would occupy a greater surface than before. Mr. Harkness seeks to account for the increase which he supposes to have taken place in the mean temperature of the earth since the post-tertiary period, by the extent of land within the tropics, which since that period has been raised from beneath the ocean by subterranean agency; and which since its upheaval has been heated by the sun's rays. He notices the fact, that in the south-west of Lancashire the diluvium is found resting only upon level and not on inclined surfaces.

2. 'On upright Fossil Trees found at different levels in the Coal Strata of Cumberland, Nova Scotia,' by Mr. Lyell.—These trees were first noticed by Mr. R. Brown, of Sydney Mines, Cape Breton, who published an account of them in the Appendix to Halliburton's Nova Scotia. They are now seen at many different levels. Their trunks extend through different strata, but are always broken off at a certain height, and they terminate at their lower extremities in beds of coal or shale, but never in sandstone. They are all of the same species, and have barks furrowed in a similar manner to those of the fossil trees from the Bolton railway, described by Messrs. Hawkshaw and Bowman. They are placed very accurately at right angles to the planes of stratification, which are generally inclined at an angle of 24°. At South Joggins there are nineteen seams of coal, some of them bearing fossil trees, interstratified with the sandstone. These trees vary in length, from six to twenty feet, and in diameter from fourteen inches to four feet. In the beds above the last seams of coal and vertical trees, there are two strata of dark bituminous calcareous shale, containing shells of Modiola and Cypris in great numbers, and probably of freshwater origin. At South Joggins there are seventeen upright trees, and Mr. Lyell believes there are ten distinct beds, one above another, in which their roots terminate. They extend over a space of from two to three miles, from north to south; and, according to Dr. Gesner, more than twice that distance from east to west. Stigmaria are abundant in some of these coal measures, with their leaves attached and sometimes spreading, as if they had been imbedded in their natural position. Mr. Lyell also gives an account of a bed of erect Calamites, discovered by Mr. Dawson in the coal-field at Pictou. From the facts observed, Mr. Lyell draws the following conclusions: 1st. That they imply the original horizontality of a great series of strata, which throughout a thickness of 3,000 or 4,000 feet, are now inclined precisely at the same angle, about 24°. 2nd. There must have been repeated sinkings of the dry land, &c. so as to produce a succession of more than ten forests of fossil trees. 3rd. They indicate a similar phenomenon, producing a succession of under-clays with stigmaria. 4th. That the agreement of the characters of the Nova Scotia fossil trees with those found upright in the coalfields of England, leads to the conclusion that this tribe of plants, by the strength and holding of their roots, resisted currents and winds, which overturned and scattered the accompanying lepidodendra and sigillariæ. 5th. That the facts related in this paper negative one of the principal objections which had been raised to the theory, which refers the accumulation of seams of pure coal to the growth of trees and vegetables on the spot, in the manner of peat: that the several seams of coal ought not, in that case, to bear so precise a resemblance to ordinary subaqueous strata, but ought to follow the irregular outline of the dry land, and to be less uniform in thickness over wide areas.

ROYAL SOCIETY OF LITERATURE.—*May* 11.—H. Hallam, Esq. in the chair. The Council in their report communicated the fact of an increase in the amount of the funds, and also of the number of members. The meeting then proceeded to the ballot of officers for the ensuing year, when the Earl of Ripon was elected President; Duke of Rutland, Duke of Newcastle, Earl of Clare, Lord Bexley, Lord Colborne, Sir Gore Ouseley, H. Hallam, Esq., Dr. Spry, W. Leake, Esq., and L. Petit, Esq., were appointed Vice-Presidents. Marquis of Northampton, Earl of Clarendon, B. Botfield, Esq. M.P., Dr. Bostock, B. B. Cabbell, Esq., Rev. R. Cattermole, Sir J. Dorat, G. P. R. James, Esq., Sir J. Swinburne, W. Tooke, Esq., W. Jerdan, Esq., were appointed members of Council.

HORTICULTURAL SOCIETY.—*May* 1.—At the Anniversary this day, the Duke of Devonshire was re-elected President; T. Edgar, Esq., Treasurer, and A. Henderson, M.D., Secretary; and the Earl of Auckland, Sir P. Egerton, Bart., and R. Hutton, Esq., were elected members of the Council.—*May* 2.—R. H. Solly, Esq., in the chair. Lord Beauvale, J. Taber, and F. Huthwaite, Esqrs., were elected Fellows. A communication was read from Mr. Feran, regarding some fine Oranges which were exhibited on a former occasion. The tree which produced them is described as small, and as having been much neglected for a considerable time; lately, however, it was potted anew in a compost of loam, cowdung, horse-droppings, and road-scrapings, and kept in a common greenhouse, and it has borne 53 excellent fruit as the result. The cause of the fruit's superiority in flavour was not accounted for; it was possibly owing to the variety being a particularly good one, or to some peculiarity of treatment yet unexplained. In consequence of the comparative nearness of the Chiswick exhibition, there was not so large a display of specimen plants as usual. Mr. Beck sent a round tin pan, divisible in the middle, and having a cavity in the centre, for the purpose of admitting pots, intended to economize tobacco-water; when this is applied to plants, for the purpose of destroying aphides, it is generally wasted, and a great superfluous expenditure is thus incurred: by this contrivance the plants may be syringed or sprinkled, and the whole of the fluid will be caught again, to be strained for further use. It was announced that Mr. E. Solly, Jun., would deliver four lectures on the Chemistry of Vegetation. Fellows will be admitted free; and to others the course will be 10*s.* 6*d.*

MEETINGS FOR THE ENSUING WEEK.

- SAT. Asiatic Society, 1, P.M.—Anniversary.
- — Horticultural Society.—Garden Exhibition.
- — Botanic Society, 4.
- MON. Statistical Society, 8.
- — Institute of British Architects, 8.
- TUES. Institution of Civil Engineers, 8.—'Description of an improved form of the Journals of Axles for Railways,' by Capt. Handcock.—'On the causes of fracture of Axles of Railway Carriages,' by J. Glynn.—'On the application of Zinc by the process of Electro-deposition for the preservation of Iron, as applied to Engineering or other purposes,' by F. Pollett.
- — Electrical Society, 8.
- — Chemical Society, 8.
- WED. Society of Arts, 8.—Mr. Cooke's Improved Electric Telegraph will be described.
- — Microscopical Society, 8.
- THUR. Royal Society, half-past 8.
- — Society of Antiquaries, 8.
- FRI. Royal Institution, half-past 8.—Sir J. South 'On the importance of Telescopes of large aperture, and on the means which have been adopted, particularly by the Earl of Rosse, for obtaining them.'
- — Botanical Society, 8.

FINE ARTS

THE WATER-COLOUR EXHIBITIONS.

[Second Notice.]

WHILE further noticing these two pleasing Exhibitions, the New one will occupy our principal attention, since it comprises the greater amount of novelty. A paragraph, however, is first due to the Old Society, and this will be of pleasant import, since it must be devoted to report of progress.

Mr. Fripp, for instance, who, but a few years ago, was an ill-assured experimentalist, here blossoms out into a rare landscape painter, with a style of his own; something akin to Varley's and Dewint's, but still displaying a modified individuality. His *Durham from Newton Hall* (8) may be cited in proof; an admirable autumnal landscape, as golden as the season, but anything rather than extravagant or tawdry. Some river scenes by him are quieter in tone, but not less masterly in touch. Mr. Oakley, too, seems to have revised his palette since we met him last year. His Gipsies are true to gipsy-dom in their contours, and flaunting costumes, half rags, half finery; and the lividness of flesh-tints which it was to be feared might spread into a manner, has passed away. Mr. Hunt was never more versatile than this year. Here we have all his range of yawning, laughing, or mischief-enacting Colin Clouts—plenty of those small and rich flower-pieces, in which selection of colour and grouping of form amounts to poetry, after its kind,—and, beyond these, wonderful compositions of still life, in which an earthen pipkin, a stool, and a bunch of cabbages, are so treated as almost to acquire (as a visitor in our neighbourhood declared,) "a human interest,"—while lastly, our painter discloses to us trim drawing-room interiors in which the gold and velvet and *marqueterie*, sanctioned by Parnell and wrought up by Gillow, acquire, under his transforming hand, that element of the picturesque, without which no chamber, were it the Queen of Golconda's, would be sufferable on paper. In proof of our praise, we point to *An Interior in Devonshire Place* (200); what can be more modern and modish than the aspect of the room? Yet who will deny the charm of the drawing? But while talking of interiors, we should be inexcusable were we to forget Mr. J. Nash's *Drawing-room at Bramhall, Cheshire* (76), a perfect Steenwyck in water-colours, without painful over-elaboration. Mr. Nash has a feeling for old English character, too, as well as for old English architecture. There may be more prose than poetry, it is true, in his *Milton dictating to his Daughters* (302), but call the composition an antique conversation-piece, and it is charmingly national. We need but make our compliments to Messrs. Copley Fielding, Dewint, Cox, Gastineau, and Evans, for having justified their fair fame this year. Mr. Harding's *Killin Scotland* (353), hardly permits us to include him in this circular; since we have had to thank him for

Digitized by Google

many more attractive drawings. On the other hand, we recollect no specimen of Mr. Prout's particular talent (not even the one so bravely sung by Barry Cornwall), so covetable as his *Munich* (62). The subject is a capital one: the Oriental minarets of the Cathedral make a famous object for a painter's distance, the pretty girls of the city, with the *rigel haube* for headdress,—such desirable figures for the foreground. What a subject for a costume and architectural painter would be High Mass in the *Dom Kirche* aforesaid! Ere we leave the *Society of Painters in Water-Colours*, we will beg Mr. Wright and Mr. J. Stephanoff to do better in future than they have done this year; the one is so feeble, the other so affected. A last word must praise Mr. Bartholomew's flowers, which are as gorgeous as usual. It is impossible to admire his groups of exotics without being also reminded of the change and enrichments which have passed over our gardens since Van Huysum was Flora's court painter.

Passing to the *New Society*, the first drawing which we must notice is Mr. Haghe's *Town Hall of Courtray* (32), as rich in all its details as any of its predecessors, and with figures superior to any hitherto produced by the artist. The old room, dressed for a solemn convocation the day after the memorable battle, is most tempting to the eye;—while the personages assembled are less conspicuous for excess of muscle and lack of expression than some we recollect from the same hand. They are still, however, too monumental and lifeless. A monk stands at the table petitioning a baron—thus much we can gather; but whether he is asking for another butt of canary for his abbey, or praying for vengeance on a foe, or (as is here the case) beseeching to have a dead body delivered over to him for burial in holy ground, is questionable. The drawing is simply a Flemish council chamber, with figures, and flesh and blood fall into their places, if thus considered, among the other properties. So, too, in the same clever artist's *Cromwell and Ireton discovering Charles the First's Letter* (30), the Puritan costume and the saddle tell the story, and thus admonished, the Englishman may then begin to recognize that Oliver Cromwell's rude but grand features have been aimed at. We do not mean to detract from Mr. Haghe's rare and special merits in these strictures, but to separate false from true in their enumeration. Mr. Topham's drawings are another great attraction to this Exhibition of the New Society. His scene from the Deserted Village (90), the *Departure of the Exiles*, appears to have been the most in esteem, to judge from the place of honour allotted to it; and we know none of our rural painters capable of amending it; but *The Refectory* (32), to study which aright, the visitor must break his back—so low is it hung—is even more attractive. Rarely were the peculiar colours and forms of Ruin better rendered than in the old wall and its arches, which shelter the vagabonds; the hazels, too, above, and the light softened by passing through their delicate foliage, are touched with a master's hand, while the figures have a life, simplicity, and wildness suitable to such a neglected haunt. Of Mr. Topham's numerous other contributions, there is hardly one to which some note is not appended in our catalogue. His hand is as free as his eye is observant: and his taste is at present so good, that we earnestly trust he will resist the temptations to exaggeration or self-repetition. One landscape we must particularize, *Ilkley* (112), which is to water-colour art what some of Mr. Creswick's rock scenes are to oil-painting.

This New Exhibition has other landscapes, by artists comparatively unknown to fame, but deserving hearty praise. One of these is Mr. Maplestone's *Sunset on Wimbledon Common* (182), a picture with as little subject as need be—a pool, a rich foreground of weeds, and a few rustic figures,—nothing more. Yet it comes nearer Cuyp in the quantity of sunlight diffused over it, without trick or Turnerism, than most oil-paintings we can call to mind. We hope its artist has more than this one effect at command: he has repeated it in other works exhibited here, but, of course, with less felicity. It was the satiating constancy of poor Barrett to luxuries of Nature like these, which impaired his popularity. The painter who has already acquired such powers of hand, need but exhibit variety in their employment to reach the highest honours. Mr. Youngman's *Brook Scene near Rokeby* (211), is one among the many pleasant proofs of improvement he puts forth this year. The woolly texture to be complained of a twelvemonth ago, has all but disappeared from his drawings; let him beware, however, of too indiscriminate a use of one favourite green—he may else become colour-sick. Mr. Robertson's *Berncastel on the Moselle* (266), is a clever drawing, though too conventional. The hills are flattered into a sublimity which the guardians of the Mosello do not really possess. Mr. Howse is another of the new water-colourists who has not been willing to stand still, as his *Old Gate from the Boom Quay, Rotterdam* (298), proves. A few seasons ago, it was impossible to look at one of his cleverly pencilled town scenes, without imagining its buildings constructed of Derbyshire spar; but the lilac has subsided into a sober grey; and we should approve the tone of the present animated and highly-finished drawing without reserve, were it but accompanied with more air. Mr. Weigall, Mr. Warren, Mr. Jutsum, Mr. Duncan, Mr. Penley, Mr. Oliver, are all meritorious in landscape, and tread hard upon the veteran water-colour Exhibition, without manifesting the slightest traces of servile imitation. We must amend our notice of the second gentleman's contributions, by stating that besides his scriptural composition remonstrated against in our last notice, and the peaceful landscape, *Little Malvern Church* (316), praised in this, he gives us another occasion to remark his versatility in his *Ave Maria* (212), a study of a Lady before a Madonna, which, with much flagrant affectation, has still a certain grace, power, and originality. We must add, too, to our commendation of Mr. Absolon's *Mercy*, a word of admiration for his *Captain Macheath* (375), and another in recognition of the loving pair, from Burns, whom he has caught, at the most becoming hour of even-fall, at their cottage door (127). This is a true pastoral. Of the pleasant affectations by Mr. Jenkins, and the homely transcripts of peasant nature by Mr. Alfred H. Taylor, we can alike say, that but a small distance separates them from excellence; but the chasm, though narrow, is deep: the thing wanting to both is truth; the one being far too dainty, the other a trifle too coarse, like the "cloth of frieze and the cloth of gold," lessoned in the significant old quatrain. We must now end these notes of the Water-Colour Exhibitions, with no small satisfaction in recording that the progress of all who have laboured to advance, seems to have been liberally acknowledged by the buying public.

MUSIC AND THE DRAMA

MADAME CARADORI ALLAN has the honour to acquaint the nobility, her friends, and the public that her GRAND MORNING CONCERT will take place, under the patronage of Her Majesty the Queen Dowager, in the Concert Room of Her Majesty's Theatre on FRIDAY, May 19. Principal Performers:—Mesdames Grisi, Persiani, Caradori Allan, Brambilla, and Alfred Shaw:—Signors Mario, Lablache, Fornasari, Brizzi, and F. Lablache. Pianoforte Solo, M. Dreyschock. Conductor, M. Benedict. Arrangements are pending with other distinguished artistes.—Boxes, for Six Persons, 3*l.* and 4 guineas; Stalls, 1 guinea; Single Tickets, 10*s.* 6*d.* To be had at the principal Music-sellers, and at the residence of Madame Caradori Allan.

UNDER ROYAL AND DISTINGUISHED PATRONAGE.—MISS DOLBY and MISS ORGER beg to announce their CONCERT will take place at the Hanover Square Rooms, on THURSDAY EVENING, May 18, 1843, to commence at Eight O'Clock precisely. Tickets, 7*s.* each, Reserved Seats, 10*s.* 6*d.*, to be had of Miss Dolby, 34, Berners-street, Miss Orger, 16, Southampton-street, Bloomsbury, and at the Principal Music Shops.

PHILHARMONIC CONCERTS.—*Fourth Concert.*—A Philharmonic concert with three *encores* has been, of late, a novelty. Let us hope that Monday's, taken in conjunction with its predecessor and the next announced, at which we are to hear Mendelssohn's 'Lobgesang,' may be accepted as a sign that the good days of the Society are not passed beyond recall. Mr. Lucas, who held the baton on Monday, takes matters much too easily—whence arose more than one unpardonable slip in execution; the Pastoral Symphony of Beethoven, the overture to 'Oberon' (*encored*), and Bennett's overture to 'The Naiades,' were played with more spirit than accuracy; but then, in the accompaniments to the songs, we came nearer the proper sensibility than is attained when the Concert is in certain other hands. The much-talked-of pianist, M. Dreyschock, made his first public appearance at this Concert. He must be placed, without contest, among the most marvellous musical executants whom the increased enterprise of the age has produced. Before he arrived in England, he was described to us as the pianist who "did in octaves what all others did in single notes." We can only give our readers a somewhat more accurate idea of him, by comparison with the wonder-players already familiar to them. He appears to us to have more execution than Thalberg,—that is, a wider reach of audacity in his spread chords, and a superior rapidity and clearness of octave passages; the latter, indeed, so consummate, as to take away from the miracle the slightest appearance of difficulty. He is more calmly certain in his execution than Liszt, and has a new manner of producing a vibrating and prolonged tone, which we can fancy carried out from his own *fantasia*-music into *adagios* by the composers of the romantic school with good effect. To say that he exhibited on Monday the charm of Thalberg's tone, or the fantasy of Liszt, would be to deprive them of their individuality without giving him praise worth having. Power, ranging between the uttermost force and the finest delicacy—sensible, rather than sensitive, expression—these are the characteristics which occur to us the most strongly while endeavouring to describe the new performer. The *fantasia* and caprice in which he appeared, are calculated to exhibit his immense attainments; but we feel more and more persuaded, that our public is no longer to be *surprised* by music of this kind at a grand concert: and if it be enchanted, it must be by a Chopin's exquisite grace and delicacy. The days of the concerto, the accompanied rondo, &c. &c.—are on the return. M. Dreyschock was cordially received by the audience; the just reward of an unpretending modesty, too rare among the possessors of powers so extraordinary. The other *solo* was Spohr's Dramatic Violin Concerto, which noble work was played by Mr. Blagrove. The singers were Miss Bassano, whose voice was unfortunately sharp in the grand *scena* from Weber's 'Ines di Castro,' and Madame Albertazzi, whose 'Non piu di fiori' is a specimen of Mozart *iced;*—curious from its total absence of feeling. Yet her voice is lovely, and excellently trained, and her reading was careful and respectful. By way of compensation, however, we had Herr Staudigl, in Schubert's 'Der Wanderer,' and the military *polacca* from Spohr's 'Jessonda,' neither of which could be surpassed. The latter, too, is one of the best bass songs by its composer,—the capital *aria* for *Mephistopheles* (from 'Faust') being another. This, had we any power to beg or to bespeak, should be sung by the incomparable *basso* at some coming concert, "by desire."

SOCIETY OF FEMALE MUSICIANS.—The annual Concert of this Society was given yesterday week, and,—what cannot always be said of such charitable meetings,—deserved the patronage it met with, on the score of good music as well as of good feeling. 'L'Allegro ed il Penseroso,' of Handel, was given as before, with a very strong and effective chorus; afterwards a miscellaneous act. In both parts of the entertainment the female talent of England showed itself as advantageously as amiably. We are not too much given to the *Mr. Dulcimer* style of expression, but here was a meeting, in the reporting of which we may truly say that our duty is also a pleasure.

HER MAJESTY'S THEATRE.—'LA GAZZA LADRA' was revived the evening before last, to the justification of our opinion expressed last week with regard to Signor Fornasari, the principal novelty. He overdressed the character, over-acted the part, and *under*sung the music. This was especially felt throughout the concerted pieces in which the opera abounds, where his want of finish, and want of precision in phrasing, seriously impaired the harmony of the several movements. The cast, on the other hand, has gained by the reinstatement of an audible *contralto*, and with it the charming duet, 'Ebben per mia memoria,' for which we have to thank that portliest of *Pippos*, Mdlle. Brambilla. Signor Mario was excellent as *Gianetto;* he is rapidly ripening into one of the best *tenori* of the day. The *divertissements* were brilliant. Fanny Elssler danced her best, as though she wished to distance the ambition of her successor; Mdlle. Cerito did her utmost to tempt the public to acquiesce in the substitution. The younger *danseuse* has strikingly improved, as to variety and general grace, since she was last in London. Then M. St. Leon, a Hercules among male dancers, put in a claim for musician's honours, by executing a very difficult violin *solo*, with a degree of

Digitized by Google

neatness and certainty astonishing from the hands of one, whose feet, one might have thought, must have engaged a life's attention.

DRURY LANE.—The new cast of *Acis* (Mr. Allen), *Galatea* (Miss Novello), and *Polyphemus* (Herr Staudigl), is in every respect advantageous to the performance of Handel's *serenata*. By the substitution of a tenor voice for a *contralto*, we are permitted to enjoy the contrasts and effects intended by the composer; while Miss Novello, who, to her credit, sings Handel better than Pacini, and is hardly called upon to act, made a greater impression on her audience than she has till now done. One dramatic effect, however, is missed by her, which might so easily be made, that we cannot but advert to it: this is in the delivery of the phrase,

Must I my Acis still bemoan?

where the music demands an amount of passion, and the situation admits at least of attitude, if not of action, far more tragical than those of Miss Novello. On the other hand, the subsequent air—

Heart, thou seat of soft delight!

was beautifully sung; the close being given with a soothing delicacy, to which the sweetest of sweet voices lent itself most kindly. But the best thing in the new performance is the *Cyclops* of Herr Staudigl. It has one fault, that of being too genial. Who could hear the Ogre sing so charmingly and cheerily, and witness the hearty activity of his gigantic movements, feeling the while that horror of his "hideous love," which it was the intent of Gay and Handel to inspire? While he was before us we thought of nothing so much as one of the gentle and good-humoured giants of a German faëry tale, whose power and kindliness is abused by some saucy, selfish daughter of Earth! Nor could his menacing gesture, even when he hurled the rock at Acis, make us believe that fatal mischief was meant thereby. But never was the music of Handel so given: the voice, the style, the feeling were all there: while the diction of the text, strange to say, was clear, appropriate, and surprisingly free from foreign accent. The town will flock to see the new *Polypheme:* and our young artists ought to be foremost in the crowd, to see what real genius can make of as ungracious a part as was ever set down to be said or sung. Mr. Hudson surprised us agreeably as *Damon;* his voice is so pleasant as to be worth further cultivation; as it is, he is a meritorious second tenor for any English operatic corps.

MISCELLANEA

May 3, 1843.

Monetary and Metrical Systems—I have read with great pleasure the letters in the *Athenæum*, of the 22nd and 29th ultimo, on the proposed change in our Monetary and Metrical Systems, a subject to which I trust a recent article in the *Edinburgh Review*, and these letters of your correspondents, will draw the attention of every thinking man in the kingdom. A. B. G.'s admirable exposition of the limitations of the powers of a Government to effect changes, is sufficient to lead to a controversy on a subject very different from that of money, weights, and measures: applying it, however, as he does, to the matter now under consideration, it affords a valuable hint to our legislators, and to all who have schemes to propose in connexion with this interesting and important subject. As your correspondents seem desirous of promoting amicable discussion, I hope to be allowed to propose a plan by which I think the decimal division of the coinage may be introduced without difficulty or inconvenience. The Commissioners seem disposed to take the pound sterling as the standard unit; but I would suggest the propriety of taking a smaller coin, say the half-crown, and dividing it decimally, by which plan many of the objections to the proposed measure are avoided. If, instead of the silver fourpence, a coin of the value of threepence had been issued, a first and important step would have been taken towards the introduction of the change in our monetary system. An issue of gold and silver coins equivalent in value to those now in circulation, altered in name and properly marked, as your correspondent B. has suggested, would prevent inconvenience even to the smallest trader, and it would only remain for the Government to issue copper coins similarly subdivided. To render the matter more clear, it may not be amiss to give a table of the values of the principal coins according to this arrangement (the names might easily be formed to suit the tastes and habits of the people; for the sake of simplicity I have adopted those which naturally suggest themselves in the consideration of the subject):—

	s.	d.	
1 Unit	2	6	}
1 Tenth....	0	3	} of the present coinage.
1 Cent	0	0.3	}

To which might perhaps be added the mite, or half-cent, in value, three-fifths of the present farthing. By this arrangement, the sovereign, half-sovereign, crown, half-crown, shilling, and sixpence, would retain their utility, as representatives of multiples or parts of the standard unit. The introduction of a new copper coinage would present no serious difficulty, since the equality of the tenth and threepence, five cents and three halfpence, &c. would be easily understood and remembered by every one. By taking the pound sterling as the standard unit, we might retain the present gold and silver coinage; but in the smaller divisions we meet with a serious difficulty, it being impossible to represent the one-hundredth part of a pound by any coin or coins now in use: continuing the subdivision a step further, we arrive at the one-thousandth part of the pound, or six twenty-fifth parts of the penny, a sum of the precise value of which few persons, whose purchases are made in small quantities, would be able to form a correct notion. The decimal division of the shilling presents similar difficulties, as the inconvenience arising from such a system would be almost entirely confined to persons the most unlikely to possess accurate information on such subjects.—I am, &c. H.

Lotteries and Little-Goes.—The gambling mania is still spreading far and fast, and there has been what the Polypicnic projectors call a further "extension of the principle" of the Art-Unions. By-the-bye we wish the subscribers to this Polypicnic gamble would address their angry letters to the managers, and not to us. Why are we to be troubled because the drawing has been deferred till the Exhibitions will be over?

Musical Novelty.—Tombola Concerts, on the principle of the Art-Union, and designed for the encouragement of the Musical Profession.—It is proposed to give a series of three Soirées Musicales, the first to take place at the Queen's Concert Room, Hanover-square, on Tuesday, ———, at eight o'clock. In addition to the amusements of the evening, a gratuitous Distribution of Chances for the following Prizes will be made:—A splendid Grand Piano, value 120 guineas; a beautiful rosewood Cabinet Piano, value 75 guineas; and a handsome Cottage Piano, value 50 guineas, to be selected from the stock of one of the first makers; with more than 500 other musical objects. Half-guinea tickets for the concert will confer one chance, and guinea tickets (for reserved seats) two chances; which may be had at, &c.

The following circular has been forwarded to us from Falmouth—

Victoria I. &c., to the people of this our Ancient Borough of Helston and its vicinity, Greeting, &c. Now be it known to all, W. J. N. Penaluna, Confectioner, &c., hath established in honour of this festive day a most enticing Flora Bazaar, replete with most choice Viands, Cakes, Bon-bons, and things of virtù and curiosity, and I do hereby will and invite each and all of you to visit the same, and try your chance in the Flora Distribution, on the principle of the Art-Union.

Another Comet.—M. Victor Mauvais, an astronomer attached to the Paris Observatory, made the discovery, on Wednesday the 3rd instant, of a telescopic comet on the limits of the constellations the Swan and Pegasus. It is a feeble nebulosity, of an oval shape, and about three minutes diameter, with a sensible condensation of light towards the centre. It was seen by Sir J. South at Kensington on the 10th.

Police Portraits.—In the review of the translation of the Chinese tale 'The Rambles of the Emperor Ching Th in Keang Nan' (*ante*, p. 429) you state that you do not recollect to have seen the 'Pictorial Proscription' mentioned in that tale as a regular resource usual in the search after all escaped criminals, in any of the works on the customs of the Chinese. May I beg to refer you to the second volume of Lieut. Burnes's 'Travels in Bokhara,' p. 233, where he adverts to that custom of the Chinese police on the Yarkand Frontier. A servant of his, a native of Tibet or Bokhara, while in Yarkand, had come under the suspicion of the Chinese authorities and suffered three months imprisonment in consequence. Previous to his release, they had his likeness taken, several copies of which, after he was conducted out of the empire, were transmitted to the frontier towns with these instructions, "Should this person appear in China, his head is the Emperor's, his property yours." Lieut. Burnes says it is needless to remark that he never again went to Yarkand.

Liverpool, May 8, 1843. *—* A Subscriber.

Orange Wine.—A Spanish journal states that, in consequence of the abundance of the growth of oranges in the south of Spain, and the difficulty of disposing of them, several of the growers convert them into wine, which is said to be of a delicious quality, and resembling much in flavour the wine of Madeira. The juice is pressed, and left to ferment, in the same way as that of the grape, after which it is put into casks, without the admixture of either alcohol or water.

Double Staircase. Dorchester, May 2, 1843.

In reference to Mr. Ferrey's account of the decayed old double staircase in Tamworth Church (*ante*, p. 342) which is supposed to be a solitary instance of this kind of staircase in England, I have met with the following description of a similar one in 'Savage's History of Wressle Castle,' near Howden, in Yorkshire, the ancient seat of the Earls of Northumberland.—"In the principal chamber (of that Castle) are two beautiful small staircases, of very singular contrivance, with octagonal screens, embattled at the top, and covered with bold sculpture, containing double flights of stairs, winding round each other, after the design of Palladio.—This double staircase was unfortunately consumed in the great fire which happened at Wressle Castle, Feb. 19, 1796, which also consumed the ancient chapel of the Percys, and the parish registers.—I am, Sir, yours, &c. S. E. H.

TO CORRESPONDENTS.—W. H. J.—Anti-Art-Union—E.P.—E.—J. H.—E. F.—A. G.—W. C. B.—An Objector to Lotteries—received.

ACHILLES BRITISH and FOREIGN LIFE ASSURANCE ASSOCIATION, No. 24, Lombard-street. Loans granted to Policy Holders.

Every description of Life Assurance may be effected, upon a moderate scale of premium, either with or without participation in profits.

Endowments for Children or Widows, and immediate or deferred Annuities, granted upon fair and equitable terms.

Loans may be obtained on personal or other security by individuals Assuring their lives with this Association.

Risks taken on the Lives of Master Mariners and Passengers by sea, either for the whole term of life, or for the voyage.

EDWARD GILBERTSON, Secretary.

Prospectuses, and every other information, may be obtained by applying at the Offices, No. 24, Lombard-street, City.

EDINBURGH LIFE ASSURANCE COMPANY. Established 1823.—Constituted by Act of Parliament. Capital Half a Million sterling.

Edinburgh—24, GEORGE-STREET,
and 11, KING WILLIAM-STREET, CITY, LONDON.

The mode in which this Company is constituted presents to the assured the benefits of Mutual Assurance, combined with the influence and security of a large proprietary all assured with the Company;

Perfect security to the assured, and freedom from all liability;

A Right of Participating in the whole Profits of the Company to the extent of Four-fifths;

A principle of division, making the distribution among those who participate in proportion to the amount severally contributed by them;

The highest benefits to all *First Class Lives*, by no unjust liberality being shown to those who die early;

Very Moderate Rates, without participation, which, on young lives, are equivalent to a *present bonus* of very considerable amount;

No Entry-Money or other charge beyond Policy Stamp.

Assurances effected on equal, or ascending or descending scales, or in any other way that the interests of parties may require.

Specimen of Rates for Insuring 100l. on a Single Life.

Edinburgh, 4th May, 1843. G. L. FINLAY, Manager.
WM. DICKSON, Secretary.

CORPORATION of the LONDON ASSURANCE. Established by Royal Charter, A.D. 1720.
FOR FIRE, LIFE, AND MARINE ASSURANCES.
Offices, 19, Birchin-lane, Cornhill, and 10, Regent-street.

John Clark Powell, Esq., *Governor.*
Abel Chapman, Esq., *Sub-Governor.*
Lestock Peach Wilson, Esq., *Deputy Governor.*

Directors.

Robert Allen, Esq. — Richard Drew, Esq.
John A. Arbuthnot, Esq. — John Purse, Esq.
George Barnes, Esq. — Edwin Gower, Esq.
Henry Blansharé, Esq. — Samuel Gregson, Esq.
John Watson Borradaile, Esq. — Edward Hermers, Esq.
Edward Burmester, Esq. — Robert King, Esq.
Henry Cayley, Esq. — William King, Esq.
Aaron Chapman, Esq. M.P. — John Ord, Esq.
Robert Cotesworth, Esq. — George Probyn, Esq.
Charles Crawley, Esq. — John Rees, Esq.
John Deffell, Esq. — Daniel Stephenson, Esq.
James Dowie, Esq. — Thomas Weeding, Esq.

Persons effecting Life Assurances with this Corporation have the choice of two plans:

The one entitling them to an annual abatement of premium after five years' payment;

The other at a lower fixed rate without abatement.

The leading features which distinguish the first of these plans from those of other Life Assurance offices are—

The guarantee of the Corporation for the full payment of the sums assured:

Annual abatements of premium, commencing after five full years' payments:

Total absence of partnership of any kind whatever:

Absolute exemption from the possibility of being called upon to contribute towards making good any losses:

And freedom from all charges of management.

The abatement of premium for the year 1843 on policies of five years' standing, under the first of the above plans, was 31*l.* 10*s.* 2*d.* per cent.

It may be here sufficient to state, as an example, that under the above system a person having effected a policy on or before the 1st of January, 1838, at an annual premium of 100*l.*, had, on the 1st of January, 1843, only the sum of 68*l.* 9*s.* 10*d.* to pay as that year's premium.

The future annual abatement must vary according to the success of this branch of the Corporation's business.

In the Fire Department assurances are effected at the lowest rates.

Attendance daily, from Ten till Four, at both Offices, where prospectuses and every information may be obtained.

ABEL PEYTON PHELPS, Esq.,
Superintendent of the Office in Regent-street.
JOHN LAURENCE, Secretary.

The Corporation having determined to increase the number of their agents, are desirous of receiving applications for appointments from parties of respectability and influence residing in the several towns and districts of England and Wales.

Robert Bruce Chichester, Esq.	William Prinsep, Esq.
Alexander Colvin, Esq.	Joshua Walker, Esq.
Edward Lee, Esq.	Major Willock, K.L.S.

CAPITAL 500,000*l.*

The objects of Life Assurance may be accomplished at this Office on terms as low as is consistent with security.

Examples of Life Assurance for 100*l.*

Age.	30	40	50	60
Annual Premium..	£. s. d. 2 4 7	£. s. d. 3 0 3	£. s. d. 4 4 9	£. s. d. 6 2 5

Endowments for future and existing children, and Annuities of all kinds are granted by this Society.

The usual commission allowed to Solicitors and others, and 5*l.* per cent. extra on the first premium.

JOHN CAZENOVE, Secretary.

BRITISH EMPIRE LIFE ASSURANCE, ANNUITY, and ENDOWMENT COMPANY, 5, Whitehall, and 36, Old Jewry, London.

Directors—Sir George Staunton, Bart. M.P. *President.*
Sir Herbert Compton, *Vice-President.*

Charles Forbes, Esq.	Arthur Helps, Esq.
James Mackillop, Esq.	Thomas E. Headlam, Esq.
J. Phillimore, Esq. D.C.L.	Robert J. Grigg, Esq.
W. Wilkinson, Esq.	G. Bicknell, Esq. (Resident).

Bankers—Messrs. Coutts & Co.

Solicitors—Messrs. Ogle & Younghusband.

The peculiar advantages offered by this Company are:—

1st. That where the assurance is for life, one-half of the premiums may remain unpaid for seven years.

2nd. A Table peculiarly fitted for policies for loans, the premiums commencing very low, and varying every three years.

Age.	1st period of 3 years.	2d period of 3 years.	3d period of 3 years.	4th period of 3 years.	Remainder of Life.
27	1 3 7	1 8 7	1 15 9	2 4 6	2 14 10

3rd. For Survivorship Annuities, on a principle peculiar to this Office, avoiding the loss of the premium paid, if the party does not survive to take the annuity.

Every information may be obtained at the Offices, at Whitehall, and 36, Old Jewry.

The usual Commission to Solicitors and Agents.

GEO. BICKNELL, Resident Director.

UNITED KINGDOM LIFE ASSURANCE COMPANY, 8, Waterloo-place, Pall Mall, London.
Division of Profits among the Assured.

Honorary Presidents.

Earl of Errol	Earl Somers
Earl of Courtown	Lord Viscount Falkland
Earl Leven and Melville	Lord Elphinstone
Earl of Norbury	Lord Belhaven and Stenton.
Earl of Stair	

Directors—Jas. Stuart, Esq. *Chairman.*
Hananel De Castro, Esq. *Deputy Chairman.*

Samuel Anderson, Esq.	Charles Graham, Esq.
Hamilton Blair Avarne, Esq.	P. Charles Maitland, Esq.
Edw. Boyd, Esq. *Resident*	William Railton, Esq.
E. Lennox Boyd, Esq. *Assist. Resident*	John Ritchie, Esq.
Charles Downes, Esq.	F. H. Thomson, Esq.

Secretary—Patrick Macintyre, Esq.

This Company, established by Act of Parliament, affords the most perfect security in an ample paid-up Capital, and in the great success which has attended it since its commencement in 1834. In 1841, the Company declared an addition to the Shareholders of one-half of their Stock, and also added 2*l.* per cent. per annum, from the date of the policies to those parties who had insured with profits. The premiums, nevertheless, are on the most moderate scale, and only a moiety need be paid for the first five years, where the Insurance is for life.

The amount of bonus added to policies since the commencement of the Company in March, 1834, to the 31st Dec. 1840, is as follows:

Sum Assured.	Time Assured.	Sum added to Policy.
£1000	6 Years 10 Months	£136 13 4
1000	4 Years	80 0 0
1000	3 Years	60 0 0
1000	1 Year	20 0 0

Every information will be afforded on application to the Resident Directors, Edward Boyd, Esq. and E. Lennox Boyd, Esq., of No. 8, Waterloo-place, Pall Mall, London.

Frederick Hale Thomson, Esq. *Surgeon*, 48, Berners-street, attends at the Office daily, about half-past Two o'clock.

ARGUS LIFE ASSURANCE COMPANY, 39, Throgmorton-street, Bank.
Empowered by special Act of Parliament, 5 & 6 Will. IV. c. 76.

Thomas Farncomb, Esq. Alderman, *Chairman.*
William Leaf, Esq. *Deputy-Chairman.*

William Banbury, Esq.	Rupert Ingleby, Esq.
Edward Bates, Esq.	Thomas Kelly, Esq. Ald.
Thomas Camplin, Esq.	Jeremiah Pilcher, Esq. Sheriff of London and Middlesex
James Clift, Esq.	
Rt. Hon. J. Humphery, M.P. Lord Mayor of London	Lewis Pocock, Esq.

Physician—Dr. Jeaffreson, 2, Finsbury-square.

Surgeon—W. Coulson, Esq. 2, Frederick's-place, Old Jewry.

Consulting Actuary—Professor Hall, of King's College.

Advantages of the Argus Life Assurance Company.
Low Rates of Premiums.

In addition to the subscribed Capital of 300,000*l.* the assured have the security of the Company's Income of nearly 60,000*l.* per annum, yearly increasing, and an accumulating Assurance Fund invested in Government and other available Securities, of considerably larger amount than the estimated liabilities of the Company.

The Rates of Premium are reduced to the lowest scale compatible with the safety of the Assured and the stability of the Company, thereby, in effect, giving to every policy-holder an immediate and certain bonus without risk, in lieu of the deferred and frequently delusive prospect of a periodical division of profits.

Annual Premium to Assure £100.

Age.	For One Year.	For Seven Years.	Whole Term.
20	£0 17 8	£0 19 1	£1 11 10
30	1 1 8	1 2 7	2 0 7
40	1 5 0	1 6 9	2 14 10
50	1 14 1	1 19 10	4 0 11
60	3 2 4	3 17 0	6 0 10

One-third of whole-term Premiums may remain unpaid at 5 per cent. comp. int. as a debt upon the Policy for life, or may be paid off at any time without notice.

In Assurances for advances of money, as security for debts, or as a provision for a family, when the least present outlay is desirable, the varied and comprehensive Tables of the Argus Office will be found to be particularly favourable to the assured.

A Board of Directors, with the Medical Officers, attend daily, at a quarter before 3 o'clock.

EDWARD BATES, Resident Director.

A Liberal Commission to Solicitors and Agents.

EUROPEAN LIFE INSURANCE and ANNUITY OFFICE, No. 10, Chatham-place, Blackfriars, London. Established January, 1819.

President—Sir James Rivett Carnac, Bart. Rook Cliff, Lymington.
Vice-President—Geo. Forbes, Esq. 9, Fitzroy-square.

With Twelve Directors.

FACILITIES are offered by this long-established Society to suit the views and means of every class of insurers. Premiums are received yearly, half-yearly, or quarterly, or upon an increasing or decreasing scale. The insured for life participate septennially in the profits realized. A liberal commission is allowed to Solicitors and Agents.

DAVID FOGGO, Secretary.

N.B. Agents are wanted in towns where none have yet been appointed.

FOUNTAINS, VASES, TAZZAS, FIGURES,

&c. in Marble, Artificial Stone, and Parker's Cement, to be seen at WYATT, PARKER & CO.'S WHARF, Hollandstreet, Surrey foot of Blackfriars-bridge. Also, a large Collection of Chimney Shafts, Pedestals, Capitals, Consoles, Trusses, &c.

DOUBLE PATENT PERRYIAN FILTER INKSTAND.—Great improvement has recently been

made in the manufacture of this article. The Patentees can with confidence recommend it as complete for general use, combined with elegance and simplicity in its action. J. Perry & Co. take this opportunity to announce that they will repair any of their Inkstands, without charge; or, if preferred, will apply the present improved principle to any of their preceding sorts at 2*s.* 6*d.* each. N.B. All Inkstands returned for the above purpose must be sent carriage-free.—PERRYIAN LIMPID INK. This Ink has a flowing property peculiar to itself, and does not corrode Metallic Pens as other Inks. In Bottles, 6*d.*, 1*s.*, and 2*s.* each. Also, in POWDER, 6*d.* and 1*s.* per Packet. Sold by all Stationers, &c. throughout the Empire.

Manufactory, 37, Red Lion-square, London.

ELECTRO-PLATED and GILT ARTICLES.—

ELKINGTON & Co., Patentees, beg to announce, that to meet the increasing demand for this manufacture, they have OPENED an ESTABLISHMENT at

No. 22, REGENT-STREET (CORNER of JERMYN-STREET),

where every variety of articles for the Sideboard, Dinner, Dessert, and Breakfast Tables may be inspected. They have also a similar assortment at their City Establishment,

No. 45, MOORGATE-STREET, CITY,

where they have a MANUFACTORY for PLATING and GILDING, RE-PLATING and RE-GILDING, ARTICLES of every description, and of ALL METALS.

With reference to articles of their manufacture, the Patentees beg to state, that they differ from all goods hitherto offered as 'plated goods,' or 'substitutes for silver,' being made in the same manner as SOLID SILVER, from which they cannot be known, and being also composed of a hard white metal, strongly coated with silver, by the Electro process.

Silver articles of every kind or pattern exactly copied.

Every article made by the Patentees or under their licence bears their stamp (E. & Co. below a crown).

WARM WEATHER.—Ease and Comfort for the Feet.—HALL & CO. Wellington-street, Strand,

London, sole Patentees of the PANNUS CORIUM, or Leather Cloth Boots and Shoes. These articles have borne the test and received the approbation of all who have worn them. Such as are troubled with corns, bunions, gout, or tenderness of feet from any other cause, will find them the softest and most comfortable ever invented; they never draw the feet or get hard, and for warm climates they are found easier and more durable than any other kind of shoes; they resemble the finest leather, and are cleaned with common blacking. Their Elastic Spring Boots are worthy attention; they supersede lacing and buttoning, and effectually support the ankle. The material sold by the yard in any quantity. Any respectable boot and shoe maker may be appointed agent.—The much-improved PATENT INDIA-RUBBER GOLOSHES are light, durable, and perfectly waterproof.—HALL & CO.'S PORTABLE WATERPROOF DRESSES claim the attention of all who are exposed to the wet. Ladies' Cardinal Cloaks, with hoods, from 18*s.* Gentlemen's Dresses, comprising Cape, Overalls, and Hood, 21*s.* The whole can be carried with convenience in the pocket.

FRAMES FOR ART-UNION PRINTS.

C. F. BIELEFELD begs to call the attention

of Artists, Printsellers, &c. to his numerous assortment of PICTURE-FRAMES, appropriate for the Art-Union and other Prints, &c., manufactured in his improved Papier Mâché. "The specimens of these frames which we have seen are certainly very beautiful." *Globe*, 17th Jan. 1843.—"They look exceedingly attractive, and are in reality as much so as if they had passed through the hands of the carver, and been produced at about ten times the expense. They have a clearness and sharpness we have seldom or never seen obtained in composition." *Art-Union.*

C. F. B. has just published a New Tariff of the Papier Mâché Frames, illustrated with Sketches of the various Patterns, &c., which will be immediately forwarded to order on receipt of six post-office stamps.—Works, 15, Wellington-street North, Strand.

METCALFE'S NEW PATTERN TOOTH-BRUSH and SMYRNA SPONGES.—The Tooth-Brush

has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose—1*s.* An improved Clothes-Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-Brushes, with the durable unbleached Russian Bristles, which do not soften like common hair. Flesh-Brushes of improved graduated and powerful friction. Velvet-Brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment, 130 B, Oxford-street.

CAUTION—Beware of the words "From Metcalfe's" adopted by some houses.

WATCHES by WEBSTER & SON, Chronometer Makers to the Lords of the Admiralty (Established 123 years), 3, BIRCHIN-LANE. The largest assortment

of fine Second-hand Watches of any house in London, by the most eminent makers—many nearly equal to new, and at little above half their original cost, all of which W. & Son warrant. They consist of fine Repeaters, Duplex, Lever, and Horizontal Escapements, all of superior manufacture. New Watches of the most elegant patterns upon the principle of their Chronometers, to which the Government awarded the prizes three years in succession, with compensation balances to counteract the variations of temperature. Also a large assortment of Lever and elegant Horizontal Watches, for Ladies and Gentlemen, at considerably reduced prices. Old Watches taken in exchange. The most experienced workmen are employed on the premises in the repairing department.

Webster & Son, 3, Birchin-lane, Cornhill.

STONE-COLOURED CEMENT.

FELIX AUSTIN, of the New Road, Regent's

Park, begs to inform Architects, Builders, Plasterers, &c. that during the process of manufacturing a very superior composition which has greatly improved his well-known Artificial Stone Ornaments, he has succeeded in making an excellent STONE-COLOURED CEMENT, adapted to building, more especially for facing brick walls and repairing decayed stone work, which he can supply at 2*s.* 6*d.* per bushel, at his Manufactory, near the Thames Tunnel, Rotherhithe.

H. WALKER'S NEEDLES (by authority the

Queen's Own), in the illustrated Chinese Boxes, are now in course of delivery to the trade. The needles have large eyes, are easily threaded (even by blind persons), and have improved points, temper, and finish. Each paper is labelled with a likeness of Her Majesty or H.R.H. Prince Albert, in relief, on coloured grounds. Every quality of needles, fish-hooks, hooks and eyes, steel pens, &c. for shipping. These needles or pens for the home trade are sent free by post, by any respectable dealer, on receipt of thirteen penny stamps for every shilling value. H. Walker, Manufacturer to the Queen, 20, Maiden-lane, Wood-street, London.

MOULD CANDLES to BURN WITHOUT SNUFFING.—KEMPTON'S PATENT.—These candles

do not require snuffing; they burn longer and are cheaper than any other candle; the flame is steady and brilliant. No metallic or deleterious matter is used in the manufacture. Price 8*d.* per lb. Sold by G. E. Parish, agent for exportation, 21½, Bread-street, City, and by Sladden & Stocking, 42, High-street, Marylebone; W. Gethen, Broadley-terrace, Blandford-square; Evans, Italian warehouse, Greenwich; John Hawkins, grocer, High-street, Whitechapel; George Hawley, grocer, Pitfield-street, Hoxton; S. Game, Fish-street-hill; J. Pain, grocer, Bethnal-green-road; G. H. Hudson, 229, Blackfriars-road; C. H. Nicholas, 19, Bolingbroke-row, Walworth; and at the manufactory, Old Bargehouse, Christchurch, Surrey.

COMPOSITION FOR WRITING WITH STEEL PENS.
STEPHENS' WRITING FLUID.

THESE COMPOSITIONS, which have so re-

markably extended the use of the STEEL PEN, are brought to very great perfection, being more easy to write with, more durable, and in every respect preferable to the ordinary Ink. In warm climates they have become essential. They consist of—An INSTANTANEOUS BLACK INK—A BLUE FLUID, changing to an intense Black colour—PATENT UNCHANGEABLE BLUE FLUIDS, remaining a deep Blue colour—A SUPERIOR BLACK INK, of the common character, but more fluid.—A SUPERIOR CARMINE RED for Contrast Writing—A CARBONACEOUS RECORD INK, unchangeable by any Chemical Agent—Also, a new kind of MARKING INK for Linen; and Inkholders adapted for preserving Ink from Evaporation and Dust. Bottles at 3*d.* each, convenient for writing from, are prepared, which will enable those who may wish to try either of these articles to do so at a small expense. Prepared by HENRY STEPHENS, the Inventor, 54, Stamford-street, Blackfriars-road, London; and sold by Stationers and Booksellers.—N.B. These unchangeable Blue Fluids are Patent Articles; the public are therefore cautioned against imitations, which are infringements; to sell or use which is illegal.

STEPHENS' SELECT STEEL PENS.—The utmost possible care having been bestowed upon the manufacture of these articles so as to procure the highest finish, they can be confidently recommenced both for flexibility and durability.

LEA & PERRIN'S 'WORCESTERSHIRE SAUCE.' Prepared from the Recipe of a Nobleman in the County.—The above celebrated Sauce has, from the time of

its introduction, been steadily progressing in public favour. Its peculiar piquancy, combined with exquisite flavour, establish it of a character unequalled in sauces. Noblemen and others, of acknowledged gout, pronounce it to be 'the only good sauce;' and for enriching gravies, or as a zest for fish, curries, steaks, game, cold meat, &c., especially unrivalled. As a rapidly-increasing inquiry is now made for it in all parts of the kingdom, the Proprietors beg to state that druggists, grocers and others may be supplied by their agents—Messrs. Barclay & Sons, Farringdon-street; Mr. J. Harding, 59, King-street, Stepney; Messrs. Metcalfe & Co. 16, Southampton-row; and by the Wholesale Oil and Italian Warehousemen in London, upon the same terms as at their Warehouse at Worcester.—Sold retail, in half-pint bottles, at 1*s.* 6*d.*; pints, 2*s.* 6*d.*; and quarts, 5*s.* each, with the Proprietor's stamp over the cork of every bottle.

FYFE'S PATENT HERMETICALLY-SEALED COMMODE PAIL.—The superiority of this in-

valuable article for the sick room is best attested, by its having passed inspection by Sir W. Burnet, the head of the medical department at Somerset House, and been adopted in the Royal Naval and Military Hospitals. Prices, with its mahogany seat and earthen pan, forming a complete air-tight, inodorous, night-table, 1*l.* 6*s.*; in a handsome japanned box, 2*l.* 4*s.*; in an elegant mahogany enclosure, 3*l.*

Sold only at Fyfe's Scientific Repository, 36, Tavistock-street, Covent-garden. Orders from the country, with a reference in London, immediately attended to.

BUTLER'S COMPOUND CONCENTRATED DECOCTION, or FLUID EXTRACT of SARSAPARILLA, is the original of the now numerous concentrated pre-

parations of the kind. A dessert spoonful of it, diluted with water, makes half a pint of the compound decoction, of the same strength and composition as that ordered by the British Pharmacopœias. It is prescribed as an alterative in scrofula, scurvy, eruptions of the skin, and all cutaneous diseases; also has been found extremely useful in chronic rheumatism, in secondary symptoms, and after an improper use of mercury.

Prepared and sold in pint bottles 10*s.*, half-pints 10*s.*, and quarter-pints 5*s.* 6*d.*, by Thomas Butler, Chemist, 4, Cheapside, (corner of St. Paul's Churchyard,) London; and may be obtained of J. Sanger, 150, Oxford-street; Davenport & Co. Waterloo-place, Edinburgh; or, by order, through any respectable Druggist.

*** No. 4, Cheapside, the corner of St. Paul's Churchyard. No connexion with any other establishment of the same name.

ROWLAND'S MACASSAR OIL, under the

Special Patronage of Her Most Gracious Majesty, the Royal Family, and the several Courts of Europe.—This Oil has acquired celebrity for its truly extraordinary efficacy and fecundity in nourishing, preserving, and beautifying the Human Hair. It imparts an additional vigour to the roots, together with a glossy brightness, and a beautiful tendency to curl. For inducing an accelerated growth of Whiskers or Moustaches, the MACASSAR is unfailing in its stimulative operation. In reference even to the Hair of early childhood, the use of the Oil is found attended with the happiest effects.—Mild, invigorating, stimulative, and purifying, it materially assists in dispelling scurf or dandriff, and renders supererogatory the use of the fine-comb. Price 3*s.* 6*d.*, 7*s.*, Family (equal to four small) 10*s.* 6*d.*, and double that size 21*s.* per Bottle.

CAUTION.—Ask for 'ROWLAND'S MACASSAR OIL,' and see that those words are on the Wrapper, as much pernicious trash is now offered to the Public as 'MACASSAR OIL' by Perfumers of apparent respectability.

Sold by the Proprietors, A. ROWLAND & SON, 20, Hatton-garden, and by Chemists and Perfumers.

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 812. LONDON, SATURDAY, MAY 20, 1843. PRICE FOURPENCE (Stamped Edition, 5d.)

For the convenience of Subscribers residing in remote places, the weekly numbers are reissued in Monthly Parts, stitched in a wrapper, and forwarded with the Magazines.—Subscriptions for the Stamped Edition for the Continent, for not less than Three Months, and in advance, are received by M. Baudry, 3, Quai Malaquais, Paris, or at the Athenæum Office, London. For France, and other Countries not requiring the postage to be paid in London, 28fr. or 1l. 2s. the year. To other Countries, the postage in addition. [James Holmes, Took's Court, Chancery Lane.]

EDUCATION IN GERMANY.—The English Institution at MANNHEIM, directed by Dr. LOVELL, was established in 1836 under the patronage of the Grand Duchess Stephanie of Baden, and it offers peculiar advantages to all wishing to combine a solid English Education with the rapid acquisition of the French and German languages.—The fullest particulars can be obtained of Frederick Lover, Publisher, Aldine Chambers, Paternoster-row, London.

WRITING, BOOK-KEEPING, &c.—Persons of any age, however bad their Writing, may, in Eight Lessons, acquire permanently an elegant and flowing style of Penmanship, adapted either to professional pursuits or private correspondence. Arithmetic on a method requiring only one-third the time and mental labour usually requisite. BOOK-KEEPING as practised in the Government, Banking, and Merchants' Offices. Short-hand, &c. Apply to Mr. SMART, at the Institution, 7, New-street, Covent-garden, leading to St. Martin's-lane.

AGRICULTURAL CHEMISTRY.

THE Committee appointed by the Subscribers to the Fund for obtaining the Services of an AGRICULTURAL CHEMIST for Proprietors and Tenants in Scotland, hereby notify that they are ready to enter into communication with any Chemist of eminence and experience, possessing at the same time a knowledge of Practical Agriculture, with the view of ascertaining the terms on which he would perform the duties required.

For information as to the terms of the appointment, application may be made to the Honorary Secretary of the Committee, Andrew Coventry, Esq., 28, Moray-place, Edinburgh.

Payment of the Subscriptions is now wished; they may be sent to Mr. Coventry by Post Office orders, or paid through parties in Edinburgh. Persons still intending to join the Association, are requested to send in their names and their subscriptions without delay.

TO SUBSCRIBERS TO ART-UNIONS.

THE LEGALITY of the ROYAL POLYTECHNIC UNION of LONDON is now clearly substantiated by the opinions of Fitzroy Kelly, Esq. Q.C. and C. Clarke, Esq.

The Songs of Shakespeare, illustrated by the Etching Club, will continue to be presented to each Subscriber until the 1st of July, when the books will be closed.

5, Cavendish-square. R. J. LONGBOTTOM, Hon. Sec.

PLAIN and COLOURED PORTRAITS, by CLAUDET'S IMPROVED DAGUERREOTYPE, or PHOTOGRAPHIC PROCESS, are taken daily at the ROYAL ADELAIDE GALLERY, West Strand.—The encouragement M. Claudet has received in France from the Académie des Sciences—the praise of the inventor, M. Daguerre—the honour of having taken the likeness of His Majesty King Louis Philippe—the flattering notices he has had in the leading newspapers and scientific reviews, prove more than mere assertion the superiority of M. Claudet's process. The public is invited to inspect the fine collection of plain and coloured specimens exhibited at the Royal Adelaide Gallery. Price for single portrait, either bust or full length, 1l. 1s., upon plate of the usual miniature size, and 5l. 5s. upon plates six times larger—viz., 6½ by 8½ inches. Any number of duplicates of the same portrait at half-price. Colouring, 5s. for one-guinea portrait, and 10s. for five-guinea portraits.

PRIVATE LUNATIC ESTABLISHMENT.—FOR SALE, by PRIVATE CONTRACT, a NEWLY-BUILT ESTABLISHMENT for ALL CLASSES of PATIENTS, with Gardens, Fixtures, Furniture, Goodwill, and Appurtenances, situated a mile and a half westward of a great and improving Commercial Port on one of the largest rivers on the Eastern Coast of England. The Property is freehold. The buildings have been erected within the last three years. The house is replete with every accommodation, and the internal arrangements are of the most approved kind. The locality is healthy and agreeable, and adjoins both Botanical and Zoological Gardens, and a Salt Water Bathing Establishment. The method of treatment adopted at this Institution is the result of great experience, and embraces all the improvements sanctioned by the highest authorities, its main feature being the general absence of restraint, a large share of liberty, under proper surveillance, and suitable exercise, aided by the appliance of moral and religious auxiliaries.

To one or two Medical Gentlemen, with activity, talent, and capital, this Institution would be an excellent investment, as capabilities of being increased are great. There is no similar institution in its neighbourhood.

There are now upwards of one hundred Patients in the Establishment.

Plans may be seen, and every particular ascertained, on application to Henry Vallance, Esq. Solicitor, 30, Essex-street, Strand, London.

19, Holles-street.

BULL'S NEW CIRCULAR For MAY, DESCRIBING ALL THE NEW PUBLICATIONS, is now ready for the use of SUBSCRIBERS to BULL'S LIBRARY. It is likewise sent Gratis and Post Free to READING SOCIETIES and FAMILIES who may also desire to know the ADVANTAGEOUS SYSTEM and TERMS on which they can regularly be supplied with whatever NEW and STANDARD WORKS, MAGAZINES, and Reviews, they may wish for perusal, which are sent in any quantity to all parts of England, Scotland, and Ireland. Apply to Mr. Bull, English and Foreign Public Library, 19, Holles-street, London.

TO READING and BOOK SOCIETIES, CLERGYMEN and FAMILIES throughout ENGLAND, SCOTLAND, and IRELAND.

New Plan for obtaining all the NEW PUBLICATIONS and STANDARD WORKS for Perusal, without purchase.

Now ready, Gratis and Post-free,

HINTS for the FORMATION of READING SOCIETIES.

The plan advocated in this little pamphlet will effect two important objects—that of adding to the supply of the current literature the choice of all the most valuable Works in the various languages; and that of extending the choice of *New Books* to the entire productions of the press. It is especially adapted to provincial readers, as by a small annual subscription the perusal of all the New Works, as they appear, may be obtained.

Saunders & Otley, Publishers, Conduit-street.

Sales by Auction.

POSTPONEMENT OF SALE OF ORGANIC REMAINS TILL 8TH JUNE.

MESSRS. J. C. & S. STEVENS respectfully beg to announce that the SALE of Mr. KOCK'S COLLECTION of REMAINS of the MASTODONTOID ANIMALS of NORTH AMERICA, will take place on THURSDAY, 8th JUNE, instead of Thursday, 25th May, as before advertised.

38, King-street, Covent-garden,
April 18, 1843.

BRITISH EMPIRE LIFE ASSURANCE, ANNUITY, and ENDOWMENT COMPANY, 5, Whitehall, and 36, Old Jewry, London.

Directors—Sir George Staunton, Bart. M.P. *President.*
Sir Herbert Compton, *Vice-President.*

Charles Forbes, Esq.	Arthur Helps, Esq.
James Macklillop, Esq.	Thomas E. Headlam, Esq.
J. Phillimore, Esq. D.C.L.	Robert J. Grigg, Esq.
W. Wilkinson, Esq.	G. Bicknell, Esq. (Resident).

Bankers—Messrs. Coutts & Co.
Solicitors—Messrs. Ogle & Younghusband.

The peculiar advantages offered by this Company are:—
1st. That where the assurance is for life, one-half of the premiums may remain unpaid for seven years.
2nd. A Table peculiarly fitted for policies for loans, the premiums commencing very low, and varying every three years.

Age.	1st period of 3 years.	2d period of 3 years.	3d period of 3 years.	4th period of 3 years.	Remainder of Life.
27	1 3 7	1 8 7	1 15 9	2 4 6	2 14 10

3rd. For Survivorship Annuities, on a principle peculiar to this Office, avoiding the loss of the premium paid, if the party does not survive to take the annuity.
Every information may be obtained at the Offices, at Whitehall, and 36, Old Jewry.
The usual Commission to Solicitors and Agents.
GEO. BICKNELL, Resident Director.

NATIONAL LOAN FUND LIFE ASSURANCE SOCIETY.

THE FOURTH ANNUAL MEETING of the National Loan Fund Life Assurance Society was held on Wednesday at the London Tavern, for the purpose of making the Annual Report, choosing Directors in place of those going out of office, declaring a dividend on the shares of the Company, and a bonus to the policy-holders. The meeting was numerously attended; amongst the proprietors from the country we observed Mr. Adams, of Exeter, Dr. Heygate, from Derby, Capt. Heaviside, from Brighton, Mr. Dees, of Newcastle-on-Tyne, Mr. Davies, of Liverpool, and Mr. Walker, of Northampton.

T. LAMIE MURRAY, Esq., took the chair, and after the notice calling the Meeting had been read by the Secretary, the Chairman said the business of the day was the presentation of the Report which the Directors had prepared to be laid before the Meeting, and also to submit their accounts as vouched by the Auditors, containing a statement of the profit and loss of the Society. The Report that had been prepared was, he hoped, of such a nature as, notwithstanding the difficulties of the times, to afford satisfaction to every proprietor. The Directors were also quite prepared to answer any questions as the present state and probable future progress of the Society that any proprietor might wish to put. He called on the Secretary to read the Report.

Mr. CAMBOUX, the Secretary, then read the

FOURTH ANNUAL REPORT.

The Directors have again, on the occasion of the Fourth Annual General Assembly of the Society, much gratification in meeting the Proprietors.

The Directors have to report a continued state of depression throughout every branch of industry, which has only distinguished the past year from its immediate predecessors by the severity of its pressure on the resources of individuals. This state of things has been felt by none more severely than by establishments engaged in the business of Life Assurance, as it may be assumed that since it is the surplus income of the community that seeks a constant and profitable investment in Life Assurance, it is evident that whatever diminishes the source of it on the one hand, or increases the direct burden upon it on the other, must act for the time being as so much discouragement to its progress.

Notwithstanding the impetus given to the advancement of Life Assurance by the very wide promulgation of the principles of the "National Loan Fund Society," and which since its formation has been succeeded by no less than thirty new offices, yet, according to the annual reports of several Life Assurance Companies that have lately been made public, it appears there has been a great falling off as compared with former years in the number of new assurers, as well as a greater amount of policies abandoned than heretofore.

The "National Loan Fund Society" has, in common with every other similar establishment, though perhaps in a less degree than some, experienced the discouragement resulting from the state of general depression, but the Directors have reason to believe that, arising from its peculiar constitution, the Society has been comparatively less exposed to the loss of income through the inability of the assured to keep up his policy. This additional protection, so well tested in the past year, has satisfied the Directors of the great advantages of the plan of the Society. The new business since the last annual meeting has however decreased less from the causes referred to than might have been expected, the new policies entered upon in the year being fewer only by 22 than in the preceding one, while the result of the three last years shows a steady increase of 915 new policies, the number issued in 1840 being 1,230, and that at the present day amounting to 2,145, which circumstance leads the Directors to believe that the principles of the Society have obtained with the public a degree of favour seldom so decidedly manifested, notwithstanding the activity of competition which the struggles of both old and new offices have created.

From the indications which the business of the last few months have afforded, the Directors would fainly believe that the existing general depression, which they cannot too forcibly point out as a cause so injurious to the progress of life assurance, is gradually yielding to a better state of things, yet they are more disposed to depend for the future prosperity of the Society, than to anything else, on the prudence and economy of management, now that the Society has become so well known, and that there exists no longer any necessity for those expenses consequent upon the introduction of any new system.

Conformably with the constitution of the Society, the Directors have caused an investigation to be made into its affairs up to December, 1842, the result of which is now presented, together with the Auditors' report, which lies on the table, and which will be read to the Meeting.

The Auditors' report exhibits the working of the Society under three heads, namely—

No. 1. An account of the receipts and disbursements of the Society.
No. 2. The profit and loss account.
No. 3. The account of the assets of the Society.

Upon the basis furnished by these accounts, and in conformity with the Deed of Settlement, the Actuary has been engaged for some months past in estimating the liabilites of the office, in order to ascertain the profit or loss on its working. The results of this investigation are highly satisfactory. It enables the Directors to recommend, after appropriating 4,337*l.* 11*s.* to the extinction of the expenses incurred in the formation of the Society, a bonus of 14,612*l.* amongst the policy-holders, and a dividend by way of bonus to the proprietors, nearly equal to 7½ per cent. on the stock, as their share of the profit accruing to them under the provisions of the Deed of Settlement.

The principle on which the division of profits to the policy-holders has been after mature consideration settled is, to allocate the profits divisible amongst the assured over every existing policy on the books of the Society, on the 30th of November last, proportionate to the contributions made, but to make a division only at the present moment to those policies on which five premiums have been paid. In this manner the policies entered upon in the year 1837 and 1838 will become at once entitled to the bonus of this year, as well as in every division that may be made in the next and succeeding years. The policies entered in the succeeding years will become respectively entitled to the present and future divisions after they have completed their first five annual premiums.

The present bonus to the policy-holders is equal to 55 per cent. on the annual premiums as a reversionary addition to the policy, 17½ per cent. in present cash, or 10 per cent. permanent annual reduction on future premiums. To make it more clear to the meeting, the Directors subjoin a few examples of the bonus proposed to be distributed, taken from the tables prepared by the Actuary.

Date of Entry.	Number of Policy.	Age.	Sum Assured.	Annual Premium.	Bonus in addition to Sum Assured.	Bonus in Cash.	Permanent Reduction of Annual Premium.
			£.	£. s. d.	£. s. d.	£. s. d.	£. s. d.
1837	6	54	4,000	200 0 0	429 12 6	175 0 0	22 15 0
	39	59	1,000	67 8 4	132 14 6	58 19 9	8 19 4
1838	114	56	3,000	175 15 0	296 9 7	123 0 6	16 9 7

The above advantages, which the working of the Society enables the Directors to recommend for distribution amongst the policy-holders, lead them to expect a continuous increase in its business.

The sums already paid since the commencement of the Society, and for which claims are admitted, amount to 21,018*l.* 18*s.*, on 32 policies, of which those in the last year amounted to 8,020*l.*

In addition to the resolutions enabling the Directors to make the proposed division amongst the policy-holders and proprietors, the other business of the Meeting is the election of four Directors, in lieu of

JOHN ELLIOTSON, M.D. F.R.S.
GEORGE LUNGLEY, Esq.
CLEMENT TABOR, Esq., and
JOSEPH THOMPSON, Esq.,

whose period of office expires, but who are eligible to be re-elected, and offer themselves accordingly;

And for the election of two Auditors in place of
Professor WHEATSTONE, F.R.S., and
Professor GRAVES, A.M. F.R.S.,

whose period of office also expires, but who are eligible to be re-elected, and offer themselves accordingly.

T. LAMIE MURRAY, Chairman.

The Auditors' account was then read: its details fully bore out the statements of the Report of the Directors.

The CHAIRMAN wished to know, before any motion for adopting the Report was made, whether any shareholder had any question to put, as he was ready to answer it?

Capt. HEAVISIDE asked whether the branch establishments of the Society had succeeded?

The CHAIRMAN said they had, though some particular branches had not come up to their expectations.

Capt. HEAVISIDE had great pleasure in moving that the Report be received. It was highly gratifying to find that the affairs of the Society were managed so well.

The motion having been seconded,

The CHAIRMAN said, before he put the motion, he wished to make a few remarks. The Report stated, as every honest Report ought to do, that there had been a period of great depression, from the pressure of which no trade, however protected, had escaped. That pressure, he trusted, was, to a certain extent, subsiding, though how long it might yet continue it was impossible to say. The next thing their attention was called to, was the expense of establishing the Society. When the Society was first instituted, it created hopes on the part of the public, which he trusted this day's proceedings, and the accounts now rendered, would not disappoint. At the same time he must observe, that if the Society created hopes on one side, it also created competition on the other.—(Hear, hear.) Since the present office was established, thirty others had been formed under different auspices, with which they had had to compete in addition to the old offices. They were not afraid of meeting that competition; they had not acted unfairly themselves, and they had nothing to complain of on the part of the other offices. But the expense of establishing the Society was now at an end, and the Directors would refer to the expenses of the past year as having been brought within reasonable limits, and they might assure them that the expense in future years would be very moderate. With regard to the future progress of the Society, that must depend upon public opinion, and he believed that when the present Report was published, the public would not be slow to discern the advantages to be secured by belonging to the Society. The fact of so large an addition being made to each policy, and now divided over those entered upon in the years 1837 and 1838, was not likely to escape the keen perception of the public. He had the pleasure of seeing one friend of his in the room who held a policy in the Society for 4,000*l.*, the division on which amounted to 429*l.* 12*s.* 6*d.* These circumstances could not fail to secure an increase of business during the next year. He should have been glad if any gentleman had asked any questions, because there was not anything connected with the management of the Society that they were not prepared to explain. He concluded by announcing that the division of profits among the Shareholders amounted to 12½ per cent., including the 5 per cent. that had already been paid to the Proprietors.

The Report was then unanimously adopted.

The retiring Directors, J. Elliotson, M.D. F.R.S., J. Thompson, Esq., G. Lungley, Esq., and Clement Tabor, Esq., having offered themselves for re-election were unanimously elected, as also were the two Auditors, Professor Wheatstone and Professor Graves.

Mr. SAMUEL WALKER (of Northampton), asked whether the Auditors' Report and the balance sheet would be printed and distributed among the Shareholders?

The CHAIRMAN said the Directors were in the hands of the meeting, but he believed it was very unusual to publish the very detailed items such as those presented constituting the accounts of insurance offices. They would be open for inspection at the office to any Shareholder, but he did not think it advisable to publish them. As far as the Directors were individually concerned, they did not care, but with regard to the Society the question was a matter of prudence.

Capt. HEAVISIDE thought they might place every confidence in the Directors.

The proposal was then withdrawn, but Mr. Walker put another question in reference to the same subject, which was, whether the branch local offices would be made acquainted with the accounts? He had attended from Northampton, and it was desirable that the local boards should possess the information; he suggested that a written abstract of the statements of the Auditors' account should be forwarded to the local boards in the provinces.

The CHAIRMAN said he did not wish to throw any doubt on the local boards, which were entitled to their confidence, but he would as soon publish the accounts in the newspapers as send them round in the mode suggested. He thought it would establish a bad precedent. It must be recollected that they had ninety rivals.—(Hear, hear.)

Mr. GRIFFITHS FRITH said he believed such a practice was not usual in any public company, as the items might get into the hands of parties inimical to their interests. As to its being necessary that the proceedings of the Society should be known, if the gentleman went down to the local board, and certified that the accounts had received the approbation of the meeting, in addition to the fact that they were open to inspection at the office, he thought it would be quite sufficient.

The CHAIRMAN said it must be borne in mind, that the same privilege was accorded to the shareholders that was accorded to the Directors themselves. The Directors were not permitted to take any abstract of any accounts or minutes from the office. They gave them exactly the same privilege as they took themselves. The Auditors' Report belonged exclusively to the Proprietors; they might examine it when they came to the office.

Capt. HEAVISIDE said he was the chairman of a local board, and if questions were put to him, if he said the accounts were correct, and were approved of by the meeting, he was sure that the local proprietors would have every confidence in him.

Mr. M. YOUNG said in a Society which appeared so well managed, they should place their reliance in the discretion of the Directors.

There being no question before the Board, the conversation dropped.

Mr. S. WALCOT proposed a vote of thanks to the Chairman and Board of Directors.

Mr. W. STUDLEY seconded the motion. He said, notwithstanding the great depression that had been universal throughout the country, and taking into account that they had received 5 per cent. on their capital, yet there was added now to that a bonus of nearly 7½ per cent. He confessed he had always been sanguine with respect to the progress of the Society, but its success had exceeded his most sanguine expectations. He was a large shareholder, having five hundred shares, and he should be happy to double that number. The National Loan Fund Life Assurance Society was based on principles that exceeded most others, and there could be no doubt that they had the feeling of the whole country with them. The Chairman was entitled to their best thanks, because the principles on which the Society was founded emanated from himself; and their thanks were also due to the Directors generally, inasmuch as they had carried out those principles to their fullest extent to the satisfaction of all parties. He cordially seconded the motion for a vote of thanks.

The CHAIRMAN, in acknowledging the vote, said, he was sure he expressed the general feeling of the Board when he stated the pleasure he felt at the unanimous feeling of satisfaction that had been exhibited at the meeting towards the Society. He had always thought that the time would come when the Society would show the value of the principles on which it was founded, and he had not been disappointed, since he had lived to see his expectation confirmed. He trusted that future years would see a still greater progress in the Society; in fact, the Society had now obtained its legitimate position, and what it had done was nothing to what it was capable of doing.—(Hear.) He thanked them in the name of the Directors for the manner in which the motion had been received.

A residue of 209*l.* remaining after the payment of the bonus, was, after some discussion, voted to the officers of the Society as a token of the approbation of the meeting, and of the zealous and able manner in which they had discharged their duties. A vote of thanks was then passed to the same gentlemen, and the meeting broke up.

For FIRE and LIFE INSURANCE, and ANNUITIES, and the PURCHASE of REVERSIONS and LIFE CONTINGENCIES.
CAPITAL, ONE MILLION STERLING.
The whole paid up and invested, and entirely independent of the amount of premiums received.
Rates and Conditions of Fire and Life Insurance, or other information, may be obtained at the Offices in London, and of the Company's Agents in the Country; and where Agents are not appointed, persons in active life, and desirous of the appointment, may apply to the Secretary.
By order of the Board,
JOHN CHARLES DENHAM, Secretary.
London, May, 1843.

PELICAN LIFE ASSURANCE OFFICES, 70, Lombard-street, and 57, Charing-cross.—Established 1797. *Directors.*
Matthias Attwood, Esq. M.P. | Sir W. Heygate, Bart. and Ald.
W. Stanley Clarke, Esq. F.R.S. | Kirkman D. Hodgson, Esq.
John Coope, Esq. | R. Henshaw Lawrence, Esq.
William Cotton, Esq. F.R.S. | J. Petty Muspratt, Esq.
Sir William Curtis, Bart. | George Shum Storey, Esq.
William Davis, Esq. | C. Hampden Turner, Esq.
J. A. Gordon, Esq. M.D. F.R.S. | Matthew Whiting, Esq.
The Plan of this Office will be found to comprise all the Solid Advantages of Life Assurance.
Persons have the option of insuring upon the Return or Non-Return Systems; and the Tables, which include Ascending and Descending Scales of Premium, have been framed to suit the convenience of all parties.
The Rates have recently been reduced agreeably to the most approved calculations, and these being verified by the experience of the Office during Forty Years, are as low as consistent with safety; those adapted to the RETURN SYSTEM entitle its assured to an equitable participation in the surplus premium, according to the plan detailed in the Company's prospectus.
The Assured under both Systems will possess the guarantee of a large PAID-UP Capital, and the further security of a responsible body of Proprietors, without being exposed to the liabilities of partnership.
Policies are purchased on liberal terms when the object of an assurance is effected;—or, loans will be granted thereon to the extent of five-sixths of such purchase-money.
Prospectuses and every information obtained on application at the Offices as above, or to the Agents of the Company appointed in every City and principal Town in the Kingdom.
R. TUCKER, Secretary.

EDINBURGH LIFE ASSURANCE COMPANY. Established 1823.—Constituted by Act of Parliament. Capital Half a Million sterling.
Edinburgh—24, GEORGE-STREET,
and 11, KING WILLIAM-STREET, CITY, LONDON.
The mode in which this Company is constituted presents to the assured the benefits of Mutual Assurance, combined with the influence and security of a large proprietary all assured with the Company;
Perfect security to the assured, and freedom from all liability;
A Right of Participating in the whole Profits of the Company to the extent of Four-fifths;
A principle of division, making the distribution among those who participate in proportion to the amount severally contributed by them;
The highest benefits to all *First Class Lives*, by no unjust liberality being shown to those who die early;
Very Moderate Rates, without participation, which, on young lives, are equivalent to a *present bonus* of very considerable amount;
No Entry-Money or other charge beyond Policy Stamp.
Assurances effected on equal, or ascending or descending scales, or in any other way that the interests of parties may require.

FELIX SUMMERLY'S

RECREATION HAND-BOOK GUIDES,

Corrected for the Season of 1843.

"Recreation is a second creation, when weariness hath almost annihilated one's spirits. It is the breathing of the soul, which otherwise would be stifled with continual business....As for those that will not take lawful pleasure, I am afraid they will take unlawful pleasure, and by lacing themselves too hard grow awry on one side."
FULLER'S HOLY AND PROFANE STATE.

"All work and no play makes Jack a dull boy."
OLD ENGLISH PROVERB.

The preceding sentences have been chosen as exemplifying, briefly and forcibly, the chief views with which this series of Hand-Books has been compiled. Whether or not any share of the growth of public interest in our National Exhibitions may be traced to these little works, it might be difficult, if not presumptuous, to attempt to determine; yet it may be allowable to instance, among the good and practical results which these Hand-Books have certainly effected for the public,—the reduction in the price of the Official Catalogue of the National Gallery, from a Shilling to Fourpence, and the greater facilities of identifying the pictures at Hampton Court Palace, which having been brought to the notice of the Commissioners of Woods and Forests, they most cheerfully assented to.

HAMPTON COURT PALACE.

(OPEN DAILY, EXCEPT FRIDAYS.)

Being a Guide to the Architecture, Tapestries, Paintings, Gardens and Grounds of Hampton Court: with numerous Embellishments on Wood, engraved by Ladies; and Plans of the Palace and Grounds from Official Surveys. The Illuminated Cover is taken from a design for a book-cover produced by Hans Holbein for Cardinal Wolsey. Second edition, price 3s. and 2s. 6d.

"Decidedly the best popular guide to the picturesque beauties of Hampton Court of any extant."—*Spectator.*

"A charming specimen of a Hand-book, literally crammed with information."—*Atlas.*

FREE PICTURE GALLERIES;

Being a GUIDE to all the PICTURES in the NATIONAL GALLERY, the DULWICH GALLERY, the SOANE MUSEUM, the SOCIETY of ARTS, and the BRITISH MUSEUM. Price 1s. 6d. Each Gallery published separately at proportionate prices.

"These Catalogues are more raisonnés and correct than the correspondent official ones; are more portable, and to their limits every way commodious, whilst they cost together much less than several of the latter cost separate."—*Athenæum.*

HOLIDAYS;

Being a Guide to London Sights.

Giving details of the Locality—Means of Access—Nature of Admission—Time when Open—Principal Objects, and Descriptive Catalogues of all the Permanent Sights. Notes for Days' Excursions out of the Metropolis. Price 6d.

WESTMINSTER ABBEY.

(The Abbey opens at 9 A.M., and closes, in the Summer, at 6 P.M. The Tombs are shown until half-an-hour before, and about an hour after, Divine Service, which commences at 10 A.M. and 3 P.M. Entrance to Poets' Corner, free; to the Nave, alone, 3d.; with the Chapels, 6d.)

A Guide to the Architecture, Sculptures, Tombs, and Decorations, with 56 Embellishments on Wood, engraved by Ladies, 4 Etchings, a Specimen of Encaustic Tiles in the Chapter House, and an Illumination. Price 7s. A Cheaper Edition, 3s.

"Its pages are not disfigured by the usual Guide-book sentimentality, rambling on without method, and mixing inaccurate if not false information with indiscriminate and nauseating praise, but it gives a well arranged and correct description, neither too popular nor too pedantic, of the Sacred Edifice."—*Ecclesiologist*, published by the Cambridge Camden Society.

"A volume got up in excellent taste, and written in a right spirit; critical so far as criticism could be allowed, but always suggestive, and testing opinions by reference to principles. As if to perfect the interest of the work, its fifty-six illustrative engravings have all been executed by women; and some amateurs, Lady Callcott and Lady Palgrave, amongst others, have gracefully contributed drawings, and thus associated their names with their sister artists. The work is professedly a Guide-book, and excellent in its way; but it is also a handsome volume for a drawing-room table, and worthy an honoured place on every lady's library shelves."—*Athenæum.*

ABRIDGED EDITIONS, with 4 Etchings, price 1s.; with Plan of the Abbey, 6d.

Also, for Foreigners, GUIDE A L'ABBAYE DE WESTMINSTER. Par Félix Summerly. Prix 1sh.

TEMPLE CHURCH.

With Eight Illustrations. Printed in three colours, in novel combinations of lithography and type, with Ornamental Cover of the pattern of the Encaustic Tiles. Second Edition. Price 1s.

"It is a very unique combination of red and black letter printing with lithography. The description of the church is very able and complete."—*Church Magazine.*

THE NATIONAL GALLERY.

(Open daily, from Ten to Four, except Friday and Saturday.) Price 6d., 3d., and 1d.

Also, for Foreigners, 'Catalogue des Tableaux qui se trouvent dans la GALERIE NATIONALE, suivi par la Chronologie des Peintres.' Prix 6d.

An Edition, with Reminiscences of the Pictures, drawn expressly from the Originals, by Messrs. John James and William Linnell. Just ready.

DAYS' EXCURSIONS OUT OF LONDON; with Engravings on Wood, by Charlotte and Laura Bond.

A HAND-BOOK for CANTERBURY; with Illustrations.

GEORGE BELL, 186, Fleet-street.

NEW WORKS AND RECENT PUBLICATIONS.

Madame Necker De Saussure.

PROGRESSIVE EDUCATION;

Or, CONSIDERATIONS on the COURSE of LIFE. Abridged from the French of Mad. NECKER DE SAUSSURE, by MISS HOLLAND. Vol. III. fcap. 8vo. 7s. 6d. cloth.

"The picture of the course of woman's life represented in the following pages, will form both a complete work in itself, and an appropriate conclusion to the first two volumes."
Author's Preface.

*** VOLS. I. and II. fcap. 8vo. 12s. cloth.

Dr. Wilde's New Work.

AUSTRIA:

Its LITERARY, SCIENTIFIC, and MEDICAL INSTITUTIONS.

With Notes on the Present State of Science, and a Guide to the Hospitals and Sanatory Establishments of Vienna.

By W. R. WILDE, M.R.I.A. L.R.C.S.I., Author of 'Narrative of a Voyage to Madeira, Palestine,' &c. Post 8vo. 9s. 6d. cl.

Egyptian Researches.

Sidney Hall's Large Library Atlas.

NEW GENERAL ATLAS of 53 Maps,

On Colombier Paper.

Constructed entirely from New Drawings, and engraved by SIDNEY HALL.

New Edition, carefully corrected throughout, half-bound in russia, 9l. 9s. folded in half; full size of the Maps, 10l.

Mrs. Sandford.

WOMAN, IN HER SOCIAL AND DOMESTIC CHARACTER.

By MRS. JOHN SANDFORD. *Sixth Edition*, fcap. 8vo. 6s. cloth.

ON FEMALE IMPROVEMENT.

By MRS. JOHN SANDFORD. *Second Edition*, fcap. 8vo. 7s. 6d. cloth.

London: LONGMAN, BROWN, GREEN and LONGMANS.

On the 1st of June, Octavo, Price 4s.

THE FIRST PART

OF THE

CLASSICAL MUSEUM.

For some years past it has been the cause of much regret that there has existed no organ for the discussion and illustration of the knowledge of antiquity. The great Reviews, for obvious reasons, seldom notice works relating to Classical Antiquity; and the consequence has been that works of acknowledged merit in this department of literature have rarely received that share of public attention which they deserve, and have sometimes remained unknown to the great body of classical students. The same has been the case, but to a much greater extent, with the productions of continental scholars. Foreign countries have had still fewer opportunities of learning how classical studies were faring with us, and a pretty general belief has arisen that classical studies here were decaying or nearly extinct. Now although it cannot be denied, that at a recent period of our literary history there has been a falling off in classical studies, or perhaps, more correctly speaking, in the production of great and standard works, and that we who used to take the lead in these matters, are now in a great measure led by others, yet it is at the same time an indisputable fact, that within the last twelve or fifteen years the study of classical antiquity has been reviving among us, and that its importance in education and in the cultivation of the mind and of taste in general, has been more universally recognised.

Several attempts have been made within the last few years to fill up the existing deficiency in our periodical literature, and to establish a journal devoted to Classical Antiquity, but various difficulties have from time to time prevented the realization of the plan. These difficulties are now overcome, and owing to the generous support which the Editor has received from many distinguished scholars, the final arrangements have been made for the publication of the CLASSICAL MUSEUM, and the first part will appear on the 1st of June.

The subjects which the CLASSICAL MUSEUM will embrace are: the Languages, History, Geography, Religion, Literature, Political and Social Institutions, Laws, Arts and Sciences of the ancients; and nothing will be excluded which throws light on any point of antiquity. Papers upon the early history and literature of our own country, and discussions upon Oriental literature, as far as it has any bearing upon or connexion with classical antiquity, will likewise occasionally be inserted in the pages of this journal. Biblical criticism and all subjects of a religious or theological nature will be excluded. The CLASSICAL MUSEUM will appear in quarterly parts, and contain:—

1. Original Essays, and occasionally Translations of the best Essays of foreign scholars, or condensed abstracts of voluminous and expensive works of importance.
2. Reviews.
3. Miscellaneous Information on subjects of Antiquity.
4. Short Critical Notices of all the works connected with Classical Studies which appear in this Country, and of most Foreign Works of the same kind.
5. Intelligence. Under this head it is proposed to give all the information respecting the Universities in this and other countries, which may be deemed important or interesting to the student.

In the case of Original Essays and Reviews the Writer's name will always be attached to his article.

Contents of the First Part.

I. Investigations on Ancient Weights, Coins, and Measures. By George Grote, Esq.
II. Hymn to Isis. By Dr. L. Schmitz.
III. Greek Topography. By the Rev. A. P. Stanley, A.M.
IV. Herodotus. By Dr. L. Schmitz and Prof. George Long.
V. A Dissertation on a Second Bosporus Cimmerius, and several Rivers of the Palus Mœotis. By Dr. W. Plate.
VI. Comparative Etymology. By Dr. W. Smith.
VII. On the Meaning and Origin of the Verb *To Tirl*. By G. C. Lewis, Esq. A.M.
VIII. Notices of recent Publications.
IX. Foreign Intelligence.
X. Universities.
XI. List of recent Publications.

Communications for the Editor may be addressed to the care of the Publisher, Mr. JOHN W. PARKER, West Strand, London.

LONDON, SATURDAY, MAY 20, 1843.

REVIEWS

The Life of Joseph Addison. By Lucy Aikin. 2 vols. Longman & Co.

THE 'Memoirs of Charles the First,' of 'Elizabeth,' and of 'James,' have made Miss Aikin extensively known as one of the most instructive and agreeable of contemporary historical writers, dispassionate in judgment and patient in the sifting of evidence. Her temperance of disposition (not to call it the common sense of a thoroughly cultivated person) fits her admirably for the task she has here undertaken. The tone of advocacy, however, which she has assumed throughout, has provoked some strictures, and will provoke more. Miss Aikin gives her sympathies exclusively to the polished scholar, the moral man, the judicious friend—never throwing away a point which may be marked to his credit, and, by contrast, casting heavy reproach on those rebuked by his virtuous equanimity: hence certain popular feelings could not fail to be awakened by her book, and she must be content to bear the covert imputation of being the apologist for cold-heartedness and worldly wisdom. With the world, the designations of "*poor* Steele" applied in love, and "*moral* Addison" affixed in sarcasm, will be too long the accepted nomenclature. Against the saddening perversity of these epithets all who love literature sincerely are found from time to time to protest. How many wasted existences—how many broken hearts—how much reproach justly cast on the most richly endowed!—what a sum of opportunities neglected, gifts misused, and pleasures unenjoyed, is implied in this one-sided sympathy! And yet the charitable might overlook it, did they not see, in this fond lingering over the past, misfortunes preparing for the future. What avail societies for the union and protection of literary men, so long as they select for especial commendation dispositions and habits leading to those follies and licences whereby the very name of Genius is made synonymous with all that is hollow, unsound, and erratic? We are not taking the side of the prosperous in our protest; for what is the amount of his misfortune who has always hearts to care for him, and hands to bear him up, compared with the solitary estate of the man who is misconstrued, derided, and counted as mean, sordid, and self-seeking by the generous spirits of his own time and the future? Neither are we ranging ourselves among the indiscriminate defenders of Addison's virtue; but it is needful that from time to time the balance should be adjusted; and especially now, when the position and influence of literary men, as a class, substantive and self-dependent, are beginning to excite attention among themselves.

Without more preamble, this book contains the first complete life of Addison ever put forth, its pages being enriched by some hitherto unpublished letters, communicated by Mr. Tickell of Dublin, descendant of the essayist's executor. Miss Aikin begins her task by a minute biographical notice of Dr. Addison, Dean of Lichfield, of whom Joseph, our subject, was eldest son: born at Milston, near Ambrosebury, Wilts, on May-day, 1672. The boy, Miss Aikin divines, was father of the shy and silent "short-faced gentleman," whose acuteness of observation passed unmolested behind the screen of excessive modesty:—

"Having, while at a country school in his father's neighbourhood, committed some trifling fault, the dread of punishment or disgrace so affected his imagination as to prompt him to make his escape into the fields and woods, where he is said to have subsisted on fruits, and lodged in a hollow tree, till discovered and brought back to his parents."

Joseph Addison, however, was early placed in the best possible situation to get rid of this sensitiveness, by being sent to the Charter-House, as a private pupil. There he made affectionate friendship with Richard Steele. From the first, the fortunes of the 'Tatler' and the 'Spectator' were as dissimilar as their dispositions. "*Poor*" Dick—to use one of the expressive phrases of his birth-place, Ireland—seems to have been "a struggler" from his infancy; destitute of patrimony—"obliged to his uncle Gascoine for a liberal education"—thrown upon life to scramble for Fortune's good things as he best might—now a comedy-writer—now a trooper in the Horse Guards. "*Moral*" Joseph was the offspring of a lettered and not unprosperous clergyman, and passed easily from home to school, from school to Oxford, from Oxford to the grand tour, which was then thought indispensable for the perfect training of a youth of family and promise. We know little of Addison's university life, beyond the facts that he was very nervous, that he performed the functions of academic tutor to one Sir John Harper, and that a meadow-walk under a row of trees, still bears his name. When he was eighteen, in recognition of the beauty of a set of Latin verses, he was elected Semi-Communarius of Magdalen College:—

"Among those elected at the same time with Addison were the noted Sacheverell, Boulter, who became primate of Ireland, and Smallbroke, afterwards a theologian of some note. Addison became *probationary* Fellow in 1697, and actual Fellow the following year."

A compliment in verse, addressed by Addison to Dryden, in 1693, is the first notice we find of the former having used his mother tongue in rhyme. Those were the days of adulatory poems and fulsome dedications; and therefore *one* may fairly be marked to the credit of Addison's heart, that the object selected by his early muse should be neither peer nor statesman, but a waning and not very prosperous poet:—

"Soon afterwards, the ambition of emulating what he praised, engaged Addison himself in a translation of the second Georgic, of which the elder poet complaisantly remarked, after this, 'my second swarm is scarce worth the hiving.' This courtesy was again requited on the part of the younger, by the humble but welcome service of supplying arguments to most of the books of the Æneid, and by the present of a critical essay on the Georgics, which Dryden printed as a preface to his own translations, but, by the special desire of the author, without his name."

The question of Addison's Greek scholarship, which was doubted by Dr. Johnson, is set at rest by documents Miss Aikin produces, in which it is proved that the young man was engaged by Tonson, the bookseller, to superintend and contribute to a translation of Herodotus. The translation of the second book of Ovid also belongs to this period. His critical bias, too, was evidenced about this time, in the epistle addressed to Mr. Henry Sacheverell, containing 'An Account of the greatest English Poets, from Chaucer to Dryden.' This was written before he had even read Spenser; and therefore he may, on the score of ignorance, be excused if the author of the 'Faëry Queene' fared but indifferently, while Cowley, and even Sprat, were pompously lauded. How time corrected these immature judgments, is recorded in the pages of the 'Spectator.'

About the year 1695, the Oxford student, according to the literary fashion of his time, offered to King William, on his return from the continent, the homage "of a paper of verses." This, Miss Aikin further regards as a profession of Whig faith; and that it might not want proper introduction, it was inscribed to Lord Somers. The statesman was charmed with the dedication, begged to see Addison, and became his warm patron. A subsequent Latin poem, written in celebration of the Peace of Ryswick, procured the successful youth the protection of Montagu, afterwards Earl of Halifax. The seed thus sown produced a golden harvest. At the age of twenty-five, Addison, being still a college tutor, and so ill repaid, or so poor a manager as to be burdened with debts, was pressed by his father to take orders. Against this, however, the conscience, the modesty, or the ambition of Addison protested; he was enabled to enlist on his side Montagu, who not only stood between him and importunities from the head of his college on this important point, but placed him in a condition to wait for advancement, by procuring for him a Crown pension of 300*l.* a-year which was given on the express condition that he should qualify himself for office by foreign travel. Before Addison set out on his tour, he provided himself with a printed letter of introduction, in the form of a second volume of the 'Musæ Anglicanæ,' containing his best Latin poems, which was to be used by him as a credential to eminent foreign scholars. It now reads almost like a jest, to find Tickell stating, that it was from a present of this volume, that "the famous M. Boileau first conceived an opinion of the English genius for poetry."

Addison commenced his grand tour in the summer of 1699; and the narrative of it is scantily but agreeably illustrated by his letters. From these we shall offer a few fragments. Devoid though they be of Pope's polish, or Gray's grace, or Walpole's wit—they are still acceptable as the utterances of what Miss Aikin justly calls "a wary and observant spirit," and as coherent with the opinions more formally published at a later period of their writer's life. The passages do not need connecting links; the first is dated *Paris*, 1699:—

"As for the state of Learning; There is no Book comes out at present that has not some thing in it of an Air of Devotion. Dacier has bin forc'd to prove his Plato a very good Christian before he ventures upon his Translation, and has so far comply'd with ye Tast of the Age that his whole book is over-run with Texts of Scripture, and ye notion of præ-existence supposed to be stol'n from two verses of the prophets. Nay ye Humour is grown so universal that it is got among ye Poets who are ev'ry day publishing Lives of Saints and Legends in Rhime."

To improve himself in the French language, Addison took up his residence at Blois. Why Miss Aikin, in quoting the following passage which a certain Abbé Philippeaux contributed to Spence, should stop to accuse the reporter of "a little and vulgar mind" it is not easy to tell: had she been able to gather more such details of Addison's manner of life, her biography would have gained in interest:—

"Mr. Addison stayed above a year at Blois. He would rise as early as between two and three in summer, and lie abed till between eleven and twelve in the depth of winter. He was untalkative while here, and often thoughtful; sometimes so lost in thought, that I have come into his room and stayed five minutes there before he has known anything of it. He had his masters generally at supper with him, kept very little company besides; and had no amour whilst here, that I know of; and I think I should have known it if he had had any."

We shall here give Addison's picture in little of Fontainebleau. Times are changed since its surroundings could pass with the traveller for "savage prospects":—

"It is situated among rocks and woods that give you a fine variety of Savage prospects. The King has Humour'd the Genius of the place, and only made use of so much art as is necessary to Help and regulate Nature without reforming her too much

Digitized by Google

The cascades seem to break through the Clefts and cracks of Rocks that are cover'd over with Moss, and look as if they were piled upon one another by Accident. There is an Artificial Wildness in the Meadows, Walks and Canals, and ye Garden instead of a Wall is Fenc'd on the Lower End by a Natural mound of Rock-work that strikes the Eye very Agreeably. For my part I think there is something more charming in these rude heaps of Stone than in so many Statues, and wou'd as soon see a River winding through Woods and Meadows as when it is toss'd up in such a Variety of figures at Versailles."

Addison's feeling for art did not, then, get beyond the *Galerie des Glaces* at Versailles :—

"The history of the present King, till ye Year 16*, is painted on the Roof by Le Brun, so that his Majesty has Actions enough by him to Furnish another Gallery much Longer than the first. He is represented with all the Terror and Majesty that you can Imagine in ev'ry part of the picture, and sees his Young face as perfectly drawn in the Roof as his present one in the side. The Painter has represented His most Xtian Majesty under ye figure of Jupiter throwing thunderbolts all about the cieling and striking terror into ye Danube and Rhine that lie astonished and blasted wth Lightning a little above the Cornice."

Though not liable to any special "impeachment" according to Philippeaux, the Spectator still used his eyes at Blois sufficiently to discover that Frenchwomen were—

—"perfect Mistresses in this Art of showing themselves to the best Advantage. They are always gay and sprightly and set off ye worst Faces in Europe with ye best airs. Ev'ry one knows how to give herself as charming a Look and posture as Sr. Godfrey Kneller cd draw her in."

In a subsequent letter we find him complaining of the "fogs and German counts" which infested Blois. "The last," he adds impatiently,—"are a kind of Gentlemen that are just come wild out of their country, and more noisy and senseless than any I have yet had ye honour to be acquainted with. They are at ye Cabaret from morning to night, and I suppose come into France on no other account but to Drink."

To these we shall add a portrait of him who was induced to admit the existence of English poetical genius, by perusal of the 'Musæ Anglicanæ':—

"Among other Learned men I had ye honour to be introduc'd to Mr. Boileau, who is now retouching his works and putting 'em out in a new Impression. He is old and a little Deaf but talks incomparably well in his own calling. He heartily hates an Ill poet and throws himself into a passion when he talks of any one that has not a high respect for Homer and Virgil. I don't know whether there is more of old Age or Truth in his Censures on ye French writers, but he wonderfully decrys ye present and extols very much his former contemporarys, especially his two intimate friends Arnaud and Racine. I askt him whether he thought Telemaque was not a good modern piece: he spoke of it with a great deal of esteem, and said that it gave us a better notion of Homer's way of writing yn any translation of his works could do, but that it falls however infinitely short of ye Odyssee, for Mentor, says he, is eternally Preaching, but Ulysses shows us evry thing in his character and behaviour yt ye other is still pressing on us by his precepts and Instructions. He said ye punishment of bad Kings was very well invented, and might compare with any thing of that nature in ye 6th Eneid, and that ye deceit put on Telemaque's Pilot to make him misguide his master is more artful and poetical than ye Death of Palinurus. * * He talk'd very much of Corneille, allowing him to be an excellent poet, but at ye same time none of ye best Tragique writers, for that he declaimed too frequently and made very fine Descriptions often when there was no occasion for 'em. Aristotle, says he, proposes two passions yt are proper to be rais'd by Tragedy, Terrour and Pity, but Corneille endeavours at a new on wh is Admiration. He instanc'd in his Pompey (wh he told us ye late Duke of Condy thought ye best Tragedy yt was ever written) where in ye first scene ye King of Egypt runs into a very pompous and long description of ye battle of Pharsalia, tho' he was then in a great hurry of affairs and had not himself bin present at it."

For notices of Addison's tour through Italy and Switzerland, Miss Aikin is indebted to his published volume of travels. We shall draw sparingly on this portion of his life, seeing that its details, thus derived, are familiar to most lovers of literature; enough to say, that all which Miss Aikin has skilfully abstracted from the record tells favourably for its writer, both as to head and heart. Even she, however, is here driven to regret the absence of personal details, concerning his "life and conversation." We shall join company for a moment with the traveller at Geneva, from which city he addresses a pleasant letter to Mr. Chamberlain Dashwood, in acknowledgment of a snuff-box. This will probably be one of the most popular pages of the new biography :—

"Dear Sir,—About three days ago, Mr. Bocher put a pretty snuff-box in my hand. I was not a little pleas'd to hear that it belonged to myself, and was much more so when I found it was a present from a Gentleman that I have so great an honour for. You did not probably foresee that it wou'd draw on you ye trouble of a Letter, but you must blame yourself for it. For my part I can no more accept of a Snuff-box without returning my acknowlegements, than I can take snuff without sneezing after it. This last I must own to you is so great an absurdity that I should be ashamed to confess it, were not I in hopes of correcting it very speedily. I am observ'd to have my Box oft'ner in my hand than those that have bin used to one these twenty years, for I cant forbear taking it out of my pocket whenever I think of Mr. Dashwood. You know Mr. Bays recommends Snuff as a great provocative to Wit, but you may produce this Letter as a standing Evidence against him. I have since ye beginning of it taken above a dozen pinches, and still find myself much more inclin'd to sneeze than to jest. From whence I conclude that Wit and Tobacco are not inseparable, or to make a Pun of it, tho' a Man may be master of a snuff-box,

"Non cuicunque datum est habere Nasam."

I should be afraid of being thought a Pedant for my Quotation did not I know that ye Gentleman I am writing to always carrys a Horace in his pocket. But whatever you may think me, Pray Sr do me ye Justice to esteem me."

While returning home, Addison's hopes of advancement received a shock in the downfall of the ministry which had befriended him, his pension being suspended, while his unpaid Oxford debts waited for him in England. Little is known of the manner in which the time of vicissitude and anxiety was passed, beyond what may be gathered from Dean Swift's libel on Delany and Carteret: in which he points to neglect shown to Addison by his quondam patrons, and to a tutorship his necessities forced him to accept. This neglect Miss Aikin earnestly denies, and with proofs in her hand, from letters, &c. As to the tutorship, Swift's allusion possibly refers to the negotiation entered into, through Tonson, with the Duke of Somerset, which failed on the discussion of terms. The disappointment felt by Addison on the occasion must have been darkened by the news from home, which reached him while in Holland, of the death of his father. He returned to England late in 1703, to meet his difficulties, and try his fortune as a man of letters; making his *début* as a member of the Kitcat Club, into which association of choice spirits he was elected shortly after his arrival; and by way of inaugural discourse, giving (as the usage was) a motto to a drinking-glass, in honour of the beauty of the Countess of Manchester, his *toast*. But sterner subjects presently called his powers forth. On the arrival of the news of the battle of Blenheim, Lord Treasurer Godolphin applied to Lord Halifax for some one possessing the pen of an eloquent writer, who was capable of turning to account so momentous an event. After some "yea and nay," Addison was named;—invited to do his best by no less a person than Mr. Boyle the Chancellor of the Exchequer, and fee'd beforehand, by a commissionership of the Excise. 'The Campaign' was the offspring of this encouragement, a *pièce d'occasion*, as utterly forgotten now, as it was loudly praised in its day. Nay, so admirably was the poet thought to have acquitted himself of his appointed task, that the promises, of which the Commissionership was but earnest, were in a short time fulfilled, in the shape of his appointment as Under-Secretary of State to Sir Charles Hedges. At the age of thirty-four, then, we find the man of letters placed beyond the reach of those storms of fortune which so perilously shake—

the garreteers, who border on the sky.

But that his official career was not to monopolize his best thoughts he very presently gave evidence: since it was in the year succeeding to his nomination that his opera, 'Fair Rosamond,' was produced to Clayton's music. The piece failed; and of course Miss Aikin, as special pleader, lays every blame upon the unlucky Clayton. We think the poet deserves his share also, since we dare to add, that a large proportion of the verses of 'Rosamond' are of little higher order than the namby-pamby rhyme of the Italian *libretti*, of which no one was more intolerant than "the Spectator." But for the sake of the will, we forgive the deed: and the intention was in those days so new and so eminently calculated to excite ridicule, that he must be indeed a Smellfungus who would pause to comment on the feeblenesses of its execution.

Somewhere about this time it was that Addison's connexion with the Warwick family began: and a letter to the young lord chimes in here pleasantly, after our notice of music; besides foreshowing that courteous play of humour for which "the Spectator" was soon to become so celebrated :—

"My dearest Lord.—I can't forbear being troublesome to your Lordship whilst I am in your neighbourhood. The business of this is to invite you to a concert of music, which I have found out in a neighbouring wood. It begins precisely at six in the evening, and consists of a blackbird, a thrush, a robin-redbreast and a bullfinch. There is a lark that by way of overture sings and mounts till she is almost out of hearing; and afterwards, falling down leisurely, drops to the ground as soon as she has ended her song. The whole is concluded by a nightingale that has a much better voice than Mrs Tofts, and something of the Italian manner in her divisions. If your Lordship will honour me with your company, I will promise to entertain you with much better music and more agreeable scenes, than ever you met with at the opera."

About this period, too, we begin to find traces of a renewal of the old intimacy between Addison and Steele, whom, indeed, the Secretary seems to have retained as assistant. We will allow Miss Aikin to state the much-vexed question of obligation and harshness between "poor Dick" and "moral Joseph" in her own best manner:—

"There are traces in these letters of some pecuniary transactions between the friends: Steele informs his wife, in August 1708, that he has 'paid Mr. Addison the whole 1000*l.*,' and at a later period he says, 'Mr. Addison's money you will have to-morrow noon.' No part of the correspondence affords the slightest confirmation of the story willingly received by Johnson, but discredited by Thyer, of Addison's having put an execution into the house of his friend to recover a hundred pounds which he had lent him. Steele, in one account, is said to have told the circumstance with tears in his eyes; another version of the story makes the debt 1000*l.*, and represents Addison as remitting to Steele the balance of the produce of the execution, 'with a genteel letter,' informing him that he had taken this step in order to awaken him to a sense of the inevitable ruin awaiting him from his habits of negligence and profusion; Steele, it is added, took

* The sixteenth year of his reign must be meant.

the warning in good part, and believed the proceeding designed to do him service. Tales thus contradictory carry their refutation with them; but when, at a later period, Steele, in one of his frequent exigencies, informs his wife that he has raised money elsewhere, 'but was denied by his friend,' it is no improbable conjecture that Addison might be the person referred to. The accurate Dr. Birch had doubtless some grounds for the observation, that their friendship endured to the end, 'with a few little bickerings on economical occasions.' When we consider the profligacy—almost the insanity—of Steele's profusion, in contrast with the undeviating economy and prudence by which Addison preserved himself free from temptations to private dishonesty or political baseness which might have proved too strong for his virtue, it will appear certain that his purse could not at all times have been opened so freely as we find that it had once been, to the selfish and unprincipled importunities of his reckless associate."

Here we must pause, for Addison's election to the representation of Lostwithiel and Malmsbury, his abortive oratorical attempt in Parliament, followed by no second essay, and, lastly, his appointment as Irish secretary, are briefly dispatched. In a life, on the whole, so level as Addison's, and so scantily chronicled by himself and his contemporaries, his works form the most interesting features: and those by which he won his fame are yet to be spoken of.

The Country House. With Designs. Edited by Lady Mary Fox. Murray.

'EDITED' has of late become a very ambiguous term. We may, however, in this instance, admit at once that the lady who appears as editor, is certainly not the author of the work; on the contrary, she appears to have assumed that her editorial office was a mere sinecure. Nor does the corrector of the press appear to have discharged his duties much better. Though a sort of boudoir volume, handsomely got up in regard to paper, type, decorations, with tastefully lithographed designs, it is so disfigured by errors of the press, orthographical mistakes, and false punctuation—to say nothing of many carelessnesses of expression, which it was the especial duty of an editor to amend,—as to be almost a literary curiosity. Some of the blunders are palpable enough, evidently the result of sheer inattention, and withal, rather amusing. Sir R. Smirke, for instance, is metamorphosed into "Sir R. Smirties," and Mr. Cockerell into "Mr. Cocherell." Such misprints, too, as "masterly" instead of "mastery," may pass as trifles, nor is it of much importance though one of the ornamented initial letters—therefore not picked up in haste and in error by the compositor—is a C instead of an A; but, that there should be so many oversights of the kind, and more especially that blunders in punctuation, turning some sentences into nonsense, should have passed undetected, does not say much for either editor or printer; but more than it would be complimentary to repeat. One of the worst examples of this carelessness occurs at page 55, here it is:—

"In approving the common practice of placing statues and bas-reliefs in statue has generally the advantage of being seen," &c.

The reader will probably rub his eyes, as we did, and read this passage over and over again. To save him trouble, we will mention that four lines have been transposed! and such carelessness in a work of considerable pretension, brought out under the patronage of Her Majesty, who subscribes for five copies, and of the Queen Dowager, who takes ten! It is a specimen of what we believe is, in printing-office phrase, called *pie*.

O! is not this a charming pie to set before a Queen!

But enough of the cooks and their blunderings;—of what kind and flavour is the meat—the book itself? To which we reply, relishing and good; but there is not quantity enough to satisfy a healthy appetite. However, it may not be amiss first of all to explain what is the subject; because neither the title nor the editor's name can have prepared our readers for it; while the information that it is published for the benefit of the "Royal Schools of Industry at Kensington," would lead them to expect something altogether different, since it might with more propriety have been published for the *benefit* of the "Institute of British Architects"—the subject being architecture and matters of taste. In fact, the volume professes to consist of a correspondence between M. de Chateauneuf, the German architect, and a gentleman in this country, who had consulted him about a country residence which he proposed to erect; and the plans and designs for which, as suggested by the architect, form the subjects of the lithographic engravings. So then, some will say, the enemy is got into our very camp! Even so; but the work is one from which many valuable hints and ideas may be derived,—not perhaps, by those who merely peruse it, but by those who will take the pains to study it. What we chiefly object to is, that there is somewhat too much on the subject of style generally, and on the choice of it; and too little on that of the particular design itself, although the latter would have afforded opportunity for a great deal of judicious comment. To say the truth, discussion on style in the abstract is now becoming somewhat a bore, and serves rather to impede than advance the progress of architecture. After all, its different styles can be considered only as so many different languages of the art; nor does it by any means follow that the perfection of the language employed secures equal perfection and mastery for all that is produced in it. On the contrary, the very same style which in the hands of one man seems full of intelligence, expression, and energy, becomes, in those of another, inane, feeble, and tasteless. People may go on prating about styles, and yet be as far off as ever from the real mark; they may prove by argument that such or such style is the very best imaginable, yet, at the very same time, show in their productions that they are unable to enter into the spirit of it, or to do it justice. Debate as long as we may, the grand secret after all is to treat the style adopted, whatever it may be, *con amore;* not only to be able to enter into its character, but to be able also to discern the farther developement which it may be susceptible of,—a secret which can hardly be said to be worth learning, because those who can make use of it, find it out instinctively for themselves, while those who cannot, are not much assisted by knowing that they lack the natural pre-requisite, without which no man can become an *artist* in the higher meaning of the word, although he may attain to a "very respectable" rank in his profession, and even become a "fashionable architect." Industry, diligence, perseverance, will certainly accomplish a great deal, but they never can supply the place of that internal, incommunicable, vivifying spirit which constitutes what we call genius. Wonderful as are the discoveries of modern science, no one has yet discovered the power of communicating mental inspiration and intense feeling; not even the academicians of Laputa proposed so extravagant a scheme as that of rendering art *à la portée de tout le monde*, or attainable by persons of "the meanest capacity." Rules and theories are serviceable enough in their way; they are the leading-strings and go-carts for beginners; yet even leading-strings and go-carts avail little, if the legs and feet that should be exercised by them are wanting.

We are now, however, indulging in a strain which the occasion hardly warrants, for there is something almost ludicrous in speaking of genius, inspiration, enthusiasm, in regard to a branch of art which so many of those who profess it, and who would fain make the world believe that it is transcendental, strive to reduce to the driest mechanical rules, and accommodate to the calibre of the *Pecksniffs*. Cutting short, therefore, further remarks of the kind, we will turn at once to the letters which passed between M. Chateauneuf and the correspondent who consulted him. Whether they were written with a view of being printed, we know not, but the letters of the German architect are not much like those of a man of business; and too formally studied, perhaps, to be so attractive and instructive as if they had been more familiar in tone and less "bookish" in manner. Such, at least, is the case with the first of them, which contains a great deal that people will be rather impatient of; some because it is too abstruse and philosophical, others because it consists of little more than the vague generalities and stereotyped common-places of criticism. When, on being asked what style he would recommend for the house his employer purposes erecting, an architect begins by adverting to the history and principles of his art, we almost fancy we hear the cry of "In the name of the Prophet! Figs!" and, after all, to what does it amount in the present instance? *Moonshine;*—at any rate, we have been unable to collect from this letter a single fresh idea or hint, since all the illustration it affords is of the *obscurum per obscurius* kind; whereas, had the writer canvassed the respective recommendations and defects of the various styles now in use, showing how the first might be further improved, and the others got rid of, he would have rendered us an essential service. One of the most intelligent remarks we meet with is—

"I have not spoken of a merely mixing up of different styles, but of compounding them together; between which two processes, there is, I conceive, a wide difference; the ingredients being merely put together, in the one case without losing their respective qualities; while, in the other, they amalgamate with each other, and produce an entirely new combination; and it is in accomplishing combinations of this kind that the power of genuine art manifests itself; and the distinction may be likened to a difference between a mechanical and a chemical combination. Nor are some compound styles of architecture less beautiful than others which are quite unmixed."

With this we agree; yet though the remark itself is a valuable and pregnant one, it is expressed too oracularly, since the principle involved in it requires to be rather fully explained and illustrated by instances, either positive or hypothetical. It is not every one who can seize hold of such a mere hint, follow it out, and discover what after all is the main point—the HOW such a felicitous combination is to be accomplished. It may indeed be said, that that HOW is one of those things which cannot be taught; nevertheless, something like satisfactory evidence might be afforded of it, by reference to cases which would serve to point out where it *has been* accomplished already, if not completely, at least to a certain degree. As that has not been done, the reader is rather tantalized than instructed; and there is besides a provokingly vague indistinctness pervading all that is said on the subject of style. If the writer does not conceal his candle under a bushel, he has certainly put it into a horn lantern of such opacity that the rays serve only to make the darkness visible. What we chiefly gather is, that he is a staunch advocate for free treatment of style, with regard rather to "capabilities," than to actual precedents; wherein we consider him to

Digitized by Google

be right, since otherwise design becomes nothing better than pains-taking, copying, and working samplers in stone.

"At various periods (he observes) men have shown themselves either barbarous or puerile in their notions on art; yet never till now such slavish copyists, such mere plagiarists, such mocking birds in style. You may judge by this sally in what an ill-humour I am at finding that you would shut me up in a cage and there make me sing. If you examine your Elizabethan architecture with some little critical attention, you will hardly fail to perceive, that with all its richness of expression, the elementary sounds are no more harmonious than the crowing of a cock or the braying of an ass."

Whatever may be thought of the sauciness with which this opinion is expressed, the opinion itself deserves attention, now that the "Elizabethan" has come again into vogue as a mere architectural fashion, not as the basis of a style to be carried on and extended, and to be moulded and fashioned according to present exigencies and circumstances, but to be implicitly followed as an express pattern, even in its defects, which are neither few nor inconsiderable.

M. Chateauneuf might have protested also against the similar "mocking-bird" system in regard to other styles, in fact to any and every style of the art, as being the reverse of that "free appropriation and adaptation of the elements" of style which he recommends. Exquisite, for instance, as are the "elementary sounds" of Grecian architecture, in themselves, they are frequently rendered most gratingly discordant by those who pique themselves on being exceedingly "classical," merely because they have not a single idea of their own which would enable them to deviate a hair's breadth from their copy-book. To say the truth, there has been too much empty and disputatious logomachy in regard to styles and their respective appellations. The excellence of the style itself is no pledge beforehand for the merit of what has to be produced in it; so far, therefore, we may lay down as a tolerably safe rule, that "Whate'er is best administered is best," since, after all is said and done, so much depends on the particular application of the style, and the degree of geniality with which it is treated. Theories and rules are very good sign-posts to direct you as to the road you are to take, but they will not protect you from tumbling into a ditch, or assist you in getting out again.

Whatever useful hints and instructions may be gathered from M. Chateauneuf's remarks with his pen, he has not been particularly happy in the design he here brings forward, as a carefully studied idea for an English "Country House." Most certainly he has allowed himself to go very far beyond his employer's ideas, for though the latter asks for what, even with after-additions will not exceed the cost of from 10,000*l.* to 12,000*l.*, he furnishes him with designs that could not be executed for less than three times as much, and that for merely the building itself, independently of fresco-painting and other interior decoration. Since it turns out, however, to be a mere *project*, the question of cost is not of so much moment as the value of the design itself as a study; and we are compelled to say, that the plan is defective in regard to *economy*, whether it be merely pecuniary, or that architectural economy which ought to regulate the distribution and arrangement of the interior, so as to secure, together with perfect convenience, a considerable degree of effect, independent of embellishment. So far is the design from being recommended by convenience or happy contrivance, as to be, in many important respects, singularly ill-contrived and inconvenient. In fact, one or two of the more obvious defects of the plan are pointed out to the architect by his employer or correspondent; yet we meet with no direct reply to them, or any suggestion for getting rid of them. They are accordingly suffered to remain, and may now serve to exercise the ingenuity of the student in devising means for obviating them, or showing how they might have been obviated, without greatly disturbing either the original plan or any part of the exterior.

Unsatisfactory as this volume is in several respects, it is still, upon the whole, one of interest and novelty. The *pro* and *con* of opinions and remarks has in it something attractive and instructive; and there is an observation by M. Chateauneuf himself, which, were it attended to as it deserves, would do more for the advancement of architecture than many volumes. We will therefore conclude by here quoting it:—

"So far, indeed, am I from wishing you to decide at once in favour of what I propose, I am most of all solicitous that you should as completely comprehend not only the general scheme, but the contemplated effect of every part. Undoubtedly it is very pleasant to an architect, to meet with an employer disposed to give him *carte-blanche*, and permission to follow out his own ideas unrestrictedly; yet it is still more delightful to meet with one, who, instead of merely acquiescing, assents from conviction, after deliberate study of the ideas submitted to him, and from the lively interest he takes in them."

This is admirably thought on the part of the writer, but the editor, as our readers will observe, has suffered it to appear in strange English.

Past and Present. By Thomas Carlyle.

[Second Notice.]

We promised in our former notice to bring forward some of those plain truths, half truths, and partial truths scattered throughout Mr. Carlyle's volume, and we now proceed to fulfil that promise. How much is there of sound thought in the following passages:—

"Fair day's-wages for fair day's-work! exclaims a sarcastic man: alas, in what corner of this Planet, since Adam first awoke on it, was that ever realised? The day's-wages of John Milton's day's-work, named *Paradise Lost* and *Milton's Works*, were Ten Pounds paid by instalments, and a rather close escape from death on the gallows. Consider that: it is no rhetorical flourish; it is an authentic, altogether quiet fact,—emblematic, quietly documentary of a whole world of such, ever since human history began. Oliver Cromwell quitted his farming; undertook a Hercules' Labour and lifelong wrestle with that Lernean Hydra-coil, wide as England; and he did wrestle with it, the truest and terriblest wrestle I have heard of; and he wrestled it, and mowed and cut it down a good many stages, so that its hissing is ever since pitiful in comparison, and one can walk abroad in comparative peace from it;—and his wages, as I understand, were burial under the gallows-tree near Tyburn Turnpike, with his head on the gable of Westminster Hall, and two centuries now of mixed cursing and ridicule from all manner of men. His dust lies under the Edgeware Road, near Tyburn Turnpike, at this hour; and his memory is—Nay, what matters what his memory is. * * Day's-wages for day's-work? continues he: The Progress of Human Society consists even in this same, The better and better apportioning of wages to work. Give me this, you have given me all. Pay to every man accurately what he has worked for, what he has earned and done and deserved,—to this man broad lands and honours, to that man high gibbets and treadmills: what more have I to ask? Heaven's Kingdom, which we daily pray for, *has* come; God's will is done on Earth even as it is in Heaven. * * And yet with all we have to remark, that imperfect Human Society holds itself together, and finds place under the Sun, in virtue simply of some *approximation* to perfection in justice being actually made and put in practice. * * With some, almost with any, supportable approximation men are apt, perhaps too apt, to rest indolently patient, and say, It will do. Thus these poor Manchester manual workers mean only, by day's-wages for day's-work, certain coins of money adequate to keep them living;—in return for their work, such modicum of food, clothes and fuel as will enable them to continue their work itself! They as yet clamour for no more; the rest, still inarticulate, cannot yet shape itself into a demand at all, and only lies in them as a dumb wish; perhaps only, still more inarticulate, as a dumb, altogether unconscious want. *This* is the supportable approximation they would rest patient with, That by their work they might be kept alive to work more!—*This* once grown unattainable, I think, your approximation may consider itself to have reached the *in*supportable stage; and may prepare, with whatever difficulty, reluctance and astonishment, for one of two things, for changing or perishing! With the millions no longer able to live, how can the units keep living? It is too clear, the Nation itself is on the way to suicidal death."

On the subject of bribery here is another hard hit happily expressed:—

"A Parliament, one would say, which proclaims itself elected and eligible by bribery, tells the Nation that is governed by it a piece of singular news. Bribery: have we reflected what bribery is! Bribery means not only length of purse, which is neither qualification nor the contrary for legislating well; but it means dishonesty, and even impudent dishonesty;—brazen insensibility to lying and to making others lie. * * Heavens, what an improvement, were there once fairly, in Downing-street, an Election-Office opened, with a Tariff of Boroughs! Such and such a population, amount of property-tax, ground-rental, extent of trade, returns two Members, returns one Member, for so much money down: Ipswich so many thousands, Nottingham so many,—as they happened, one by one, to fall into this new Downing-street Schedule A! An incalculable improvement, in comparison: for now at least you have it fairly by length of purse, and leave the dishonesty, the impudence, the unveracity all handsomely aside. Length of purse and desire to be a Legislator ought to get a man into Parliament, not *with*, but if possible *without* the unveracity, the impudence and the dishonesty! Length of purse and desire, these are, as intrinsic qualifications, correctly equal to zero; but they are not yet *less* than zero,—as the smallest addition of that latter sort will make them."

Stripped of its rhodomontade and nonsense, is there not also much pith in our next extract?—

"And truly, as we said above, is not this comparative silence of Abbot Samson as to his religion, precisely the healthiest sign of him and of it? 'The Unconscious is the alone Complete.' Abbot Samson all along a busy working man, as all men are bound to be, his religion, his worship was like his daily bread to him;—which he did not take the trouble to talk much about; which he merely ate at stated intervals, and lived and did his work upon! This is Abbot Samson's Catholicism of the Twelfth Century;—something like the *Ism* of all true men in all centuries, I fancy! Alas, compared with any of the *Isms* current in these poor days, what a thing! Compared with the respectablest, morbid, struggling Methodism, never so earnest; with the respectablest, ghastly, dead or galvanised Dilettantism, never so spasmodic! Methodism with its eye for ever turned on its own navel; asking itself with torturing anxiety of Hope and Fear, 'Am I right, am I wrong? Shall I be saved, shall I not be damned?'—what is this, at bottom, but a new phasis of *Egoism*, stretched out into the Infinite; not always the heavenlier for its infinitude! Brother, so soon as possible, endeavour to rise above all that. * * But of our Dilettantisms, and galvanized Dilettantisms; of Puseyism—O Heavens, what shall we say of Puseyism, in comparison to Twelfth-Century Catholicism? * * That certain human souls, living on this practical Earth, should think to save themselves and a ruined world by noisy theoretic demonstrations and laudations of *the* Church, instead of some unnoisy, unconscious, but *practical*, total, heart-and-soul demonstration of *a* Church: this, in the circle of revolving ages, this also was a thing we were to see. A kind of penultimate thing, precursor of very strange consummations; last thing but one? If there is no atmosphere, what will it serve a man to demonstrate the excellence of lungs? How much profitabler when you can, like Abbot Samson, breathe, and go along your way!"

Is it, or is it not strange, that these very philosophical, and very Christian reflections on

Digitized by Google

hyper-religious sensitiveness of the day, should have fallen from the pen of a layman, rather than from the mouth of some one of the thousand preachers of the word who have taken part in the Pusey controversy? As to the *penultimacy* of the thing, that, too, is matter for serious consideration; for without going the length of supposing that the existing divisions of the Church are preludes to its disruption from the State, it is enough to remember the licence and vice which succeeded to the religious extravagance of the Covenanters, in order to form a most desponding conjecture as to the morals of a no very remote generation.

An image most frequently suffices to mount Mr. Carlyle's perception of a partial truth:—

"Consider, for example, that great Hat seven-feet high, which now perambulates London Streets; which my Friend Sauerteig regarded justly as one of our English notabilities; 'the topmost point as yet,' said he, 'would it were your culminating and returning point, to which English Puffery has been observed to reach!'—The Hatter in the Strand of London, instead of making better felt-hats than another, mounts a huge lath-and-plaster Hat, seven-feet high, upon wheels; sends a man to drive it through the streets; hoping to be saved *thereby*. He has not attempted to *make* better hats, as he was appointed by the Universe to do, and as with this ingenuity of his he could very probably have done; but his whole industry is turned to *persuade* us that he has made such. To my Friend Sauerteig this poor seven-feet Hat-manufacturer, as the topstone of English Puffery, was very notable. Alas, that we natives note him little, that we view him as a thing of course, is the very burden of the misery. We take it for granted, the most rigorous of us, that all men who have made anything are expected and entitled to make the loudest possible proclamation of it; call on a discerning public to reward them for it. Every man his own trumpeter; that is, to a really alarming extent, the accepted rule. Make loudest possible proclamation of your Hat: true proclamation if that will do; if that will not do, then false proclamation,—to such an extent of falsity as will serve your purpose; as will not seem too false to be credible!—I answer, once for all, that the fact is not so. Nature requires no man to make proclamation of his doings and hat-makings; Nature forbids all men to make such."

But such truths, when brought to bear on a line of argument, too frequently lose all their value, and become falsified, by their illogical application and half-digested conclusion. In the chapter, for instance, on Frank Jocelyn's account of the election of Abbot Samson (a happy choice brought about, not, as Mr. Carlyle insinuates, by the wisdom, but by the selfish interests of his monks, and confirmed by the lucky accident of the king having no interest in annulling the election), the author takes occasion to inculcate that forms of election are of no avail against ignorance or dishonesty of the electors, a remark true enough as far as it goes,—that is, just half way; but how does he work out the idea?—

"There is in every Nation and Community *a fittest*, a wisest, bravest, best; whom could we find and make King over us, all were in very truth well;—the best that God and Nature had permitted *us* to make it! By what art discover him? Will the Heavens in their pity teach us no art; for our need of him is great! Ballot-boxes, Reform Bills, winnowing-machines: all these are good, or are not so good;—alas, brethren, how *can* these, I say, be other than inadequate, be other than failures, melancholy to behold? Dim all souls of men to the divine, the high and awful meaning of Human Worth and Truth, we shall never, by all the machinery in Birmingham, discover the True and Worthy. It is written, 'if we are ourselves valets, there shall exist no hero for us; we shall not know the hero when we see him;'—we shall take the quack for a hero; and cry, audibly through all ballot-boxes and machinery whatsoever, Thou art he; be thou King over us! * * No earthly machinery able to exclude the Quack. Ye shall be born thralls of the Quack, and suffer under him, till your hearts are near broken, and no French Revolution or Manchester Insurrection, or partial or universal volcanic combustions and explosions, never so many, can do more than 'change the *figure* of your Quack.'"

Admitting, in all its extent, the proposition, that it is the spirit, and not the letter of institutions which quickens, of what avail is an idle declamation, lamenting that the men of one century are not the men of another? If a word, a wish, could alter the nature of things, could isolate the past from the future, and release our living nature from the chains of cause and effect, then there might be some application of the Abbot's tale. Unluckily, too, the premises are altogether false. The twelfth century men were ruled by false heroes, were more incapable of judging between the true and the false, and had less power of giving effect to their choice than we of the nineteenth. Would mortal man dream of recurring to the twelfth century and its "spirit" as an instructor in the art of election? Is it not matter of record, that Englishmen were driven to seek for other more elaborate means of choice, because the old form of close nomination was practically a stifler of this same spirit of the olden times, in whatever degree it then sporadically existed? Having assumed then that the spirit wanting in our times was in existence in the twelfth century (what will not a poet assume?), Mr. Carlyle thus illustrates its absence among us:—

"We English find a Poet, as brave a man as has been made for a hundred years or so anywhere under the Sun; and do we kindle bonfires, thank the gods? Not at all. We, taking due counsel of it, set the man to gauge ale-barrels in the Burgh of Dumfries; and pique ourselves on our 'patronage of genius.' Genius, Poet: do we know what these words mean? An inspired Soul once more vouchsafed us, direct from Nature's own great fire-heart, to see the Truth and speak it, and do it. * * George the Third is Defender of something we call 'the Faith' in those years; George the Third is head charioteer of the Destinies of England, to guide them through the gulf of French Revolutions, American Independencies; and Robert Burns is Gauger of ale in Dumfries. It is an Iliad in a nutshell. The physiognomy of a world now verging towards dissolution, reduced now to spasms and death-throes, lies pictured in that one fact,—which astonishes nobody, except at me for being astonished at it. The fruit of long ages of confirmed Valethood, entirely confirmed as into a Law of Nature; cloth-worship and quack-worship: entirely *confirmed* Valethood,—which will have to *unconfirm* itself again; God knows, with difficulty enough."

What deep sense and surface twaddle are here mixed together! Does the author intend that every George III. is to be deposed as often as we discover any man who can write nervous poetry to enthrone in his place? This is worse than the St. Simonian "Every man according to his capacity." Does he even mean that governments are to be overturned to make room for a real superior, if such should be discovered? that sovereigns should take places like schoolboys at an examination? Has not experience confirmed the fact, that there is not, that there cannot be, unanimity as to the main point. Who shall fix upon this imputed best? who enforce the determination? Let Mr. Carlyle ask the unfortunate Poles. The theory insinuated is a practical denial of all that is best known of human nature. It is a real retrogradation in political philosophy. Yet such no-reasoning as this is the staple nearly of the entire volume.

The notion of comparing the past to the disadvantage of the present, is a poet's notion: an edifice raised in the realms of pure fancy: an Armida's enchanted palace or an Armida's person. Any school-boy would muster fact enough to show the infinite superiority of modern times in every particular, both moral and physical. If our ancestors had not our evils to contend with, neither had they a tithe of our benefits. Taking even to the uttermost Mr. Carlyle's discouraging views of the condition of the working classes, is that condition comparable with the unbroken series of plague, war, and famine, which, in the boasted twelfth century, desolated the isle, and made life one continued suffering? But, again, is the present stagnation of trade really a necessary ingredient in our civilization, or an accident? Are we really more destitute of will and resources for arriving at a happier condition than our ancestors? Above all, in making the attempt, are we not to deal with men as they are, to work with the materials that are before us? Is it philosophy to idly invoke an irrevocable past, and to imagine that effects can be revived in the absence of their causes? No: Mr. Carlyle's admirers would perhaps admit that such is not the truth, and they would tell us it is—poetry; we say it is childishness and absurdity.

The sum of Mr. Carlyle's argument is this, that the European world is sinking into anarchy, because men have deserted truth for appearances, and because they want faith in certain Platonisms; which defect he chooses to regard as Atheism—using the word in a far different signification from that in which it is universally understood, though what precisely he does mean by it we will not undertake to say. Thence he concludes, that the fundamental reform, the reform which must precede all others, is that each man should reform himself; should take to believing in universals, in order that he may abandon false and apparent goods, and embrace only such objects as are really worth pursuing. It never enters into his thought, that if mankind are not what they were at some other epoch of imputed excellence, they are what they are through the influence of certain antecedents. It is thus, for instance, that the steam-engine, by improving the physical resources of man, has multiplied and condensed the species faster than moral and political philosophy could follow to regulate for the new contingency. It is thus, too, that the multiplication of enjoyments, and the increased security of property and life, have abated enthusiasm, and subordinated the future to the present. We are all the creatures of society, partaking in the weaknesses as we profit by the strength of the age in which we live. Neither is it enough to foreknow and to appreciate ulterior reforms; we must desire them, feel their necessity. We must want something that reform can supply. It is, therefore, no abstraction that we seek, but a practical application of specific means to specific ends. This individual reform is but the putting salt on the bird's tail, in order to catch it: it evades all the difficulties of the case, and provides for nothing. Mr. Carlyle's bugbears "political economy, and the *laissez faire*," may be small and inefficient steps in the highway of progress; but they are steps well defined: permanent landmarks to prevent new inquirers from deviating: experiences verified, or at least open to canvass and correction, because recorded: they are not endless retracings of the same labyrinth, revolutions in the same vicious circle.

Days and Nights of Salmon Fishing in the Tweed, &c. By William Scrope, Esq. F.L.S. Murray.

Mr. Scrope's narrative style is so easy, pleasant, and life-like, that a volume from his pen is sure to be welcome; but that there may be no doubt on the subject, he always comes with a goodly company of friends, and on this occasion introduces the reader to Wilkie, Edwin and Charles

Digitized by Google

Landseer, W. Simson, and E. Cooke, who bring with them a portfolio of capital sketches.

Salmon fishing is a noble sport; but for the art and mystery of leistering, trolling, sunning, and burning the water, the reader must refer to the volume; nor shall we concern ourselves with the natural history of the salmon, or the disputes about the parr and the smolt, and other like matters, but rest content with a characteristic scene or descriptive anecdote. And here, first, a few lines on the qualities and conditions of an angler:—

"If I am ever so indiscreet as to utter a word about fishing, I am always asked, 'if it does not require a great deal of patience.' Now, these sort of interrogators are in Cimmerian darkness as to the real thing. But I tell them, that to be a first-rate salmon fisher requires such active properties as they never dreamed of in their philosophy. It demands (salmon fishing at least) strength of arm and endurance of fatigue, and a capability of walking in the sharp streams for eight or ten hours together, with perfect satisfaction to one's self; and that early in the spring season, when the clean salmon first come forward. In after life, people are considerably addicted to boats, and to go about attended like admirals; that is what we must all come to. But your real professor, who has youth on his side, should neither have boats nor boots, but be sufficient in himself. No delay, no hauling the boat up the stream, but in and out, like an otter; even like we ourselves in the time of our prime, Fahrenheit being below zero. We then pitched our tent under Craigover rocks, on Tweedside, and slept in it, that we might go forth, rod in hand, at five o'clock each morning to our aqueous pastime. * * I say then, and will maintain it, that a salmon fisher should be strong in the arms, or he will never be able to keep on thrashing for ten or twelve hours together with a rod eighteen or twenty feet long, with ever and anon a lusty salmon at the end of his line, pulling like a wild horse with the lasso about him. Now he is obliged to keep his arms aloft, that the line may clear the rocks,—now he must rush into the river, then back out with nimble pastern, always keeping a steady and proper strain of line; and he must preserve his self-possession, 'even in the very tempest and whirlwind of the sport,' when the salmon rushes like a rocket. This is not moody work; it keeps a man alive and stirring. Patience indeed! It is indispensable to have a quick eye, and a ready hand: your fly, or its exact position, should never be lost sight of; and you should imagine every moment of the livelong day that an extraordinary large salmon is coming at it. No man can do anything properly unless he is sanguine, and his whole heart and soul is in the business. * * There is a speculation in angling that gives great zest to the sport. You may catch a moderate-sized fish, or a distinguished one; or, mayhap, a monster of such stupendous dimensions as will render your name immortal; and he may be painted, and adorn some fishing-tackle shop in London, like Colonel Thornton's pike, which threw *Newmarket* on his back as he was landing him,—a lad, says the Colonel, so called from the place of his nativity. Of course you expect the latter phenomenon every cast. You see him in your mind's eye eternally following your fly, and you are ready to strike from second to second. It is true he does not actually come, as experience teaches. But what of that? he may come in an hour—in a minute—in a moment; the thing is possible, and that is enough for an angler."

We hear, occasionally, of wild adventures and hair-breadth escapes from our fishing friends on the Namsen and in the Fiords of Norway, and on the great rivers of America, but it is possible, it appears, to meet with stirring incidents even on the Tay, when she comes flooding down from mountain and moorland. Thus, Mr. Scrope, when about to remove his quarters to the Tweed, had to descend the former river with his small boats to Perth:—

"These boats were built on Tweedside for fly fishing in small waters, and in warm weather were held for the fisherman by a man who waded in the water, lest the salmon should be scared away by the motion or appearance of the oars, or canting pole, as it might be. Being, therefore, of a very light and diminutive construction, they were not exactly calculated to endure the buffets of large and tempestuous waters; one is not apt, however, to be over nice about such things, and accordingly I resolved to put them to the proof. Nor was an opportunity long wanting. After a night of heavy rain, the Tay, which flowed through the park of Meikleour, rose to a fearful extent. This was exactly the sort of thing to suit me; so I proposed to my fisherman, Charles Purdie, to go down the flood to Perth, a distance of about twelve miles by water. We did so; and here I insert the particulars of our voyage, as they may serve to give an idea of a Scottish spate. We were standing at the foot of the sloping lawn before my house; and as Charlie Purdie bent his regards on the frightful violence of the flood, I thought he did not half like to embark on it. In fact, he did not only disapprove of the general conduct of the river, but also of the peculiar rocky nature of the channel in which it was its pleasure to gallop along to the ocean. Moreover, he knew there was an obstruction in the river at a place called the Linn of Campsie, about four miles below the proposed starting-place, where at the arrival of his little boat he did not anticipate much pleasure. In fact, neither Charlie nor his master conceived it would be possible to pass the falls into the Linn, since no boat could do so in the ordinary state of the water without being upset, or dashed to shivers. They would see how things looked, however, on their arrival at the spot, and act accordingly. 'Now then, loosen my boat, Charlie: I will go first; and take care you do not run foul of me.' The boats being unmoored, we shot down the river in a moment, and were soon at the end of the park, where the Isla comes into the Tay. This additional volume of water increased our velocity; we guided our boats into the main currents, and away we went with the swiftness of a steam-engine. Rocks and woods opened to our view in an instant, and in an instant vanished behind us. Thus we were driven along with great fury till we came within the sound of the great falls of the Linn of Campsie: soon we descried before us the awful barrier of rocks which rose up right athwart the stream, extending from bank to bank. The waters had worn their way in some places through this barrier, and tumbled madly through the rocky gorges; down they went, thundering with stunning sound into the enormous cauldron below. Then arose the strife—the dashing of the spray—the buffeting against the banks—the swirling of the eddies, crested with large masses of foam—all was in hideous commotion. This state of things threatened to put an end to our projected voyage. To go right onwards through the centre gorge was to pass to certain destruction: as well might one hope to shoot in safety down the falls of Schaffhausen. I was prepared for all this, and was quite aware of the impediment before I began my voyage; so I did as I had made up my mind to do before I started. I pulled towards some alder trees which grew on the bank above the fall, and held my boat fast by the branches; I then told Charlie to secure his boat also with a rope, and to land and reconnoitre. We were enabled to do these things without much difficulty, as the water was in some measure arrested in its course above the fall, being slightly bayed back by the barrier of rocks. Being on terra firma, my hero looked ruefully at the torrents: one alone appeared something like being practicable; and it was one that, in the mean state of the river, was nothing but a dry channel. Whether our small craft could shoot down it without foundering or not was by no means evident to the eye, though a practised one, of the explorer. He was, however, somewhat encouraged by two fishermen who were mending their nets. They thought, they said, that we 'might possibly descend in safety, if we managed our boats well.' Charlie looked, and sighed, and looked again; the thing was evidently not in harmony with his ideas; for he could not swim himself, and he doubted whether his boat would either, when it arrived at the bottom of the fall. However, I decided that I would try the thing alone; and if it should prove a failure, the example was not, of course, to be followed. So I brought my little boat some way above the cataract, with her head up the stream, and by rowing against it let her fall by degrees stern foremost, by which means I had a clear view before me, and could therefore steer to a nicety. She went down most agreeably, though in nearly a vertical position, but pitched upon a rock below the fall; but before any harm happened, I swung her off by inclining my body to and fro. My fisherman followed successfully; and having passed the wide-spreading Linn, the channel of the Tay became more contracted, and we resumed our former pace, shooting down the rapids like an arrow, and by occasional swift snatches of the oars avoiding the breakers around us. So we passed among the hanging woods and impending rocks of this romantic river, till we arrived at Stanley, where groups of people were assembled on the hill-top, who shouted to us with all their might, and made signs and gestures, the meaning of which I could not comprehend, but they seemed to be warning us of some impending danger: I could not catch the import of their words, as the sound was but faintly heard amidst the din of the waves. So I did not perplex myself with attending to them, but thought it wisest to trust to my own discretion, which fortunately carried the boats safely to their place of destination. I learned afterwards, that seeing our boats were mere insignificant cockle-shells borne down by the flood with great impetuosity, they were fearful that we should be carried down the mill-dam, and come in contact with the machinery. But a better fate awaited us than such a Quixotic one; and after a little rough work, in which we shipped a reasonable quantity of water, we at length approached the bleaching grounds of Perth, where the river swept swift and ample in an even channel under a wooded bank studded with villas; we then darted through the middle arch of the beautiful bridge in the town, and hauled up our boats on a wharf below it."

We will now introduce our readers to Tom Purdie and his immortal master:—

"Two or three more fish were taken amongst the stones at the tail of the cast, and the sport in the carry-wheel being now ended, the fish were stowed in the hold of the boat, the crew jumped ashore, and a right hearty appeal was made to the whiskey bottle. It was first tendered to the veteran Tom Purdie, to whom it was always observed to have a natural gravitation, but to the astonishment of all, he barely put his lips to the quaigh, and passed it to his nephew. 'Why, uncle mon, what the deil's come ower ye? I never kent ye refuse a drappie afore, no not sin I war a callant; I canna thole to see ye gang that gait.' 'Why, I'll tell ye what it is, Charlie. I got a repreef from Sir Walter for being fou the ither nicht.' 'Eh, uncle, how was that?' 'Why,' says Sir Walter, 'Tom,' says he, 'I sent for ye on Monday, and ye were not at hame at aight o'clock; I doubt ye were fou, Tom;' 'I'll joust tell ye the hale truth,' says I, 'I gaed round by the men at wark at Rymer's Glen, and came in by Tarfield; then I went to Darnick, and had a glass o' whiskey wi' Sandy Trummel at Susy's, and I war joust coming awa when Rob steppit in, and cried for half a mutchkin. I was na for takkin mair, but the glasses were filled, and I did not like to be beat wi' them, so I tuk mine.' 'And is that all you had, Tom?' said Sir Walter. 'Aye, indeed was it,' said I; 'but, Heaven have a care o' me, I never was the war of it, till I was ganging up by Jemmy Mercer's by Coat's Green; and when I cam up by Kerr side I wanted to see Maister Laidlaw, but I thoucht I durst na gang in; and how I got hame I dinna ken, for I never mindet it na mair; but our wife war in a terrible bad key the morning, because I wair sair wanted last nicht.' 'Well,' said the maister, 'ye mun never do the like again, Tom.' We then ganged to the woods, and thinned the trees; and I laboured with the axe at thae that Sir Walter marked. 'Now Tom,' says he, 'you will go home with me, for you have been working very hard, and a glass of whiskey will do you good;' and he cawed to Nicholson to bring Tom a glass o' Glenlivet. I tuk it doon; and, mon, if yee'd found it, it beat a' the whiskey I ever tasted in my life. 'Well, Tom,' said Sir Walter, 'how do ye feel after it? Do ye think another glass will do ye ony harm?' I said naething, but I thoucht I wad like anither, and Nicholson poured out ain, and I tuk it. Then the maister said, 'Tom, do ye feel ony thing the war o' it?' 'Nau, nau,' said I, 'but it's terrible powerfu', and three times as strang as ony whiskey I ever drank in my life.' 'Then, Tom,' says Sir Walter, 'never tell me that three glasses o' Susy's whiskey will fill ye fou, when ye have drank twa of mine, which you say is

Digitized by Google

three times as strong, and you feel all the better for it.' Hey, mon, I never was so taen by the face in a' my life! I didna ken where to luk. The deil faw me if ever he cotch me so again."

There are numberless like anecdotes, capital sketches of character, and pleasant descriptions in the volume.

Dictionary of Greek and Roman Biography and Mythology. Parts I. and II. Edited by W. Smith, L.L.D. Taylor & Walton.

A silent and desirable revolution is taking place in the English courses of Classical Education: hitherto the writers of Greece and Rome have been studied on a principle that placed language above thought, and rendered words more important than ideas. We have known young men who could scan the most difficult metres of Aristophanes, and quote all the grammatical subtleties devised to explain his anomalies of construction, who had not the slightest knowledge of the great course of political events on which his dramas were founded; who never suspected that the poet discussed important constitutional questions; and who were unacquainted with the history of the persons assailed, and consequently incapable of appreciating the point of the satire. We have known those who had learned Cicero's speeches almost by rote, but were yet ignorant of the persons named, the laws quoted, and the constitution of the courts or assemblies addressed; they were minutely accurate in longs and shorts, never tripped over a false quantity, could compete with Alvarez himself in the niceties of prosody, and surpass Schrevelius in quibbling derivations; but of the political import and historic value of what they read, they were just as ignorant as if it was written in an unknown tongue. It was, and to some extent it is, the bane of education in our classical schools, that so much time and labour are bestowed on constructing the scaffolding, as to prevent nine out of every ten from proceeding to erect the main edifice.

We hailed with pleasure the publication of the 'Dictionary of Greek and Roman Antiquities' by the conductors of the present work; it was a revelation of the mind of the classic ages to youthful students; it brought their legislation to be tested by the standards of moral principle and public utility, pointing out where law had been successfully applied to the benefit of the community, and where perversity of institution had been the pregnant source of national wrong. With still greater success it developed the nature of the taste which it is the proper end of classical studies to inspire: its text and its illustrations equally developed the great object of ancient art—of classic poetry, painting, sculpture, and music—which was to perfectionate the ideal of physical beauty. We have since had frequent occasion to consult the work, and have found every article to which we referred, not only accurate in the information it conveyed, but intellectually valuable in the investigations it suggested.

We saw the announcement of the present work with sincere pleasure. Lempriere's Classical Dictionary,—a work scarcely abreast with the knowledge of its own day,—was far, very far behind the requisites for a book of reference in the present state of classical literature: diffusive on matters to be found in ordinary abridgments of history, it was meagre and jejune on those points where young students most wanted information. Dymock's variation of Lempriere, published as an original work, was still worse; the alterations were principally remarkable for a union of dogmatism with ignorance. Anthon's edition of Lempriere, originally published in America, and edited here by Mr. Barker, was a clumsy enlargement of an inconvenient edifice, without plan, order, or system. Anthon crammed into his volume everything which appeared to suit his subject, to be found in the works of English and continental scholars, without regard to proportion or consistency; his English editor, "*regis ad exemplar*," superadded the stores of an ample common-place book, and their joint production is a specimen of complete disorganization. How it happened that the proprietors of Lempriere never engaged some English scholars to re-cast the work, is one of those mysteries of trade which we cannot unravel. We do not regret their neglect, since it has led to the production of the work before us. It is obviously impossible to enter into minute criticism of a lexicon or dictionary; we may, however, notice one or two general matters in which this Classical Dictionary is superior to its predecessors. It keeps the mythology of Greece distinct from that of Rome;—not always indeed as perfectly as we could wish—but sufficiently so to prevent that confusion between the poetical creed of the Greeks and the political religion of the Romans, which has so long been a pregnant source of error and perplexity to youthful students. The article *Aphroditè*, which by the way is misplaced by a couple of pages, may be noticed as an example of learning employed to bring out the poetic beauty of a legend, instead of burying it beneath a mass of pedantic dissertation. In the article on Apollo we think that too much weight is attached to Müller's opinion that this deity was purely spiritual; it would be singular indeed if the Dorians, the least refined of the Hellenic races, should have anticipated all the rest in the worship of intellectual instead of elementary divinities.

We have been greatly pleased with the historical articles on the successors of Alexander, and the dynasties of the Seleucidæ, and the Ptolemies. The history of the Macedonian, Syrian, and Egyptian kingdoms should be regarded as the connecting link between the histories of Greece and Rome; Alexander and his generals levelled the roads over which the Cæsars marched to universal empire, and the omission of their career as the precursors of Roman dominion, is one of the greatest defects in the course of historical study, which is still prevalent in our ordinary schools.

Among the novelties of the book may be noticed the introduction of Byzantine History. Gibbon is almost the only authority accessible to English students for the annals of the important events between the reigns of the first and last Constantine, on the shores of the Bosphorus; in too many instances he has rendered but scant justice to the Greeks of the Lower Empire, whilst on the other hand Lebeau has so overrated them that his eulogies have all the effect of a libel. The Byzantine articles in this Dictionary are written in a spirit of careful scrutiny, and show that the authors are masters of the subject. We think, however, that the literary attainments of Anna Comnena are rather underrated; the parody of her style which Sir Walter Scott has inserted in his Count Robert of Paris, is a mere exaggeration of her defects, which are indeed sufficiently prominent; but if any candid reader examines her account of the campaigns of the Normans, under the Guiscards in Western Greece, he will be convinced that the princess had no small pretensions to the character of an acute and graphic historian.

Ancient art has received a due but not a disproportionate share of attention in this Classical Dictionary. Not only have we the lives of the most eminent sculptors, painters, and architects of the classic ages, but lists of such of their works as are still extant, and of the places in which they are preserved. The illustrations are taken from coins and medals; independent of their historical value, they exhibit the state and progress of the numismatic art among the ancients.

There is no need of pronouncing any formal eulogium on this new Classical Dictionary, for in fact it is the only one with any pretensions to the name in our language; and as such it must form part of the library of every student who desires to become acquainted with the mind of antiquity.

'The Cyclops' of Euripides: a Satyric Drama. By a Member of the University of Oxford. Oxford, Graham.

This translation is one of those trifles which call for no vast expense of criticism. The elegant amusement of learned leisure, occupying little time in the execution, and scarcely half an hour in the perusal, if it gives the reader a tolerable notion of the original, it fulfils all that need be expected from it. Pedantry, indeed, may apply its microscope to discover, phrase by phrase, with how much or how little verbal accuracy the task has been performed; but a careless *non est tanti* is all that the *Athenæum* can afford to bestow upon the point. 'The Cyclops' of Euripides has little to recommend it to general curiosity, beyond its being the sole example left us of a great tragic author's powers in the lighter department of his art; for unlike 'The Pleaders' of Racine, it makes no very striking claim on the reader for a hearty laugh. Indeed, there is some difficulty in assigning the poem to the genus Comedy. The term applied to it by the translator, of "a satyric drama," is more germane if not very precise. The most accurate view we can offer, is to state that the generic relation of the Odyssey (from which the story is taken) to the Iliad, nearly represents the relation of 'The Cyclops' to the regular tragedy; whose forms it takes, pretty much after the fashion of our burlesque travesties *minus* the broad fun. There is little in it approaching to the coarse jesting and biting personalities of Aristophanes, the prevailing type of the comedy of Athens. It is, therefore, probable, that the piece was written without any eye to representation. As to the plot, the well-known story of the ninth book of the Odyssey forms its subject, to which Euripides merely adds the supposition, that Silenus and the Satyrs (the captives of the monster) are inhabitants of the country, with whom Ulysses communicates, and from whom he learns what he has to expect from Polypheme. Silenus thus prologizes:—

O Bacchus! Bacchus! Who shall tell the pains
That I have suffer'd, all for love of thee?—
Ay, and still suffer; though no longer young,
As when the vengeful Juno fired thy brain,
And drove thee from the tender mountain Nymphs
Who nurs'd thee;—or as when Heaven's war grew hot,
And I stood by thee in the deathful strife,
And slew Enceladus, thy giant foe,
Driving my spear right through the recreant's shield—
I slew him;—none but I:—No dream was that:
No;—for I show'd to thy dear self the spoils.
But now a draught more bitter am I doom'd
For thee to drink;—Juno again the cause;
Whose hate commission'd that fierce Tuscan band
Of lawless pirates to lay hold on thee,
And of thy goodly form make merchandise
To distant lands. The rumour reach'd mine ears:
Forthwith I put to sea with my brave sons,
To search thee out, and rescue our lov'd lord.
Onward we sped our course; I at the stern,
The steady steersman o'er the briny deep,
That foam'd and whiten'd 'neath the bending oars
Plied for thy sake by my own sturdy lads.
Onward we row'd; till off Malea's point
A fierce South-Easter caught us, and impell'd,
Though hard we strove against it, on this coast,
At Etna's rugged foot; a helpless prey
For Neptune's one-eyed brood, who here inhabit
Dark sunless caves, with throats athirst for blood.
Of these the fiercest, Polypheme by name,
We call our Master, and his flocks we tend,
Our *Evoe Bacchus!* heard, alas! no more.
Far on the mountain's steep my youthful troop
Keep herd, the bleating sheep and goats their care.
While I, as suits my years, keep house at home;
My task to fill the troughs, and sweep the floors,
And at the Cyclops' board to minister.
Now then, Silenus, hie thee to thy work;
This iron shovel must the threshold clear,

Digitized by Google

Lest speck or spot be on its pavement seen,
To greet our giant-shepherd when he comes.
Ha! Now I see my gentle boys approach,
Tending their charge;—and now, even now, ye frisk
The dear Sicynnis*; but no more as when,
In frantic thiasus †, ye forced the doors
Of fair Althea; while the dance and song,
And jocund pipe, led on the merry God,
And all around was rout and revelry.

Then follows a chorus of the Satyrs, to whom enters Ulysses with his companions, and then the story proceeds, very closely following the version of the Odyssey. Ulysses begs assistance, in the way of provender, from Silenus, offering him wine in exchange, as a bribe, to rob his master.

Uly. There:—wet thy lips with that.
Sil. O glorious sight!—
Uly. Trust you your eyes alone?
Sil. Nay, nay;—though seldom errs my nostril's eye.
Uly. Taste then; and prove thy nose is in the right.
Sil. (*Drinks*) Baba!—Already could I skip and dance:
Aha! Aha!—
Uly. Methinks it gurgled down thy throttle bravely.
Sil. Ay; I can feel it at my finger tips.
Uly. Nor this alone we'll give, but coin besides.
Sil. Talk not of coin; or coin me only this.
Uly. Now for thy master's milk,—the cheese,—the meat.
Sil. All shall be thine.—My master! Who is he?
His flocks, and herds, and stores,—I'll give thee all,
Then take from off some rock the lover's leap,
Once I've enough to make me mad and blind.
But who's the madman?—He who loves not drink.
And who can love, or toy with her he loves,
Save he who drinks, and dances to his drink?
Here sleep my cares and troubles.—Thus I kiss
Thee, darling cup!—Yet once again I kiss thee,—So.—
(*Drinks.*)
As for the Cyclops, what care I for him?
I bid the one-eyed Homicide go hang.

In a subsequent dialogue with the Satyrs, Euripides spares not his accustomed gibe at the fair sex:—

Chorus. You took, you tell us, Ilium and fair Helen.
Uly. Ay; and laid low old Priam's royal house.
Cho. Now answer truly;—when you had the jade,
Laid you not on her wanton shoulders rarely,
Then found some likely husband to her mind?
For, rumour says, she yokes with many mates;—
The smiling traitress!—on whose smitten eye
Struck Paris,—shining in his broider'd vest,
With Asian hose around his taper thighs,
His dainty neck hung with a glittering chain.
Aha! right soon forgot she her good man,
And left him for the gallant.—What a sex!
And what a baggage she! Yet like the rest;—
Dear tender creatures!—Would I had them all.

Silenus, so bold behind Polypheme's back, is a mere flatterer and coward before his face, urging him to eat Ulysses "both neck and crop."

And don't forget his tongue. That morsel, sure,
Shall give thee words enow.

Polypheme has now taken the wine, the fatal Greek present, that is to be, like the Trojan horse, mere destruction to the receiver; and now hear him in his drink:—

Ho, Yo! Ho, Yo! Methinks I'm merry;—
A little drunk. Nay,—very—very:
Like some good ship,
In gallant trim,
That scarce can swim,
Hurrah! hip, hip,—
Full to the brim,—
My load aboard,
My cargo stored;—
Ho! I am drunk, and merry—very—
And yet another bumper bring,
Ere to my friends I go;
And on the greensward let me sing,
My merry mates! Ho, Yo!

When the moment for slaying the monster arrives, the Satyrs, as might be expected of the pot valiant, shrink from their part.

Uly. In with you then, and seize the glowing brand.
Cho. Nay; first your generalship must name
A leader,—whom to follow;—
Some daring one,—athirst for fame,—
That fearful orb to hollow.
Semicho. 1. Too far without the cave I stand,
To hope to lend a helping hand.
2. And I have sprain'd my ankle-joint;
3. The like mischance has happ'd to mine;
2. Stumbling against that rocky point;
3. Though how, I cannot well divine.
4. And see, this cinder in my eye;
I cannot budge.
All. Nor I—nor I.
Uly. What! All disabled! ere a step you've stirr'd—
Cowards! I value not such help as yours.

They do not, however, refuse a song, to encourage Ulysses and his own followers to the good work.

Io! Io!—There goes it—So.—
In with it,—in,—
My gallant fellow!
Stick it well in, that slender pin;—
What though he bellow?—
About it goes, 'twixt head and nose;—
Twist it, twirl it, work it round,
Nail him firmly to the ground;—
Ply the bloody butcher's trade,—
Well he knows it—'twas his own;—
Give it him, right in the head;—
Heed nor cry, nor groan, nor moan.
There crack'd a nerve!
See ye don't swerve—
A sinew there!
See ye don't spare—
In with it there,—just there,—I tell ye;
Mark the bursting bubbling jelly;
How it sputters, in gory gutters!
That's well. What a yell
The monster sent!
At last he's spent;
And victory! victory! is our cry:——
Now let him up, to wail his misery.

This may be thought rather too grotesque, but it is a close copy of Homer.*

The English reader is now in possession of a sufficient sample, to judge both of the work itself and of the talent of the translator; and so we take our leave.

* A favourite dance of the Satyrs.
† A band of revelling Bacchanalians.

* Ὡς τον ἐν ὀφθαλμῳ πυριηκεα μοχλον ἐλοντες
Δινεομεν, τον δ' αἱμα περιῤῥεει θερμον ἑοντα.
* * * *
Ὡς δ' ὁτ' ἀνηρ χαλκευς πελεκυν μεγαν, ἠε σκεπαρνον
Εἰν ὑδατι ψυχρῳ βαπτει μεγαλα ἰαχοντα
Φαρμασσων,
Ὡς του σιζ' ὀφθαλμος—κ.τ.λ.

OUR LIBRARY TABLE.

On the Educational Clauses in the Bill now before the House of Commons, for regulating the Employment of Factory Children, by W. J. Fox.—Education in most countries is now acknowledged to be a right on the part of the child and a duty on that of the parent, which the State is bound to enforce. In England, the State claims to be the protector of the child, if it be subjected to physical injury; but of mental or moral neglect or injury, from which, not only the child, but society itself, must suffer, it takes no notice, unless the child has property sufficient to pay for its protection as a ward in Chancery. We confess, that we are so far English in our prejudices, that we do not altogether like the meddling interference of the State; but the evil of ignorance is so great, as shown in the late Reports—the state into which the people are fast sinking so fearful—that we were prepared to submit, thankfully, to almost any law that promised even a partial remedy. The Bill here brought under consideration is, we admit, open to very serious objections, and we trust they will be temperately considered while there is yet time; but great as are the objections, we say any measure is better than indifference. Let the State acknowledge its duty to do something, and that is the lever with which we may work out improvement and extend the system. The amendments suggested by Mr. Fox are,—"*First*, for the trustees proposed by the Bill, to substitute trustees elected by the rate-payers; and to limit their control over the master, in the teaching and management of the school, to the enforcement of regulations sanctioned by the Committee of Council on Education. *Secondly*, to reserve a certain portion of the school-time for direct religious instruction, to be given by such religious teachers as are approved by the parent. *Thirdly*, to allow the privileges of schools constituted under the act to any existing schools which are efficiently conducted, and will allow equal opportunities of religious instruction to all the pupils, of whatever denomination. *Fourthly*, to make the certificate required by the child's employer, a certificate of attainment, and not of attendance; the attainment being graduated according to the child's age; *e. g.* reading fluently in the Gospels, at nine years of age; reading and writing at ten; knowledge of the first four rules of arithmetic at eleven, &c. Some intelligent proprietors of factories and other large establishments, amongst whom Mr. Cobden deserves honourable mention, have for some time acted on this principle of requiring, not school attendance, but actual attainment."

Historical Records of the first Madras European Regiment, by a Staff Officer.—This work is in reality a military history of the Madras Presidency, for the regiment to which it relates acted a very distinguished part in all the wars of Southern India, from the days of Lawrence and Clive to those of Hislop and Cotton. There is nothing in the volume possessing sufficient interest to demand further notice than to state that it appears to have been carefully compiled from official documents.

Legends, Lyrics, and other Poems, by B. Simmons.—Of these poems the larger number have previously appeared in *Blackwood's Magazine*. The author has many poetic qualities—fancy and freedom of hand—that *daren doe* which puts no restraint upon its own imaginings, and a command of melody for their utterance. It might be worth while, had we space, or a more profitable occasion, to inquire why, with these, and some other, elements of poetic success of a high order, the result is so unsatisfactory. But we will merely remark, that the legends are the best portion of this volume; because the author affects a picturesque style—an almost pageantry of language—which lends itself well to the romantic legend or heroic ballad, but overcharges the simplicity, and disturbs the tenderness, of the lyric. Our author's besetting fault is exaggeration, both in feature and colouring. If the poems had been new to the public, we might have given some examples at once of their merits and defects; but our readers may take the following, as a graceful example of the author's lyric, when most free from his favourite poetic vice:—

On the Portrait of a Lady.
BY CHALON.

"Throw back the barriers!—Marshal—see
That, high above that shout,
Herald and trumpet fearlessly
Ring our defiance out!
Long as this arm can lift a lance—
This hand a charger rein,
Supreme o'er all yon Lady's glances,
Where Beauty throngs, or pennons dance,
Devoted We maintain!
And knightly spur be hacked from heel,
Reversed his blazon be,
Who, Bright One, in the combat's peal,
Strikes feeble stroke for thee!
Back with the barriers!—undismayed
Fling forth our challenge wide!
God, and one lustrous look to aid,
The battle We abide!"

Such, in the Tourney's noble days,
Had haply been the guise
Of errant Minstrel's duteous praise,
Beneath Her gracious smile, whose gaze
Before us shadowed lies.—
But, woe for Beauty and for Bard,
Those days are gone—the glory-starred!
For Roland's horn of dreadful tone
We hear the Knightsbridge bugles blown,
And the sole Fields of Cloth of Gold
Are by veracious Robins sold.
Nothing through earth or ocean's range
But suffers dull disastrous change,—
Save Woman's radiant looks, that beam
As ages back they beamed,
When Sydney wove his starry dream,
And Surrey's falchion gleamed.
O blessed boon!—though vanished long
Those stately times of sword and song!—
Still blooms—though low the shaft is laid—
The loved Acanthus undecayed.——
We drink deep faith, from yonder face,
That, though the sterner powers
Of Chivalry are gone—its grace
And gladness still are ours.

Poetry for the Million, edited by Peter Priggins, with notes by the Sub-editor. Second series.—So preposterous was the attitude assumed by the M.P. against whom this squib is directed, on the occasion which furnished its subject, that he is certainly fortunate in not having drawn upon himself any rougher handling than has yet been his fate. He might fairly have expected missiles from "a whole college of crackers." But the incident has not gravity sufficient to carry the weight of a continuous publication like this. Mrs. Norton hit the parliamentary poet hardest, making just about as much of the matter as it deserved, saying "the right thing in the right place." In a word, the matter is a *trifle*, which did not require all this *whipping*. It is right, however, that we should add, that were all these things not so, the bad taste of this particular performance would destroy its efficacy and demand the lash more than the thing it lashes. They can have no character as moral teachers who apply the *lex talionis* in morals: and he has a low estimate indeed of the dignity and resources of satire, who inoculates himself for the per-

Digitized by Google

formance of its functions with a portion of the virus, whose presence provoked the satire itself.

Reeds Shaken with the Wind, by the Rev. R. S. Hawker.—Some time ago, we made a favourable report of a little volume of poems from the pen of this author, entitled 'Ecclesia';—and offered a specimen or two of the manner in which this Cornish vicar made his pleasant muse a helper in his spiritual ministrations. The present volume is, also, devoted to the service of the altar, and is in the same mild spirit as the former:—but we could not illustrate our favourable opinion of the author so pleasantly from its pages, as his earlier publication enabled us to do.

The only known MS. of Shakespeare's Plays, by J. O. Halliwell, Esq.—We scarcely need inform our readers that the MS. here referred to was not written by Shakspeare. It is merely a copy of the 'Merry Wives of Windsor,' presumed to have been transcribed for some private representation, about the time of the Commonwealth. The variations are not of such importance as, in our opinion, to justify the publication.

Celebrated Crimes, by Alexander Dumas.—So much of the interest of romance attaches to these narratives, as to leave it doubtful how far the higher interest of historical truth has been sacrificed to artistic effects.

The Norwood Schools, by the Rev. J. Browne.—An interesting little volume, which may be read with pleasure by all, and profit by the Guardians of Unions.

EXPERIMENTS AND OBSERVATIONS ON MÖSER'S DISCOVERY,

Proving the effect is neither due to Light nor Heat.

BY HORATIO PRATER.

It is proposed now to demonstrate, that the radiation discovered by Möser is not invisible light, as he supposes, nor heat, as has since been supposed. For, first, where is the evidence that bodies absorb light? Some few, certainly, have been shown so to do; but surely not the metals, &c. &c. which exhibit the greatest facility in receiving and giving the impressions discovered by Möser. It seems, *à priori*, more probable that the radiation in question should consist of heat (which we know exists in all matter) than of light. Accordingly, Mr. Hunt has written an elaborate paper in favour of the supposition that such radiation consists of heat. In the course of this essay, however, it will appear, that neither of these suppositions is correct.

1. *With regard to the nature of the substances that produce spectra.*—Every substance I have tried has produced its spectrum when left on a polished copper plate. Coins, whether of gold, silver, or copper, platinum, nickel, brass, pieces of glass, wafers (red, blue, and white), peppermint or rose drops, whalebone, talc, gum, a horse-hair ring, lava from Vesuvius, Indian rubber (but slight), and sealing-wax. This last, left ten days, gave a whitish grey *permanent** spectrum, clearer than any of the others, though the wax and plate were both kept dry as usual. The impression on a small brass seal (a P) was very obvious when the plate was breathed on. The seal had been left ten days.†

2. *Effect of dissimilar metals.*—It has been asserted, that when a gold or silver coin is placed on a copper plate, the effect is greater than when a copper coin, &c. is placed on the same metal. When hent is used, this position is true, as will be shown hereafter; but when the plates and coins are both kept cold, (exposed to external air, for instance, in March,) a farthing, on two different occasions, in an hour, left as good a spectral image as a sovereign,—I thought, a better one.

It was, however, remarkable, when a heat of 160° was applied to this plate, that the spectrum of the copper soon became invisible, while that of the gold was apparently not at all diminished. This experiment was repeated twice with the same result. I likewise found that, though the spectrum of the copper was to appearance, *at first*, as good as that of gold or silver, yet that it began to disappear much sooner, after a few breathings on the plate, than did the spectrum produced by gold or silver. *On the whole*, therefore, it seems right to admit that the effect is greater when dissimilar metals are used.

3. *Effect of unequal heat on the plate and coins.*—It has also been asserted, that when the copper coin is heated, and the metal plate of copper kept very cool, that the effect is increased. I have, however, not been able to satisfy myself of the truth of this statement. A penny and a farthing, heated to between 130° and 160°, and laid on a cold copper plate half an hour, did not appear to leave even so good a spectrum as two of the same coins left to cool for half an hour outside the window, by the side of the plate itself, before being placed on the plate. All the coins were placed on the plate at the same time, and left the same time. Neither could I perceive any difference when one sovereign was heated and the other not, both being placed on the same copper plate.

4. *Effect of heat generally.*—In order to ascertain whether heat hastens the impression, the following experiments were made:—1. A bright half-sovereign, a bright halfpenny, and a dull one, were heated to about 150° on a polished copper plate. The half sovereign left a *permanent* impression; and both the halfpence left spectra visible only by breathing. It was obvious from this experiment and others, that heat increases the effect where *contact is permitted*,‡ since the impression is permanent. Accordingly it was deemed right to try if heat has this effect when the coin is at a distance from the copper plate.

I put a silver fourpenny piece on the plate, and on the fourpenny piece I put a penny. I found that when these remained only twenty-four hours, that no spectral image of the penny was produced; but on remaining forty-eight hours one was apparent. In this last case, the lettering of the fourpenny piece became almost visible when breathed upon; but not being breathed upon, no mark of it at all was perceptible. The penny piece, however, left its mark without being breathed upon—an annular *bright* mark, which was not rendered more or less distinct by being breathed on. The spectrum of the fourpenny piece was alone brought into view by this.§ The place where this had laid was exactly as bright as that covered by the penny. In fact, the copper plate seemed preserved from oxidation by the contact and proximity of these coins. Thus, then, it appeared to require forty-eight hours for a spectrum of the penny piece to be produced—the spectrum of a coin *not in contact*. The same experiment being made at a heat of 160°, no spectrum of the penny appeared after one hour, though the fourpenny piece had left a strong impression.

Ditto, continued for five hours, a spectrum of the penny was *just* visible, and only so when the plate was held in a particular position with regard to light.

A half-crown piece being laid on a half-sovereign, and the same heat continued five hours on the same plate, the half-sovereign left a still better impression than the fourpenny piece‖ above mentioned, and the half-crown had also made a *permanent* spectrum very visible.

A farthing, which had rested the same time *on* the plate, left no permanent spectrum, but only one slightly visible by breathing. Even when pressed upon by two pence, and left eight hours, it left only a *barely visible* permanent spectrum: so a brass medal. These spectra being rendered far more visible by breathing, could hardly be considered permanent spectra.

These experiments show:—1st. That heat much increases the rapidity of the radiation, *even when the object is not in direct contact*; and 2ndly. That it takes place much more energetically from gold and silver than from copper (a copper plate being used). They also show that a permanent spectrum is to be considered only as a *higher degree* of that produced or rendered apparent by breathing.

A sovereign, two hours on a very thin lamina of talc, at the above heat, gave no spectrum; talc alone gave its spectrum; nor did a halfpenny, eight hours on the same at the same heat; nor a shilling (new) on a thin piece of glass, the shilling being under a half-penny. The talc and glass in these cases alone gave a spectrum; the talc a better and more permanent one than the glass.¶ I should have said the talc was on copper-plate.

The spectrum of the penny, in the experiment lately detailed, is equally visible when the experiment is made on glass; but polished metals seem to show it the best.

When glass is used, there is, after from twenty-four to forty-eight hours, a slight deposition of dust,

* By a *permanent* spectrum is always meant, in this essay, a spectrum that remains when the substances or coins are removed—not a spectrum which cannot be rubbed off by *gentle* friction, for all the above *permanent* spectra are yet soon effaced by friction.

† It left a permanent spectrum of its *margin*. Coins left a similar time do the same; *the part where they have remained retaining its polish*. The permanent spectrum then, in such cases, plainly depends on the substances preserving the plate from oxidation by contact or proximity. I add proximity, because a half-crown or penny resting on a fourpenny piece, placed on the plate, likewise leaves its *permanent* spectrum. The free circulation of the air is impeded here in consequence of the extreme proximity, just as it is by actual contact. Hence the oxidation being less in all such cases than in the parts external to the coins, we have of necessity the permanent spectra.

‡ Although the mark is permanent in such cases, still it very easily rubs off, even when gold has remained five hours on heated copper plates; and no spectral figure is left when the part is breathed on, after the plate has been well rubbed. As this is the case, such permanent mark is not to be considered as a *different* effect, but only as a *higher degree* of the same effect as that caused by mere imposition without heat. I found all the things mentioned in Section 1. gave a *permanent* spectrum if left eleven days, but only one rendered visible by breathing, being left but a few hours.

§ However, after six or eight days, *as this began to tarnish*, the spectrum of the fourpenny piece became visible without breathing on it. Yet nothing had been done, except that the plate had been heated to about 150° once or twice for other experiments.

‖ When the plate was rubbed pretty strongly with chamois leather only, the spectra of the half sovereign and fourpenny piece were soon effaced; while those of the half-crown and penny (not having been in contact with the plate) remained.

¶ A sovereign on a silver fourpenny piece two hours, gave only a very feeble permanent spectrum; the silver leaving, of course, a well marked spectrum.

Digitized by Google

&c. around the parts which are not covered by the penny, and thus a round mark (permanent spectrum) is visible on removing the penny, even before breathing at all; still on rubbing it off *till nothing is visible*, and breathing on it again, the spectrum of the penny appears, as well as of the fourpenny piece, proving that dust adheres much more strongly than we should have supposed, or perhaps better—leaves its mark behind with greater pertinacity.

That this is the true explanation of the appearance of a spectrum, when the coin is not in direct contact with glass, was to me rendered clear by another experiment, in which a half-crown was left on one sixpence, and a penny on another, on a clean glass plate *covered over with paper, and kept in a closet* for ninety-six hours; yet on examination, neither a permanent spectrum, nor even an evanescent one by breathing, was perceptible either of the half-crown or the penny; the sixpences alone had left spectra (which, however, were only visible by breathing), that under the half-crown being the clearest. Yet the penny and half-crown were in the best condition for giving spectra, for the surfaces of both were tarnished, and that of the copper purposely so.

This result induced me to try the same with a copper plate, and I found that when a bright half-crown (having been well boiled in water and then polished) was placed on a fourpenny piece, similarly treated, and left forty-eight hours *covered* in the closet as above, that the half-crown left no spectrum, even evanescent. Neither did a *purposely* tarnished penny placed on another fourpenny piece, and left the same time.

5. *As regards the distance from the plate at which images may be taken.*—A silver fourpenny piece is about the one-twentieth of an inch in thickness, and at this distance we have seen silver, copper, and of course gold, give a spectral image on a copper plate. But on putting a half-crown on two sixpences and a half-franc piece, making the distance from the plate more than the one-tenth of an inch, no spectrum of the half-crown was made, although the experiment was continued for twelve successive days and nights. Neither was any made by removing the half-franc piece (thus making the distance only one-tenth of an inch), and continuing heat of 160° or so for five hours.

A sovereign fixed at three-quarters of an inch, and a small brass medal at somewhat less than half an inch, from a polished copper plate, and continued in such position for seventeen days and nights in a little closed deal box, gave not the least vestiges of spectra; neither did a fourpenny piece left at one-fifth of an inch, nor a card plate (engraved) left the one-tenth of an inch, for eleven days. The copper plate had remained *perfectly polished* in both experiments; and this is worthy of remark, as showing that in *confined* air copper does not oxidate perceptibly. Another plate left in the *same* room was completely tarnished in five or six days.

A fourpenny piece, about the one-twentieth of an inch, under a silver plate for eleven days, gave scarcely a perceptible spectrum; though a farthing, on which the plate *had rested*, gave a good spectrum, but not a *permanent* one, (*i. e.* breathing was required to show it).

A fourpenny piece is about the one-twentieth of an inch in thickness, and this seems the greatest distance an image can be taken by the above plan. But even at this distance I have not succeeded, if the half-crown laid on the fourpenny piece is *perfectly* polished, and *all external dust, &c. carefully excluded* by the box just mentioned—(see Sec. 8, on the comparative polish of metals).

6. *As regards impressions on glass.*—We have already observed that heat does not seem to increase the effect of *metal* coins on glass. Neither did *long contact;* for a fourpenny piece, left a *week* on a piece of looking-glass, only left the usual spectrum, no *figure* being visible. The same remark applies to large *printed* letters. At least, some paper with these, after remaining pressed two or three days without giving any impression, was then heated for five hours, so pressed, at about 160°, but no impression was made. On another occasion, print and writing were left a week on a glass mirror without leaving an impression. When, however, thinner paper and larger letters were used, and heat and pressure applied as above for four or five hours, these letters were plainly visible; but, as appeared to me, far more easily erased than were the spectra of *coins* on copper plates.* A slight touch of the finger, for instance, erased the letters in question. They were produced in this case in consequence, no doubt, of the thinner paper being *moister* than that first used.

Heat does not appear to increase the effect on glass. A fourpenny piece under a shilling for three hours, at 160°, left no spectrum.

On putting a penny on a sovereign, and leaving them for three hours and a half at the above heat, I thought the spectrum of the penny slightly visible; but as the image is never so apparent as on polished metal, I shall not venture a decided opinion on this point as regards glass.

A *polished*, *boiled*, and then well dried half-crown gave as good a spectrum on a glass plate in twenty-four hours, as did a dirty half-crown; but I thought the spectrum of the former disappeared sooner by breathing. On a far thinner glass plate, a bright, boiled fourpenny piece, left the same time, gave no spectrum at all.

7. *Polished surfaces not appearing capable of receiving the impressions.*—These exceptions from the general rule I have found to be talc, and, among the metals tried, steel to a certain extent, platinum, and gold.

Whether heated or not with the coins on it, I have found *no* spectrum produced on talc, except in one instance, where a tarnished half-sovereign had been pressed some days by a half pound; and even here the mere margin of the coin was *barely* perceptible.†

On steel, after remaining twenty-four hours, I found a *very* slight evanescent spectrum produced by a small piece of brass, and on *one* occasion by a half sovereign very much tarnished; but as heat did not appear to increase or hasten the effect, we may consider steel almost unsusceptible. The spectra just named disappeared entirely after breathing *twice;* and no *permanent* spectrum was produced, though the piece of brass above mentioned was placed even on the top bar of a grate, and of course kept very hot, for two or three hours.

Under the head 'Thinness of the plates,' experiments, showing the incapability of platinum to receive images, are mentioned.

The same remark applies also to gold. I kept a shilling and a farthing, on two different occasions, for twenty-four hours or longer on a well polished plate of gold, yet they *barely* left a marginal spectrum; and this spectrum, as in the case of steel, disappeared *entirely* on breathing on it twice. As the gold used was not free from the usual alloy of copper, possibly this was the cause of its receiving even the very slight spectrum it did. However this be, these experiments seem almost sufficient to establish the important general principle—viz. *that the less metals are oxidable by exposure to the air, the less is their susceptibility to receive spectra.*

8. *As regards comparative polish in metals.*—1. A new sovereign, a new half-crown, and new farthing (all well polished) were kept on a bright copper plate, at 160° or above, on *two* successive occasions, for four or five hours. The gold and silver left only *very* slight permanent traces of their margin, the copper left none at all, but its spectrum, when the plate was breathed on, became, I thought, even rather more evident than the spectra of the gold and silver, these being likewise breathed on. 2. A *tarnished* sovereign and a *tarnished* half-crown being laid on the same copper plate, and kept at the same heat *only three-quarters of an hour*, a permanent, and *far more apparent*, spectrum was produced, than in the former case; the *whole area*, where the half-crown had laid, was covered with a whitish cloud, and the impression dimly sketched. 3. By selecting a halfpenny *very much* tarnished, and letting it remain five hours on a bright copper plate, heated to 160° or so, and subsequently for thirty-six hours in the cool, a *permanent* spectrum was produced, in which all the *lettering* of the coin was *beautifully* visible; yet here was copper on copper. But as I found this impression to go off completely at a heat far below what the impression did, at exp. 5, below, the general principle, that silver gives a *stronger impression*, remains. 4. A *well polished* new sovereign and a *tarnished* sixpence being laid on a bright silver plate for four hours, and kept at 160°, the sovereign had left no spectrum, but the sixpence had left a *permanent* one, in which almost all the lettering appeared, so plainly was it visible. 5. A *perfectly* polished half-crown was laid on a pretty well polished sixpence, and a *purposely* tarnished one on a purposely tarnished sixpence, and put on the same plate with the halfpenny (exp. 3, above), heated five hours and left thirty-six hours afterwards. The lettering, &c. of each sixpence was visible, but *far* more of the most tarnished; and also this was the case with that of the most tarnished half-crown, as regarded its spectrum. That of the polished was scarcely visible. But the lettering of neither half-crown was visible, though they had remained so long and been heated. This experiment also shows how much the effect is strengthened by *actual contact*. A similar experiment was made in the closed deal box (mentioned in Section 5). The copper plate was laid upon a *polished* and boiled fourpenny piece, and this on a half-crown similarly prepared; after ninety-six hours, no spectrum whatever of the half-crown was visible, by breathing or otherwise, but the fourpenny-piece, in actual contact, had left the usual spectrum. The plate had remained *perfectly* polished. All these experiments show that the dissimilarity of metals is not of such importance as has been conceived: they show the difference wanted to produce the effect is a difference in brightness or oxidation, i. e. as far as a *permanent* and good impression, *showing the lettering*, &c. is concerned; for I find when left on the plate half an hour or so, tarnished or polished metals give equally good spectra. But in this case the spectrum is only made apparent by breathing, and of course shows *nothing* of the lettering, &c. However, even in this case, the spectrum of the tarnished sovereign disappeared less soon by breathing on it than did that of the polished one; so in reality the spectrum of the former may be said to have been the most perfect.

The same remark applies to a glass plate (see Section 6, as regards glass, &c.).

9. *Which metal receives images fastest, copper or silver?*—My experiments lead me to say copper, whether heat be applied or not. When the same degree of heat was applied, I found a sovereign produced a good *permanent* spectrum (impression) on a bright copper plate, although only an evanescent one (one seen only when the plate is breathed on) was produced on an equally well polished silver plate, placed at the same time at the same heat. When heat was not applied I found the copper received an *evanescent* spectrum first.

10. *As regards the effect of interposed substances.*—As every substance tried left a spectrum, I did not much expect that the influence would permeate any lamina, even of the thinnest description. Accordingly, when a sovereign or shilling was left twenty-four or forty-eight hours on a piece of stiff, though very thin, paper, it gave no spectrum, but the mark of the paper was alone visible. The experiment was repeated, half the coin resting on the copper plate and half on the paper: and although it remained a fortnight in this position, the half only *in contact* with the plate was visible by breathing on the paper, leaving *its own* spectral image just as if no coin had rested on it at all.

The same experiment was repeated with the thinnest possible layers of talc, gum, cork, and whalebone, glass, plane and concave,‡ with the same result. Each substance left its spectrum, the part where the coin rested on such layer not being at all distinguishable. The spectral image of the square piece of talc was perfect to the minutest outline, and left its straight mark under the sixpence equally well as at other points. These experiments render it clear that the effect is not due to latent light, for otherwise how could it happen that a coin does not leave a spectral image when left on *transparent* substances, glass or talc *even a fortnight?* They also show it does not

* On a copper plate also this *thin paper* (not being dried well first) gave a permanent and very visible spectrum, the lettering being clearer than on glass: not due to oxidation, for on rubbing it off, the surface of the copper was left polished—*i. e.* oxidation in the usual sense of the term; for there, no doubt, was some *very slight* chemical action, as large printed letters on perfectly well dried paper were not taken off on a copper plate, the heat at 160° being applied for five hours; or on another occasion, the print remaining a week on the plate, and pressure being used.

† Talc, like platinum, is not easily acted on by acid.

‡ With the glass the experiment was only continued forty-eight hours; with the paper, talc, and cork a fortnight, silver coin being used; with the whalebone and gum, ten days, gold coin being used.

Digitized by Google

depend on heat (at least alone), for a heat of 160° soon passed through thin glass and talc, and I found it impossible to keep my finger on glass or talc so placed. Yet we have seen above that even gold left two hours on talc so heated left no spectrum, permanent or temporary. So great is the effect of interposed substances, that even a *slight tarnish* on the metal exerts a very obvious effect.§ One shilling was left twenty-four hours on a polished part of the plate, and another on a part of the same slightly tarnished (but yet sufficiently bright to see oneself perfectly). A very slight image only was left in the last case, that entirely disappeared when breathed on twice, while that on the polished part of the plate remained, after being breathed on twelve or fourteen times.

A sovereign left twenty-four hours or above, tarnished, gave scarcely a perceptible spectrum, and a sixpence none at all. On such a surface a sovereign was left on two different occasions, under a penny, for three hours, at a heat of 160°, and barely left a permanent spectrum of its *outer* margin; while on a well polished surface, at same heat, the outline of the impression also would have been left as a permanent spectrum in an hour or two.

11. *Mass.*—Mr. Hunt considers, that mass exercises an influence and increases the effect. In my experiments, however, I could not detect this. A farthing on a copper plate gave as good a spectrum as a penny, and when heated to 160° the farthing gave far the best, though the penny had a halfpenny laid on it. A fourpenny piece too gave as good a spectrum as a half-crown, pressed by another above it, in the same time, the contact being equally good in each case. *The contact in these cases was made as equal as possible with the copper plate.*

12. *Does the thinness of the plate exert an influence?* A farthing (in two experiments) pressed by twelve or fourteen pounds weight, on a polished piece of platinum foil, in thirty hours left no spectrum at all; neither did it on a fourpenny-piece, or a sovereign, or half-sovereign, when kept three or four hours at 160° under the same weight. I found a spectrum could be made on nearly equally thin zinc plates (zinc *foil*), by leaving a sixpence on it an hour or two. Zinc, not being elastic, allows the pressure to be equal. The particular chemical nature of platinum has, however, much to do with this effect; for I found that when a fourpenny-piece, or another small brass metal object was left on a highly polished lamina of steel,—heated to 160° or not—a spectrum was scarcely made. That elasticity and consequent *imperfect contact* is not the sole cause of the incapacity of thin lamina of platinum and steel, for receiving spectral images was to me rendered *probable* by observing that coins, placed on a thick copper plate, seldom were in *perfectly* close contact, yet gave good spectra. In order to come to a more definite conclusion on this point, I got a lamina of bright copper, even thinner, and as elastic as the platinum lamina above mentioned. Gold or silver coins left twenty-four hours on this, gave a spectrum scarcely visible; but on leaving a half-sovereign for two or three hours on it, exposed to heat of 160°, as above, and pressed down by exactly the same weight, the half-sovereign left a *permanent* spectrum very well marked indeed.

The result of this experiment obviously shows, that although thinness and elasticity may have some little effect, the principal cause for the formation of the spectrum is the peculiar *chemical nature* of the metal, and *that a spectrum cannot be produced on a non-oxidable metal, such as platinum.* Bright silver and copper plates are well known to *tarnish* by exposure to the atmosphere (the former, perhaps, rather by forming a sulphuret than an oxide), but no matter how. I have also found that spectra could be formed on tin and zinc plates, both of which, of course, are oxidable. So on copper coated with mercury, the mercury in such case no doubt readily tarnishing (see section 7, Polished surfaces not receiving spectra). Having decided that the effect in question is due neither to light nor heat, to what cause, it may be asked, is it to be ascribed?

Conclusions.—1stly, As *brightness* of the plate is indispensable, and with brightness must exist an *increased tendency* to tarnish, or enter into chemical combination; 2ndly, as the plate must be of an oxidable metal, and judging from the experiments with silver and copper the more oxidable the better; 3rdly, As the more perfectly the coins are cleaned and dried* the less the effect, and as a dry perspiration (so to call it) must exist in a greater or less degree on all coins, since they pass through so many hands, and as perspiration is slightly acid; 4thly, as even with *clean* coins the effect‡ by *actual contact* must be admitted, but still is greater when there is a difference in the nature‖ of the metal; and 5thly, as when the metals are not in contact (being removed only the one-twentieth of an inch apart), no action or spectrum is evident, if the free circulation of air, and the connexion with dust be prevented—taking all these and minor considerations into account, we come to the conclusion that the effect in question is dependent on a *chemico-mechanical* action, or what Berzelius has called *catalytic* action. No doubt it may be urged against this view, that the action takes place when the coins and plate are both heated, and hence quite dry. But this is no solid objection, for the adage "Corpora non agunt nisi sint soluta" is not true, as hundreds of examples in chemistry show. The very fact of heat itself increasing the effect is all in favour of a chemico-mechanical view; for heat increases the tendency of copper to oxygenation, and tends also to volatilize any feeble acid matter on the coins. But again, if it be said the spectrum rubs off, even *when permanent and clearly defined* (as we have shown), *and leaves a polished surface under it*,—this we admit; but still this surface has suffered an *almost imperceptible degree* of oxygenation; for so slowly does this effect take place, that it is only visible when much advanced, as will be evident to any person who watches the gradual tarnishing of copper plates. Möser's discovery shows that *very slight* chemical action is often going on, *which has been previously overlooked.*

The chief difficulty that occurs to the above view is, that the effect takes place, to a slight extent, on glass; but in all my numerous experiments I have found that the effect is *much less* on glass than on well polished copper; for in no case has a *permanent* spectrum been made on glass, even by the longest contact†. It will also be remembered that I found no effect whatever produced on talc. Now the talc scratches easily, glass of course does not; but talc is probably less soluble in acids than glass; at least in my trials it did not seem at all acted on either by nitric, muriatic, or sulphuric. To be sure, you *perceive* no effect of these on glass, but it does not seem impossible but that some *very* slight effect takes place, and that the alkali of the glass is *very* feebly acted on, as glass is a *compound* body. *Contact*, at all events, may be presumed to have an influence on the affinities of one of its elements, whether there be even the *slightest* degree of decomposition or not. Now this influence is the catalytic influence; for it has been shown above, that without actual contact, *and when all dust is kept off*, neither silver nor copper, even at the one-twentieth of an inch from the glass plate, produces any effect, though kept there ninety-six hours. (See section 4, of heat generally, end.) In consequence of this slight alteration in affinity, the parts of glass which have been in contact some time with coins or other substances, condenses the breath differently from those parts which have not: hence the spectrum.

The effect of glass, *supposing it not susceptible of a gradual change by the action of air similar to oxidation*, is rather in favour of the spectrum depending on a mechanical than a chemical action. I have in consequence ascribed the effect to a mechanico-chemical action, or a *catalytic* action, meaning thereby an action so slightly chemical as, in the present state of the science, to be scarcely appreciable.§ The attraction of glass and oxidable metallic plates for *dust*, &c. is very great; and is perhaps dependent on the same cause as their attraction for oxygen. Whether or not, I feel pretty well convinced, after a laborious investigation of the discovery in question, that it is not of that wonderful character that Möser and others have supposed; nor calculated to alter our ideas of vision or of the nature of light. On the contrary, I think with Fizeau (a short notice only of whose memoir I have seen) that no effect *of any consequence* is produced *where organic matters are carefully removed by boiling water and polishing*; for such is perhaps the philosopher's opinion just named, and in as far as our opinions agree, he has the priority. Begun by a purely catalytic action, it is only continued and developed in any *marvellous* degree when those circumstances are present that permit it to assume a more strictly chemical character.

§ One spectrum, however, may be made on another; thus, after talc had remained eight hours on heated copper-plate, and left a permanent spectrum, a sovereign put on this an hour left a permanent spectrum.

* Moisture much increases the effect. Thus, when one surface of a shilling was rubbed over with ink, and such surface put on the copper plate and heated to 150°, a mark *much* more difficult to be effaced was left than when this degree of heat was applied without moisture.

‡ This is equally true, as will be remembered, with regard to glass plates.

‖ The *general* result of all the above experiments shows this; and of course an alteration of affinity from contact, is far more probable when metals are different than when the same: though if one be dirty, this makes it approach the nature of a different metal.

† A permanent spectrum has been proved (see experiments) to be but a higher degree of an evanescent one.

§ In coming to this conclusion I have not forgotten another difficulty, viz. why a well *polished* and boiled copper coin produces a spectrum on copper plate. The effect, even when continued an hour or two at a heat of 160°, is *very* slight, and I found it to disappear entirely by twice breathing on the plate. *Contact* then, of the same metal SLIGHTLY modifies chemical properties: such on the present view is the inference to be drawn from this fact.

FOREIGN CORRESPONDENCE.

Sakhara, April 18.

THE morning of the 27th of March opened, as it not unfrequently does, perfectly cloudless, and with less than usual of the white streak of vapour over the river; but before mid-day a violent wind from the east so filled the air with sand, that the villages between us and the river became obscured. The appearance of this phenomenon is that of a London fog, deprived, however, of the yellow infusion. The wind was so violent that the sand came in at all the openings of the tent, to the east, and the finer particles sifted through the pores of the canvas, and covered everything. One would have supposed that the river and the cultivated plain would have protected us, situated as we are on the west side of the cultivation. The thermometer got up to 100°; and in the afternoon, as the wind changed to south, it rose three degrees higher. After sunset the wind ceased, and the rest of the phenomena gradually subsided. All of us felt a kind of oppression on the chest, myself a positive difficulty of breathing. It was one of those fifty days of wind called Q'hramseen, which are distributed over this and the two following months. The next day the sun rose beautifully clear—but no dew, no freshness in the atmosphere. The day was comparatively cold, the thermometer not reaching 80 degrees.

A detachment, in which I was included, made an excursion to Dashour and to the Pyramids. The excavations which have been made near the Mustaba Faraoum have disclosed tombs built of brick, and arched, immediately under the sand—a thing never dreamt of in the places where they have been found. From this discovery, there is reason to believe that there are tombs where we hitherto supposed the ground to have been untouched; hillocks, the work of Dame Nature, covered with flints (Egyptian pebbles), are now found to be ruined brick buildings. How the circumstance of their being covered with pebbles is to be explained, I do not know: violent as are the winds of the desert, they are not capable of that. It is very remarkable that you seldom pick up a pebble on all sides rounded; most commonly you find pieces broken out in a way and in a part of the pebble where it could not happen from a blow. This occurs, too, always on the upper part of it. I cannot help thinking that the sun is the principal agent. How account for a nearly round smooth-edged depression in the centre of a large pebble, no appearance of blow, and this occurring on the upper surface? How account for all these pebbles being in concentric layers of colour? I think the old notion of these stones being rounded by the action of water must be abandoned, seeing that the outer crust is concentric with other crusts of various colours.

We have had several days of unusual excitement. On Tuesday I accompanied Doctor Lepsius to Cairo, to be presented to the Prince Albrecht. The whole day was spent in preparations for the journey, and on the road. The Prince declared his intention to visit our encampment; thence proceed to Sakhara, where we were to prepare a lunch. This arranged, we had another day's hard work, for we had to make the needful purchases in Cairo, and yet to arrive in time for dinner at Sakhara, a distance of at least twenty miles; and

Digitized by Google

no railroad, no coachroad, but a track sometimes through a palm-grove, sometimes through a corn-field, and sometimes over a newly ploughed field, to avoid a still more disagreeable road across a barren track of hills and fissures, in which the legs of our donkeys and my camel might be easily broken. I will give you the details of our little journey as they occurred. Our party consisted of ——, ——, Mohammed, and another Mohammed, a great tall Nubian, who ran by the side of the donkeys, each donkey accompanied by its driver, and myself mounted on a camel. Imagine what a sensation such a party would make trotting down Regent Street. Having arrived at Old Cairo, opposite to the end of the Island of Rhondah, where is situated the Nilometer, we stopped at a *café* near the river, while we sent one of the donkey-boys to buy bread for themselves, and another to buy some grass (clover) to regale our animals, and Mohammed to buy mats for the Prince. In the meantime we sat at the door of the *café*, smoking the Shesha and drinking a cup of Mocha—our camel, donkeys and drivers obstructing, in some degree, the road in front of the *café*. When all this was done, Mohammed undertook to embark our donkeys and their drivers in a boat (our caravan being increased by another man and donkey, which carried the mats) and we ourselves took possession of another boat, in which we soon arrived on the western bank. I omit the description of the piazza before the *café*, the varied scene of boats, horses, camels, and the different qualities of people, both as to nation and profession, before us, as we drank our coffee on the mustiba of the *café*—a scene full of amusement and reflection.

Imagine us on the western side of the Nile, each leading his animal up the irregular bank, which is now of considerable height, till arrived at a convenient place for mounting. From thence we proceeded along the embankment, the same on which we formerly travelled, when on one side was a lake and on the other the flowing stream; now, in place of the lake, are fields of ripe corn, and in that of the river, cucumber and melon plantations which descend to the water's edge. Thus far our road was tolerably easy, till we turned off to dodge between the palm trees, and afterwards crossed ploughed fields and narrow tracks between clover and corn. We reached our encampment a little after sunset.

I forgot to say that we have seen a comet every night for the last month. It has now disappeared.

On arrival we dined and went to bed. —— had brought with him his saddle-bags full of costly articles of dress, which he had bought in Cairo, besides the usual paraphernalia of a gentleman's toilet. These treasures he had placed in his tent, at the head of his bed, on which he had fallen asleep, the lamp yet burning. About midnight we were disturbed by the report of a pistol, and a cry, in Arabic, of Stop thief! from the other end of the encampment. It did not succeed, and poor —— had lost his rich saddle-bags and other articles from his tent. In the morning it appeared that our guardians had been sleeping when they should have been watching, and as it was further hinted that so skilful a robbery could not have been executed without the participation of said guardians, they were consequently sent to prison, and four others chosen from our band of excavators. Our tents were, in the meantime, put in order for the reception of the Prince; the new mats were laid down in our dining tent; a piece of cotton cloth disguised the naked deal planks of that in which we take our frugal meals; our tin cups were changed for transparent glass, and a bottle of hock adorned each extremity of the table. At two o'clock the Prince, Dr. Lepsius, and attendants, were discovered in the plain, by the man who had been posted on a hill to give us timely notice, that we might put on our Sunday attire, which was all accomplished before the party had arrived, being mounted on very ordinary donkeys. We were all introduced so soon as the party reached the edge of the little plain occupied by our tents. The Prince is tall, thin, young, and blond; his dress admirably suited to the climate,—a Turkish silk shirt, over which a blue striped European one, a brown holland jacket, and loose, thin, blue trowsers. The attendants were entirely dressed in brown canvas, and carried each a double-barrelled gun, sword, and pistols. They disappeared till after we had taken coffee, ate some bread and dates, and drank a glass of wine and water, when the Prince called for one to bring his pipe. The Prince spoke to —— and me in English, laughed a good deal at our misfortunes of the preceding night, described some circumstances of his journey in Nubia, and his dinner with the Pasha, handed his note-book to —— to have all our names written in it in hieroglyphics, and then mounted his donkey to visit some of the curiosities in the neighbourhood. By his desire I accompanied the procession with my camel, which he mounted after leaving the uneven ground of the *campo santo* (if I may so call it), and had arrived in the plain on his way to visit Memphis, when we again changed our locomotives—he to continue his journey to the Nile, I to return to the camp. On Saturday our usual occupations proceeded. ——, however, went to Cairo, taking with him one of the servants, to consult with the Prussian Consul as to the best means of recovering the stolen property. Everything proceeded in the encampment on Sunday as usual: the flag was unfurled, prayers were read, nothing was wanting but the evening quantum of milk, which, through some neglect, did not arrive. The only consequence was, that those who could not drink tea without it, drank water.

Now, imagine us fast asleep,—our tents occupying the whole space of table land; behind us an irregular wall of rock, in which are the excavations (ancient tombs) that serve us for magazines and kitchen. At two o'clock in the morning, two Arabs approached our table land, whose presence disturbed the guardians, and whose subsequent flight into the plain induced the two guardians and two of our best and most active servants to follow; and while thus engaged, twenty or thirty men (for the accounts vary) advanced, threw down two of the tents, in one of which three of our party were sleeping, accompanying the action with howling and the discharge of pistols, which awoke me and others, who came out half dressed, with such arms as we could in the hurry seize on. I found myself standing with a sword in one hand and a dagger in the other on the ruins of one of the tents, before I was thoroughly awake, one of our companions disentangling his gun from the ropes of the tent, and another dragging what things the Arabs had left from the ruins. We adjourned to the kitchen, collected our arms, and attended the wounded, among whom was one of our party, very slightly, by a knife, in the elbow, which he got while contending with an Arab for a bundle of clothes. One of our servants who had pursued the Arabs into the plain, returned with a severe wound in the head, besides several bruises from a stick on the legs; one of our guardians was also wounded on the head and hands. Having stopped the bleeding by covering the wounds with ground coffee, and put the wounded to bed in one of the excavations leading from our kitchen, we armed ourselves, and two of us, with Francis and one of the guardians, set off, to follow the footsteps of the Arabs, whom we traced to a village north of us, picked up sundry articles of dress, which in their flight they had dropped, and then returned to our camp. By this time the sun had risen, but not shown his face above the opposite mountains. We took a cup of coffee, and agreed to send to Cairo to inform Dr. Lepsius. In the course of the morning I went to the village of Sakhara, obtained twelve men as guards for the ensuing night, and spent the rest of the day in making further preparations. In the evening arrived the Doctor and —— and all the servants. We disposed of our increased force, and went to bed, each prepared in case of attack. On Wednesday morning arrived the sub-governor of this district, to prepare for his superior, who came about two o'clock. The sheikhs of the neighbouring villages were already in attendance, and after some questions they, and several others, suspected to have a knowledge of the affair, were bastinadoed, in order to extract further information, but all in vain. The villages are to be made to pay our loss, which amounts to about 110*l*. During the process of beating, the women who had collected in the plain were screaming; and indeed the whole ceremony was of a nature which I do not desire to see repeated. To-day, our encampment is all noise and confusion; my tent infested with Turkish soldiers and Arab chiefs; when the business will end I cannot tell.

Soon after mid-day, the whole of the money was brought to Dr. Lepsius, and he made a present of a quarter of the whole sum to the sheikh of Sakhara.

The parent locusts have disappeared, but hosts of little black ones remain, the size of flies, that congregate, like their fathers, on the sunny side of the sandhills.

OUR WEEKLY GOSSIP.

AMONG the more notable occurrences, not merely of the week, but of the times, is the Rev. Sydney Smith's petition to Congress against the repudiating states of the Union, which has appeared in the *Morning Chronicle*. It is among the best specimens of this clever man's very peculiar mode of thinking and expression, at once eloquent and argumentative—the model of what a manifesto should be. It is simple in statement, cogent in reasoning, uncompromising in principle, and dignified in language. That it is the emanation of one mind, is no just cause for depreciation; for such, in truth, is every document the most officially authoritative; and it is not the less the voice of all civilized Europe in protest against the most gigantic fraud of the age in which we live. As becomes the position and character of the petitioner, he subordinates the pecuniary injury to the moral and political wrong inflicted by the repudiators. He laments over the dissipated hopes of the best friends of the American experiment in self-government, and over the terrible advantage given to the enemies of free and representative institutions throughout the world. To us, there is something imposing in this individual wrestling with a nation's depravity; and we doubt not, that among the citizens of the United States there are numbers to appreciate the value of such a man's opinion, embodying, as it does, the reason and the probity of all mankind; and who will be far more willing to listen to the voice of one tried friend, than to yield to the *brutum fulmen* of a secretary's office, though backed with all the artillery of "a world in arms."

It is more than probable that the last American packet has brought letters and an explanation from Mrs. Sigourney respecting the publication of Mrs. Southey's letter; meanwhile we publish the following statement, which has appeared in an American paper, and evidently proceeds from Mrs. Sigourney:

"Having contemplated visiting Dr. Southey at Keswick, Mrs. Sigourney, on leaving England, wrote to Mrs. Southey, regretting that the accounts she had received of Dr. Southey's extreme illness had deprived her of the pleasure of seeing him. In reply to this, Mrs. Southey wrote, under date of April 3, 1841, as follows:—

"'Permit me thus familiarly to address one whose name, *at least*, has long been familiar to me, and toward whom, having seen some specimens of her beautiful poetry, I cannot feel as toward a stranger.' And thus closing—'It will please me to think that I shall be held in kindly remembrance, in a far off land by one whose genius was held in honour by him who was (humanly speaking) my *light of life*.'

"With regard to the alteration of Mrs. Southey's letter, or 'the interpolation of phrases implying intimacy and ejaculations of pathos,' it is enough to say that there is not the slightest foundation for the charge. We are able to state this confidently, after a careful examination and comparison of the manuscript with the printed page.

"The only remaining charge is that of having published Mrs. Southey's letter without authority. We cannot answer this better than by stating the simple fact, that since the appearance of Mrs. Sigourney's book, she has received a cordial letter from Mrs. Southey, in which she (Mrs. Southey) fully approves, to use her own words, of '*the publication of those few words of mine, to which you have done too much honour—both to them and their writer.*'"

We collect from this, that the statement which charged Mrs. Sigourney, a stranger, with having written to Mrs. Southey to request her correspondence, and with having forthwith published Mrs. Southey's answer, with all its melancholy details, is substantially true; that "since the appearance of Mrs. Sigourney's book," she has received "a cordial letter" from Mrs. Southey, in which that lady "fully approves" of the publication; that the charge of interpolating the published letter with phrases and ejaculations is denied, and indeed amounted to little, as the published letter proved. Now the original charges against Mrs. Sigourney were put forward on the avowed authority of Mrs. Southey herself; and

Digitized by Google

if it can be shown that Mrs. Southey has since written to Mrs. Sigourney a "cordial letter," in which we will not say she *fully approves*, but in which she did not honestly, distinctly, and unequivocally *disapprove* of the publication, then there has been a great deal of mystification, double-dealing, and duplicity. This fact established, all other objections, so far as Mrs. Southey is concerned, fall to the ground at once, as miserable trifling; and we shall not hesitate to say, that Mrs. Sigourney has been most unworthily treated. *Our* objection, however, to the publication of such a letter, is strengthened a hundred-fold the moment it can be proved that Mrs. Southey was a consenting party, whether after or before publication.

A meeting took place on Wednesday last, Mr. Dickens in the chair, for the purpose of forming an 'Association for the Protection of Literature.' As the meeting was held for the purpose of preliminary discussion, so many suggestions were thrown out, that we were unable to obtain a correct copy of the Resolutions finally agreed to; but it is a marking feature of the spirit which animated the meeting, and an honourable consequence of the discussions which have of late years taken place with reference to this subject, that the first resolution recognized specifically "the rights of literary property in all nations;" from which, of course, it follows that the literary property of all nations is entitled to protection, and will be protected, so far as practicable, by all members of the Association. Indeed, the only discussion of importance related to a Resolution which went so far as to declare that the members would not knowingly either edit, print, or publish any work in which copyright exists, whether such copyright be vested *in a foreigner* or an Englishman, without the consent in writing of the author or publisher, or sell a copy of any pirated edition of such work; and the justice of this Resolution was fully admitted; but it was shown by Messrs. Longman, Murray, Spottiswoode, and others, that there were practical difficulties which made it inexpedient to adopt so stringent a principle as a fundamental law of the Association. It was therefore resolved that, for the present at least, the aim of the Association should be to carry into effect the provisions of the recent Act in relation to the infringement of copyright, and the introduction into England and her possessions abroad of pirated copies of English works.

In connexion with this subject, we may observe, that our attention has been recently called to two maps drawn and printed under the direction of Major Jervis, for a work on Asia, which he is preparing to publish by subscription. As these maps are both copies, the one of Capt. T. Dickinson's survey of Bombay, the other of Meyendorff's map of the route from Orenburg to Bokhara, they have intrinsically little claim to notice, but one of them seems to trench on a principle, the violation of which we cannot allow to pass in silence. The days are approaching, we hope, when the whole race of compilers and copiers who live on the learning and ingenuity of others will be totally suppressed. Major Jervis has produced these maps we presume in order to show the subscribers to his work that he is actually engaged on it; but we cannot so easily explain his choice of subject. Did he copy Meyendorff's or Lapie's map of Central Asia, because he thought that recent events gave interest to that portion of the globe? But that map was confined to a special object, viz., the illustration of the route from the Russian frontiers to Bokhara; and, with reference to the route to Khiva, it is useless, for this route lies on the western side of the Sea of Aral, which is not included in Lapie's map. Seventeen years have elapsed since the publication of Meyendorff's map, and within that time a great quantity of information has been collected by the Russians; so that we are now much better acquainted with the shores of the Sea of Aral. The maps accompanying the works of Levchine and Zimmerman show much improvement in this respect. Still further we think it a just ground of complaint that Major Jervis has not taken the trouble to free his map from the peculiarities of French orthography; thus we have Bech for Beah, Tach for Tash, &c. Nay, he has not even changed the meridians reckoned from the observatory at Paris. He has copied the French map without taking the least pains to adapt it to an English work. This being the case, are we not justified in asking, whether the requisite number of copies of the original map might not have been procured from Paris for much less than the cost of copying? Have we not here an example of that invasion of foreign copyright, which, however tolerated by law, ought certainly to be discountenanced by society?

We regret to announce the death, on the 10th inst., of Mr. Thomas, of Oxford Street, well known, both at home and abroad, as the possessor of the finest private cabinet of coins in this country. It is hard to say whether the fact of its having been left to a *tradesman* to form so princely a collection, is one which reflects more honour on the middle classes, or more discredit on our wealthy aristocracy. We have not heard what directions Mr. Thomas has left as to the disposal of his collection; but presume that the whole will come to the hammer. We were going to give utterance to the natural wish, that such a collection might pass unbroken to some public and permanent depository; but we forbear, believing that, on the whole, the occasional dispersion of large and valuable cabinets contributes more to the advancement of numismatic science than their preservation. For instance, the magnificent collection bequeathed by Dr. Hunter to the Glasgow Museum is, for all useful purposes, as effectually buried there, as it would be at the bottom of the Thames; perhaps, indeed, even more effectually, for there would be a greater probability of its being brought to light from the latter concealment than from the former.

The late Sir Bethel Codrington's collection, removed from Dodington Park, made almost as great a stir last week at Messrs. Christie & Manson's as Birnam Forest removed to Dunsinane did, long of yore, at Macbeth's Castle. We cannot divine what magic charm rendered this two days' sale of intolerable and tolerable daubs (some very few good pictures excepted) so bewitching; but our brethren dilettanti thronged to it like a tribe of Red Men, with sanguine faces and simple enthusiasm, to Mr. Catlin's wigwam attelier in the Backwoods, and seemed no less gratified by all they beheld than were those savage amateurs by their ruddle and lampblack portraits. How many an auction-advertisement resembles the mysterious *Duc dà me* of our friend Jaques, minus the classic feature—"a Greek invocation to call fools into a circle"! Select we have granted the Dodington Park collection,—a select assortment of bad originals and palpable copies, there being just one precious jewel amidst the vast heap of litter, perhaps also two or three paste diamonds, which might pass for real with purblind judges. Even the jewel—a 'Sea piece,' by *Vandervelde*,—we think exhibits several flaws, though it brought first-water price, 1,475 guineas! Its beauties, however, are half interred beneath an accumulation of dirt; when restored to full daylight again, through the skill of Mr. Brown, the apparent purchaser, we can imagine them not to have been much overvalued. The composition presents a grim and broken expanse of livid waves, edged with greyish foam, illustrating that most expressive epithet in the fine old ballad of Sir Patrick Spens—"the *gurlie* sea"—a word still familiar among our Scottish and Irish compatriots. Ships and small craft rock and jostle upon the disquieted element; an open barrier of piles ill protects a low headland against which the surges rebound with what may be called a visible roar, for the hurly-burly is evident from its concomitant appearances. Clouds form the distance, and have the same leaden hue as the ocean. Yet, despite all these constituents of grandeur, the composition wants, in our opinion, a due economy to give it full effect; as a whole, it betrays that feebleness which, we think, most often distinguishes Vandervelde's larger productions; at least we have seldom seen any without a certain waste of canvas, whilst his smaller works have not a square inch "to let," and are pregnant throughout, even though their details be few. This, perhaps, is partly owing to the painter's favourite neutral tint, that becomes weak and monotonous when spread over a wide surface; partly to a less deep and powerful impasto than seems suitable for such dimensions. His manipulation, likewise, so spirited in a cabinet-piece, looks somewhat feeble in a gallery picture. That one now discussed evinces lassitude of hand (we should have said *mind*) here and there; but Vandervelde never delineated a troubled sea more ably; if the frame held water, water could not represent itself better—it could not represent a troubled sea at all! The so-called *Rembrandt*, a 'Christ leaning on a Staff," brought 240 guineas; the 'Parce somnum rumpere,' ascribed to *Sassoferrato*, 185; the 'Holy Family,' affiliated upon *Andrea del Sarto*, 135. A large landscape, very black in the shadows, spotty in the lights, and hard in the handling, had nevertheless some air of a true *Pynacker*, brought 140 guineas. We forgot to mention, last week, the price of *Brueghel* and *Van Balen's* 'Triumph of Flora,'—145 guineas.

It is announced in the *Times*, that the Duke of Sussex's library is forthwith to be disposed of. It is stipulated in the will that it shall be in the first instance offered to the British Museum; and that, in the event of such national establishment declining to purchase, it shall be sold in such manner as the executors may direct. The library, it appears, consists of upwards of 45,000 volumes, most of them in excellent condition, independently of MSS., consisting of early copies of different portions of the Holy Scriptures.

As the anniversary dinner of the Artist's Benevolent Fund was postponed, in consequence of the death of the Duke of Sussex, it may be well to announce that it will take place this day, and that Lord John Russell will preside.

The Horticultural Society held its first meeting at Chiswick on Saturday, and never was day more propitious,—the previous rains had brought forward the plants and trees and flowers into unusual luxuriance, and a warm sun and a cooling south-west wind made the day delightful. Nearly 5,000 persons were present.

We can but notify in a line, as having taken place, the concerts of *Miss Steele, Mr. Venua, Miss Dolby and Miss Orger*. The last named ladies deserve as many words of encouragement as can be packed into a small compass: the one for her cleverness and invention as a pianist, the other as the best of our younger English *contralti*, to whom time and experience will doubtless give that more refined delivery, and more polished execution, which are demanded to keep due proportion with a voice so beautiful and expression so true as she possesses. So, too, a line must announce the revival of 'I Puritani' at Her Majesty's Theatre, and the *début* of Signor Camillo Sivori. Of his performances on the violin, we shall take the earliest occasion of speaking.

The great annual Rhenish Musical Festival is to be held this year at Aix-la-Chapelle, on the 4th and 5th of next month. Upwards of fifteen hundred performers will be assembled on the occasion. The *programme* will include, *First day*, a Magnificat by Durante; Mozart's symphony in G minor, and Handel's oratorio of 'Samson.' *Second day*—the 'Sinfonia Eroica' of Beethoven; an unpublished psalm, by M. Reisseger (under whose direction the performances will take place); a hymn by Cherubini; another by Vogler; and the overture to 'Les Francs Juges,' by M. Berlioz. This eccentric composer, by the way, is exciting a sensation in the Prussian capital. A second concert at which some of his works have been performed, seeming to have becen more successful than his first. Our next news from Berlin will probably tell us of the first performance of the 'Medea' of Euripides, with Mendelssohn Bartholdy's choruses.

We observe that a new opera by Maestro Peri—of whose good promise as an Italian composer we spoke some two years since—has been successful at Parma. By the title of the work, 'Esther d'Engaddi,' we presumed the *libretto* to have been arranged from the tragedy of that name by Pellico.

The statue of Joan of Arc, the fine work of the late Princess Marie of France, presented by her royal father to the Department of the Vosges, was inaugurated, on the 9th of the present month, in its new abode in the house at Domremy, where the heroine was born, amid an immense concourse of spectators collected from all points of the department.

The *Journal de la Meurthe* gives the following account of a meteorological phenomenon, which on the 4th of the present month, affrighted the town and neighbourhood of Nancy. "A globe of fire," says that paper, "three or four mètres in length, traversed the heavens from west to east, about two in the morning. This immense meteor was of a brightness so intense, that the inhabitants of the country, who witnessed this extraordinary spectacle, were terrified into the belief that they were instantly to be destroyed by it. The meteor

Digitized by Google

appeared not more than thirty mètres above the earth, travelled at the slow rate of about one kilomètre per minute, and was preceded by an electric detonation. The horses of the diligence from Metz to Nancy took fright at its aspect, and overturned the carriage.

ROYAL ACADEMY OF ARTS, TRAFALGAR SQUARE.
The EXHIBITION of the ROYAL ACADEMY is NOW OPEN. Admission (from 8 o'Clock till 7), 1s. Catalogue, 1s.
HENRY HOWARD, R.A., Sec.

The NEW SOCIETY of PAINTERS in WATER COLOURS.—The NINTH ANNUAL EXHIBITION of this Society is NOW OPEN, at their GALLERY, 53, PALL MALL, next the British Institution, from 9 till Dusk, daily. Admittance, 1s. Catalogue, 6d.
JAMES FAHEY, Secretary.

The THIRTY-NINTH ANNUAL EXHIBITION of the SOCIETY of PAINTERS in WATER COLOURS at their GALLERY, PALL MALL EAST, is NOW OPEN. Open each day from Nine till Dusk. Admittance, 1s.; Catalogue, 6d.
R. HILLS, Secretary.

DIORAMA, REGENT'S PARK.
JUST OPENED, with a NEW EXHIBITION, representing the CATHEDRAL of NOTRE DAME at Paris, with effects of Sunset and Moonlight, painted by M. RENOUX, and the BASILICA of ST. PAUL, near Rome, before and after its destruction by Fire, painted by M. BOUTON. Open from Ten till Five.

EXHIBITION of Sir GEORGE HAYTER'S GREAT PICTURE of the HOUSE of COMMONS, painted on 170 square feet of canvas, and containing portraits of all the Members of Parliament, also a portrait of Her Majesty Queen Victoria, and various other works, forming a collection of more than 800 portraits of eminent personages of the present day. Open from 10 till dusk.—At the Egyptian-hall, Piccadilly. Admission, 1s.

THE CHINESE COLLECTION, Hyde Park-corner.—This UNIQUE COLLECTION consists of objects *exclusively Chinese*, and surpasses in extent and grandeur any similar display in the known world. The SPACIOUS SALOON is 225 feet in length, and is crowded with rare and interesting specimens of virtù. The Collection embraces upwards of SIXTY FIGURES AS LARGE AS LIFE, portraits from nature, appropriately attired in their native costume, from the MANDARIN of the highest rank to the wandering Mendicant; also MANY THOUSAND SPECIMENS in Natural History and Miscellaneous Curiosities, the whole illustrating the appearance, manners, customs, and social life of more than THREE HUNDRED MILLION CHINESE.—Open from 10 till 10.—Admittance 2s. 6d. Children under 12 years, 1s.

SCIENTIFIC AND LITERARY

GEOGRAPHICAL SOCIETY.

May 8.—G. B. Greenough, Esq., V.P. in the chair.

Read—'An Account of a Journey through the country of the Mamasení, or Khogilli,' (tribes of Lurs) by the Baron Clement Augustus de Bode. On the 21st of January, 1841, the traveller having visited the cavern which contains the colossal statue of Shapúr, in the hills bearing that name, and explored the labyrinth by torchlight, descended into the valley, and followed up the course of the river of Shapúr, after which he proceeded northward, and reached the camp of a Mamasení chief at a place called Chenocheján. The river of Shapúr comes from the mountains of Piri-Zen, traverses the valley of Deshti Beri, forces its way through the Kuteli Dokhter mountains, and then waters the plain of Kazerún, after which it is lost behind the mountains of Kemorij. The camp and its position is next described, and the beautiful valley of Búm, lying between vineyards and pomegranate groves, on the right, and a wild tract on the left, which reaches to the Persian Gulf, and is inhabited solely by lions and other wild beasts. Proceeding northward, the plain of Saraï Barám was reached, having at its entrance some rock sculptures, (which are minutely described in the paper, and of which a beautiful sketch was exhibited). The rivers of Nobendjan were next passed; it was once a flourishing city, at which Timúr halted before he laid seige to Kaleh Sefíd, which place, after passing the fort of Nur-abád, the traveller left on his right; it has been described by Mr. Macdonald Kinneir. From Nur-abád the route goes northward over hills, and then descends in a north-west direction into the lovely Narcissus-covered valley of the Abi-Shúr. Fahliyan was next reached—now a paltry town of sixty or seventy houses, but formerly of some importance. The place is supplied with water by a channel coming from the rocks at some distance; that of the Abi-Shúr being, as its name implies, brackish. The land here is very fertile, yielding in the winter, crops from twenty-five to fifty for one; sesamum is cultivated, and yields one hundred for one. Leaving Fahliyan, the traveller forded the Abi-Shúr, and visited some ruins, but of little interest. The Abi-Shúr rises in the snowy mountains of Ardekán; and after forcing a passage through the hills, west of Fahliyan, flows on to the Persian Gulf. The valley of Serabí was next traversed; its western extremity is a marsh, full of deep pools and reeds, the abode of many wild animals. The Abi-Shúr was then forded, and the traveller entered the valley of Basht. (Here the paper goes into an historical disquisition respecting the Mamasení, and a table of the divisions of the tribe is given.) The castle of Basht is surrounded by the houses of the chief's vassals. The traveller was hospitably treated at this place; on leaving it, he crossed some hills, and then descended into a valley full of oaks, almonds, and other trees. Dughumbesun was next reached, a place twenty-seven miles from Basht. During the whole of this route neither water nor habitations were met with, though ruined villages and subterranean canals showed that formerly there had been both. After leaving Dughumbesun, the road continued west along the valley, then took a north-west direction, and crossed two small streams, when the traveller came to the Kheïr Abad river, so called from a village of the same name on its opposite bank, but better known as the Haidiyan; it is the Arosis of the ancients, and the Abi Shirín of Timur's route: from this river to Bibehan the distance is eleven miles.

To this paper was added another by the same author, being an essay on the probable site of the Uxian city, besieged by Alexander the Great on his way from Lusa to Persia. The Baron thinks the site of the city is at Mal Amir.

STATISTICAL SOCIETY.

May 15.—W. Tooke, Esq., V.P., in the chair.—Three new Fellows were elected.—A translation, by Sir J. Boileau, Bart., of a paper by M. Passy, of Paris, 'On the division of heritable property, and its influence on the distribution of wealth,' was read. It has been so generally received an opinion in this country that the law of inheritance in France tends to subdivide property almost *ad infinitum*, and to level fortunes to a similar scale, that a paper by so eminent a person as M. Passy, controverting this opinion, and bringing forward, for the first time, statistical facts to prove that inequality of fortunes must always exist, is well worthy attention. The author commences by showing, that among the ancients all attempts to legislate for the preservation of equality of wealth, failed, and then refers both to the feudal and modern times for proofs that if laws of inheritance are able to influence the division of fortunes into classes, they cannot reduce or confine them within any fixed or equal limits. In Poland, though only five estates have been entailed on the eldest son, a few families have obtained almost regal wealth, while the greater part of the numerous nobility have fallen into indigence. He then proceeds to notice the most powerful causes constantly in operation to account for these facts, and secure the unequal diffusion of wealth. M. Passy then passes to the special causes in France, and is of opinion that the greatest influence is exercised there by the very unequal number of children born to a marriage in the different classes of society, and the fact that the rich class has fewest of all. From 1826 to 1836, the average number of legitimate children born annually in France, was 904,702, and as the average number of marriages during the same period was 256,927, it follows that the number of births to each marriage has been 3.52. The 39 principal towns, of more than 20,000 inhabitants, contain a population of 2,634,523, and the annual average of births has been 65,290, and of marriages 21,374, giving only 3.05 births to a marriage; thus the average of births in these towns is less than that of the country in general by 0.47, and less than the average of rural districts and towns under 20,000 inhabitants united, by 0.51, or nearly 15 per cent. It appears therefore that the average of births is least in those towns where the mass of the inhabitants live upon their means, and greatest where the working class is most numerous. The effect which riches have upon restraining the fecundity of marriages is nowhere more apparent than in Paris. The most opulent families of France congregate there, and the marriages show fewer births where the population is the richest. In the four first arrondissements united, which are those where the most opulent families reside, the number of children to a marriage is only 1.97, while the average of the four poorest is 2.86. These facts deserve the more attention, because in spite of the reasons that determine the inhabitants of Paris to choose peculiar localities according to their respective circumstances, some poor families will be found in the quarters inhabited by the rich, and some rich families in the quarters occupied by the poor. If, therefore, the most opulent portion of the population of Paris, which has not two children to a marriage, was not renewed by the accession to its ranks of families recently enriched, it would be speedily diminished, and its progress towards extinction would be more rapid than that of any of the aristocratic bodies of which history preserves the recollection. It is therefore quite clear that one of the most important causes towards the unequal distribution of wealth arises from the less fecundity of marriages among the higher classes of society. The prevailing opinion, that riches diffuse themselves, and pass from the hands of their possessors amongst the mass of the population, is based on the incontrovertible fact of the gradual multiplication of subdivisions of the soil: 123,630,328 subdivisions are now admitted in France, and it is argued that this parcelling out of the soil would not have occurred without the number of landed proprietors having immeasurably augmented. M. Passy conceives this to be a great error, and thinks that there is nothing really in common between the parcelling out of the land and the state or quantity of private fortunes, and he believes that territorial subdivisions may be multiplied without wealth being displaced or subdivided into smaller or more numerous portions. In 1815 there were 10,083,751 names registered as landed proprietors; in 1835 it appears there were 10,893,528, giving an increase in twenty years of 8 per cent. of proprietors: an important fact, if the population had remained stationary; but to estimate it rightly, it is necessary to consider what has been the advance of the population during the same period. In 1815 it was only 29,152,743, while, in 1835, it had reached 33,326,573, an increase of 14 per cent. Thus, while the number of proprietors only increased 8 per cent., the population increased 14 per cent., proving that instead of increasing in equal ratio, the number of proprietors is proportionably diminished. It was, moreover, computed in 1815 that France contained 100 fixed capitalists in every 290 inhabitants, but in 1835 only 100 in 305, showing that the number of proprietors, as compared to the rest of the population, has decreased 2½ per cent. M. Passy then proceeds to investigate what change has occurred in the amount of fortunes distributed amongst the class possessing property. The value of property transmitted by will or inheritance in 1826, was 1,345,711,516 fr., and in 1836 it had increased to 1,560,320,825 fr., thus showing that the real and personal property transmitted by deaths increased nearly 16 per cent. in 11 years. If the classes possessing property have not multiplied as fast as the rest of the community, they have at least gained 4 per cent. in the 13 years prior to 1836, and yet, far from the fortunes of individuals being diminished by it, the general progress of wealth has increased. The author concludes by stating, that division of inheritances, far from having produced equality in the distribution of wealth, has been overcome by the causes tending to inequality, and a tendency towards concentration has resulted. The population has increased in France in the last 13 years 8 per cent.; wealth more than 16 per cent.; and if the classes of proprietors have seen their fortunes augmented, the working classes have also seen the fund which remunerates their toil, increase more rapidly than the hands which divide it.

INSTITUTION OF CIVIL ENGINEERS.—*May* 9.—The President in the chair.—The paper read was by the Rev. Mr. Clutterbuck, 'On the periodical Drainage and Replenishment of the Chalk Basin of London,' in continuation of a former communication (*Athen.* No. 762). The object was to show the existence of a continuous subterranean water level, dipping at an average inclination from the river Colne, to the Thames below London; with reference to which the author was enabled to determine with accuracy the height to which water would rise between those two points. A minute account was given of the nature and origin of the supply of water to that portion of the Basin which underlies the London and plastic clays, together with a detail of certain remarkable phenomena observable at the points at which the water finds its way into the chalk; by which it appeared that, a great portion of the rain-water which flows from the surface of the clays by water-courses, sinks into the subjacent chalk on its arrival at the outcrop of the sand of the plastic clay formation, and

Digitized by Google

thus regulates and maintains the subterranean supply for the metropolis. It was also shown that there is a depression of the natural level under London, caused by the great exhaustion of water by pumping from deep wells, sunk either into the chalk or sand of the plastic clay formation, and that this depression is gradually increasing and already extends two or three miles beyond the metropolis.

In the discussion which ensued, the question of the probable exhaustion of the River Colne, and of the reservoir in the chalk, was strongly insisted on, if ever any considerable amount of pumping should take place in the valley near Watford for the supply of water to London; and it was shown from the register of two rain-gauges, one of them on the surface, and the other buried three feet under the ground at Nash Mills, that of the rain which fell in two years rather less than half reached the buried gauge; that therefore any calculation of a supply equal to that shown by ordinary rain-gauges would be fallacious.

May 16.—The President in the chair.—A paper by Captain Handcock was read, describing a Railway Axle invented by him, which had been used for nine months on the Southampton Railway. The alterations consisted in making the journals of a conical form at the shoulder end, and at the outer end, a similar conical collar slides upon the journal, and can be forced forward by a screw collar at the extremity; the brasses are also conical at the entrances, following the parallel form of the journal, and meet in the centre within half an inch; they can revolve in the bored cast iron boxes when the friction upon the axle becomes excessive. It has been found that this form prevents the usual oscillation of the carriages, because, if the brasses wear, the conical collar is screwed up, and the lateral motion ceases; the wear and tear is diminished, and the saving of oil is very great: it was stated that one pint of oil had sufficed to lubricate all the axle-bearings of a six-wheeled engine and a four-wheeled tender whilst running 924 miles; and that there was not any tendency to heat.

A paper was read upon Zinc as a protecting covering to iron, and the adaptation of the process of electro-deposition for this purpose, by Mr. F. Pellatt. Iron is, from its superior affinity for oxygen, susceptible of rapid decomposition, and it has ever been a desideratum to discover some cheap mode of protecting it; the ordinary methods of painting and tinning being not sufficiently durable. By the laws of electricity when metals are in contact, the negative metal is protected at the expense of the positive; and under all ordinary circumstances zinc being the positive metal, it becomes a protector to the negative metal iron. Zinc, like most metals in commerce, is not to be met with pure: in the other metals, however, the impurities do not generally tend to the injury of the metal with which they are in contact: such, however, is not the case with zinc, and its impurities; together, (when in contact with moisture) they generate a galvanic current, by which the zinc is rapidly destroyed. The impurities existing in ordinary zinc, and the difficulty and costliness of the process of sublimation, in order to procure *pure* zinc, were noticed. It was also strongly insisted on that impure zinc, itself being of little value, could not afford protection to any other metal upon which it might be coated; and that, therefore, the mode of plating iron with melted zinc (of commerce) was objectionable. The report made to the French Academy, by M. Dumas, was quoted, he says "the zincing of iron, by steeping it in a bath of melted zinc, has many inconveniences; besides the iron combining with the zinc, constitutes a very brittle superficial alloy, the iron losing its tenacity." It is known that in the deposition of metals from metallic salts by the electro process, the pure metal only is deposited, so that the process proposed in the papers is not open to the ordinary objections. The iron also being coated with zinc in a cold solution, its state is no way changed. The expense of the process was stated to be trifling, not exceeding that of four coats of oil paint. The electro process seems entirely to overcome the difficulty of coating with pure zinc, as well as to afford facilities for covering iron work of whatever form or size, and as it requires no great outlay, the process may be carried on anywhere. Zinc has another great advantage: though itself easily oxidized, the oxide in ordinary circumstances is insoluble, and affords a protection to the metal below. For roofing and many other purposes, it was suggested that zinced iron would be found very useful. Many specimens of zinced iron (some of which had been exposed to the weather for months) were exhibited to the meeting, as well as specimens of iron coated with copper by the same process. Some large specimens of railing, for the palace, coppered upon iron, the ornamental part at top being gilt, appeared very beautiful.

It was stated that Messrs. Elkington & Co. have given an estimate for zincing the Suspension Bridge at Hungerford Market.

MEDICO-BOTANICAL SOCIETY.—*May* 11.—H. Gibbs, Esq., in the chair.—A communication from Dr. Houlton, 'On the collecting and preserving roots for medicinal purposes,' was read.—The discordant opinions found amongst medical practitioners and authors respecting the medicinal properties of indigenous vegetable remedies, may be attributed, in a measure, to want of information respecting the method of collecting, preserving, and manipulating these important articles; as pharmaceutists have no sound practical guide to direct them, there is a want of uniformity in their preparation, and consequently in their properties. To remedy this was Dr. Houlton's object, by laying down some safe rule for collecting and preserving roots. The directions contained in the *London Pharmacopœia* he condemns as uncertain and erroneous; and further shows, that the instructions for the same purpose, contained in the work of Dr. Bellingham and Dr. Mitchell, are incorrect. He observes, that *all roots should be taken up at the time that their leaves die*, as they then abound with the proper secretions of the plant. This rule has no exception; it applies to the roots of trees, shrubs, herbs, rootstocks, bulbs, corms, and tubers; and it includes the curious plant, Colchicum, whose flower only appears in the autumn, and its leaves and fruit the following spring and summer. Biennial roots must be taken up in the first year of their duration, as when the leaves decay in the second year, their roots are either decayed, or merely dry wooded fibre. Roots intended to be preserved should be dried as soon as possible after they have been dug up; the large tree roots, especially the more juicy ones, dry better in their entire state than when sliced.

METEOROLOGICAL SOCIETY.—*May*.—G. Leach, Esq., V.P., in the chair.—Prof. Sewell, V. H. Cullen, M.D., W. Burrows, Esq., were elected members.—Papers read: 'On Solar, Stellar, and Cometary Light, with an attempt to explain the manner these Phenomena influence the Earth's Atmosphere,' by Lieut. Morrison, R.N., to which were added, by way of supplemental remarks, 'On the Peculiarity of the Weather during the first week in May, 1843,' being a practical application of the principles laid down in the above paper. A paper from P. M'Farlane, Esq., of Comrie, on his hourly self-registering barometer, with a letter from D. Milne, Esq., Edinburgh. A paper from J. Ruskin, Esq., describing a Double Lunar Halo with two Paraselene, as seen at Camberwell on the 18th of March last. Several notices of the *Aurora Borealis*, and other phenomena, were next read, and tables from numerous stations compared. The meetings were adjourned till November.

SOCIETY OF ARTS.—*May* 10.—Dr. Roget in the chair.—The Earl of Clarendon was elected a member.—The Secretary read a paper by H. Fardon, Esq., 'On the Improvement of the Art of Agriculture,' the object of which is to show the importance, in a national point of view, of introducing generally an improved mode of cultivation by means of spade husbandry. After entering into details, with respect to the two systems of agriculture chiefly pursued, which are known as the low system and the high system—the former being based on the principle of annual tenancy, the latter on that of granting leases—the writer proceeds with an examination of the third system, or spade husbandry, and quotes the following case, as showing the profit to be realized by its judicious adoption. The experiment was made on two acres of land for twenty-seven years, and on two other acres of land for fifteen years, alternate crops of wheat and potatoes being produced, and the land, which is stiff clay, being turned up with a fork ten inches deep. The cost of the wheat crop, including planting, keeping clean, reaping and thrashing, was at the rate of 1*l.* 17*s.* per acre; and of the potatoe crop, including breast-ploughing, wheat stubble, forking land, planting, cleaning, and getting up and harvesting, 5*l.* 15*s.* 3*d.* per acre, the average being 4*l.* 6*s.* 1½*d.* per acre, while the annual produce realized the sum of 69*l.* 5*s.* 6*d.*, or at the rate of 17*l.* 6*s.* 4½*d.* per acre, surplus, subject only to deductions for rent and parochial taxes. It must be remembered that this profit was effected by the sale, and not by the consumption of a great part of the produce, the latter being the prevailing custom. As a further proof of the adequate productive powers of the system the writer advocates, he adduces the well known case of Mrs. Gilbert, of Eastbourne, who, through her benevolent exertions, has succeeded in establishing self-supporting national schools, by receiving rent for the land occupied by the master, who instructs the children in the usual course of education in the morning, and employs them on his land in the afternoon. Mr. Fardon recommends that a portion of land should be attached to every country union, to be cultivated by the able-bodied poor, according to the third system, the effect of which would be to reduce the poor's-rate. He further suggests, that the redundancy of manufacturing labour might be turned to account in cultivation by spade husbandry.

May 17.—B. Rotch, Esq. V.P. in the chair. The Secretary read a paper 'On the subject of Mr. Cooke's Practical Electric Telegraph as now used on the Great Western Railway,' which was illustrated by a complete telegraph at work in the Society's Rooms. Mr. Cooke first adopted the plan of laying the telegraph wires in iron tubing. This plan, though successful, was costly, and difficult to repair when injured. More recently he has carried out, on the Great Western Railway, a plan of suspending the conducting wires in the open air from lofty poles—the leading advantages of which are, 1. diminished cost—2. superior insulation, and 3. facility of repair. The cost of the original plan may be stated at about 300*l.* per mile, while, by the improved system, it is reduced to 150*l.*, with a still greater advantage in favour of the permanency of the work. The present method of proceeding in laying down the telegraph, is, first to fix firmly into the ground at every 500 or 600 yards strong posts of timber, 16 to 18 feet in height by 8 inches square at bottom, and tapering off to 6 by 7 inches at top, fixed into stout sills and properly stoutted. Attached to the heads of these posts are a number of winding apparatus, corresponding with the number of conducting wires to be employed, and between every two of such posts upright wooden standards are fixed about 60 or 70 yards apart. A ring of iron wire (No. 7 or 8), which had been formed by welding together the short lengths of which it is made, is then placed upon a reel, carried on a hand-barrow, and one end being attached to the winder at one draw post, the wire is extended to the adjoining draw post and fixed to its corresponding winder; by turning the pin of the ratchet wheel with a proper key, the wire is tightened to the necessary degree—thus the greatest accuracy may be attained in drawing the wires up till they hang perfectly parallel with each other. To sufficiently insulate the wires so suspended at the point of contact with the posts, is an object of indispensable importance, as the dampness of the wood during rainy weather would otherwise allow the electric fluid to pass off freely into the earth or into an adjoining wire, and thus complete the circuit without reaching the distant terminus at which the telegraphic effect is to be produced. In this lies an important feature in Mr. Cooke's invention, as the mere idea of supporting wires in the open air from poles, trees, or church steeples is the oldest on record. For long distances Mr. Cooke employs earthenware or glass for his insulation, and cast iron standards with ash tops as drawing and suspending posts. Another point in connexion with this step in the invention is the perfect insulation from the earth: this allows of the employment of the earth as half of the conducting circuit, without risk of the current finding a shorter course through some imperfectly insulated point. For two years Mr. Cooke has tried this plan successfully on the Blackwall Railway, and lately on the Manchester and Leeds line. Two advantages arise from the employment of the earth as a conductor; 1st, one wire is saved in each circuit—thus diminishing complexity and cost; and 2nd, the earth acting as a vast reservoir of electricity, the resistance offered

Digitized by Google

to the transmission of the electricity is vastly diminished, and the battery is able to work through a much greater distance with a smaller conducting wire. Thus each telegraph on the Great Western Railway can be made to work with two wires.

MEETINGS FOR THE ENSUING WEEK.

MON. Geographical Society, 1, P.M.—Annual.
— Numismatic Society.—Annual.
TUES. Zoological Society, 8.—Scientific Business.
— Institution of Civil Engineers, 8.—'A second Communication upon the Action of Air, and Water, whether Fresh or Salt, and at various Temperatures, upon Iron and Steel,' by R. Mallet.
WED. Geological Society, half-past 8.
— Linnean Society, 1.—Anniversary.
— Society of Arts, 8.—Professor Faraday's mode of Ventilating Lamp Burners will be described; also Mr. Lee's Safety Railway Carriage.
THUR. Royal Society, half-past 8.
— Royal Society of Literature, 4.
— Philological Society, 8.—Anniversary.
— Medico-Botanical Society, 8.
— Society of Antiquaries, 8.
FRI. Royal Institution, half-past 8.—Rev. John Barlow, 'On Man's power of controlling, or preventing, the manifestation of Insanity in himself.'

FINE ARTS

ROYAL ACADEMY.

WE have been obliged, for cogent reasons, to defer thus late our remarks on the present Exhibition, and in the interim, have been exceedingly edified by the very opposite opinions concerning it, which are current in the world of Art as well as the world of Fashion. Some abuse it, because they have always been accustomed to hear it abused, and because they are, very literally, "*nothing*, if not critical;" and others praise it, because the Royal Academy ought to be kept up; and the Royal Academicians are, some of them, very excellent fellows. As to the criticism in the newspapers and periodicals into which we have glanced, it is, with a few distinguished exceptions, in the same flashy and trashy style as usual; and from its shallowness, its inconsistency, its flatness, and its flippancy, well calculated to make all artists, even those who, otherwise, might have modesty enough to profit by it, contemn and mistrust a power so carelessly, so ignorantly, and often so unjustly exercised. Apollo he knows, that we pretend not to infallibility of judgment, but we do pretend to honesty, and to a respect for what we consider the true immutable principles of Art; and we write with the feeling and the conviction, that if the criticism of the day—*newspaper criticism* as it has been slightingly termed—be of little consequence or value to the artist, it may have some influence, however trifling, in assisting to form the taste of the public. How few ever visit an exhibition or a picture gallery, with any standard of excellence in their own minds, or any clear idea of what they may reasonably demand or expect in the different walks of Art!

Of the present Exhibition, generally speaking, we should say that it is the best we have had for some years past—the most hopeful—we had nearly said the most promising:—we are aware that this kind of impression may arise out of the mood of mind in which we may happen to be when we pay our first visit. It is quite true, that there is the same lack of anything *great* in purpose or in style—the same superabundance of *under-sized* history and pretty furniture pictures of sentiment—the same, or even a larger proportion of over-sized portraiture, three sides of the two largest rooms are, if we remember rightly, covered with portraits, full-length ladies and gentlemen in attitudes; but it is nevertheless an Exhibition which has left a feeling of interest in the mind. On the whole, "we do spy some marks of amendment;" we bring away memories and images more distinct and impressive than usual. The pictures of our artists of established name and fame, are not many, but they are good, and painted mostly with a due respect for their own fame, and a due respect for that public, to which they are not now to appeal for patronage, for they can command it, but which looks up to them with a just pride and confidence to be guided—to be instructed, as well as delighted and refined. We have also to regret the absence of some favourites, for whose names and numbers we instinctively search the index to the catalogue. Mulready does not exhibit this year—he, who in truth and homely sentiment, united to the most delicate mastery of hand, emulated the best of the old Dutchmen. Nor Callcott, our most poetical landscape painter, who might have been our Claude, if some cold influence from our northern skies had not apparently breathed a misty chill over his classical Italian scenes. And poor Wilkie! This is the first Exhibition we can remember, since our early boyhood, in which his name has been absent; and though of late years he had taken to evil ways, and slurred and daubed after a vile fashion, still we shall not easily replace him. These recollections of the absent, subtract something from the amount of gratification; but our younger artists are in great force; there are pictures here, which indicate higher aspirations than we have seen of late on the walls of our Exhibitions; which encourage us to believe that if the taste and the demand for a higher style of art be awakened in this country, it will be met by a developement of adequate power. The portraits, the *tableaux de genre*, and landscapes are, as usual, charming—nay, more charming than usual.

There are this year 780 exhibitors, and 1,530 works of Art, which on a comparison with former years shows a progressive increase of numbers, which might well alarm any artistic Malthusian who should set himself to calculate results: "as if in Art were propagation too." The number of works exhibited at the Academy in 1840, was 1,241. In 1842 they amounted to 1,343; last year to 1,409, and this year as we have stated, to 1,530. Now, if out of these 1,530, there be, peradventure, fifty, or twenty, or even five, which have not been painted for Art-Unions, or Annuals, or fashionable boudoirs, or to please the million, but for fair fame and its just reward, we may rejoice over the salvation of Art, and pronounce that the world of thought within us is likely to find again its interpretation in the world of Nature around us.

Now, to take things in order and in detail, let us see first, what has been done in the highest department of Art, in historical painting, under which head are comprised all subjects, from sacred or profane history, or from the poets which rank as classical: of these there are few, and a larger proportion than usual are either taken from Scripture, or have a religious tendency. Such subjects have the disadvantage of having been already well nigh exhausted by the elder painters, so that it is difficult to devise any novelty of treatment; and the advantage of dealing with effects and appealing to sympathies, which are inexhaustible.

108, *Hagar and Ishmael*, C. L. Eastlake, R.A., a picture of exquisite grace and sentiment and originality, as regards the conception of a most hackneyed subject. Hagar, bending over the fainting boy, is in the act of presenting to him the refreshment to which he stretches forth his thirsty lips; he has half raised himself on one hand, and his back is to the spectator. The desert extends far behind, till mingled with the distant horizon; a withered fallen date tree lying on the ground, serves the double purpose of breaking and relieving the arid background, with its monotonous lines, and conveying the idea of extreme drought and barrenness. The attitude and countenance of Hagar are full of simple beauty, and the figure and limbs of Ishmael, the youthful flexibility of the back, and the correct marking, finished without display or obtrusiveness, the colour subdued yet rich, are all characteristic of this accomplished painter. He has no other picture this year, which may be a matter of regret, but none of surprise; as Secretary to the Commission for the Decoration of the Houses of Parliament, Mr. Eastlake has sacrificed to the promotion of his art, the time and the talents which might be more profitably to himself expended in the exercise of his art: but this is his affair, and we have more cause for gratitude than complaint. If anything effective is done, it will be in great part owing to his devotion to the object, and his perfect understanding of the end to be attained, and the means to be employed.

339, *Christ and the Woman of Samaria*, J. R. Herbert, A. There is great beauty in this picture, from the earnestness and simplicity of the conception; the wondering expression on the woman's face is good, but the head of Christ is a failure; in trying to give simplicity, the artist has given us vacancy. We think so highly of Mr. Herbert, that we should venture to point out, did space and time allow it, some other faults of execution and management, which an artist of so much feeling and taste might easily have avoided.

361, *Jephtha's Daughter: the last Day of Mourning*, H. O'Neil. This is a very beautiful and carefully painted picture. The daughter of Jephtha, and her attendant virgins, are seen grouped on an eminence in front; some are singing to their musical instruments, others are mourning around; in the far distance, over the plain, camels are seen advancing, which are to carry the victim back to her home—and to death. The effect is that of a glorious eastern sunset; the whole group is kept in a full bright light, and the variety and gaiety of the colours would give it rather too much the air of a bouquet of flowers, considering the solemnity and pathos of the subject, if the beauty and expression of the heads and the simplicity of the grouping did not redeem this minor fault. The whole picture must be pronounced beautiful, and it is so far in advance of any of Mr. O'Neil's former efforts as to have come upon us as a surprise.

423, *Solomon Eagle exhorting the people to repentance during the Plague of the year 1665*, P. F. Poole. This is another picture which has agreeably surprised us; not that the subject is agreeable, but, on the contrary, so full of horror, pain, and pity, that we should not wish to inhabit the room in which it hung; but in point of power and painting it is admirable: and no subject so full of physical horror was ever more finely treated; it appears to us one of the very best pictures in the Exhibition. The great number of figures, grouped without confusion or perplexity, and the concentration of the interest and effect, round the crazed prophet in the centre; the beautiful girl looking up in front; the ruffian, the reckless gamblers, the delirious patient who has escaped from his bed, the ominous looking masked robbers, armed with aromatic essences, one of those horrid women who we are told went about strangling and rifling the dying wretches, and who looks as if arrested by the denunciations of judgment—all these, and a great variety of accessories, render this picture very dramatic and striking without too far outraging the feelings. There is something, too, very effective in the ghastly glare of light shed over the scene, which is also in accordance with all the descriptions of that hideous period, when in the sultry, vapoury noon-tide sun, there was a supernatural ominous glare. It is a powerful picture—and gives earnest of a higher power, which will make us look anxiously for the future works of this artist.

306, *John Knox endeavouring to restrain the violence of the people who, excited by his eloquence against the Church of Rome, destroyed the altar, missals, images of saints, &c. at Perth*, in 1559, J. P. Knight, A.—A great deal of careful painting, and good intention, and variety of expression distinguish this picture, with, however, the tendency to coarseness and the want of elevation and poetry, which are, we think, the defects of this meritorious painter: besides this picture, Mr. Knight exhibits six portraits.

William Etty, R.A., has this year seven pictures in the Exhibition, all of merit—but we could wish that, instead of these seven, he had exhibited one really worthy of him. He is our historical painter *par excellence*, yet not one of these, whatever names or titles he has been pleased to give them, can be called an historical picture. It appears to us, that Mr. Etty has taken his Academy studies of female form, and by the addition of some significant adjunct, has turned them into subjects; thus his *Entombment* is a female model, with dishevelled hair, *posée* as Magdalen, and a group of well-drawn, well-painted figures behind, very like bandits, carrying a dead body; but of the grandeur, the gloom, and the pathos of the deposition of Christ in the sepulchre, we have nothing here—it is worse than Caravaggio. In the same manner we have a woman stooping down, and an ark and a baby being added, it is the *Mother of Moses*. A fore-shortened female figure, excellently drawn as a study, becomes, by the addition of a Cupid, *Venus slumbering in the Greenwood Shade*,—and so on,—the want of intention and character everywhere apparent. We hold this to be unworthy of the mature genius, the acknowledged power, the practised hand of such a man as Etty; so that unless we should hear that his time and efforts are devoted to some great work, and that these things are exhibited as what they are,—studies, not pictures,—we shall visit him with more severe criticism hereafter: for the present we pass on.

C. Leslie, R.A., has five pictures this year, of unequal merit. Of these, *The Queen receiving the Sacrament on the Day of her Coronation*, must rank as History, but it is unavoidably History treated in the

Digitized by Google

genre style. The difficulties of the subject have been met, and in great part overcome, with taste and judgment, and the profile of the Queen is one of the best likenesses we have seen of Her Majesty; the colouring beautiful, bright and harmonious—colour is one of Lealie's excellencies. This, however, is not his best picture here—we shall have to speak of that hereafter.

287, *Waterloo on the 18th of June, half-past seven* P.M., Sir W. Allan, R.A. Here is another picture, which, we presume, must rank as History, in which the most consummate talent has been displayed in the conquest of difficulties in art; and yet, if a panoramic view of a battle-field be history-painting, then Borgognone and Vander Meulen should take rank as historical painters,—all consists in the mode of treatment. Raphael's 'Constantine and Maxentius' (even in the small copy at Hampton Court) is a grand historical picture, not a mere battle-piece,—and we make the observation merely as such, not with any idea of invidious comparison: only we would rather have seen Allan's power of invention and expression and sentiment displayed on a more congenial subject than a battle-field.

516, *Angelica descending from the Flying Horse, after she had been rescued by Ruggiero: from the 'Orlando Furioso,'* J. Severn.—A very poetical subject, very poetically treated; the undraped figure of Angelica seen in front, with its bending delicacy and fair luxuriant tresses, is in exquisite taste and drawing; but in this picture, as is usual with Mr. Severn, the tone of colour is too deep—Time will do his work on it, and can hardly darken without blackening it.

Mr. Hart has no historical picture this year.

280, *Naomi and her Two Daughters-in-law*, E. W. Eddis. A group of three half-length figures, life-size, and with a certain largeness of manner in the drawing and expression, from which we augur well.

562, *Italy*, W. D. Kennedy,—groups of figures, life-size, representing an Italian festa, vine-dressers, &c., evidently intended as a decorative picture, and in style and character admirably adapted for the purpose; the colour is like that of the ancient frescoes (the 'Aldobrandini Marriage,' and others). As well as we can judge from a distance, the picture has great merit as a composition.

Clelia and the Roman Hostages,—Moses protecting the Daughters of Jethro,—and three other incidents in the life of Moses, G. Jones, R.A. Five small sketches in sepia, of historical subjects poetically treated, but certainly not historical pictures.

These brief notes comprise, we think, what has been done in History—from which the reader will also be enabled to judge what has *not* been done. Next week we shall review the other departments in due order.

MUSIC AND THE DRAMA

THE QUEEN'S CONCERT ROOMS, HANOVER SQUARE. Mr. W. H. HOLMES (Professor of the Pianoforte at the Royal Academy of Music) has the honour to announce that his MORNING CONCERT will take place on SATURDAY, June 10, 1843. To commence at half-past One o'Clock precisely. Further particulars will be duly announced.—Stalls, One Guinea each, and tickets, Half-a-Guinea each; may be had at the Principal Music-sellers, and of Mr. W. H. Holmes, 36, Beaumont-street.

ANCIENT CONCERTS.—The Fifth and Sixth Concerts were directed by the Duke of Wellington and H.R.H. Prince Albert. The Hero of Waterloo is generally enterprising on these occasions, but, on Wednesday week, the selection seemed to have been delegated to some less energetic hand; and there was nothing to call for special mention, save the performance of the great *aria* from the 'Creation,' by Herr Staudigl. Prince Albert's, on the contrary, was the best Ancient Concert we ever attended. Not one piece had been selected which was otherwise than choice or interesting: this time, too, we were spared the showy uselessness of the Opera corps—Signori Mario and Lablache being the only Italians *commanded* on the occasion, while the other singers were the established artists usually seen at the Ancient Concerts, *with* Herr Staudigl, whom also it would rejoice us to keep as a fixture in England. To speak now of the music performed: we had a Gregorian chaunt, sung with double choir, a *corale*, by Lucas Osiander (a stranger to us), and a 'Sanctus' by Palestrina, to represent the most antique schools of music: we had, by Handel, two splendid choruses from 'Esther' and 'Saul,' and the stately air, 'Si tra i ceppi,' from 'Berenice,' sung as only Lablache can sing it. Then we were treated to three specimens from Gluck's operas—the overture to 'Armida,' an *arietta* with chorus from the same exquisite faëry tale in music, and the dream of *Orestes* with the Furies, from the 'Iphigenia.' This was sung by Sig. Mario, but the orchestra was at its very worst in its accompaniment of the lulling movement which precedes the apparition of the tormentors,—scratchy and disjointed, where delicacy and smoothness are most eminently required. Nor can we approve the blatancy of the trombones in the following chorus, the musical figures of which were entirely stifled by their indiscriminate blasts. Somehow or other, we hear these violent instruments nowhere in such prominence and plenty as at the Ancient Concerts: we presume that they are luxuries for which we have to thank the conductor. How long will it be before the respect due to the master-works of Art shall be understood in England? We are beginning to remove the tasteless modernizations which, under the pretence of ornament, have disfigured our old buildings—but when will our directing musicians, as well as architects, admit that every age has its own proprieties, which cannot be cast aside, or exchanged for more modern modes of attire, without loss of effect and discredit? The bass *bravura* from 'Der Tod Jesu,' by Graun, a song in the mechanical style so thoroughly exhausted by Handel, deserves to be mentioned, for the sake of Staudigl's admirable execution of it. The 'Credo' from Hummel's mass in E flat, the 'Te Deum' by Haydn, and the 'Gloria' from Cherubini's mass in C, may be grouped together as Catholic music of the modern school. The last movement is as nobly conceived as it is ingeniously executed. It is a chorus with eight *solo* parts, towards the middle of which the maintenance of one note in the accompaniment, with ever-changing harmonies in the orchestra, and ever-changing dialogue in the voices, produces an effect entirely new and happy; and still so consummately managed, as to be guiltless of any appearance of artifice. We cannot pass, without homage, Beethoven's well-known march and chorus from 'The Ruins of Athens,' nor the temple scene in 'Die Zauberflöte.' Beside these pieces, there was no want of music lighter, but still as unhackneyed, to relieve the ear; and had not the audience been too aristocratic to show any pleasure, (that is, supposing it to include many *cognoscenti*,) the whole concert must have been warmly received. We are glad to record it, as a sign that one of our most venerable and valuable musical establishments shows signs of a renewal of its youth. We hope, next week, to have as much to say of the Philharmonic Society.

DRURY LANE.—A new life has been infused into the 'Sappho' of Pacini, by the appearance of Herr Staudigl as *Alcander*. No part, we imagine, could have been selected for the German *basso* more completely alien from his musical sympathies: however, since the selection was inevitable, we only mention the fact to honour the genius which could convert a distasteful task into a labour of love. The music allotted to the Priest is the weakest in the opera: *Sappho*, *Climene*, and *Phaon* having at least all pretty melodies to sing: whereas, the fourth voice in the *quartett* is devoted to the most insipid of insipid *cantabiles* and *bravuras*. Yet with these Herr Staudigl electrified his audience. Small, too, as is the variety of action admissible, he nevertheless contrived to give the part character and colour; and, what is still more, made his words *tell*, by the force and propriety of his emphasis, to the point at which foreign utterance was entirely forgotten. His reception was enthusiastic.

ST. JAMES'S THEATRE.—*French Plays.*—There are some happy persons on whom the shafts of criticism fall stingless. Thus to anatomize Mdlle. Déjazet as an actress, with the view to denounce the nothingness of the dramatic bubbles buoyed up by her brilliant animal spirits, were lost labour. Who would care to put himself in the predicament of the *Père de Jay* in 'Voltaire en vacances,' to be set at nought by an *Arouet* as saucy as herself? Not we. For safety's sake then (if not for honesty's) we had better maintain her personation of the author of the Henriade in his boyish days to be without fault. Thus, too, we will forbear dwelling upon the inanity of such mirth—veritable "crackling of thorns"—as she and M. Levassor stir up in their 'Indiana et Charlemagne;' the one, the plainest spoken of *grisettes* that ever donned *débardeur's* costume to mob it at a carnival masquerade—the other so riotous a *tapageur*, though a knight of needle and shears, as to convince us that the man made of nine French tailors must be Gog or Goliath, at the smallest. But we must record our judgment that we have nothing on our own stage—Keeley's fatuous cockneys not forgotten—so indefeasibly London-*ish* as these two amiable young personages are Parisian. Wonderful is it to find them singing their songs, and dancing their dance at St. James's, by the light of the spectacles of solemn Lord *This*—and under the shadow of moral Lady *T'other's* turban! We are a strange people. Talk to an English woman of fashion in Paris about the Théâtre Palais Royal, and ten to one a wrinkled brow is her answer—possibly a "*not at home*" from thenceforth! while here, we have the very pillar of that "amusing little templo of ungodliness"—as Mrs. Gore calls it—going all her lengths and *breadths* with a comrade as unreserved, and every one is charmed, and crying "who but Déjazet?" Seriously, after her kind, she is of consummate excellence. We must also praise as emphatically as words can convey meaning, the performance of M. Levassor in 'La Nuit aux Soufflets,' a little comedy of higher order than the above mentioned carnival duett. In this he is a foolish Duke of Ferrara, who servilely adopts Louis Quatorze for model, and, in spite of the leading-strings in which he is held by a rigorous Dowager Duchess, breaks out into weak little desires for such adventures and *bonnes fortunes* as are supposed to be becoming to royal youths. While wandering in the park at twilight in a quest of this kind, Duke Hercules receives a slap on his face by mistake. Notions of offended dignity never struggled through a duller brain: and the stratagems by which the real criminal, the Duke's master of the hounds, a sort of second-hand Dubois, contrives to elude suspicion, yet to satisfy his royal master's desires of imitating Le Grand Monarque, while soothing his offended spirit—make up a trifle, which, with so comical and careful an artist as M. Levassor for centre, we almost fancied, at the moment, as profound and as pointed as a scene by Beaumarchais. One glimpse of the visage of his forcible-feeble Highness, is worth the price of a stall.

MISCELLANEA

Paris Academy of Sciences, May 8.—M. Arago made a communication of the discovery of a telescopic comet, by M. Mauvais, on the 2d instant, (*ante*. p. 470). M. Arago joined to this communication some remarks on the most celebrated of all comets, that of Halley, which made its last appearance in 1835. Our readers are aware that several astronomers have examined the Chinese records, for the purpose of ascertaining whether any observation had been made on the appearance of Halley's comet. The researches of M. Biot have shown that Halley's comet was observed in China on the 26th of Sept. 1378; and M. Arago has compared the observations made in Europe on Halley's comet, and finds them coincide so perfectly with the observations made in China on the comet of 1378, that he entertains no doubt that the comet was that called Halley's comet.—A roport was read on a paper by M. Payer, entitled 'Inquiries into the tendency of stalks and stems towards the light.' It had long been known that plants placed in the dark incline towards any opening which admits the light, but it was not known which of the solar rays caused this tendency. M. Payer has resolved the point. He examined the solar action first by movable coloured glasses used as screens, and, secondly by a fixed spectrum. The four glasses which he used allowed only certain rays to pass, viz.:—No. 1, red; No. 2, red, orange, yellow, and green; No. 3, red, light orange, yellow, green, and blue; No. 4, red and violet. The two first caused no inclination; but the other two rapidly produced that effect.—M. Dufresnoy read a report on a paper by M. Paillet on the geological character of the earth, which, in Sicily and Calabria, contains sulphur. M. Paillet concluded that the sulphur is the result of the decomposition of the

Digitized by Google

gypsum under the influence of the igneous phenomena. —A communication was made by M. Beaude on the subject of mineral waters sold in earthenware bottles. For some time past there have been several complaints as to the quality of the Eau de Vichy, sold in bottles of this description, and the deterioration was supposed to have been caused by the decomposition by the contents of the substances of which the vessels in which it is contained are composed. M. Beaude states that he has analyzed the waters contained in earthenware bottles, and has found no trace of the decomposition which was supposed to exist. He concludes that these bottles are quite as good for the purpose for which they are used as glass. This opinion is in opposition to that of M. Rognetta, who asserts that several kinds of mineral waters, which are sold in earthenware bottles, are deteriorated by the reaction of the mineral elements of the water upon those of the bottle, the mixture of the produce of this reaction in the liquid, and the mechanical infiltration of the liquid in the pores of the bottle. He concludes that it is improper to send mineral waters from the sources which supply them in any other way than glass bottles of the best quality.

Caricatures.—There is a new artist and humourist in the field, or we are mistaken. Here we have an etching, by "Pam," of Sir Robert as an Income Tax collector presenting his demand to the keeper of a china shop, who significantly, but with savage resolution not to be shaken, bids him "Take it out in China." The very crockery seems to threaten, and a brace of brandy-flasks in the form of pistols are ominous of the issue. The state of trade and circumstances are cleverly intimated by the accessories —the spiders have woven their webs in places which good ale should have moistened—the ugly "mugs" grin at the collector—a little Staffordshire poodle has turned his back on a Staffordshire Wellington, and looks unutterable things—even a China jar has a history on the face of it.

The Speaking Machine.—I have as yet seen no notice in your valuable periodical of an invention, which is, at present, attracting great attention here, and which certainly merits every praise that can be bestowed upon unwearied perseverance and successful ingenuity. It is the *Sprachmaschine* or the Speaking Machine, not quite appropriately called Euphonia, of Mr. Faber, the result of a beautiful adaptation of mechanics to the laws of acoustics. You are aware that the attempts of Cagniard la Tour, Biot, Müller, Steinle, to produce articulate sounds, or even to imitate the human voice, have not been very successful; in fact, our knowledge of the physiology of the larynx and its appendices has been so limited, that we have not even an explanation of the mode in which the falsetto is produced. Mr. Faber's instrument solves the difficulties. I can only give you a very imperfect idea of the instrument. To understand the mechanism perfectly, it would be necesary to take it to pieces, and the dissection naturally is not shown the visitor—less from a wish to conceal anything, than from the time and labour necessary for such a purpose. The machine consists of a pair of bellows at present only worked by a pedal similar to that of an organ, of a caoutchouc imitation of the larynx, tongue, nostrils, and of a set of keys by which the springs are brought into action. [The further description would be unintelligible without diagrams.] The rapidity of utterance depends of course upon the rapidity with which the keys are played, and though my own attempts to make the instrument speak sounded rather ludicrous, Mr. Faber was most successful. There is no doubt that the machine may be much improved, and more especially that the *timbre* of the voice may be agreably modified. The weather naturally affects the tension of the Indian rubber, and although Mr. Faber can raise the voice or depress it, and can lay a stress upon a particular syllable or a word, still one cannot avoid feeling that there is room for improvement. This is even more evident when the instrument is made to sing, but when we remember what difficulty many people have to regulate their own chordæ vocales, it is not surprising that Mr. Faber has not yet succeeded in giving us an instrumental Catalani or Lablache. Faber is a native of Freiburg, in the Grand Duchy of Baden —he was formerly attached to the Observatory at Vienna, but owing to an affection of the eyes, was obliged to retire upon a small pension; he then devoted himself to the study of anatomy, and now offers the results of his investigations and their application to mechanics, to the world of science.

Hamburgh, March 31. I am, &c. S.

Lotteries!—Hereford Art-Union.—With a view to aid in extending a love for the Arts of Design, and to give encouragement beyond that afforded by the patronage of individuals, it has been proposed to purchase by means of Shares, on the principle of the Great Art-Union of London, the Pictures of Mr. ——, &c. &c. Plan.—The purchase to be effected by the following mode, viz.:—325 Shares of one guinea each, being the total amount of the prices of the whole of the pictures. To be disposed of by lot after the manner of the London Art-Union; and in addition to the equal chance afforded of each subscriber becoming possessed of a valuable work of art, each share will be entitled to a Splendid and Valuable Etching, on copper, of the Prize No. 1, Mr. —— having liberally volunteered to give an original finished Etching on copper, which will be carefully etched by himself.

May, 1843.

SIR WALTER SCOTT'S WORKS AND LIFE.

I.

In 98 Volumes, small 8vo. cloth lettered,

196 Engravings on Steel,

WAVERLEY NOVELS, 48 Vols.—POETRY, 12 Vols.—PROSE WRITINGS, 28 Vols.—LIFE, 10 Vols.

This complete Edition is getting scarce.

II.

In 10 Vols. royal 8vo. cloth lettered,

Portraits and other Engravings,

WAVERLEY NOVELS, 5 Vols.—POETRY, 1 Vol.—PROSE WRITINGS, 3 Vols.—LIFE, 1 Vol.

III.

WAVERLEY NOVELS,

5 Vols. royal 8vo., just completed,

(SAME AS IN THE PRECEDING SET,)

With Engraving from GREENSHIELDS's Statue, and Titles after HARVEY.

IV.

WAVERLEY NOVELS,

25 Vols. small 8vo., just completed.

The most popular of the Novels of this Edition are to be had, very neatly half-bound morocco, price 5*s.* each.

V.

WAVERLEY NOVELS,

Abbotsford Edition.

Royal 8vo., each Fortnight in Parts, 2*s.* 6*d.*

Vols. I. and II. are completed, also WAVERLEY—GUY MANNERING—THE ANTIQUARY—BLACK DWARF, with OLD MORTALITY—in separate Novels.

VI.

WAVERLEY NOVELS,

People's Edition.

SEVENTY-TWO Weekly Numbers, and EIGHTEEN Monthly Parts, have appeared, also WAVERLEY—GUY MANNERING—THE ANTIQUARY—ROB ROY—THE BLACK DWARF, with LEGEND OF MONTROSE—and OLD MORTALITY—in separate Novels.

VII.

NOW IN COURSE OF PUBLICATION,

SIR WALTER SCOTT'S LIFE OF NAPOLEON,

To be completed in Five Volumes, uniform with

WAVERLEY NOVELS IN 25 VOLS. SMALL OCTAVO,

With Plates and Maps.

IN THE PRESS,

SIR WALTER SCOTT'S POETRY,

To be comprised in 6 Vols., uniform with

WAVERLEY NOVELS IN 25 VOLS. SMALL OCTAVO,

With Twelve Plates after TURNER.

R. CADELL, EDINBURGH;

HOULSTON & STONEMAN, LONDON.

And to be had of every Bookseller in Great Britain and Ireland.

Now ready, to be had of all Booksellers,

LIEUT. V. EYRE'S PORTRAITS of the CAUBUL PRISONERS, 32 Plates, 21*s.*; coloured, 2*l.* 12*s.* 6*d.*

Dickinson & Son, 114, New Bond-street.

MARY HOWITT'S NEW WORKS FOR YOUTH.

In one handsome pocket volume, price 2*s.* 6*d.* bound.

NO SENSE LIKE COMMON SENSE: a Tale for Young People. By MARY HOWITT. Forming part of a Series of Tales for the People and their Children.

London: printed for Thomas Tegg, 73, Cheapside; where may be had, printed uniform, ALICE FRANKLIN, a Tale by MARY HOWITT. Price 2*s.* 6*d.* bound.

Price 2*s.* 6*d.* Part 2 of

A CYCLOPÆDIA of BIBLICAL LITERATURE. By JOHN KITTO,

Editor of 'The Pictorial Bible,' &c.

Assisted by a more numerous body of distinguished Scholars and Divines, British and Foreign, than has ever hitherto been engaged in any similar undertaking.

Adam & Charles Black, Edinburgh; and sold by all Booksellers.

THE NEW VOLUME OF

MR. JAMES'S RICHARD CŒUR DE LION
Is now ready.

Also, lately published, Vols. I. and II.

"Mr. James's characters are drawn with the utmost attention to existing records. The events are industriously studied, so as to bear the stamp of historic truth; and the very landscapes are painted with that fidelity which an artist only can bestow."
Monthly Review.

Saunders & Otley, Publishers, Conduit-street.

Richard Bentley, New Burlington-street,
(*Publisher in Ordinary to Her Majesty.*)

MAGNETS, ELECTRO-MAGNETIC and ELECTRICAL MACHINES, Improved Batteries, Callan's Coils for giving powerful shocks, Dissolving Views, Cameras, and all kinds of Optical and Philosophical Apparatus, made and sold by C. W. COLLINS, Instrument Maker and Accurator to the Royal Polytechnic Institution, No. 3, Wardour-street, third house from Oxford-street, London.

MOULD CANDLES to BURN WITHOUT SNUFFING.—KEMPTON'S PATENT.—These candles do not require snuffing; they burn longer and are cheaper than any other candle; the flame is steady and brilliant. No metallic or deleterious matter is used in the manufacture. Price 8*d.* per lb. Sold by G. E. Parish, agent for exportation, 21½, Bread-street, City, and by Slodden & Stocking, 42, High-street, Marylebone; W. Gethem, Broadley-terrace, Blandford-square; W. Evans, Italian warehouse, Greenwich; John Hawkins, grocer, High-street, Whitechapel; George Hawley, grocer, Pitfield-street, Hoxton; S. Game, Fish-street-hill; J. Pain, grocer, Bethnal-green-road; G. H. Hudson, 229, Blackfriars-road; C. H. Nicholas, 19, Bolingbroke-row, Walworth; and at the manufactory, Old Bargehouse, Christchurch, Surrey.

METCALFE'S NEW PATTERN TOOTH-BRUSH and SMYRNA SPONGES.—The Tooth-Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose—1*s.* An improved Clothes-Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-Brushes, with the durable unbleached Russian Bristles, which do not soften like common hair. Flesh-Brushes of improved graduated and powerful friction. Velvet-Brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment, 130 B, Oxford-street.
CAUTION—Beware of the words "From Metcalfe's" adopted by some houses.

WATCHES by WEBSTER & SON, Chronometer Makers to the Lords of the Admiralty (Established 128 years), 2, BIRCHIN-LANE. The largest assortment of fine Second-hand Watches of any house in London, by the most eminent makers—many nearly equal to new, and at little above half their original cost, all of which W. & Son warrant. They consist of fine Repeaters, Duplex, Lever, and Horizontal Escapements, all of superior manufacture. New Watches of the most elegant patterns upon the principle of their Chronometers, to which the Government awarded the prizes three years in succession, with compensation balances to counteract the variations of temperature. Also a large assortment of Lever and elegant Horizontal Watches, for Ladies and Gentlemen, at considerably reduced prices. Old Watches taken in exchange. The most experienced workmen are employed on the premises in the repairing department.
Webster & Son, 2, Birchin-lane, Cornhill.

CHARLES F. BIELEFELD respectfully informs ARCHITECTS, BUILDERS, DECORATORS, &c. that he has re-published his Quarto Volume, with a Tariff, at a very reduced price, viz. 20*s.* (formerly 3*l.* 3*s.*) containing nearly 1000 patterns of ARCHITECTURAL ORNAMENTS in every style, principally from designs by eminent architects. The ornaments may be had manufactured in the improved PAPIER MACHÉ, at the Works, 15, Wellington-street North, Strand. The book will be forwarded to the country on receipt of a Post Order for 20*s.*
"This is unquestionably a most valuable invention."—*Literary Gazette.*
"We deem it a duty to make as widely known as possible one of the most admirable inventions of the present day; we allude to the Papier Mâché of Mr. Bielefeld," &c. &c.—*Court Journal.*
"A large Quarto Volume on the use of the improved Papier Mâché in Furniture, the Interior Decoration of Buildings, &c. has been placed in our hands; and certainly until we had perused its preface, and glanced over its pictured contents, we had no conception of the number of purposes for which paper was available. Every possible description of Ornaments for ceilings, cornices, panelling, mouldings, &c., which, from the lightness and durability of the material, and susceptibility of high finish, are more than twice the value of any composition."
—*Observer.*
"Mr. Bielefeld has shown not only the use of Papier Mâché, but its beauty, so clearly, as to make his volume a sad temptation to persons of more taste than fortune."—*Athenæum.*
"Its lightness, sharpness of outline, and flexible tension of substance, render it, at all events, of incalculable value as a substitute for plaster and wood-carving, or rather as a *vast improvement* on either."—*Polytechnic Journal.*
Papier Mâché Works, 15, Wellington-street North, Strand.

BLUE LIAS LIME, at RICHARD GREAVES' WHARF, Blue Lias Wharf, Paddington.—The Canal have offered such reductions in their tonnages, that the above valuable Lime can be offered on the same terms as Lime from Dorking.—As MORTAR for all Foundations, Sewers, &c., it is superior to any, as it sets as hard as stone under water.—As CONCRETE, it has more power than any other Cement or Lime.—As CEMENT, it has the colour of, and sets as hard as, stone, and does not vegetate.——Mr. GREAVES is now supplying the Works at Woolwich Dockyard, the Tower, and for the Sewers of the Hatton Garden Commissioners.

"Hamburgh, 14th March, 1843.
"Sir,—Respecting Blue Lias Lime I am fully aware of its quality, having always specified for its use for Hydraulic and Sewer Works, and, as technical adviser, for the rebuilding of this City I have done the same. "WILLIAM LINDLEY."

"Oxford, 4th May, 1843.
'Dear Sir,—I am quite prepared to certify that your quarries near Stratford-on-Avon are true Blue Lias Stone, and that stone of this formation is an excellent material for making Mortar for setting in Water Works and damp foundations.
"W. BUCKLAND."

PATENT PERRYIAN PENS. Prices rendered accessible to all Writers.—JAMES PERRY & CO., Manufacturers to Her Majesty and H.R.H. Prince Albert, have just introduced a new variety of their excellent Metallic Pens, in boxes containing one gross, &c., in cases containing a quarter of a hundred, and on cards; all of which are manufactured under the protection of their Patents, suitable for every description of writing, and superior to all the ordinary Steel Pens in general use. J. P. & Co. strongly recommend Bankers, Merchants, Exporters of Metallic Pens, and all large buyers, to make trial of these articles, in the full confidence they will be found to possess more of the necessary elasticity for the production of good writing than any other Pens at a similar price.—Sold by all Stationers and Dealers in Metallic Pens throughout the Empire. Manufactory, 37, Red Lion-square, London.

H. WALKER'S NEEDLES (by authority the Queen's Own), in the illustrated Chinese Boxes, are now in course of delivery to the trade. The needles have large eyes, are easily threaded (even by blind persons), and have improved points, temper, and finish. Each paper is labelled with a likeness of Her Majesty or H.R.H. Prince Albert, in relief, on coloured grounds. Every quality of needles, fish-hooks, hooks and eyes, steel pens, &c. for shipping. These needles or pens for the home trade are sent free by post, by any respectable dealer, on receipt of thirteen penny stamps for every shilling value. H. Walker, Manufacturer to the Queen, 20, Maiden-lane, Wood-street, London.

Exposé of the folly of ascribing Nervousness to Stomach, Liver, and Bowel Complaints.—Just published, 3rd edition, by Dr. Moseley, price 5*s.* ("This is the best book on nervousness we have."—*Prof. S*—— (*Surgeon.*)

ELEVEN CHAPTERS on NERVOUS or MENTAL COMPLAINTS. Simpkin & Marshall, and all Booksellers. A clergyman of Cambridge University, having cured himself of a nervous complaint of fourteen years' duration, and in eight years, out of 9,000 patients, known not to be uncured, offers, from benevolence rather than gain, to cure others. Low spirits, sleeplessness, mental debility, exhaustion, determination of blood to the head, vertigo, groundless fear, failure of memory, incapacity for study and business, restlessness, irresolution, wretchedness, indecision, delusion, melancholy, thoughts of self-destruction, insanity, &c., are curable by this discovery. Most recover in six weeks. Means of cure sent to all parts at the cost or half the cost prices, and no fee for advice demanded. Apply to, or address, post paid, Rev. Dr. Willis Moseley, 9, Charlotte-street, Bloomsbury. At home from 11 till 3.

TO LADIES.

ROWLAND'S KALYDOR, under the *special patronage of Her Most Gracious Majesty* and the *Royal Family*.—A creamy, odoriferous preparation from *Oriental Exotics*, is now universally known as the *only* safe and efficient *protector* and *beautifier* of the Skin and Complexion. Its virtues are commonly displayed in thoroughly eradicating all *pimples, spots, redness, tan, freckles*, and other unsightly *cutaneous defects*, in healing chilblains, chaps, and in rendering the most rough and uneven skin pleasantly soft and smooth. To the *complexion* it imparts a juvenile roseate hue, and to the *neck, hand*, and *arm*, a delicacy and fairness unrivalled. To Gentlemen, it allays the irritation of the skin after shaving. Price 4*s.* 6*d.* and 8*s.* 6*d.* per bottle, duty included.
CAUTION.—Ask for 'ROWLAND'S KALYDOR,' and see that these words are on the envelope, as much *pernicious* trash is now offered to the public as 'KALYDOR' by Perfumers of *apparent* respectability.
*** To protect the public from fraud, the Hon. Commissioners of Stamps have authorized the Proprietors' signature to be engraven on the Government Stamp thus—A. ROWLAND & SON, 20, Hatton-garden; sold by them, and by Chemists and Perfumers.

BUTLER'S COMPOUND CONCENTRATED DECOCTION, or FLUID EXTRACT of SARSAPARILLA, is the original of the now numerous concentrated preparations of the kind. A dessert spoonful of it, diluted with water, makes half a pint of the compound decoction, of the same strength and composition as that ordered by the British Pharmacopœias. It is prescribed as an alterative in scrofula, scurvy, eruptions of the skin, and all cutaneous diseases; also has been found extremely useful in chronic rheumatism, in secondary symptoms, and after an improper use of mercury.
Prepared and sold in pint bottles 20*s.*, half-pints 10*s.*, and quarter-pints 5*s.* 6*d.*, by Thomas Butler, Chemist, 4, Cheapside, (corner of St. Paul's Churchyard.) London; and may be obtained of J. Sanger, 150, Oxford-street; Davenport & Co. Waterloo-place, Edinburgh; or, by order, through any respectable Druggist.
*** No. 4, Cheapside, the corner of St. Paul's Churchyard. No connexion with any other establishment of the same name.

DELICACY OF COMPLEXION.—The use of GOWLAND'S LOTION is speedily followed by the disappearance of every species of cutaneous defect and discolouration, and the establishment of a pure surface of the skin, accompanied by the brilliant circulation which constitutes the tint of beauty; whilst as a refresher it preserves the most susceptible complexion from the effects of heat, freckle, and sallowness, and sustains in all cases to a protracted period the softness of texture and vivacity peculiar to earlier years.—'Robt. Shaw, London,' is in white letters on the Government stamp, without which it is not genuine.—Prices, 2*s.* 9*d.*, 5*s.* 6*d.*; quarts, 8*s.* 6*d.* Sold by all Perfumers and Medicine Venders.

FOR BEAUTIFYING THE SKIN.—GODFREY'S EXTRACT of ELDER FLOWERS, a most fragrant perfume, and delightful cosmetic. It speedily and completely removes tan, redness, &c., and by its cooling, balsamic, and healing qualities, renders the skin soft, pliable, and free from dryness, scurf, &c., and clears it from every humour, pimple, or eruption. By its use the skin becomes, and continues, delicately clear and soft, and the complexion fair and beautiful. In shaving, it is invaluable, rendering the skin smooth and firm, and protects it from the effects of sun and dust. It is beyond all praise as a general family lotion. Sold in bottles, price 2*s.* 9*d.*, by all respectable Medicine Venders and Perfumers.

13, *Great Marlborough Street, May* 20, 1843.

MR. COLBURN'S NEW PUBLICATIONS.

I.

WINDSOR CASTLE:

An Historical Romance.

By W. HARRISON AINSWORTH, Esq.

Author of 'The Tower of London,' 'Rookwood,' &c. Complete in 3 vols. post 8vo. with ILLUSTRATIONS by GEORGE CRUIKSHANK. (Now ready.

II.

DIARY OF THE TIMES OF CHARLES II.

By the HON. HENRY SIDNEY, afterwards EARL of ROMNEY.

Including his CORRESPONDENCE with the COUNTESS of SUNDERLAND, and other Distinguished Personages.

Edited by R. W. BLENCOWE, Esq.

2 vols. 8vo. with Portraits. (Just ready.)

III.

THE LOST SHIP, OR THE ATLANTIC STEAMER: A ROMANCE.

By the Author of 'Cavendish,' 'The Flying Dutchman,' &c.

In 3 vols. (Now ready.)

"A tale full of action, character, and excitement. It contains some of the most novel, stirring, and spirited scenes, that are to be found in any naval romance of the day."
Naval and Military Gazette.

IV.

STEAM VOYAGES ON THE MOSELLE, THE ELBE, AND THE LAKES OF ITALY;

Together with Notices of THURINGIA, and SAXON SWITZERLAND.

By MICHAEL J. QUIN, Esq.

Author of 'A Steam Voyage down the Danube.' In 2 vols. small 8vo. with Illustrations. (Just ready.)

V.

THREE YEARS IN CALCUTTA; OR, THE STRANGER IN INDIA.

By G. W. JOHNSON, Esq., Advocate of the Supreme Court at Calcutta.

2 vols. small 8vo. 18*s.* bound. (Now ready.)

"Never (says the Author in his preface) did any other parent country than Great Britain possess a colony so magnificent as Hindostan, and never were the inhabitants of any parent country either more generally ignorant of the actual state of its colony, of its resources, or of the manners and customs of its population."
This work on the actual state of India will doubtless prove a useful and acceptable guide to all strangers.

VI.

EXCURSIONS UP THE RHINE.

By VICTOR HUGO,

Author of 'The Hunchback of Notre Dame,' &c. Closely printed in a single volume, for the use of English Travellers, price 10*s.* 6*d.* bound. (Now ready.)

"We have here many excellent specimens of the talent of Victor Hugo. His descriptions are wonderfully spirited, full of verve in their language, and of picturesque truth in detail; and the species of grotesque romance with which he invests the Middle Ages gives an interest to his scenes, persuading even the most plodding antiquary to pardon the occasionally fantastic heightening received by the picture from the warm fancy of the artist."—*Quarterly Review.*

VII.

MR. BURKE'S NEW WORK.

A COMPANION TO THE PEERAGE AND BARONETAGE.

Now ready, PART I. (to be completed in Four Quarterly Parts, price 10*s.* 6*d.* each),

MR. BURKE'S HISTORY OF THE LANDED GENTRY:

A Genealogical and Heraldic Dictionary

Of the whole of the Landed Gentry, or Untitled Aristocracy of England, Scotland, and Ireland.

To be comprised in a Single Volume, of 1600 pages, beautifully printed in double columns uniformly with the Author's popular PEERAGE AND BARONETAGE.

VIII.

THE HISTORY OF OUR OWN TIMES.

By the Author of 'The Court and Times of Frederick the Great.'

Vol. I. price 10*s.* 6*d.* bound, with Illustrations. (Now ready.)

"The object of this work is to present an historical account of the extraordinary and astounding events of the last fifty years, commencing with the French Revolution. An attentive perusal of this first volume has satisfied us that the author is equal to the task he has undertaken; and that if the remaining volumes be written with the same vigour, impartiality, and accuracy, 'Our Own Times' will form a valuable addition to our historical literature,—the more valuable because embracing within itself that which can nowhere else be found, except in scattered portions diffused through many ponderous, and not easily accessible volumes."—*John Bull.*

IX.

LETTERS OF MARY, QUEEN OF SCOTS,

Illustrative of her PERSONAL HISTORY, now first published from the Originals.

Edited by AGNES STRICKLAND.

New and Cheaper Edition, with numerous Additions, uniform with Miss Strickland's 'Lives of the Queens of England,' in 2 vols. small 8vo. with Portrait, 21*s.* bound. (Just ready.)

X.

LIVES OF THE PRINCES OF WALES,

HEIRS TO THE BRITISH THRONE.

By FOLKSTONE WILLIAMS, Esq., Author of 'Shakspeare and his Friends,' &c.

Vol. I. price 10*s.* 6*d.* bound, with Illustrations. (Now ready.)

"One of the most important and highly-acceptable additions to English history that has for many years issued from the press—every page teems with interest."—*Bath Herald.*

XI.

NARRATIVE OF A VOYAGE ROUND THE WORLD,

Performed in H.M.S. SULPHUR, in 1836–42.

By CAPT. SIR EDWARD BELCHER, C.B. F.R.A.S. &c.
Commander of the Expedition.

Under the Authority of the Lords Commissioners of the Admiralty.

2 vols. 8vo. with upwards of Forty Illustrations, price 36*s.* bound. (Now ready.)

"Of these volumes it is impossible to speak too highly. We can conceive no occupation likely to afford more authentic and important knowledge, or to yield at the same time more amusement and delight than the perusal of the work before us."—*John Bull.*

HENRY COLBURN, Publisher, 13, Great Marlborough-street.

☞ *Orders received by all Booksellers.*

GRAMMAR, COMPOSITION, ELOCUTION.—Mr. LEOPOLD SMART, Pupil of his Father, Mr. B. H. Smart, and practically familiar with his modes of tuition, gives INSTRUCTION in SCHOOLS and FAMILIES on reduced terms. Cards at Hookham's Library, Old Bond-street.—Address, 55, Connaught-terrace, Hyde Park.

HANWELL COLLEGIATE SCHOOL, MIDDLESEX. Principal, the Rev. J. A. EMERTON, M.A., Curate of Hanwell.—Parents and Guardians desirous of selecting a School in a beautiful and healthy situation, combining, on fixed and liberal terms, the intellectual advantages of a Collegiate Course, with religious instruction, moral and physical training, and domestic care, may obtain Prospectuses on application to the Rev. T. T. Walmsley, D.D., Rectory, Hanwell; J. D. Macbride, Esq., D.C.L., Principal of Magdalene Hall, Oxford; or of the Principal, at the School.

KING WILLIAM'S COLLEGE, ISLE OF MAN.
Principal, Rev. R. DIXON, M.A., Cambridge.
Vice-Principal, Rev. J. G. CUMMING, M.A., Cambridge.
The prescribed Course of Education embraces the Greek and Latin Classics; Hebrew; the Mathematics, including Mensuration, Fortification, and Navigation; Arithmetic and Merchants' Accounts; Writing, History, Geography, English Grammar, and Composition; and the Doctrines and Duties of Christianity, as taught by the United Church of England and Ireland. The greatest attention is paid to the Religious and Moral Improvement of the Pupils; and the whole system of instruction is directed to the promoting and cherishing of early genuine piety in union with a sound liberal education.
The Church Missionary Society place the sons of their Missionaries in this Institution.
The College Fees vary from 1l. to 3l. 10s. per quarter, according to age.
Boarders are received into the College, and by the Masters at 30 guineas per annum.
The College will RE-OPEN on AUGUST 1.
Further particulars may be obtained by application to the Principal.
May, 1843.

EDUCATION IN GERMANY.—The English Institution at MANNHEIM, directed by Dr. LOVELL, was established in 1836 under the patronage of the Grand Duchess Stephanie of Baden, and it offers peculiar advantages to all wishing to combine a solid English Education with the rapid acquisition of the FRENCH and GERMAN languages.—The fullest particulars can be obtained of Frederick Lover, Publisher, Aldine Chambers, Paternoster-row, London.

EDUCATION AT LUBEC, IN GERMANY.

THE very superior nature of the Education imparted to Youth at the higher Schools and Colleges of Germany, and more particularly, the great proficiency in Modern Languages, History, Geography, Mathematics, and other practical branches of instruction, to be attained by Pupils destined for the Army or Navy, or for Commercial pursuits, has long convinced reflecting parents and guardians of the advantages to be conferred on the Youth under their charge, by sending them over to Germany, to complete their Education at one of those Institutions.
The College or High School at Lubec, denominated "The Catharineum," has for centuries enjoyed high repute as one of the first of these Collegiate Schools; a Commercial Institution in the same city, for the communication of practical commercial and counting-house knowledge to Pupils of a more advanced age, has attained to almost equal celebrity, and an English Gentleman resident there, who has been a Master at the Catharineum nearly Twenty Years, has an Establishment for the reception of a limited number of Pupils, destined to attend either of those Institutions, under whose care parents and guardians may rest assured, that the Youth they may intrust to his charge will meet with not only all the superintendence requisite to their obtaining a perfect knowledge of the German and French Languages, and to insure due progress in their other studies, but also all those comforts of home and social intercourse, and that attention to the religious and moral opinions of English parents, the want of which so often deters persons from sending youth abroad.
For a Prospectus and further Particulars, Terms, &c., apply to W. L. NEWMAN, Esq., Insurance Office, York.

TO PARENTS AND GUARDIANS.

A SURGEON, of considerable practice in NORWICH, has a VACANCY for a well-educated YOUTH as a PUPIL to the Medical Profession, who will be allowed to avail himself of the great professional advantages which the many charitable institutions of that city afford.—For further particulars apply to Messrs. Corbyn & Co. Chemists, 300, Holborn; or, by letter, to G. F. Esq., Tombland, Norwich.

HORTICULTURAL SOCIETY of LONDON
EXHIBITIONS at the GARDEN.—The next Exhibition will take place on SATURDAY, the 17th of June; subjects for Exhibition must be at this Office, on Friday, the 16th of June, or at the Garden before half-past EIGHT o'clock, A.M., on the day of Exhibition.
The gates will be opened at One, P.M. Tickets are issued to Fellows at this Office, price 5s. each; or at the Garden in the afternoon of the days of Exhibition, at 7s. 6d. each; but only to Orders from Fellows of the Society.—N.B. No TICKETS WILL BE ISSUED IN REGENT-STREET ON THE DAY OF EXHIBITION, 21, Regent-street.

OFFICE for PATENTS of INVENTIONS and REGISTRATION of DESIGNS, No. 14, Lincoln's Inn-fields, where all business relating to the Securing and Disposing of BRITISH and FOREIGN PATENTS, Preparation of Specifications, Drawings of Inventions, is expeditiously and economically effected.
Also REGISTRATIONS under the New Consolidated Copyright of Designs Act, 5 & 6 Vict. cap. 100.
A Prospectus, containing much useful information, may be obtained, and references to an Alphabetical List of Patents and Registrations made, on application to Mr. Alexander Prince, 14, Lincoln's Inn-fields.

SOCIETY for the FORMATION of a PUBLIC GALLERY of the WORKS of LIVING BRITISH ARTISTS.—The Projectors of the Society have seen with much satisfaction the interest which has already been excited in its objects, and confidently anticipate the support of the Lovers of Art in their attempt to lay the foundation of a Public Gallery of the Productions of British Artists. Communications may be addressed to 71, Wimpole-street.

THE LATE JOHN VARLEY.—A few DRAWINGS by the above esteemed artist, his last productions, and which have never been before the public, are offered for SALE by a gentleman who had them direct from Mr. Varley.—Apply at No. 6, Cambridge-street, corner of Broad-street, Golden-square, where they may be seen.

ITALIAN PICTURES, the Property of a Gentleman.—The Reposo, by Titian; St. John and the Lamb, by Carlo Dolce; The Madonna of the Time of Raphael; The Virgin and Child, by Andrea del Sarto; TO BE SOLD BY PRIVATE CONTRACT, at the Picture Gallery 107, Regent-street, established for the Sale of Pictures, &c. by Commission. Open from 9 till 5.

THE ROYAL GOBELIN TAPESTRY.—Four most beautiful Specimens brought to this Country in the early part of the French Revolution. The subjects from the Life of Henri Quatre: the Compositions are truly elegant, and they are presumed to be unique, upright, oval in shape, and appropriately framed. TO BE SOLD BY PRIVATE CONTRACT, and may be seen from 9 till 5 o'clock, at the Commission Picture Gallery, 107, Regent-street.

WHOLE-LENGTH PORTRAIT of QUEEN ELIZABETH.—TO BE SOLD, a very fine and rare PORTRAIT of QUEEN ELIZABETH. Her favourite Dog, mentioned in her life, is on a table, on which her hand rests. This picture is in its original genuine state, painted by Mark Gerard. Also for Sale, a capital Picture by CANALETTI, a VIEW IN VENICE, a charming composition, and a Picture of high quality. To be viewed at the Commission Picture Gallery, 107, Regent-street, from 9 till 5 o'clock.

TO READING and BOOK SOCIETIES, CLERGYMEN and FAMILIES throughout ENGLAND, SCOTLAND, and IRELAND.
New Plan for obtaining all the NEW PUBLICATIONS and STANDARD WORKS for Perusal, without purchase.
Now READY, Gratis and Post-free,
HINTS for the FORMATION of READING SOCIETIES.
The plan advocated in this little pamphlet will effect two important objects—that of adding to the supply of the current literature, the choice of all the most valuable Works in the various languages; and that of extending the choice of *New Books* to the entire productions of the press. It is especially adapted to provincial readers, as by a small annual subscription the perusal of all the New Works, as they appear, may be obtained.
Saunders & Otley, Publishers, Conduit-street.

TO READING CLUBS, LIBRARIES, &c.—4000 VOLUMES of SECOND-HAND NOVELS, TRAVELS, &c. including all the late publications, to be SOLD at amazing low prices for cash. Catalogues, with prices affixed to each set, *gratis*, at CARVALHO'S Cheap Book Warehouse, 147, Fleet-street. Also for sale, 100 Volumes, *all new*, library binding, for only 7l. 10s. (1s. 6d. a vol.) published as *nearly* 50l.; among which are Works by Bulwer, Marryat, and other popular Authors.

CHEAP BOOKS,
To be obtained of JOHN KENDRICK, 4, Charlotte-row, Mansion-house, London.

NOBLE MARBLE GROUPS, STATUES, AND BUSTS, FROM THE ROYAL GALLERY OF DRESDEN.

Messrs. FOSTER & SON beg to announce to the Nobility, Gentry, and Connoisseurs, that they are directed to SELL by AUCTION, at the Gallery, 11, Davies-street, Grosvenor-square, on WEDNESDAY, June 7, at 2 precisely, in Forty Lots,

A COLLECTION of SCULPTURE of the highest class, formerly a portion of the Royal Gallery of his Majesty Frederick Augustus, King of Poland and Elector of Saxony, purchased by the present proprietor at Dresden, in the year 1836. These distinguished works of art, then ornamenting the royal palace in the Grosse Garten, in the Saxon capital, were carried off with others by Frederick the Great of Prussia, in 1745, to his palace at Potsdam, were restored to the gallery of Dresden in 1763, and are known to all lovers of the arts by Laplat's celebrated engravings of the Dresden Gallery. The collection consists of Eight Mythological and Allegorical Groups and Two single Statues, all in Carrara marble, of the size of life, and executed by the first Artists of the Age; also Three Groups of Children by the celebrated Algardi, and 27 Busts, of which a few are Antique, and some are Portraits of distinguished characters of the Saxon Court at that period.—May now be publicly viewed, gratis, and Catalogues had at the Gallery; and of Messrs. Foster & Son, 14, Greek-street, and 54, Pall Mall.

SUMPTUOUS ASSEMBLAGE OF MAGNIFICENT EFFECTS OF HIS LATE ROYAL HIGHNESS THE DUKE OF SUSSEX.

Messrs. CHRISTIE & MANSON have the honour most respectfully to inform the Nobility and Public, that they have received instructions from the Executors of his late Royal Highness, to SELL by AUCTION, at their Great Room, King-street, St. James's-square,

THE VERY COSTLY ASSEMBLAGE of PROPERTY collected, during a long series of years, by HIS ROYAL HIGHNESS THE DUKE OF SUSSEX, and to be removed from Kensington Palace.

The different Sales will take place in the following order:—
On THURSDAY, June 22nd, and following days, precisely at One o'clock,

The superb gold, silver-gilt, and silver Sideboard and Cabinet Plate; and the Dinner and Dessert, Tea and Coffee Equipages, consisting of complete Services of every Variety of Table Plate, besides the precious examples of Cinque-Cento; Old English, German, Oriental, and other workmanship in Figures, Chalices, Vases, Ewers, Ancient Baronial Salts—some Pieces from the Collection of Charles I.—the Gold Inkstand of William III.—a superb Gold Coffee Pot of the King of Candy—three Toilet Services, gilt Sacramental Plate: the whole amounting to 44,000 Ounces.

On WEDNESDAY, the 28th, and following days,

The valuable and interesting Collection of TRINKETS, including Badges of the Garter, and other Orders—a multitude of Rings set with large and fine Brilliants, Rubies, Emeralds and Sapphires, Seals, Cameos and Intaglios, Chains, about 160 gold Snuff Boxes, of the magnificent taste of Louis XIV., and later periods, &c. &c.

On MONDAY, July 3rd, and following day,

The matchless Collection of CLOCKS and WATCHES, including every variety of ingenious Horological Mechanism, particularly the celebrated Wooden Clock, the first work of John Harrison, of Burrow—one designed by Prince Rupert—two high Clocks by Le Pautre, in regal taste—a curious Water Clock—an Organ Clock—the celebrated Mudge Chronometer—a Clock presented by Vulliamy to His Royal Highness; and others by that celebrated Maker—the Watch of James I.—a small Clock of Marie Antoinette; besides many in beautiful cases of Boule—Watches by Breguet; and other Makers, Ancient and Modern. The ARMORY consists of fine Andrea Ferrara Claymores—Oriental, Damascus, and German Swords, mounted in Gold and Silver—the Sword of William IV.—the Sword of the great Lord Peterborough—Rifles by Kuckenreuther—beautiful Modern English Fowling-pieces by Manton, Wilkinson, and Moore; and Pistols.

On WEDNESDAY, July 5th, and following days,

The sumptuous FURNITURE of Ebony, Boule, Marqueterie, Cabinets, Sofas and Chairs of Oriental Rosewood, inlaid with Ivory—a precious Casket of Crystal—gorgeous Candelabra of Or-molu and Bronze—magnificent Oriental Jars and Cisterns—rare Specimens of Oriental Porcelain, many of them superbly mounted—a large Collection of Groups and Figures of the finest Dresden,

On MONDAY, July 10th, and following day,

The unique Collection of MEERSCHAUM and other PIPES, mounted with Gold and Silver—Tobacco and Cigars of the most precious quality.

The different Properties will be on view some days before each Sale, and Catalogues may be had gratis at Messrs. Christie & Manson's Offices, King-street, St. James's-square. Due notice will be given of the Sales of the Miscellaneous Property, which will follow.

ORGANIC REMAINS.

FELIX SUMMERLY'S

RECREATION HAND-BOOK GUIDES,

Corrected for the Season of 1843.

"Recreation is a second creation, when weariness hath almost annihilated one's spirits. It is the breathing of the soul, which otherwise would be stifled with continual business.... As for those that will not take lawful pleasure, I am afraid they will take unlawful pleasure, and by lacing themselves too hard grow awry on one side."

FULLER'S HOLY AND PROFANE STATE.

"All work and no play makes Jack a dull boy."

OLD ENGLISH PROVERB.

The preceding sentences have been chosen as exemplifying, briefly and forcibly, the chief views with which this series of Hand-Books has been compiled. Whether or not any share of the growth of public interest in our National Exhibitions may be traced to these little works, it might be difficult, if not presumptuous, to attempt to determine; yet it may be allowable to instance, among the good and practical results which these Hand-Books have certainly effected for the public,—the reduction in the price of the Official Catalogue of the National Gallery, from a Shilling to Fourpence, and the greater facilities of identifying the pictures at Hampton Court Palace, which having been brought to the notice of the Commissioners of Woods and Forests, they most cheerfully assented to.

HAMPTON COURT PALACE.

(OPEN DAILY, EXCEPT FRIDAYS.)

Being a Guide to the Architecture, Tapestries, Paintings, Gardens and Grounds of Hampton Court: with numerous Embellishments on Wood, engraved by Ladies; and Plans of the Palace and Grounds from Official Surveys. The Illuminated Cover is taken from a design for a book-cover produced by Hans Holbein for Cardinal Wolsey. Second edition, price 5s. and 2s. 6d.

"Decidedly the best popular guide to the picturesque beauties of Hampton Court of any extant."—*Spectator.*

"A charming specimen of a Hand-book, literally crammed with information."—*Atlas.*

FREE PICTURE GALLERIES;

Being a GUIDE to all the PICTURES in the NATIONAL GALLERY, the DULWICH GALLERY, the SOANE MUSEUM, the SOCIETY of ARTS, and the BRITISH MUSEUM. Price 1s. 6d. Each Gallery published separately at proportionate prices.

"These Catalogues are more raisonnés and correct than the correspondent official ones; are more portable, and to their limits every way commodious, whilst they cost together much less than several of the latter cost separate."—*Athenæum.*

HOLIDAYS;

Being a Guide to London Sights.

Giving details of the Locality—Means of Access—Nature of Admission—Time when Open—Principal Objects, and Descriptive Catalogues of all the Permanent Sights. Notes for Days' Excursions out of the Metropolis. Price 6d.

WESTMINSTER ABBEY.

(The Abbey opens at 9 A.M., and closes, in the Summer, at 6 P.M. The Tombs are shown until half-an-hour before, and about an hour after, Divine Service, which commences at 10 A.M. and 3 P.M. Entrance to Poets' Corner, free; to the Nave, alone, 3d.; with the Chapels, 6d.)

A Guide to the Architecture, Sculptures, Tombs, and Decorations, with 56 Embellishments on Wood, engraved by Ladies, 4 Etchings, a Specimen of Encaustic Tiles in the Chapter House, and an Illumination. Price 7s. A Cheaper Edition, 3s.

"Its pages are not disfigured by the usual Guide-book sentimentality, rambling on without method, and mixing inaccurate if not false information with indiscriminate and nauseating praise, but it gives a well arranged and correct description, neither too popular nor too pedantic, of the Sacred Edifice."—*Ecclesiologist*, published by the Cambridge Camden Society.

"A volume got up in excellent taste, and written in a right spirit; critical so far as criticism could be allowed, but always suggestive, and resting opinions by reference to principles. As if to perfect the interest of the Work, its fifty-six illustrative engravings have all been executed by women; and some amateurs, Lady Talcott and Lady Palgrave, amongst others, have gracefully contributed drawings, and thus associated their names with their sister artists. The work is professedly a Guide-book, and excellent in its way; but it is also a handsome volume for a drawing-room table, and worthy an honoured place on every lady's library shelves."—*Athenæum.*

ABRIDGED EDITIONS, with 4 Etchings, price 1s.; with Plan of the Abbey, 6d.

Also, for Foreigners, GUIDE A L'ABBAYE DE WESTMINSTER. Par Félix Summerly. Prix 1sh.

TEMPLE CHURCH.

With Eight Illustrations. Printed in three colours, in novel combinations of lithography and type, with Ornamental Cover of the pattern of the Encaustic Tiles. Second Edition. Price 1s.

"It is a very unique combination of red and black letter printing with lithography. The description of the church is very able and complete."—*Church Magazine.*

THE NATIONAL GALLERY.

(Open daily, from Ten to Four, except Friday and Saturday.) Price 6d., 3d., and 1d.

Also, for Foreigners, 'Catalogue des Tableaux qui se trouvent dans la GALERIE NATIONALE, suivi par la Chronologie des Peintres.' Prix 6d.

An Edition, with Reminiscences of the Pictures, drawn expressly from the Originals, by Messrs. John James and William Linnell. Just ready.

DAYS' EXCURSIONS OUT OF LONDON; with Engravings on Wood, by Charlotte and Laura Bond.

A HAND-BOOK for CANTERBURY; with Illustrations.

GEORGE BELL, 186, Fleet-street.

New Works

PRINTED FOR

LONGMAN, BROWN, GREEN AND LONGMANS.

1.

ARTS, ANTIQUITIES, AND CHRONOLOGY OF ANCIENT EGYPT,

From Personal Observations. By G. H. WATHEN, Architect. Royal 8vo. with numerous Plates and Wood Engravings, from Drawings made by the Author. 16s. cloth.

"In this beautiful volume—adorned with several exquisite lithographs of Egyptian scenery and remains—Mr. Wathen has advanced some admirable and learned suggestions, connected with his own art, in opposition to the theories of Winckelman and his followers."—*Examiner*, May 20, 1843.

2.

HERODOTUS.

THE HISTORY of the PERSIAN WARS, from HERODOTUS.

With English Notes, Examination Questions, and Indices. By the Rev. C. W. STOCKER, D.D., formerly Fellow of St. John's College; and late Professor of Moral Philosophy in the University of Oxford. 2nd edition, revised and considerably improved, 2 vols. post 8vo. 18s. cloth.

3.

PROGRESSIVE EDUCATION;

Or, CONSIDERATIONS on the COURSE of LIFE.

Abridged from the French of Mad. NECKER DE SAUSSURE, by MISS HOLLAND. Vol. III. fcap. 8vo. 7s. 6d. cloth.

"The picture of the course of woman's life represented in the following pages, will form both a complete work in itself, and an appropriate conclusion to the first two volumes."

Author's Preface.

*** VOLS. I. and II. fcap. 8vo. 12s. cloth.

4.

THE RAMBLES OF THE EMPEROR CHING TĬH

IN KĒANG NAN.

Translated into English by TKIN SHEN, a Chinese Student. Edited, with an Introduction, by Dr. J. LEGGE. 2 vols. post 8vo. 21s. cloth.

"Wild and extravagant as is the whole composition, it has one great and paramount attraction—that of giving a genuine insight into many of the detailed every-day customs and notions of the inconceivable multitudes of human beings, who for cycles have, immured in China, lived and died in isolation from the world. We shall not trust ourselves to run into extracts, feeling that nothing short of a complete perusal of the work will satisfy our readers. Dr. Legge allows us to hope for more Chinese translations, and sure we are that British barbarians will right joyfully receive lessons on Celestial civilisation. Meanwhile, we recommend all readers to lose no time in getting a copy of this comical work."—*Morning Post*, May 24, 1843.

5.

ELEMENTS OF PRACTICAL AGRICULTURE;

Comprehending the Cultivation of Plants, the Husbandry of Domestic Animals, and the Economy of the Farm. By DAVID LOW, Esq. F.R.S.E., Professor of Agriculture in the University of Edinburgh. 4th edition, greatly enlarged, 8vo. with nearly 200 Engravings on Wood, 21s. cloth.

"No work on practical agriculture has appeared in our time which will bear a comparison with this excellent work. It will become the manual of practical agriculture for the British empire."—*Edinburgh Phil. Journal.*

6.

KING ERIC AND THE OUTLAWS;

Or, the THRONE, the CHURCH, and the PEOPLE, in the THIRTEENTH CENTURY.

By INGEMANN.

Translated from the Danish, by J. F. CHAPMAN.

3 vols. post 8vo. [*Just ready.*

7.

MESSRS. LONGMAN AND CO.'S

Worship, Discipline, and Customs of the Early Church; with an Introduction, containing a Complete and Chronological Analysis of the Works of the Antenicene Fathers. Compiled from the Works of Augusti, and other Sources. By the Rev. J. E. RIDDLE, M.A. The 2nd edition, in a large 8vo. volume, with a copious Index, 18s.

BIBLE CYCLOPÆDIA, a Comprehensive Digest of the Civil and Natural History, Geography,

Statistics, and General Literary Information, connected with the Sacred Writings. Complete in 2 vols. price 2l. 10s., illustrated by several hundred Woodcuts.

HISTORY of the CHURCH of IRELAND.

VOL. I. From the Reformation to the Revolution.

II. From the Revolution to the Union.

By the Right Rev. RICHARD MANT, D.D., Lord Bishop of Down and Connor.

2 large volumes, 8vo. 17s. each.

By the same Author, 8vo. 12s.

PRIMITIVE CHRISTIANITY, exemplified and illustrated by the ACTS of the PRIMITIVE CHRISTIANS.

HISTORY of the CHURCH of ENGLAND, embracing copious Histories of the Thirty-nine Articles,

the Translation of the Bible, and the Book of Common Prayer. By THOMAS VOWLER SHORT, D.D., Lord Bishop of Sodor and Man. 3rd edition, 16s.

CHRISTMAS DAY AND OTHER SERMONS. By FREDERICK DENISON MAURICE, M.A.,

Chaplain of Guy's Hospital, and Professor of English Literature in King's College, London. 10s. 6d.

LIVES of EMINENT CHRISTIANS.

By the Rev. R. B. HONE, M.A., Vicar of Hales Owen. The Fourth Volume, 4s. 6d. with Portraits; containing LIVES of JOHN BRADFORD, ARCHBISHOP GRINDAL, and JUDGE HALE.

The First Volume contains the Lives of Archbishop Usher, Dr. Hammond, John Evelyn, and Bishop Wilson. The Second Volume, Bernard Gilpin, Philip de Mornay, Bishop Bedell, and Anthony Horneck. The Third Volume, Bishop Ridley, Bishop Hall, and Robert Boyle.

MEMORIALS of ERNEST THE PIOUS, First Duke of Saxe-Gotha, the Lineal Ancestor of Prince

Albert. By the Rev. THOMAS LATHBURY, M.A. 6s.

Dedicated by Permission to His Royal Highness Prince Albert.

By the same Author,

A HISTORY of the CONVOCATION of the CHURCH of ENGLAND. 7s. 6d.

2. THE SPANISH ARMADA. 3s.

3. GUY FAWKES. 3s. 6d.

REVIEWS

George Selwyn and his Contemporaries; with Memoir and Notes. By J. H. Jesse. Bentley.

Mr. Carlyle, in his recent work, feelingly laments over the many things most interesting to posterity, which chroniclers pass over, as too familiar to claim their notice. It is, in truth, absolutely necessary to get to some distance from objects, in order to behold all their details, and to estimate with accuracy their several bearings and relations. This defect does not appertain to the intimate correspondence of contemporaries, entered upon without view to publication, and treating of whatever personally concerns the writers,—the most trivial as well as the more important events of the passing hour. In their *bavardage* lies their great merit; for while in the greater essentials of humanity, one epoch or generation does not widely differ from another, and the workings of passions and the play of the more pressing necessities in each man are the same,—in the petty details of trifling accessory motives, transitory fashions, and incidental peculiarities, will be found all that constitutes the colouring and costume of ages and of nations, coming out in the most striking relief. With relation even to the greatest events, we look to such correspondence as that now before us, (when it is to be had,) not merely for the little causes which are the parents of great effects, but for the illustration of a multitude of particulars which are not to be gathered from more solid and solemn records. But with respect to the portraiture of manners, and a delineation of the habits and modes of thought of by-gone times, it is precisely from the lightest, most playful and trivial of letter-writers, that the greatest number of illustrations may be expected. If this point of view, though it may be true, that

> Who kills fat oxen should himself be fat,

it by no means follows that who writes instructive letters should himself be full of instruction; nor that the letters themselves should possess any other merit than that of faithfully reflecting the minds and the whereabouts of the parties by whom they were written.

It is, then, no unanswerable objection to the letters which occupy the greater portion of the present volumes, that they are unconnected with any famous or consequential events, that they record only the every-day trivialities of light-hearted and unoccupied idlers, that they afford no connected view even of the surface of events; and that though they introduce to the readers some persons, who have figured on the stage of public life, they add little to our foregone knowledge of their characters and peculiarities. They are still curious memoranda of the passing hour: and, coming warm and fresh from minds busied and moved by its infinite nothings, they betray, in a thousand casual expressions and confessions, the true form and pressure of their times; while they offer some measure of the value of the institutions of the age, by showing with a minute precision, the sort of fruit which these institutions were actually bearing.

The contemporaries of George Selwyn were the fathers of a few of us, and at most the grandfathers of the greater number of actual readers; yet less is known of their manners and habits than of those of much remoter periods; for the French Revolution seems to have built a wall between the present and the past; and mankind have already acquired the habit of looking at things through the peculiar media derived from that event; so that it is only where the characteristics have been distinctly traced by previous writers, that the objects themselves are perceived in any tolerable purity.

With respect to the aristocracy of these countries more especially, we have latterly been accustomed to see them forced into some approach to business habits, compelled to study closely their position and its interests, and soured and heated by the opposition of the other classes of society; so that it requires considerable efforts of abstraction, to conceive of their immediate predecessors as they really existed,—careless, joyous, light-hearted, often light-headed, and scarcely aware of the existence of aught in society beside themselves, save only as the unresisting creatures of their will, and the devoted instruments of their pleasures.

In a literary point of view, also, this correspondence has its merits, as showing to what an extent mere ease and the absence of affectation confer grace and elegance of style. Very many of the letters, it is true, are written by persons who have given other and greater proofs of a finished education, and of considerable natural talents; and nearly all the writers were men who enjoyed some reputation for wit and conversational agreeability; but that such men as the Duke of Queensberry, (the old Q. of our early recollections,) and other mere devotees of pleasure, or slaves of parliamentary and official politics, should be able to trifle agreeably, and throw a dignity over their vices by the grace and spirit of their narratives, will appear to many more than extraordinary.

These letters have also the further advantage of affording some assistance in forming a more correct judgment of a popular contemporary, of whom great differences of opinion at present prevail. The correspondents of Selwyn were not only the contemporaries of Horace Walpole, but his equals in rank and station, and some of them his daily companions; and they thus afford a new measure whereby to judge both the man and his writings. Admitting, as we must do, that the writers in question were among the *élite* of the aristocracy, men who really did distinguish themselves from the mass, we cannot but feel that the pursuits of Walpole as much transcended theirs in intellectuality and utility, as his letters exceed in thought and in the power of amusing. They, it is true, appear to accredit some modern contempts thrown on Walpole, by accusing him of affectation, because his pursuits were not theirs; and by quizzing his predilection for dowager society, because their tastes lay another way: but a comparison of his letters and theirs shows his politics purer, his pleasures more refined, his tastes more elevated, and his range of thought more varied; as his wit was more subtle and subdued, than that of the best of the butterflies to which he has been likened, or of the more bustling worldlings for whom he has been depreciated. In reply, then, to much that has been objected to Walpole, we need but point to these volumes, and to make the necessary deduction for what tribute a man of the world must pay to the intellectual and moral feebleness of the atmosphere he is condemned to breathe, to be satisfied of the injustice of the imputations.

But it is high time to come to the work itself. Selwyn, it appears, was in the habit of preserving all letters addressed to him, down to the "most trifling notes and unimportant memoranda;" and these form the staple of Mr. Jesse's volumes, which he has only arranged in chronological order, and stripped, as he says, of such passages as might give offence to persons yet living. To the more remarkable of the correspondents Mr. Jesse has dedicated a separate memoir of one or more pages, compiled indeed from sources generally too accessible to the reader; but they are still not without a convenience to those who are not gifted with a strong memory, or with patience for personal research.

From him we learn that Selwyn was born in 1719, was at Eton a contemporary of Gray and Walpole, and was expelled from Oxford for one of those irreverent frolics, then not uncommon amidst the wine-cups of "men of wit and pleasure about town." At twenty-one his father, whose landed property at Ludgershall enabled him to return a member for that borough, obtained for him a sinecure appointment in the Mint; and a few years afterwards he became a member of parliament, more frequent in his attendances at Paris than in St. Stephen's Chapel.

"The character of Selwyn was in many respects a remarkable one. With brilliant wit, a quick perception of the ridiculous, and a thorough knowledge of the world and human nature, he united classical knowledge and a taste for the fine arts. To these qualities may be added others of a very contradictory nature. With a thorough enjoyment of the pleasures of society, an imperturbable good-humour, a kind heart, and a passionate fondness for children, he united a morbid interest in the details of human suffering, and, more especially, a taste for witnessing criminal executions. Not only was he a constant frequenter of such scenes of horror, but all the details of crime, the private history of the criminal, his demeanour at his trial, in the dungeon, and on the scaffold, and the state of his feelings in the hour of death and degradation, were to Selwyn matters of the deepest and most extraordinary interest. Even the most frightful particulars relating to suicide and murder; the investigation of the disfigured corpse, the sight of an acquaintance lying in his shroud, seem to have afforded him a painful and unaccountable pleasure. When the first Lord Holland was on his death-bed, he was told that Selwyn, who had long lived on terms of the closest intimacy with him, had called to enquire after his health. 'The next time Mr. Selwyn calls,' he said, 'show him up:—if I am alive I shall be delighted to see him, and if I am dead he will be glad to see me.'"

This peculiarity of Selwyn's has been denied; more especially by the Rev. Dr. Warner, who had good access to the literary and fashionable society of that day, and who thus wrote in the *Gentleman's Magazine*:—

"I shall content myself with informing you, that this idle but wide-spread idea of his being fond of executions, (of which he never in his life attended but at one, and that rather accidentally, from its lying in his way, than from design,) arose from the pleasantries which it pleased Sir Charles Hanbury Williams and the then Lord Chesterfield to propagate, from that one attendance, for the amusement of their common friends. Of the easiness with which such things sat upon him you may judge from the following circumstance, which I have heard him more than once relate. Sir Charles was telling a large company a similar story to that of his attending upon executions, with many strokes of rich humour received with great glee, before his face, when a gentleman, who sat next to the object of their mirth, said to him in a low voice, 'It is strange, George, so intimate as we are, that I should never have heard of this story before.'—'Not at all strange,' he replied in the same voice, 'for Sir Charles has just invented it, and knows that I will not by contradiction spoil the pleasure of the company he is so highly entertaining.' And such was his good-nature in everything."

Could this statement be verified, it would afford a remarkable instance of the ease with which falsehoods get accredited in society, even in the lifetime and presence of the parties interested in their contradiction; and it would thus detract in no small degree from the value of the steadiest traditions. We agree, however, with Mr. Jesse in thinking the proofs of the established opinion on this point far too strong to be overthrown even by the direct and conscientious conviction of the Reverend witness;

Digitized by Google

nay, more, we are inclined to surmise that Selwyn was in no small degree indebted to this very eccentricity for much of his social reputation.

As a public character, Selwyn passed a long life of parliamentary nullity; a sinecure pluralist, and consequently a ministerial dependent, silent in the house, though jocose and entertaining in society. He was Clerk of the Irons in the Mint, Registrar of the Court of Chancery in Barbadoes, and Surveyor-general of the Crown lands; to which places was added the social post of receiver-general of waif and stray jokes.

"The only anecdote, indeed, which we possess of his conduct in Parliament was his habit of amusing the House, during a long debate, by snoring in unison with the first minister, Lord North. At the time when Burke was wearying his hearers by those long speeches, which obtained for him the name of the 'Dinner-bell,' a nobleman (who is still living, and who sat in the House of Commons with Selwyn) happened to be entering the House just as Selwyn was quitting it: 'Is the house up?' was the inquiry, 'No,' replied Selwyn, 'but Burke is.'"

A man of pleasure in the fullest extent of the phrase, George Selwyn was also "a devoted frequenter of the gaming-table;" but he died comparatively rich, and, therefore, could not have been a great loser by the practice; and in his latter years, he got the better of a vice, which he said was "too great a consumer of time, health, fortune, and thinking."

The only other very salient particular of Selwyn's life is thus narrated by Mr. Jesse:—

"The last years of Selwyn's life were enlivened by the society of an interesting child, whom he adopted as his daughter, and who resided under his roof. That child was Maria Fagniani, the reputed daughter of the Marquis and Marchioness Fagniani. It would be a false affectation of delicacy, were we to pass over in complete silence the mysterious reports respecting the true parentage of Selwyn's infantine charge, which at the period were in common circulation. According to general rumour, the Duke of Queensberry and George Selwyn each believed himself to be the father of the child; and the impression that such was the fact was rendered still stronger, when the Duke of Queensberry subsequently bequeathed her the sum of 150,000*l.*, besides other property, and George Selwyn the sum of 33,000*l.* As the writer of the present memoir has had access to Selwyn's most private papers, it might be expected that he would be enabled to clear up the difficulty; however, though there are passages which unquestionably lend weight to the supposition that either the Duke of Queensberry or Selwyn was the father of the child,—or rather that each severally believed himself to be so,—yet, in fact, there is far from being certain proof that such was really the case."

In a memoir of Selwyn, however brief, some record of his *bons mots*, beyond those already known, might be expected; but this expectation, if formed by the reader, will be but imperfectly gratified. No task, says Mr. Jesse,—

—"can be more disappointing in its result, than that of collecting the scattered *bon mots* of a man of professed wit, with a view to prove that his reputation is well deserved. Many of his best sayings have, probably been lost to us; others, perhaps, have suffered in the narration; and, moreover, the charm of manner, which must have greatly enhanced their value at the moment they were uttered, can now, of course, only be taken on credit. The manner in which Selwyn more especially gave utterance to the workings of his fancy, is said to have been distinguished by a ludicrous gravity of voice and countenance which never failed to excite laughter in every one but himself."

Among the very few specimens here preserved, the following perhaps are the least generally known:—

"Soon after the celebrated coalition between Fox and Lord North, the former was boasting at Brookes's of the advantageous peace he had ratified with France, adding, that he had at length prevailed on the Court of Versailles to relinquish all pretensions to the gum trade in favour of Great Britain. Selwyn, who was present, and to all appearance asleep in his chair, immediately exclaimed, 'That, Charles, I am not at all surprised at, for, having permitted the French to draw your *teeth*, they would be indeed d——d fools to quarrel with you about your *gums*.' When the affairs of Charles Fox were in their more than usually embarrassed state, his friends raised a subscription among themselves for his relief. One of them remarking, that it would require some delicacy in breaking the matter to him, and adding that, 'he wondered how Fox would take it.'—'Take it?' interrupted Selwyn, 'why, *quarterly*, to be sure.'"

Selwyn did not die till the year 1791, when he bequeathed 10,000*l.* four per cents. and 33,000*l.* to Mdlle. Fagniani; and as the lady inherited stilll more largely from the Duke of Queensberry, she justified the joke of Harlequin, in being "rich enough to have more than one father." She is now, as Mr. Jesse states (p. 6), "the present Marchioness of Hertford;" and could not, therefore, as Mr. Jesse also states (p. 24), have married "the present Earl of Yarmouth." Such careless contradictions are far too common in Mr. Jesse's publications to be passed over in silence. Thus, of another famous personage in his day, Orator Henley, we are told that he "built his chapel in the neighbourhood of Newport Market," in another place that he "lectured in Clare Market," and both statements are true, but refer to different periods; while Mr. Jesse, as if to reconcile contradictions, says, "*in the neighbourhood of Newport Market*, near *the corner of Lincoln's Inn Fields*."

Of Orator Henley only two letters are given; one of these, relative to a row kicked up in his chapel by Selwyn and his companions, may probably be the one referred to in the 'Curiosities of Literature;' it therefore, may be itself considered as a curiosity:—

January 16, 1744.

"Sir,—I am desirous, on a footing of Reason and Right, which are entirely on my side, to make you, Mr. Carteret, and Mr. B. my friends, not my enemies. I hinted this at Mr. Balaguerre's, and have written a short letter to Mr. Carteret about it. So many instances of this kind have been repeated, that self-preservation has been at stake. I am accountable for the peace of my congregation; and among the rules and articles of my consent and conditions, as owner and minister, one rule is, to go out directly, (forfeiting what has been given,) if any person cannot, or will not, observe those conditions; for the smallest circumstance of disorder has been inflamed to the highest outrage. The bishop's nephew began something of the kind two months ago, and made me retribution: so have others, and I must send an attorney to warn those not to come, whom I suspect, hereafter. *You* have been at this sport before. I may be useful to you all some time. In the meantime, as you are gentlemen, have good judgment, good nature, and were in fault, I hope this will break no bones, and that you will shew this epistolary dissertation to Mr. C. and Mr. B.

I am, sir, your most obedient humble servant,
J. Henley.

The early letters in this correspondence are (like all young men's letters) the least important and amusing. The few passages relative "to the '45" are deprived of much of their value by the already published letters of Walpole.

Among the more frequent correspondents of Selwyn was the first Lord Holland, of whom Mr. Jesse has written a memoir, in which his own political leanings appear something too plainly. We have, too, an account of the once celebrated sisters Gunning, and of the equally notorious Duke of Queensberry, on whose vices the author leans more lightly than on those of the Whig premier and his father. Gilly Williams is another correspondent, whose frequent letters are among the pleasant contents of these volumes. He tells a story, which, being addressed to Selwyn goes to confirm in some degree the notoriety of that gentleman's peculiar tastes:—

"I will give you a Newgate anecdote, which I had from a gentleman who heard it. He called on P. Lewis the night before the execution, and heard one runner call to another, and order a chicken boiled for Rice's supper; but, says he, you need not be curious about the sauce, for you know he is to be hanged to-morrow. That is true, says the other, but the Ordinary sups with him, and you know he is a hell of a fellow for butter! If the Continental air has not altered you, this will please you, at least I have known the time when you have gone a good way for such a morsel."

The following is a favourable specimen of this gentleman's epistolary style:—

"I wonder what you do with yourself, *sic rare scribis!* I do not believe you think I have a penny left in my pocket, that you will not put me to the expense of a letter, but wait till a d——d odd animal joins the Macaronies to save me twelvepence postage. Pray tell Lord March, that I am this moment come from the opera, and the knowing ones agree, nothing like Manzoli has been imported into this country for ages. Signora Scotti is pretty, but her voice scarce strong enough to reach three benches from the orchestra. But I can tell you something which, as Lord Bacon says, will come more home to your business and bosom. Old Harrington's robbery is found out. His porter was the principal thief, who let in a cheesemonger, and another not yet taken, who divided the spoil. A watch and some of the plate are returned. The cheesemonger is the evidence, so the porter will go alone in the cart: they were discovered negotiating one of the bank-notes at Chester. No army on earth was ever in higher spirits than our Administration. Opposition seems on its deathbed. The Yorkes have left it. Charles Yorke has been squeamish, and would not return to his old post again, but kisses hands next Wednesday for a brevet of precedency at the bar. He has acted, as most lawyers do out of their business, with as much absurdity, and as little knowledge of the world, as a fellow of a college. The Duke and Duchess of Grafton are separated, though the articles are not yet agreed upon between them. General Conway is to treat in favour of the duke, and old Ellison for the duchess: it is thought she will retire upon her jointure. The dowager's birthday was full and well dressed. People say Lord Holland looks well; but I think he breaks very fast, and has more of the old man in his speech, which you remember was remarkably quick and lively. God bless you, my dear George! When you have nothing else to do, let me hear from you—see you, I suppose, I never shall."

Of Sir Charles Hanbury Williams it is unnecessary to make any notice. His letters, indeed, are not many, and his name and reputation sufficiently known to our readers. From Horace Walpole we have also an occasional letter, not of any major interest; but, for the present, we must break off, with the intention of resuming our remarks and extracts another day.

The Grandeur of the Law. By Edward Foss, Esq. F.S.A. Spettigue.

It is curious and interesting to observe the extent to which this little volume demonstrates that an institution so gorgeous and glittering as the peerage, has arisen out of an element so sombre and solemn as the law. The coronet issuing from the wig is a transformation as marvellous as that of the butterfly from the grub, or the production of the gaudy tulip from its paltry root. Strange to think that in the dim and dingy alleys and cloisters of the Temple, or the dusky chambers of Gray's Inn, were planted and reared many of the most illustrious houses of the British nobility, the present occupants of the sunniest pinnacles of society and fortune. One would not have said that the soil was germane to dukedoms, or the clime kindly to the flowering of marquisates or baronies. The battle-plain would have seemed a likelier field for such a brilliant crop, and the warrior's plume a more probable ornament of an olden earl's brow than the lawyer's quaint headpiece of curled goat's hair. Yet the fact is that

Digitized by Google

our peerage has received much larger contributions from the bar than from the camp, and may generally be congratulated upon the peacefulness and civility of its origin. Mr. Foss does not enable us to state what proportion the bar-born nobility bears to the whole body of the order; but if we recollect right, Bishop Fleetwood estimated the proportion in his time as fully three-fourths, and if it is less at present, it must be owing, we should say, to the accessions which the peerage has received from the sources of politics and commerce. Without yielding to any vulgar prejudice against the profession of the law, we may be allowed to lament that the constitution of the country enables it to seize what appears a somewhat exorbitant share of the greatest honours of the state. Admitting the claims of law to a place amongst the sciences, how seldom has it been cultivated with the spirit of philosophy, or the generous ardour of the scholar! How seldom has the love of truth, of justice, or humanity, stimulated legal researches, or sustained forensic labours! Few students have approached the study, few prosecuted it with the pure spirit of a Hale, or the high mind of a Romilly. Well-founded is Milton's eloquent complaint that most men are "allured to the *trade* of law, grounding their purposes not on the prudent and heavenly contemplation of justice and equity, which was never taught them, but on the promising and pleasing thoughts of litigious terms, fat contentions, and flowing fees." There is room therefore to deplore that, of all men who dedicate their lives to intellectual pursuits, lawyers alone should have a key to the great dignities of the country; and to the same extent it is questionable how much the peerage is raised in moral estimation by its numerous descents from

> Men of that large profession, who can speak
> To every cause, and things indeed contraries,
> Till they are hoarse again, yet all be law:
> That with most quick agility can turn,
> And return, make knots and undo them,
> Give forked counsel, take provoking gold
> From either side and put it up.—*Ben Jonson.*

The House of Lords being a court of justice, and the highest legal tribunal in the realm, it is pity that judicial attainments are not hereditary, like estates and titles: such an arrangement (it is evident from the work before us) would tend so admirably to make the chamber in practice what it is in theory, and furnish the Constitution with a much better excuse for vesting the highest functions of the law in the hands of men who are not lawyers, than Blackstone's ingenious pretence, that the peers "from the independence of their fortune and the dignity of their station, are presumed to employ that leisure which is the consequence of both in attaining a more extensive knowledge of the laws than persons of inferior rank;" to which the learned commentator adds, by way of reinforcement, that "the founders of our policy also relied upon that delicacy of sentiment so peculiar to noble birth, which, as on the one hand it will prevent either interest or affection from interfering in questions of right, so on the other it will bind a peer *in honour*, an obligation which the law esteems equal to another's oath, *to be master of those points upon which it is his birth-right to decide.*" The true public security in the case, is, perhaps, rather the sense of common decency that forbids the bulk of the peerage from interfering directly or indirectly in matters of which, with all their delicacy of sentiment and sense of honour, they are necessarily in utter darkness. Blackstone might just as reasonably have rested the judicial pretensions of the house of peers upon the facts exhibited by Mr. Foss, and argued, that even if legal learning was not of a descendible quality, still it might fairly be expected, that the mere reverence for their wigged and ermined ancestors would preserve a taste for the study of the law, and a certain habitual knowledge of its principles, amongst the Cecils, Cokes, and Fortescues, and the other noble issue from the ancient ornaments of the bar. Yet, after all, we do not see why the idea of an hereditary lawyer is more chimerical than that of an hereditary law-giver. If the intellectual aptitudes for legislation are transmitted from sire to son, why not the talents of a conveyancer or a special pleader? There may be a legal organization of the human brain, as well as a political, and that organizations have an inheritable quality is admitted by the physiologists. We do not know that this justification of the seeming constitutional anomaly, by virtue of which the peers of England are arbiters in the last resort of the knottiest questions of jurisprudence—questions that have baffled the sagacity of the chancellor, the twelve judges, and the whole legal profession—has before been suggested. It is clearly more conceivable, that the Dukes of Norfolk and Devonshire, or the Earls of Talbot and Cardigan, should be qualified to try appeals from the Court of Chancery, by force of their descents from great judges in the reigns of the Plantagenets and Tudors, than by the efficacy of Sir William Blackstone's principle, that the honour of those noble peers will "bind them to be *masters of those points* upon which it is their birth-right to decide." We place great faith in the principle of honour in many cases, but much do we question if, in its utmost strength and purity, it ever caused an English nobleman to apply himself to Sheppard's Touchstone, or *Master* Fearne on Contingent Remainders. We doubt if even Lord Fortescue ever felt himself under this sacred bond to fathom the learned works of his ancestor, Sir John, who was Chief Justice in the reign of the Sixth Henry, and we have still greater hesitation to believe, that the present Earl of Leicester has whiled away many of his hours over the refreshing pages of the Institutes, or Reports of Sir Edward Coke!

Mr. Foss shows, that amongst the peerages of legal origin are to be found the dukedoms of Norfolk, Devonshire, Rutland, and Manchester; the Marquisates of Winchester, Townshend, Salisbury, Exeter, Camden, Aylesbury, and Bristol; the earldoms of Suffolk, Winchelsea, Sandwich, Cardigan, Carlisle, Shaftesbury, Coventry, Tankerville, Aylesford, Cowper, Macclesfield, Buckinghamshire, Egremont, Guildford, Hardwick, Bathurst, Clarendon, Mansfield, Talbot, Fortescue, Roslyn, Harrowby, Verulam, Bradford, Eldon, Somers, Burlington, Effingham, Yarborough, Leicester, and Lovelace; one viscounty, and no fewer than forty baronies.

Mr. Foss observes in the preface,—

"Few fathers have devoted their sons to the study of the law without a latent hope, and perhaps a more confident expectation than would bear expression, that they would attain the highest honours of the profession; and still fewer sons have commenced their legal career without forming a sanguine prospect of a brilliant termination. Indeed, it will not be too much to say, that even in maturer years, the unsuccessful barrister, pondering in his solitary chamber over his infrequent briefs, which come like 'angels' visits, few and far between,' can scarcely refrain, in his day-dream, from picturing a more prosperous futurity, in which he sees himself dressed in the ermine and seated on the bench. It will not, therefore, it is presumed, be deemed an uninteresting inquiry, not only to those who are connected with the law, but to those also who are proud of their country, to trace among the present members of the house of peers the number of those by whom, or by whose ancestors the judicial seat in England has been filled. It may, perhaps, also not be without its effect in exciting the industrious scholar to a prosecution of his labours, by exalting the study in which he is engaged, and by exhibiting to his view, as a possible reward for his perseverance, an object of legitimate ambition."

This mode of exalting the profession of the law is undoubtedly an attractive one; but it is obvious how much it differs from the views taken by Milton in the extract given above from his tract on education. Ambition of a peerage, is a motive not a whit more elevated in a moral sense, than the prospect of "litigious terms," and avarice of "flowing fees." Mr. Foss's notion of the grandeur of the law does not comprehend the sources from which the administration of justice ought to derive its chief dignity; and to those sources we think it would be better to elevate the views of the young student, than to allure him either by the chink of gold or the glitter of the coronet. There is no fear that Mammon will plead his cause feebly; the disposition to work for the rewards of the money-god requires no strengthening, being only too strong already, and needing check and discouragement, not instigation. Bacon well records, amongst the retardations of learning, the pursuit of knowledge for the ends of ambition and lucre. The depression of the study of the law, for ages in the hands of avaricious craftsmen, who, far from "the prudent and heavenly contemplation of Justice and Equity," never beheld the form of either, even in a dream of the night, has certainly made it a difficult undertaking to raise it out of the muck, and restore it to its place amongst generous pursuits; but though the task be difficult, we are enthusiasts enough not to deem it hopeless; and we should therefore prefer to see the grandeur of the law traced to its real and indisputable moral importance, as a branch of knowledge having infinite bearings upon the affairs of life and the order and happiness of society, than displayed in the abundance of the temporal honours purchased or won by its professors. It is not the great prizes of any vocation that ennoble it: neither the ministers of religion nor of justice draw true honour from wealth or title. Twenty dukedoms would not dignify the name of Scroggs, while that of Romilly, the son of a silversmith, decorated by no peerage, shines in the light of true and imperishable honour.

A History of the Life of Richard Cœur-de-Lion. By G. P. R. James, Esq. Vol. III. Saunders & Otley.

THE importance of the contest between Henry the Second and Becket, and the pre-eminence given to it by Mr. James in his second volume, led us in our former review (No. 738) to confine our attention to that subject, reserving the "doings" of the hero to a future time. The hero, however, whom we left just buckling on his gilt spurs, has not even at the close of this, the third volume, entered upon that career which has given to Cœur-de-Lion his eastern and western fame; it concludes, indeed, with the fall of Jerusalem, an event which excited the most anxious feelings of Christendom, and probably fixed the purpose of the royal crusader. In our review of Mr. Addison's History of the Templars, we adverted to the valuable information which might be derived from the Oriental annalists; and of their aid, as well as of the Christian chroniclers, Mr. James has availed himself. The following is his description of the crusaders' first sight of Jerusalem:—

"During their march from Archas, all the associations of the land had been crowding upon the imaginations of the pilgrims of the cross. The names of Ramula, Sidon, Emaus, had all awakened the memories of what had passed in those places in earlier days; and at the latter town, when they encamped for the evening, the host was joined by envoys from the Christians of Bethlehem, beseeching the leaders to send forward a body of men to protect that town from the threatened vengeance of the Saracens. Tancred was accordingly dispatched with a hundred lances to give the assistance required, but

Digitized by Google

during the whole of that night the host of the crusade knew no repose. The name of Bethlehem, Bethlehem! passed from mouth to mouth, recollections were awakened that banished sleep, all the enthusiasms of their nature were aroused, zeal and tenderness, and love, and hope, and indignation, for that sweet religion which they all professed, scared away slumber from every eye, and some hours before darkness disappeared the excitement became so great, that the army arrayed itself spontaneously, and began to move towards Jerusalem. It was a beautiful summer morning, we are told, in the month of June, and ere the great body of the crusade had proceeded many miles, the day broke in all the majesty of eastern light. They had just reached the summit of a gentle hill, when starting up with the rapidity which characterises the dawn of Syria, the sun rushed forth, and they beheld in the distance a rocky steep, crowned with towers, and walls, and domes, and minarets. 'Jerusalem! Jerusalem!' became the cry throughout the army, as the object of all their toil, and labour, and strife, and suffering appeared before their eyes. All that they had endured up to that moment, weariness, thirst, famine, pestilence, and the sword, were forgotten in exceeding great joy, or only remembered to render that joy more ecstatic and overpowering. The effect could scarcely be borne: some laughed, some wept, some shouted 'Hierosolyma!' some cast themselves on the ground, some fainted, and some died upon the spot."

It was not without a fierce and sanguinary struggle that the Holy City was taken; and the massacre which followed was awful: that which took place in the Mosque of Omar has, indeed, been represented by modern historians as the slaughter of an unresisting population. Mr. James, however, shows that the contest was continued in the streets for many hours, and that it was armed men, who retreated to the Mosque of Omar, and defended it as though it had been a fortress.

The history of the second crusade, the disastrous progress of the Emperor Conrad and Louis the Seventh of France, are traced with great minuteness, and obscure or controverted points cleared up by reference to the Oriental historians. At this period Saladin appears on the field; but he scarcely maintains in authentic history that character of knightly courtesy and honour with which modern romance and romancing history have invested him; in fierce and determined valour, however, he was a worthy rival to the "Lion Heart." Ere the commencement of his successful war with the King of Jerusalem, Mr. James quits his narrative of events in the East, and returns to the history of the last days of Henry the Second. These, the reader well knows, were embittered by strife with his sons, to each of whom he behaved with harshness and injustice. The writers who have vindicated, or at least excused, Henry's conduct, seem altogether to have forgotten, not only that these sons were no longer children, but the main principles of the feudal law. Henry, Mr. James remarks—

—"had clearly and distinctly made over certain feudal territories to his sons, and though there can be no doubt that he might retain the homage of those territories to himself, and might, in case of rebellion, cause the territories so granted to be forfeited by the decree of a feudal court, yet he could not otherwise resume the fiefs which he had granted, and still less transfer the homage from one vassal to another. The whole code of feudal law shows that he could not go beyond these limits; and had the lands been actually pronounced forfeit by rebellion, some notice must have been taken of it at the time, either in the public acts or general chronicles of Henry's reign."

The father, however, irritated at Richard's refusal to yield up the Duchy of Aquitaine, to which, it must be borne in mind, he derived his right from his *mother*, commanded his two eldest sons to wage war upon their brother! It is true, that as soon as Henry found the war had commenced, "he employed every method to quiet the discord." He had, however, some difficulty in allaying the tumult which he had raised, and when he became reconciled to Richard, his two elder sons turned their arms against him. The death of these two sons was, probably, a subject of gratulation rather than regret to the selfish and grasping father: and when Richard declared his intention of taking the cross, the King, although we are told "he mildly reproved him," yet inwardly exulted that the only remaining son who had arrived at manhood, was about to place himself so conveniently out of the way. Richard, however, although pledged to the Holy War, did not visit Palestine for many years; and again father and son became foemen. Rumours prevailed that Plantagenet intended to exclude Richard from the succession to the throne, and to bestow the crown upon John; while his delay in completing the marriage of Adelais, the French King's sister, with Richard, formed another just cause of irritation. Richard hereupon demanded that his marriage should immediately take place, and that the barons of England should take the oath of fealty to him as heir apparent:—

"To this proposal Henry gave a naked refusal, but, nevertheless, during the first day, we are told the conference passed quietly. On the second, high words began to take place, and on the third, menaces and reproaches ran so high, that the knights were seen to lay their hands upon their swords. A truce was, nevertheless, agreed upon till the day of St. Hilary following; which being settled, and quiet restored in the assembly, Richard addressed his father in the midst of the circle of nobles and clergy which surrounded the two kings at a respectful distance, begging him to give him some security of his succession as heir to the throne. Henry, we are told, made an artful but unsatisfactory answer, and Richard, after many entreaties, exclaimed, 'I now perceive that what I imagined to be incredible, is probably true!' and immediately turning to the King of France, he unbuckled his sword, placed his hands in those of that monarch, and did homage for all the territories held by the Crown of England in France, saving his father's rights during his life and his own fealty to Henry. The English king beheld this proceeding with consternation and dismay; and the meeting broke up in confusion."

War now broke out; and when at length the French and English monarchs signed a treaty of peace at Saumur, Henry discovered the duplicity of his favourite son John. The enraged father, invoking the most fearful maledictions on both his sons, retired to Chinon; and his neglected death-bed, his plundered chamber, and his corpse flung on a table, destitute of the slightest covering, emphatically showed the estimation in which the cruel and licentious Plantagenet was held even by his immediate attendants.

The first acts of Richard, on his accession, were marked by gentleness. None of the nobles who had borne arms against him were executed; and all persons imprisoned in England for infractions of the forest code, were set free at his express command. His mother Elinor, who was now liberated, after an imprisonment of nearly sixteen years, was appointed regent; and her first act was to proceed from town to town, throwing open the prison gates; "for," as Gervase remarks, "she was well able to appreciate that most joyful refreshment of soul, freedom." We are glad to find that Mr. James points out the inaccuracy of the received opinion, that there was a complete jail delivery on the accession of the new monarch. It was of prisoners convicted of offences against the late sovereign only—of those imprisoned for treason, for falsification of the coinage, or for infraction of the forest laws; and it seems probable that the reason for their liberation was, what in the instance before us is specifically stated, "for the repose of the king's soul." Those who had been snatched from the gallows-tree by his death, might naturally be supposed fervent in their prayers for his repose.

The following is the description of the new monarch:—

"Richard I., on his accession to the throne, was in the thirty-second year of his age, and endowed by nature with many high qualities of body and of mind. In person he was tall, strong, and active, long in the arms, straight and flexible in all his limbs, graceful of form, and peculiarly powerful in frame. His complexion was fair, his hair approaching red, but not exactly of the colour which is generally called so, and probably of the hue which we name auburn. No man, we are told, possessed more perfect symmetry, or more dignity of air and demeanour. He was famous for every sort of martial exercise; and we find the wielding of the sword particularly named as an art in which he excelled at this period. His skill in war, too, had been proved upon various occasions; and that the arts of peace were also cultivated by him, is shown by the fact, that in his own day he obtained much celebrity in what was then called the gay science, or in other words, the composition of small and somewhat rude pieces of verse, the first effort of reviving poetry on the north of the Alps. Besides these qualities, Richard had displayed a degree of moderation and even gentleness in his dealings with all men since he had succeeded to the dominions of his father, which might have been expected, from the clemency which he had generally shown to his vanquished enemies, during the various struggles in Poitou and Aquitaine, but which seems to have taken his subjects by surprise, when, having unbounded power to chastise, he used it, but with two exceptions, to soothe, to recompense, or to forgive."

That the people should look forward with pleasure to the coronation of such a king, is not surprising; and we find that it was attended with an extraordinary display of feudal pomp. It has, however, obtained a melancholy celebrity from the massacre of the Jews. The following is Mr. James's account:—

"Whether to gratify the zeal of his faithful subjects, or to guard against any of those acts of tumult and violence which sometimes took place when the wandering traders of the children of Israel were mixed with the Christians at any public ceremony, Richard had published a proclamation, forbidding the Jews, who were then very numerous in London, from entering the church or the precincts of the palace on the day of his coronation. Notwithstanding this prohibition, the Israelites, it would seem, were determined, either from motives of interest or curiosity, to enter the banquet hall, and witness the festivities which were going on. While the king was still at table, several of the Hebrew people, amongst whom was a wealthy Israelite named Benedict of York, passed the gates on the pretence of offering the king gifts on the occasion of his coronation; but as soon as they were perceived, the inferior persons who crowded the lower part of the hall, attacked and drove them out with blows, following them furiously into the space before the palace. Benedict, the Jew of York, was nearly killed upon the spot, and only saved from death by crying out that he wished to become a Christian; upon which he was baptized, apparently without any decent delay, by William, Prior of St. Mary's, of York. The crowd on the outside of the hall seeing the Israelites thus driven forth from the presence of the king, became possessed with the idea that it was by Richard's order they were attacked, and not content with striking them with the fist, caught up sticks and stones, killing several, and leaving others half dead upon the ground. The report spread like lightning through the city, that a general massacre of the Jews had commenced. It unfortunately happens that in every great town multitudes are found ready to follow any example of mischief which may be given to them, crowds speedily collected in various parts of the capital, and pouring into the quarters in which the houses of the Jews were situated, commenced the work of pillage and murder in the most brutal and remorseless manner. Few were suffered to escape, but those who, having friends amongst the Christian population, were permitted to fly to their houses for shelter. Such was the mad rage of the excited people that the houses of the Hebrews were fired, even at the risk of burning the capital, a great part of which

Digitized by Google

was then built of wood; and if we may be permitted to form a conception from the writings of many of the contemporary monks and priests, what was their own conduct at the time, it is probable that these abominable acts were, in most instances, countenanced and encouraged by the clergy. Nor was the offence confined to London alone. The news of the massacre of the Jews spread through the whole country with the rapidity and malignity of a pest. One city emulated another in rapine and violence; and it would seem that of all the great towns throughout the kingdom, Winchester alone displayed the true spirit of Christianity towards the unfortunate Israelites, for which lenity she is severely blamed by some of the contemporary historians."

Richard expressed a most commendable indignation at this massacre. He dispatched his justiciary to protect the Jews, and finding that Benedict of York had been so precipitately baptized, he caused him, on the following day to be brought before him. He then asked him if he really had intended to become a Christian, and the Jew replying in the negative, "he permitted him, uninjured, to abjure the religion he had only apparently assumed, though there can be no doubt that had Richard put him to death for his nominal apostacy, all Europe would have rang with applause of the deed."

The pecuniary preparations of Richard for his crusade, and the narrative of the expedition of Saladin, which ended in the capture of Jerusalem, conclude this volume. The following extract is interesting, and affords another proof that "there is nothing new under the sun." The strongest army which Palestine had seen for fifty years was collected for the relief of Jerusalem, but how to pay it was the question:—

"In moments of great and pressing difficulty the same measures generally present themselves to all states, however different may be their habits and customs at other periods; and things that strike us as novelties, produced by the exigencies of our own situation, will often be found upon the page of history, adopted by men under similar circumstances in various remote ages. At a general assembly of the nobles and people of the kingdom of Jerusalem, with the consent and approbation of the king, it was determined, in the imminent necessity of the time, to have recourse to a property and income tax. Assessors were appointed to estimate the property and income of each person in the realm; measures were taken to insure individuals against surcharge and afford them the power of appeal; the assessors were bound by oath not to reveal the secrets of any man's fortune, which they might discover in the execution of their duty; and the lower class were in some degree protected against the pressure of the tax. The impost was fixed at one per cent. upon property, and two per cent. upon income derived from ordinary revenues, [this included all revenues of landed proprietors, monasteries, churches, &c.] while those who laboured for their bread, and whose income was derived from pay or salary, were with justice imposed only to half the amount, though they were not absolutely exempted from bearing a share in the burdens of the state."

No exertions, however, availed: after a determined resistance the city capitulated. On the 2nd of October, 1187, the standard of the Prophet again floated from the walls of Jerusalem, and Christendom prepared for a third crusade.

History of Slavery, by J. Bandinel. (Longman & Co.)—*Letters on the Slave Trade*, by J. E. Alexander. (Gilpin).—*American Slavery*, by James Grahame. (Smith & Elder).—*Results of Negro Emancipation*, by John Jay. (Wiley & Putnam).—*Essay on the Means of overcoming the Prejudices of the Whites against the Blacks*, by S. L'Instant, [*Essai sur les Moyens d'extirper les Préjugés, &c.*] (Paris, Pegneur; London, Dulau).—*Posthumous Letters of Dr. Channing*, (Simpkin & Marshall,) &c.

Were we to judge from the goodly array of works before us on the question of slavery, and a host of pamphlets besides, which would make a list of titles as long as a reasonable article, we should be led to suppose that the interest of the subject is inexhaustible, and the doubts respecting a right conclusion very difficult of solution. But after having read over these several publications, we find that the battle is now over so far as argument is concerned. Dishonest evasions to escape the force of the sentence which justice and reason have pronounced against the continuance of slavery, may indeed be had in abundance, but the sentence itself is undisputed: an advocate for the permanent existence of slavery is not to be found.

Mr. L'Instant, a native of Haiti, whose able Essay on the Prejudices against the Colour of the Africans obtained the prize from the French Anti-Slavery Society, has effectually answered the vulgar error that the Negroes are intellectually inferior to the Caucasian race, by the publication of his work. It is a learned and philosophical examination of the source of those prejudices which stigmatize the Negroes as an inferior race of beings; he shows that similar prejudices have been nurtured wherever an ascendancy has been established, and that they have attained their greatest height at the moment when the absurdity of the pretences on which the ascendancy was founded had been most thoroughly exposed. The Spartans, the Athenians, and the Romans regarded their slaves with the same contempt and the same hatred, generated by fear, which the Turks evinced towards the Greeks, the Normans towards the Saxons, the Franks towards the Gauls, and the American planters towards their Negroes. It is one of the sad proofs that an ascendancy of race or caste extends moral degradation to the dominant as well as to the subject party, that absurd slander is ever made the excuse for unjust oppression. Mr. L'Instant has shown the truth of this principle by a copious induction from the history of all ancient and modern ascendancies, and so far as analogy can be received as valid argument, he has shown that the prejudice against the Negroes is only a particular case of a general rule. Here however Mr. L'Instant stops short; it was necessary to the completion of his subject to show that every irrational ascendancy is at best profitable to a very few of its members; that it fosters the preposterous pride of the rest at the expense of their real interests, and that injustice in the long run is purchased at as ruinous a price by a caste as it is by a nation.

We regret that Mr. L'Instant did not enter into this economic question, because he is the only one of the anti-slavery advocates who has fairly mooted the general question, of which Negro slavery is but a particular instance, namely, what are the necessary results of any system of ascendancy? It is in consequence of his taking this enlarged view that he has escaped from the prevalent error of pouring out vials of fierce indignation on the slave-holding States of America, as if they were without parallels in the history of hypocritical iniquity. He has measured the circumstances of their position, and has held them up to pity rather than to censure. Does any man believe that if Jamaica, Barbadoes, and Antigua, had been southern counties of England,—that every stable-helper and errand boy had been taught from infancy that an inferior race existed predestined to be hewers of wood and drawers of water for his caste and class,—that the very pauper in the workhouse was able to indulge a pride of superiority;—does any one believe that under such circumstances the British legislature would have found Negro emancipation an easy task? If such a belief is entertained, all history is set at nought, for in every country whose annals are recorded, it has been found that men adhere to the banner of ascendancy while its last rags can be held together, and even when it has fallen to pieces by its own rottenness there will be found multitudes looking with fond veneration to the naked staff.

We do not condemn special exertions for the extirpation of the slave trade and slavery, but we do not wish to see a part mistaken for the whole. Every exertion to prevent general commercial injustice strikes a blow at that trade which is the most unjust of all; every effort made to put an end to class-legislation weakens the most absurd of all classifications, that which rests on difference of colour. "This should ye have done, and not have left the other undone." It is perfectly true that the advocates of emancipation not only have the best of the argument, but they virtually have the arena to themselves, and that the great strength of the slave-holders is now deaf and silent obstinacy. Has modern history no example of any question but slavery being in a similar condition? Our anger against the Americans is misplaced; too many of us are open to the retort "Physician, heal thyself."

So far as England has had direct power, the objects of the Anti-Slavery Society have been attained; the indirect influence of the country remains to be exerted. Let us set to the world an example of integrity, of equal justice, of common rights, and of general laws; let us show practically that national prosperity can only be based on national equity, and let us repudiate every sacrifice of the many for the sake of the few, convinced that in the long run we thus provide best for the real and permanent advantage even of those few. These are objects worthy of every exertion for their attainment; they not only include the result sought by the Anti-Slavery Society, but they are the most certain and efficacious means for its accomplishment.

The Life of Joseph Addison. By Lucy Aikin.
[Second Notice.]

With the second volume of this agreeable biography, we commence a new era in the life of Addison, and in the history of English literature. While the Secretary was in Ireland pursuing "the even tenor of his way," he was agreeably startled by the appearance of a public instructor, at once philanthropic, gossipping and critical; by whom the reciprocal duties of parents and children,—the last new absurdity enacted by the Signors and Signoras of the Italian Opera—or the last new fashion (*sub rosâ*) of dainty garters for the toasts of the town,—were discussed; those with becoming gravity, these with welcome sprightliness. Our *Atticus* was observant enough at a very early stage of the business to detect Steele's easy wit and generous sentiments, behind the conjuring mask of Isaac Bickerstaff. It became as soon evident to him, that there was mischief, in which Nature and Education had alike qualified him to take the lion's share. He communicated with Steele, at first mere hints, *mots*, and such-like valuable "assistance in little"—but shortly in the more substantive form of complete papers and essays. It is not possible here to estimate the value of the little pamphlets which treated of morals, arts, and manners, in a style so new and fascinating;—Miss Aikin is duly impressed with their importance to the world of letters as it stood in 1709: the task of tracing its direct influences on the essayists of 1843, is as pretty an occupation as could be found for some Corney yet to come.

The few letters with which Miss Aikin illustrates this period, are literary as well as poetical. We have a genteel compliment to Mr. Ambrose Phillips—as "an admirable hand at a Sheep-

Digitized by Google

Crook," on his pastorals, a line, characterizing Bishop Hoadley, rumours of financial and political changes, and ecclesiastical appointments for "the amusement" of Dr. Swift, and certain information conveyed to the Marquis of Wharton, that the 'Essay on Cries' was written by Mr. Harley, and 'Mr. Bickerstaff Detected,' by Congreve. In 1710, however, it was Addison's fate to turn controversialist—replying, in the *Whig Examiner*, to the attacks which Matthew Prior published against the Duke of Marlborough in a rival paper:—

"The Examiner having brought forward a humble correspondent to tell the public that the writer of this paper could furnish mankind with 'an antidote to the poison that is scattered through the nation,' Addison says, it puts him in mind of the first appearance that a celebrated French quack made in the streets of Paris. A little boy went before him, publishing with a shrill voice, 'Mon père guérit toutes sortes de maladies.' To which the Doctor, who walked behind, added in a grave and composed manner, 'L'enfant dit vrai.'"

There is nothing new under the sun! All who are well read in Scott, will recognize the above anecdote in the first appearance of Wandering Willie in 'Redgauntlet.' Proceeding but one page further, we find Addison so possessed by party spirit, as to ascribe the "sublime in nonsense" to that very Sacheverel to whom he had dedicated his early epistle on the English poets. Thus ended their friendship. But the times were stormy, and men were, perhaps, then more bitter in quarrel than now-a-days. All the world is familiar with the display of "envy, hatred, malice, and uncharitableness" which Swift's journal to Stella reveals: and a stronger evidence of the characteristic bent of our author's mind could not be adduced, than that he was able to originate and perfect a work so continuous and important as 'The Spectator,' amidst such "a crush of matter, and wreck of worlds" as he was then surrounded by. Doubtless he was glad to escape from Whitehall and its cabals, to the company of Sir Roger, and the quietness of Kensington, where, about this time, he took up his abode. It must not be forgotten, however, that Addison was not compelled to remain an agitator, as many needy men are, from the cogent necessity of advancing their fortunes:—

"His Irish place was preserved to him till he obtained permission to sell it, stocks probably rose again, and whatever became of his Indian estate,—an estate in a West Indian Island, probably,—it is certain, that before the conclusion of this year, he found himself justified to that prudence which never forsook him, in making the acquisition of the house and lands of Bilton, near Rugby, for the sum of 10,000*l.*; his brother Gulston, however, assisting him, we know not to what amount, in the purchase."

Miss Aikin devotes one of her most elaborate chapters to an analysis of the peculiar merits of 'The Spectator;' much that is pertinent and clever being said by her in polished language. There is a wider view to be taken of the subject by a literary censor more catholic in his sympathies than our authoress; but we will leave this for another day, and content ourselves with the few anecdotes concerning the establishment of our progenitor, and the connexions to which it introduced the editor. One of these was Pope, whose 'Essay on Criticism' was very favourably reviewed; for which just courtesy the poet returned thanks to Steele, who, by way of rejoinder, made the author of 'The Messiah' known to Addison: and shortly afterwards we find the former addressing the latter in as flattering a strain as was ever poured by enthusiastic *Twenty* into the bland and willing ear of *Forty*:—

"Sir,—I have past part of this Xmas with some honest Country Gentlemen, who have Wit enough to be good-natured, but no manner of Relish for Criticism or polite writing, as you may easily conclude when I tell you they never read the Spectator. This was the Reason I did not see that of ye 28th till yesterday at my Return home, wherein tho' it be ye highest satisfaction to find myself commended by a Person whom all ye world commends, yet I am not more obliged to you for that, than for your Candour and Frankness in acquitting me with ye Errour I have been guilty of in speaking too freely of my Brother-Moderns. Tis indeed ye common method of all counterfeits in Wit, as well as in Physic, to begin with warning us of others' Cheats, in order to make ye more way for their own. But if ever this essay be thought worthy a second edition, I shall be very glad to strike out all such strokes which you shall be so kind as to point out to me: I shall really be proud of being corrected; for I believe 'tis with ye Errors of ye Mind, as with ye Weeds of a Field, w^h^ if they are consumed upon ye Place, enrich and improve it more, than if none had ever grown there. Some of ye Faults of that book, I myself have found, and more (I am confident) others have, enough at least to have made me very humble, had not you given this public approbation of it, which I can look upon only as ye effect of that Benevolence you have ever been so ready to show to any, who but make it their endeavour to do well. But as a little Rain revives a flower, which too much overcharges and depresses, so moderate praise encourages a young writer, but a great deal may injure him; and you have been so lavish in this Point, that I almost hope (not to call in Question your Judgement in ye Piece) that 'twas some particular partial Inclination to ye Author which carried you so far. This would please me more than I can express, for I should in good earnest be fonder of your Friendship than the World's applause. I might hope too to deserve it better, since a man may more easily answer for his own sincerity than his own Wit. And if ye highest Esteem built on ye justest ground in ye World, together with Gratitude for an obligation so unexpectedly conferred, can oblige a Man to be ever yours, I beg you to believe no one is more so than Sir, your most Faithful and ob^t.^ humble servant

"A. Pope."

The next event in Addison's life, was the production of 'Cato,' at Drury Lane, in April, 1713. This play had been in progress for many years, and so triumphant was its success, that its run of a month was only stopped by the indisposition of one of the performers. The Queen herself expressed willingness to receive its dedication. Booth, then a young actor, established himself on the tragic stage by his acting of the principal part:—

"It was afterwards performed by the same company at various provincial capitals, and at Oxford; and here, says the manager, 'on our first day of acting it, our house was in a manner invested, and entrance demanded by twelve o'clock at noon; and before one, it was not wide enough for many, who came too late for their places. The same crowds continued for three days together, an uncommon curiosity in that place; and the death of Cato triumphed over the injuries of Cæsar everywhere.'"

That there was something of partizanship in a popularity so amazing, is well known, and Pope, in a letter to Sir William Trumbull, mentions that Whigs and Tories took public occasion to press the sentiments, of which the dialogue was full, into their service: but allowing the fullest value to temporary and extraneous excitement, there is no gainsaying the fact, that as a work of stage art, this cold, classical, polished tragedy, transported the beaux and belles of the last century into the seventh heaven of ecstacy. It may be, that we are unjust to 'Cato,' that its solemn and sonorous maxims have been worn threadbare in quotation and the routine of school discipline, until we are unable to distinguish them from pompous common-places; but let the tragedy be judged ever so reverently, what Englishman is there who would sacrifice one page of Sir Roger and Will Wimble for the whole five acts through which the virtuous Marcia towers above her sex?

Shortly after the triumph of 'Cato,' and Pope's letter to the author, in which Addison is flattered as a being whose return "brings more joy than the sun's," while Dennis is designated as that "beastly bird," the bat, who is to be driven into obscurity by the orb of Day,—arose that misunderstanding, which separated the author of the 'Essay on Man' from the essayist on manners. The question is ably stated by Miss Aikin, who does not scruple, of course, to lay the larger share of blame upon "the little crooked thing who asked questions." So measured is she in her language, when speaking of her hero, so pre-eminently candid in accepting the smallest explanation he has to offer, that we think she uses too strong expressions in denouncing the "*venom*" of Pope's rage, even though she has to quote, as warrant for her noun, that biting character of *Atticus*, which has lived as long and been cited as often as the roundest period of the classical tragedy. The quarrel blazed out, it will be recollected, on the occasion of the announcement of Tickell's translation of the Iliad, which Addison was assumed to have protected somewhat jesuitically, that *is*, after having given Pope to understand that his version was to be the sole and final one, so consummate were his qualifications for the task. We care not further to dwell on a matter so humbling to literary pride as a disunion between such master minds on matters of personal interest. Enough to say, that Addison best kept his temper, and, wrapped in his reserve, or indifference, or serenity (as the case may be), has sustained little damage in character from as keen an assault as was ever launched at that most sensitive of mortal beings, an author! Graver cares may have rendered the affair of less consequence to him—the peace of Utrecht and the parliamentary disturbances excited by so momentous an affair—not omitting the share Miss Aikin conceives Addison to have taken in moderating Steele's Whig intemperance on the occasion—was a matter calculated to touch the man in office:—

"While Addison chid, without being able to moderate, the headlong zeal of his old associate, and lamenting in vain the ruin in which it was contributing to involve him, his own moderation, which was in reality the result of good sense, not indifference, inspired one of the opposite leaders with hopes of his conversion. The value of such an accession to a party now shaken at once by assaults from without and dissensions within, justified a decided effort; and Bolinbroke, to whom he was previously no stranger, asked of him a confidential interview. They conversed freely together for two hours, but parted with the full knowledge that 'they differed *toto cœlo* in politics.' Addison, indeed, had long since penetrated into the true character of this accomplished man, but ambitious, resentful, and totally unprincipled politician. Spence relates from Pope, that on Parnell's having been introduced into Lord Bolinbroke's company, and speaking afterwards of the great pleasure he had in his conversation, Mr. Addison 'came out with his usual expression, "If he had but as good a heart as he has a head,"' and applied to him that 'cankered Bolinbroke' from Shakespeare."

Yet even during a time so turbulent, the moralist found leisure to work at that treatise on the 'Evidences of Christianity,' which remains still a fragment: the wit, to help "*poor* Dick" in 'The Guardian,' and subsequently, when his unlucky friend abandoned that new periodical, to publish a supplementary volume to 'The Spectator.' The death of the Queen, in 1714, was a circumstance which could not but trouble the essayist's leisure. In the usual scramble for places, he was again nominated as secretary to the Irish Lord Lieutenant, then the Earl of Sunderland:—

"In his present circumstances (adds Miss Aikin), the employment was probably a welcome resource, and he quickly prepared to revisit the sister island in this important capacity. But here also he was fated to incur pecuniary disappointment, thus stated in his

Digitized by Google

'Memorial.' 'That the Memorialist's profits as Secr. under my Ld. Sunderland have fallen very much short of what might have been expected from that Office, and (contrary to yᵉ Profits of all other yᵉ like Offices in this first happy year of your Majesty's reign) have amounted to no more than they usually are in any common year, by reason of his Lordship's absence from that kingdom, and his not being qualified to give out military commissions.'"

It was on this second visit to Ireland that Addison proved that his independence was not shaken by his acceptance of office; since, on being forbidden by his new superior to hold intercourse with the Dean of St. Patrick's, he positively refused to pare and clip his private connexions according to official pattern. While Addison was writing memorials in Ireland, his old associate, "*poor* Dick," was entering upon the government of a dynasty little less troublous than the Lord Lieutenant's, by becoming patentee of Drury Lane Theatre. To this undertaking it is generally believed that 'The Spectator' contributed the comedy of 'The Drummer,' "the history and mystery" of which unsuccessful play are given by Miss Aikin, with all her characteristic care, lest her hero's fame be in aught damaged:—

"It was coldly received, although it was said to have been 'exquisitely acted;' but Steele, believing it, from the delicacy of its strokes of humour, better fitted for the closet than the stage, published it soon after with a laudatory preface. No hint of the author was given to the public, but Tonson paid what was thought the high price of fifty guineas for the copyright, under the impression that it was by Addison, after whose death Steele appears to have made a direct assertion to that effect. When therefore this comedy was found to be omitted in Tickell's posthumous edition of Addison's works, Tonson complained of having been imposed upon by Steele, who made his defence in that letter to Congreve, already cited, which he printed as an introduction to a second edition of the Drummer. In this piece, after making the general assertion that 'no one who reads the preface which I published with it will imagine I could be induced to say so much as I then did, had I not known the man I best loved had had a part in it, or had I believed that any other concerned had much more to do with it than as an amanuensis,'—he proceeds to defend this judgment on the ground of internal evidence, affirming that had he known nothing of the circumstances, he should have seen the humour of his friend in every page of it. Then, after digressing to some ill-founded censures of Tickell's account of the author's delays in the completion of Cato, he thus proceeds: 'If I remember right, the fifth act was written in less than a week's time; for this was particular in this writer, that when he had taken his resolution, or made his plan for what he designed to write, he would walk about the room, and dictate it into language with as much freedom and ease as any one could write it down, and attend to the coherence and grammar of what he dictated. I have been often thus employed by him; and never took it into my head, though he only spoke it, and I took all the pains of throwing it upon paper, that I ought to call myself the writer of it. I will put all my credit among men of wit for the truth of my averment when I presume to say, that no one but Mr. Addison was in any other way the writer of the Drummer; at the same time I will allow that he sent for me, which he could always do, from his natural power over me, as much as he could for any of his clerks when he was Secretary of State; and told me, 'that a gentleman then in the room had written a play, that he was sure I would like; but it was to be a secret; and he knew I would take as much pains, since he recommended it, as I would for him.' This, it will be observed, is no very cogent assertion of Addison's claim to the piece; but we have in corroboration both the plot, which has a striking point of resemblance with that of Rosamond,—there being in each a husband who visits his wife when she believes herself his widow,—and the style, in the humorous scenes, which bears strong marks of Addison. What is still more conclusive, Theobald has recorded, that he himself told him, that he had taken the character of Vellum from the steward in Fletcher's Scornful Lady,—to which the similarity is very conspicuous. It might indeed be a joint work; but the total silence of Tickell on the subject during his life, and the fact that no hint to this effect exists among his papers, or in the traditions of his descendants, seems to award the authorship to Addison solely."

Miss Aikin would have gladly acquiesced in Tickell's rejection of this poor farce from among Addison's collected works. She has more to say, and with reason, in praise of the point and the persuasion of the author's 'Freeholder:' and does not omit to notice that a large portion of these confessedly political essays, were addressed to "the ladies." This was reasonable, seeing, that in all ages "the sex" has taken the romantic side of every political question, which assuredly was *Stuart*, not *Guelph*, on the present occasion. Our essayist's free rallying of widows in 'The Freeholder' was somewhat oddly followed by what may be called the last great step of his life, his marriage with the Dowager Countess of Warwick, which took place in the year 1716—Tonson conjectures after a courtship one degree less long-drawn than that of *Hilpa* and *Shallum*. Miss Aikin rebuts the assertion as eagerly as if she meant to give credence to the charges brought against Addison as a fortune-hunter, to which the subsequent rumours of his domestic unhappiness are but the natural sequel. *These* she also indignantly denounces; basing her defence upon a clause in Addison's last will, as if testamentary dispositions were invariably dictated by temper and feeling. From the time of our author's marriage he made Holland House his principal residence. He resigned his public occupations in 1718, in consequence of ill health, and in the July of the following year took leave of life and literature, in that memorable scene and with those golden words which, beyond most that have been described and painted, are so eminently calculated to adorn a tale. A lucid and careful summing up of his virtues and gifts, is added by Miss Aikin, who has "not left a stone unturned," that the monument erected by her to one of our most polished writers and complete minds may be also fair, upright, and symmetrical.

Algernon Sidney's Letter to Thomas Wyse, Esq., M.P., concerning Art-Unions, &c. Hearne.

In old sporting phrase, Algernon Sidney would have been described as "a very ugly customer;" he says much that is pertinent—the schemers will say impertinent—concerning Art-Unions, Electrotypes, Prince Albert's patronage, the print trade, print publishers, past and present, the wrongs of artists, and other matters and persons thereunto allied. Respecting Art-Unions, he is somewhat late in the field—and, we think, wide of the truth in his judgment. He dwells far too emphatically on a distinction between the Art-Union of London, and the National and other trading Art-Unions. That the motives of the projectors were widely different, we admit; but this in a very trifling degree affects the question, if the influence of these unions be equally pernicious on Art. The pamphlet, however, is of more value than might be supposed from the temporary purpose for which it is written. In an Appendical Letter addressed to Mrs. Parkes, the writer shows up in a searching manner, the character of the print trade, and the pretensions of the print publishers, from the days of Boydell to our own, to be considered as patrons of Art. The pamphlet is evidently written by one who has been behind the scenes, and thoroughly well understands the effects of trade influences on Art and Artists. Mrs. Parkes speaks of certain deceased publishers as having fostered genius, and built up the British schools of Painting and Engraving: on which he thus energetically comments—

"I should certainly not, Madam, have addressed to you the following few lines, nor, perhaps, have written of Art-Unions at all, if you had not, illusively, erroneously, and as I think, mischievously, lauded the late, and some of the present London print publishers; and if you had not evasively avoided that which, in my estimation, is the most offensive and injurious—in short, the very worst—feature of the would-be National-Artful-Union. You seem, moreover, not to have entertained the idea, chiefly worthy of entertainment,—that of emancipating Art and Artists from their past British thraldom. It is only the new invention of Electrotype, and the twelve individuals who would constitute the Parnassian council, with Mr. Moon for their Magnus Apollo, that excites your displeasure. The *system* of a dominating set of dealers, you seem to think is right enough. You say those dominating dealers have been the patrons and blessed promoters—I aver that they have been the ignorant and despotic oppressors—of British art, and cajolers of the public taste. * * Do you suppose that any of these 'patrons' and promoters, and builders up, of the British school, did not deal in Masks and Mantillas? You know better. You must be cognizant of what Bowyer has done; and can scarcely be ignorant that Boydell, after the Plate of the Death of Wolfe had become entirely his own property, by his purchasing shares of deceased proprietors,—after it had delivered thousands of impressions, and been repeatedly retouched,—yes, after all this, he fraudulently erased the inscription beneath it, or, perhaps, caused his Printer to prevent the inscription from printing, in one of the ways which you describe; and printed off *apparent* 'PROOFS,' to the defamation of Woollett, who had been the foundation of the Alderman's fortune, and the gross deception of that liberal public who had relied on his honour, and amply rewarded his fancied exertions in fostering talent 'and a' that.' * * I earnestly wish that I could bring Mrs. Parkes to repudiate her present tenets (at least, some of them) and study in a new school of Art-patronage, or Art-ministration rather.—While I earnestly wish, and even entertain the hope of inducing her to leave off her un-English adulation—Pah! it is quite exuffolate to think of her pretending [I trust it is but pretending] to out-Moonise her rivals, in affecting to venerate the '*munificence*'—yes, the munificence, forsooth! of a Prince who expended 18,000*l.*" on a coronation robe. * * "Now this very King of the 18,000*l.* robes, rejected, as you well know, a fine picture, (rather an elaborate finished sketch for a larger picture) from the pencil of Hilton, of Lord Wellington's triumphal entry into Madrid; from which royal rejection, may have proceeded in part *the fashion* of neglecting this very meritorious painter, whom, since his decease, it has become *the fashion* to praise. * * It is evidence of the truth of the lamentable postulate I have before laid down, that 'Alas! there are *Fashions in Art*.' That in this British land, which has left its nobility to pick up their taste on Art, from interested picture and print dealers, or as else they may—*Fashion*, which rests on *personal influence*, and that most childish of our emotions *Novelty*, has with impunity invaded the province of Taste—nay, is sometimes *substituted* for Taste; and that this substitution, fanned by Flattery's silken wing, is recognised and sanctioned by some amongst the great. Discernment and principle are accordingly pushed aside where they presume to intrude, and dealers in the *commodities* of Art, *follow*, *flatter*, and *degrade* their dupes, and virtually counteract the Artists whom they pretend to foster, whose proper office and delightful duty it is, to *lead*, *purify*, and *exalt* the genuine votaries of Taste. * * Next, permit me to remark that you and Mr. Moon in your adulations, in which there appears too much of an emulation to outvie each other, confound cause with effect, and displace them accordingly. Works of Art should not be esteemed good because they are fancied or beloved by Princes, but they should be beloved by Princes, when and because they are good: *vide* Hilton's picture and the gorgeous robe above-mentioned. * * The critic of the *Athenæum*, an observant judge, says, that in cases of subscription, soliciting 'names will no longer do,' obviously meaning fashionable names deposited as nest-eggs. Can we be surprised that such influences have abated? Right glad am I to hear that they have. It is among the very best of the signs of the times, as respects the pursuits of Art. Leviathan has by much too long allowed himself to be led by this hook in his nose. * * You complain of the trials of the times; 'enough (you think) to pull a royal merchant down.' This *misconception* I am sorry to read. Why, Madam, *the times were never*

Digitized by Google

before so auspicious to print selling as at present. At no former period were there half so many Engravings sold. You entirely mistake 'the genuine forms of things.' The real subject of your complaint, aye, of *your* complaint, be well assured, though you may not yet have perceived it, is the *numerous swarms* of idle and mendacious dealers—counter-and-portfolio men, who have fastened upon the Fine Arts and prey on their vitals. If to feed luxuriously these swarms of talentless exchangers and plausible shop-window men, be the true aim and proper employ of the arts of Painting and Engraving, I must accord you that the times are somewhat less good than they lately were; nay, they are not likely to be again quite so palmy as they have been. But why? Because the swarms of plausible idlers will be sure to multiply more rapidly than the patronage of Art will increase or accumulate. Wherefore if you have assumed this false criterion of prosperity, for your own sake, and the sake of Art and the Public, make haste to divest yourself of so untenable a notion. Learn, with the least possible delay, to discriminate between manufactures, of which you may increase the produce, through means of machinery, and Fine Art, which you cannot. Respect Genius: and do not fancy that it is producible or increaseable by the petty irrigations of 'the trade,' even when not illiberally disposed."

This pamphlet suggests a wide field for discussion, on which we may enter hereafter: but we must at once remark, that though we have over and over again protested against the disgraceful quackeries of the print publishers, we do not agree with the writer before us in his attack on them. A print publisher is a trader in prints, and as Falstaff says, "'Tis no sin for a man to labour in his vocation;" to call them "mammon-worshippers," to say "they care not a fig for fine art;" to talk of "locust swarms," "talentless exchangers," "plausible shop-window men," is equally offensive and unjust. That they "demand a clear half from the poor engraving-wight or painter, who presumes to publish any work of his own, leaving him to defray out of his moiety the expenses of printing, paper, advertising, &c." is no hardship of which a painter or engráver has reason to complain, for he need not and will not avail himself of their services, unless he believes that it is his interest to pay the fifty per cent. He or his friend Algernon Sidney is at perfect liberty to open "Metropolitan Emporia," and sell their own works, and the works of other artists and engravers at any per-centage they please; and the fact that this is not done at less than fifty per cent. is strong presumptive evidence, that it would not pay to do it. We admit that the writer may plead as an apology for this scorn and indignation, the strong provocation offered by Mrs. Parkes in her idle flourishing about the motives of print-sellers; but flourish as she or they may, it must not lead us from the valid objections to the manner in which the print trade is, and has long been conducted, and which lie in another direction, as the writer knows perfectly well, for he distinctly alludes to it. The utter ignorance of the vast majority of persons who buy modern prints, "lays them open to the plausibilities of specious imposture," and leaves them at the mercy of the dealer; and of this the print publishers have availed themselves to an extent utterly ruinous to art and artists. By power of money they can at any time give a fictitious value and interest to any work. The moment, therefore, that they have bought a picture, or given a commission for one, every means, no matter how unworthy, are resorted to, to give it celebrity—poets are paid to write verses on it, that the public may be infected with this bought enthusiasm; prose paragraphs are paid for in the local papers to trumpet forth its merits, and even critical journals have been established by print-sellers, professedly "devoted to Art," but in truth to the breeches-pocket interests of the proprietors, to lead, and of course mislead, the public judgment. These things, however offensive in themselves, would be of comparatively little consequence, if the "be-all and the end-all" were the thousands and tens of thousands conjured out of the pockets of the public; but we repeat, they are ruinous to Art, and death to all noble and generous devotion to it. The trader's trade-artist becomes *the* artist of the day, and the man who has devoted a life to Art for Art's sake, goes friendless, penniless, and fameless to his grave, because he would not work in harness, manufacture to order, or sell himself body and soul to a print-publisher. Even the fifty per cent. commission cannot save him; for the publisher gets eighty or ninety by the sale of a print, of which he has the copyright.

A Paper Lantern for Puseyites. By Will o' the Wisp. Smith, Elder & Co.

A clever *jeu-d'esprit*—one of the few good-humoured trifles to which the Puseyite controversy has given rise. A young Oxonian, the Rev. Hilary Oriel, is presented to the living of "Pope's Newmouth," and reports on the state of affairs in the parish, and his resolution to amend them, to his friend, the Rev. Clement Loyola.

The parsonage never can suit me at all,
It is so much too large; it is what I should call
A good family house, for me wholly unfit;
You know my ideas, and I will not permit
Such arrangements to stand in the house of a priest;
They are meant for a wife and six children at least.

Well, so much for the residence: now for the church,
Which I find has been shockingly left in the lurch:
For my predecessor, poor, sleepy old creature!
Never troubled himself in repairing one feature
Of her primitive face. It looks sadly dejected;
And it goes to my heart that it thus was neglected.
Now I am resolved on complete restoration:
I will keep out of sight the so-called Reformation,
Set aside all those Ridleys and Latimers too;
With Cranmer or Jewell what have we to do?
As it now has been proved by the deepest research,
'Tis the Catholic, never the Protestant Church.—
The old-fashioned Commandments, the Prayer, and the Creed,
Set just like a horn-book for the children to read,
I cannot, I fear, altogether erase,
But some new ones I'll have, more befitting the place.
Pray send your old missals,—I'll study the letters,
For I must take some hints from our Romanist betters.
Then with characters varied, with ornaments new,
Painted quite in a blaze, with gold, scarlet, and blue,
And with roses and flourishes properly decked,
They will have a most brilliant and striking effect;
So may every one think they are different quite
From those ugly old things done in mere black and white.

When all this is arranged, I shall stand in great need
For some lights for my altar: it grieves me indeed
To find that there is not a candlestick here,
Not a vestige of one; and to me it is clear
That Cromwell's vile men knocked them all on the head
When they sought to establish their new lights instead:
Now it is my intention to set up thirteen,—
That's enough for the candlesticks; next comes the screen,
For which I must order some plaster and paints,
As I'm anxious anew to bedizen my saints;
There is one wants a head, and another a nose,
St. Chad has no fingers, St. Crispin no toes;
The stigmata gone from St. Francis's hands;
Without arrows or wounds St. Sebastian stands;
Poor St. Ursula 's there, but she hasn't a rag on;
They 've taken St. Michael, and left me the dragon;
Of a book most obscure St. Augustine 's the bearer;
And St. Gregory needs a new papal tiara.

The sight of the windows would make you quite sad;
I must have some stained glass, if it is to be had.
* * * *
What reformers began, the churchwardens have finished,
All the figures misplaced, and their glories diminished;
For (would you believe it?) these odious old fuzzles
Have twisted and turned them like so many puzzles;
They've murdered St. Denis, they've set on his head,
'Tis not borne on his hands, but his shoulders instead!
Among other queer changes, what think you I've pounced on?
The devil is taking the nose of St. Dunstan!
There are angels sans wings, and the heroes are flying,
The martyrs are slaying, the torturers dying;
And unlucky St. Cuthbert they cleverly show there,
With his head in one window, his trunk in another;
* * * *
What d'you think they replied, when I spoke of the font?—
"Oh! there is an old font, but we make it a rule
To use a pint-basin and four-legged stool."
Now, according to law—and I'll have it made known—
I am bound to use none but a fit one of stone.

September approaches, and the Squire, a descendant of President Bradshaw, arrives with his two daughters. The characters of these girls are very cleverly contrasted; both natural, well drawn, and clearly defined. An attack is immediately made on the Squire; but "the old Puritan stain" is not to be washed out, and the enthusinst takes leave in a huff. The future history is intimated in the following passage:—

I fear I was ruffled;—I quitted the door,
And almost vowed never to enter it more;
But I brought to my mind apostolic snecession,
And a dignified calm of my thoughts took possession:
"We alone are the ministers; we hold the keys,
And let in, or keep out, whomsoever we please."
As I mused in this way, I strolled down by a road,
That turned close by a cottager's lowly abode;
I heard a soft voice, in a silvery tone,
Reading forth from the Gospel of blessed St. John.
I crept up to the window, and peeped through the bushes;
I acknowledge I sneaked,—and it raises my blushes
To think I should feel thus ashamed to be seen.
Now, why did I do it?—for really 'twas mean.
But when my eyes glanced on an object within,
I paused—there I fear that I fell into sin—
A thought flashed through my brain, but I bitterly rue it,—
"Though women can't minister, angels may do it!"
The delicate fingers that lifted the page,—
The sweet lips of youth speaking comfort to age,
Were by no means what I had expected to see,
Why then should I mind? these were nothing to me.
Then I hurried away.

The tale is illustrated with some clever woodcuts: the Village Choir has a merit beyond the requirement of the work, and shows a power worth cultivating for higher purposes.

OUR LIBRARY TABLE.

The False Heir, by G. P. R. James, Esq. 3 vols.—In a preface to 'Eva St. Clair,' (a recent republication of many of its author's shorter stories,) Mr. James defended himself from the charge of over-productiveness. In his prelude to 'The False Heir' he recapitulates his services in the great Copyright question, and assigns as a reason for the reduced price of the novel before us, a pledge given that should the English novelist be protected, by prohibiting the import of piratical copies of his works, the experiment of reducing the price of books should forthwith be tried. "If the False Heir," concludes Mr. James, "fail to sell better than its predecessors, of course the old scale of prices must be returned to." This is a little egotistic, very inconsequential, and not altogether worthy of one who has been so energetic in an honourable cause. The benefactor is best remembered by his silence, since with self-assertion the suspicion of the many is sure to be aroused. When will authors be superior to this preface-weakness? 'The False Heir' needed no tap of drum nor "ear-piercing fife" to bid the public of novel-readers admire him. The tale is certain to attract all who love its writer's former fictions. To unthread its mazes, however, is beyond our intention: there is no contemporary writer who deals so cleverly with mysteries, surprises, escapes, links of evidence lost to be found again at the express moment when most needed, as Mr. James. Suffice it to say, that the scene is laid in France, during the last century, and that the intrigue of the tale is frankly revealed by its title—that Francis de Langy, the "false heir," is one of the most *preux* heroes, whose chivalrous and courteous virtue was ever chronicled by Mr. James—that Julie d'Artonne is one of the sweetest and most maidenly of heroines—and that Jean Marais is one of the cleverest of valets, as will be seen in the part played by the knave for the deliverance of the old Count d'Artonne. Then we have the wild scenery of Auvergne (which, by the way, seems to be coming into request) described in our novelist's best manner, with a prison-interior or two, forcible enough to assure us that it is not from want of power that Mr. James restrains his hand from delineating those dark combinations of crime and misery in which so many modern authors revel—we had written *wallow*. 'The False Heir,' in short, may pair off, for the skill with which it is constructed, and the interest it excites, with 'The Ancient Régime,' from the same busy pen.

The Dirge of Westminster, or Founder's Day.—'The *Dirge* of Westminster' is scarcely a fitting title for this performance,—which is a lament for the decay of that ancient Institution, with a cut or two at its more flourishing rivals, and a scheme for its renovation. The cause of its decline the author finds to be the spread of brick and mortar, which, carrying London westward, has invaded its meadows, and polluted its play-ground, the Thames; and the remedy which he, prescribes, is a migration, after the American fashion, before the advancing tide of population, and a settlement in the far West, on the banks of the Severn,—including an annual pilgrimage to, and festival at, the ancient seat. The remedy is exactly proportioned to the disease,—according to our author's pathology:—and he is the more reconciled to this emigration, *because* the Dean and Chapter of Westminster have deprived the scholars of their ancient privilege of access, at all times, to the interior of the Abbey,—locking from their youth the teaching of its ancient monuments. The outcry against the exclusion of the artistic and general *public*, the author considers (*totidem verbis*) as a mere farce; but the Westminster school-boys he holds to be thereby robbed of one of their most valuable prerogatives. In the course of his pleading,

several ancient and venerable spirits are invoked, whom spells a thousand times more potent than any which could be wielded by an army of wizards like this Westminster Advocate, shall never startle again from the deep slumber into which they have been cast by the great magicians that now walk the earth. To the main poem are added some classical *Nugæ*, by the author, and a body of copious Notes, in which he very complacently reviews his own performance, and explains the meaning of his text, scholiast-fashion, the explanation being to the text as three to one. These notes are as fine an example of "much ado about nothing" as a lover of words for their own sake need desire. For an instance, there is a note of some length, making conscientious acknowledgment of a plagiarism in that very striking and original phrase, "*young ambition!*" and our author, with the candour of genius, that can afford to be candid, assigns its place of nativity to "a Town-boy's play, in Barton-street, Westminster, more than half a century ago"!! We insist upon the generosity of this proceeding, because, if the author had chosen to keep his own counsel, even they who suspected a plagiarism, would, in all probability, never have found him out. But, having given him honour, where it is due, we are bound to add that, assuming the ancient school of Westminster to be in so sorry a plight as this author supposes, it has small chance of regeneration if it can find no abler advocate than him—and little deserves it, if it can produce none.

Lives of Eminent Christians, by the Rev. R. B. Hone.—This is the fourth volume of a careful and well considered compilation. The author has chiefly confined himself to the lives of those statesmen and divines who were most conspicuous for their attachment to the principles of the Anglican Church, and has therefore been compelled to discuss many controversial subjects which are still the theme of angry dispute. It is not to be expected that he could divest himself of the prejudices of position, but he has honourably exerted himself to maintain a spirit of charity and moderation, even when pronouncing merited censure.

The Cold Water System; an Essay by M. J. Graham, M.D.—*Approximate Rationale of the Cold Water Cure*, by Richard Beamish.—*Hydropathy, its Philosophy and Fact*, by C. V. Schlemmer.—We have already recorded our opinion of the royal road panacea, improperly termed hydropathy; and have referred to sound medical authorities in proof that the efficacy of a regulated use of cold water, under certain circumstances, is neither new nor rare, while we cautioned our readers against the extravagances and excesses sanctioned by its new-fangled advocates. We are now called on to notice three new testimonials on behalf of the remedy. These we might characterize by a single line. They are all the productions of persons interested in establishments for conducting the various processes of the hydropathic cure; and their essays are obviously composed on Dr. Ollapod's principle of "bringing custom to the shop." Dr. Graham's work, however, professes to draw the line between use and abuse, and to moderate extreme opinions as to the applicability of the remedy, and therefore carries with it a *primâ facie* semblance of reason. He may, on this account, be supposed to approach to our own notions, and, on the *sapit et mecum sentit* principle, be entitled to our approbation. We are, therefore, called upon to state that in Dr. Graham's moderation we can trace nothing more than an effort to conciliate those, whose common sense cannot be made to swallow Priessnitz *tout pure*. Dr. Graham justly observes that "assertions are not proofs, nor are cures always facts;" and he might have added, nor are inferences from facts always logical and correct. To all this we are ready to agree on rising from the perusal of his own volume. There is no sustained effort in it to appreciate the relation of means to ends, on anything like scientific principles. Dr. Graham also holds out to his patients the additional line, that he does not trust to "the halting legate" Priessnitz absolutely and exclusively, but comes to the aid of the water cure by a due administration of the ordinary drugs. Whether this be rationalism or empiricism, we leave to others to decide.

On the Law of Lunacy, by a Phrenologist.—The writer anticipates that the gentlemen of the press "will endeavour to overwhelm" him "with a torrent of unprincipled invective." We think that he is mistaken; and that they will treat the work as "a rabid effusion, the mere product of an absurd and merely animalized intellect," if, indeed, they will admit that intellect has had anything to do with it.

Poems, by Viator.—Viator has picked up few things, on his travels, worth the trouble of bringing home, so far as these poems are evidence;—assuredly, his path has not led him to Helicon. The author offers them as "trifles light as air"—it is their fate to be returned upon his hands as "*unconsidered* trifles." Their most remarkable feature is a History of Rome, from the earliest days down to the conquest of Alaric, executed in 104 lines.

Poems, by B. Fenton.—Of the only plausible argument which could have been pleaded in extenuation of a publication so weak as this, the author has deliberately deprived himself—by keeping its contents, written when he was comparatively a boy, for presentation to the world in his character of a man. Youth's venial folly of a few unmeaning rhymes has in it nothing which need demand so severe an expiation, in after-life, as this self-denunciation before the tribunal of the public.

Spring Flowers: a Collection of Poems, by T. W. Newton.—These poems are described by the author as his first essays at verse. Unless he be a very young man indeed—so young that their testimony goes for nothing, one way or the other,—all who wish him kindly will counsel that they should be his last.

Seven Poems, by Owen Howell.—There is an air of pretension about these poetical exercitations, which plainly announces that their author "thinks he is thinking:"—yet such truisms as compose them are to be had, at an easier price, and seven to the half-dozen, almost anywhere.

Dora Marcelli, the last of her Race, by D. W. Scott.—It has a mournful sound that "last of her race" to those who read only the title-page: they who seek further find a compensation in the conviction, that no more of the family can ever be sung in verse like this.

Chronological Chart of British Architecture, &c., by A. Barrington, M.D.—We have here a chart, accompanied by an illustrative volume. The chart appears to differ from other charts principally by being printed in larger type. It is divided into columns, and contains the leading events in British history, a genealogical table of the sovereigns, with their armorial bearings! and illustrations of contemporary architecture!

List of New Books.—Rambles in the Isle of Wight during the Summers of 1841 and 1842, by John Gwilliam, 12mo. 6*s.* cl.—Edmonds' and Hollings' Leicester Latin Grammar, 12mo. 2*s.* cl.—The Twenty-first Book of Livy, with Notes, &c. by C. R. Edmonds and J. F. Hollings, 12mo. 3*s.* cl.—Watchwords of Gospel Truth, with Scripture Meditations, 12mo. 5*s.* cl.—The Pictorial Bible, illustrated with many hundred woodcuts, 3 vols. imperial 8vo. 2*l.* 12*s.* 6*d.* cl.—The Pictorial History of the Jews and Natural History of the Holy Land, by John Kitto, with 500 engravings on wood, 1 vol. imperial 8vo. 1*l.* 11*s.* 6*d.* cl.—Letters to my Children on Church Subjects, by Rev. W. J. E. Bennett, Vol. I., post 8vo. 6*s.* cl.—Swan's Letters on Missions, with Preface, by W. Orme, 2nd edit. 12mo. 4*s.* cl.—Scott on the Existence and Agency of Evil Spirits, 8vo. 12*s.* cl.—Hetherington's History of the Westminster Assembly of Divines, 12mo. 5*s.* cl.—Acts of the General Assembly of the Church of Scotland, royal 8vo. 1*l.* 12*s.* 6*d.* hf-bd.—A History of British Birds, by William Yarrell, 3 vols. demy 8vo. 4*l.* 10*s.* cl.; Ditto, 3 vols royal 8vo. 8*l.* cl.; Ditto, 3 vols. imperial 8vo. 13*l.* 10*s.* cl.—Manual of British Botany, by C. E. Babington, 12mo. 9*s.* cl.—The Progress of the Nation, by G. R. Porter, Esq., 3 vols. 1*l.* 4*s.* cl.—Harris (Snow) on the Nature of Thunder Storms, 8vo. 10*s.* 6*d.* cl.—Life of Rev. James Renwick, by Rev. R. Simpson, 18mo. 2*s.* 6*d.* cl.—Life of Napoleon by Sir Walter Scott, Vol. II., new edit. 12mo. 5*s.* cl.—Melbourne Church, by Rev. J. Deans, 8vo. 5*s.* cl.—Carpenter's Popular Cyclopædia, Vol. I., containing 'Vegetable Physiology and Botany,' 12mo. 9*s.* cl.; Ditto, Vol. II., containing 'Mechanics, Horology, and Astronomy,' 12mo. 9*s.* 6*d.* cl.—The Student's Guide to Measuring and Valuing Artificers' Works, 8vo. 7*s.* 6*d.* cl.—Ben Bradshawe, the Man without a Head, a Novel, in 3 vols. post 8vo. 1*l.* 11*s.* 6*d.* cl.—Facts and Figures applied to current Questions, royal 8vo. 2*s.* cl. swd.—The Tutor's Assistant, or Comic Figures, in Arithmetic, by Alfred Crowquill, 12mo. 6*s.* cl.—The Philosophy of Marriage in its Moral, Social, and Physical Relations, by M. Ryan, 4th edit. fc. 8vo. 6*s.* cl.—Bennett's Historical and Descriptive Account of South Australia, post 8vo. 2*s.* cl.—Paper Lantern for Puseyites, 2nd edit. 8vo. 1*s.* 6*d.* swd.—Poems by A. J. B. Hope, fc. 8vo. 3*s.* cl.—The Hand-Book to Paris, 7th edit. 32mo. 2*s.* 6*d.* cl.—Traditional Nursery Songs, square, with 8 coloured plates, 4*s.* 6*d.* bds.—Sir Hornbook, or Child Launcelot's Expedition, squnre, bds. 2*s.* 6*d.* plain, 4*s.* 6*d.* coloured.—The Book of the Navy of the United States, by John Frost, with portraits, &c., post 8vo. 7*s.* 6*d.* cl.—The Miser's Daughter, by Ainsworth, 2nd edit. 3 vols. post 8vo. 24*s.* cl.

THE LATE DISCOVERY.

She stood where hills were high and green,
Where flowers were sweet and wild,
Where ne'er before her steps had been,
The city's toiling child;
But even the glorious spring that shed
Its sunshine o'er her now,
Could ne'er restore the spring time fled
From that young heart and brow.

She saw the happy hamlet homes,
In valleys fair and free;
And heard, among the meadow blooms,
The voice of childhood's glee;
But from those early shaded eyes
The tears were falling fast,
As thus, amid her dying days,
The blighted spoke at last:

"Ah! had the earth such glorious things
Beneath so blue a sky,
While all my cheerless, hopeless springs
In darkness glided by?
Did all these lovely scenes expand,
These happy hearts exist,
And yet, amid the pleasant land,
How was my portion mist?

For I have seen the palace hall
In distant splendour gleam,
And heard the midnight festival
Awake my weary dream;
And all that wealth from farthest shore
Or distant wave could bring,
Mine eyes have seen, but ne'er before
Beheld the blessed spring.

Though oft such visions long ago
My lonely dreams have cross'd,
Yet never knew my soul, till now,
The all that it had lost.
Oh, lovely vales! oh, glorious skies!
Oh, flowers of balmy breath!
How will ye gladden other eyes
When mine are sealed in death.

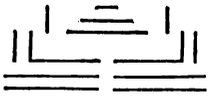
Alas! for human sacrifice,
The stain of every clime;
For all whose youth unpitied dies,
The lost, the doomed of time.
Ah! well, well, may that promised shore
Be bright with tearless bliss,
If it to withered hearts restore
Their summers lost on this."

April 4, 1843. Frances Brown.

FOREIGN CORRESPONDENCE.

Carlsbad, May.

It occurs to me, oddly enough, in Austria, and on the most splendid of May-days, that I intended to send you some report of one of the sights of Dresden, which you will not find in Guides or Handbooks—viz. the Saxon House of Commons, or as it is here called the Second Chamber. It happened, fortunately, during our short stay, that the three days' debate on the press took place. I don't know whether that debate has attracted the notice of the English press, but I am sure it deserves to do so—indeed, it would be as well altogether if we were less aggressive and more sympathizing. We mention other nations only to find fault with them; and though the privilege of finding fault is one which I am far too good an Englishman not to maintain to the last drop of my blood, yet I think the pleasure of saying to a neighbour, with all one's heart, "Well done," is also one not to be despised. Those who have written such fierce attacks on the enemies of the press, should have a good word to say for its friends.



It is the fashion, just now, in Germany (among a certain class of writers) to boast very much of their excess of modesty and self-negation. I confess I am generally not struck with this. But it does appear to me that they are given to undervalue their representative assemblies. When I said I wished to hear a debate, some said I should be bored to death, some looked as if they thought I wanted to laugh at the duodecimo House of Commons. When I said I had been extremely interested and much impressed by the decorous and respectable character of the meeting, they seemed surprised, and looked to see if I was in earnest. This arises partly from the presumption

Digitized by Google

—too often justified—that an Englishman will treat everything foreign with scorn—everything political above all; partly from the universal tendency to rate size and strength above all other qualities.

I was, however, quite sincere. An Englishman who has lived for some time where debating is impossible, begins to feel a sort of tightness across the breast, which must be unintelligible to any one not reared in the breezy atmosphere of political discussion, and which he himself could hardly believe possible at the close of a session of Parliament, or after reading a scene enacted at the Chambre des Députés, or an outbreak in Congress. But so it is. One thinks the present evil the greatest in the world, till one is brought into contact with another. In short, whether it was that the sight of men arranged on benches—not chairs—for the purpose of debate, or that one has a sort of parental feeling towards all little Houses of Commons, certain it is that I felt more *heimlich* (homelike) than I had done for a long time, and looked and listened with great interest.

My present business is chiefly with the look. The Chamber consists of seventy-five members, elected by the towns (*Bürgerstand*) and the country (*Bauernstand*). The room is a long square. At either end is a door; at one of these the members enter, at the other the ministers. Along one side and a part of the two ends, stand three rows of benches for the members, as opposite: in front of each bench is a desk. On the other side, of course facing the members, sits the president, or speaker; and on either side of him, the two secretaries. Before them sit the three or four reporters (*Stenographen*). Behind the president is a sort of tribune, which, on the occasion in question, was occupied by a deputy (*Abgeorducter*) of the ominous name of Todt (Death), one of the most active and conspicuous speakers in the Chamber. The reason of his occupying this place, was, that he was *Referent* (Refendarius) of the deputation before whom the law under debate had been laid. This wants a little more explanation. Every project of a law (bill) emanates from the Government, and before it is submitted to the House, must be laid before a deputation (committee). The *Referent* (chairman) of this deputation acts as spokesman for it so long as the law is under debate. Before him lies the report of the deputation, to which he continually refers, as also other papers connected with the subject. There are, I believe, standing committees or deputations to which certain classes of bills are referred—but I am not sure.

On the side at which the ministers enter are their chairs—four, I think, in number. On this occasion there were present the Minister for the Home Department, the Minister for Foreign Affairs, and the Minister of Public Instruction and Church Affairs (*Cultus-Minister*). Every time one came in, the members rose; a very innocent remnant of the good old times, when ministers made the rain and the sunshine. On the side, over the deputies, and opposite the president, is the gallery for the public in general. This was filled with a very attentive audience, chiefly composed of young men. On the right hand is a gallery for the peers (members of the first chamber), to which, also, strangers are admitted. On the left is one for women, of whom there were about half-a-dozen. Here the English rule is reversed: women are admitted (without any favour or interest) to the second chamber, and not to the first. I beg to observe, that I state this as a perfectly indifferent fact, and mean to imply neither eulogy nor reproach; though I never could admire the project of admitting "ladies" into the House of Commons.

You will not expect me to send you a report of the debate. The whole is to be found in the *Deutsche Allgemeine Zeitung* (Leipzig), or in the '*Landtags Mittheilungen*' (Reports of the Diet)—where the proceedings of the Chambers are regularly printed at length, and exempt from all censorship. I shall only say, that the general tone was calculated to impress a stranger with great respect for the character of the people and the assembly. That it was quiet, orderly, and attentive, everybody who knows anything of Saxony will expect to hear. There were no interruptions, no violence, no jokes, no charlatan tricks: everybody who spoke seemed solely occupied with his subject, said what he had to say, more or less well, but always with decorum and earnestness. Some of the members are not without oratorical talent, which is rare in Germany, because there is no demand for it. With no bar, no representative bodies, and no public meetings, the inducement to cultivate elocution is not general nor strong. The pulpit and the professor's chair protect their occupant against interrogation, objection, and reply. There seemed to be no limit to the number of times a deputy might speak. I think Mr. Henry Brockhaus, the eminent bookseller of Leipzig (whose opinion on the effects of the law on literature have naturally great weight) spoke at least five times, and some deputies even oftener; sometimes only a sentence or two, so that the debate was then more like a conversation; but always without the least confusion. Each member rose in his place, and having said what he had to say, sat down. The ministers all spoke—Herr von Nostitz und Jänkendorf more than once. Herr von Leschau (Foreign Minister) made an appeal to the Chamber, not to urge the Government into collision with foreign powers (a very reasonable subject of dread). The fact is, that not a week passes in which the Saxon Government is not pestered with "reclamations" from one or other of its neighbours. There is something extremely touching, as well as exasperating, in the thought, that the best intentions of the best of kings towards his own subjects may be controlled and thwarted by foreign interference. I do not know what the sentiments of the King of Saxony may be on this subject, but be they what they may, his position must compel him to obey other considerations. England whose institutions are copied, and whose example is quoted by the constitutional states of Germany, cannot be an indifferent spectator of so unequal a conflict. Those States are all small, and physically powerless; nor can it be supposed that their proceedings are watched with a very benevolent eye by other governments. Their only real strength lies in the opinion of Europe. It is, above all things, our imperious duty *to abstain from abuses of the press.* Nobody who has not watched the struggle that is going on in Germany, can tell how the cause of free discussion is continually damaged and thrown back by its so-called advocates and friends. Every abuse, every excess, is a weapon, and a most effective one, put into the hands of its enemies. I am afraid the consideration, that while we disgrace ourselves we injure others, is not likely to have much weight with traders in words—but with the merely unthinking it may. Nobody can blame a conscientious ruler for desiring to keep from his subjects the torrent of mischievous stuff which makes the virtuous and the judicious of all countries grieve. If that were practicable without too great a sacrifice, who would not do it?

In my list of Saxon ministers you will miss a name which has so long been connected with the highest regions of science, disinterested and enlightened patriotism, affectionate loyalty to the king he is so worthy to serve, ardent, expansive philanthropy—M. de Lindenau was not present.

The Saxon chamber has the less merit in its sober and temperate deportment, since it has little to irritate it. The character of the king would disarm the fiercest Jacobins; the simplicity of the court is in harmony with the frugal habits of the people, the country is on the whole thriving, and there is no oppressive aristocracy. Those who care much for the honour of constitutional bodies, must regret that the States gave so niggardly a Civil List to a sovereign, who relinquished not only vast hereditary property, but all the princely and unequalled collections of his ancestors to the people. Such things do not render constitutions attractive, especially where there could not be a pretext; for there is not a soul in Saxony who thinks the king's taste would permit him to abuse wealth.

The Chamber meets at ten and sits till two—sometimes, in cases of desperate effort, till three. The members are paid for their attendance—I think five thalers a day. The States meet every third year.

The complaints of German liberals, and the sneers of Englishmen of all parties, as to the insignificancy of German representative assemblies, are founded chiefly on their inability to determine the fate of a ministry. A majority is a simple record of opinion. For example, on the question (so much and long debated all over Germany) of a public administration of justice and oral procedure (*Offentlichkeit und Mündlichkeit*) the majority in the Saxon Chamber was seventy-two to four. As this did not produce any immediate result—in short, as the decisions of the Chamber are not law, people say the Chamber is a mere mockery, &c. &c. Before one assents to this, one must admit that there is no vital power in truth, and that calm and continued discussion leads to nothing. The question for Government to settle is, whether in the present restless and irritable state of the popular mind everywhere, it is better that there should be a legalized arena for the utterance of public opinion, or whether, like an ill-stopped current, it should be left to force its own way through a hundred unlicensed channels; and the question for peoples, whether such an arena is not worth having, even though it be not armed with legislative powers.

New York, March 29, 1843.

One of the late *Quarterly Reviews* remarked that the reprints of the fashionable novels of the last London season constituted the standard literature of America, a remark that has much truth in it, for too many of these novels are thus reprinted and circulated. But the reproach, however well deserved, shows an ignorance of the real state of the republishing market which it may not be amiss to devote a few paragraphs to correct. The republications in the United States have advanced within a short period immeasurably in extent. The change in the mode of publishing has brought about this result. Formerly, when the production of a book required capital and credit, there was a natural limit in the resources of the trade. When a book went through some of the regular forms of announcement, printing, binding, circulating from city to city, a tithe of the best English publications supplied the market. Correspondents and agencies had to be created, and credit had to be given. Most of these essentials of the old trade (and of all regular trade) are now dispensed with. In the first place, the book is no longer a book; it is a pamphlet in form, unbound; the credit system is at an end, for the paper-covered pamphlets are sold for cash from the counter; a publisher was then also a bookseller, and the expenses of his warehouse and interest upon his stock came in as elements of the cost—a charge that is felt no longer.* Moreover the mail routes, at newspaper rates of postage upon the greater part of these republications (which are published as extras of some weekly periodical, to come within the post office privilege), afford a very rapid and simple method of transportation. Under this new system the power of reproducing a foreign literature is widely enlarged. Where there is no copyright charge, no binder's charge, where one sheet of paper does the work of four, where there are no losses by credit, where there is no store-hire chargeable, where there are no *old shopkeepers* on hand, the edition being at once disposed of for ready money—books may well be cheap, and cheap they are.

New books are published by several of the large publishing houses, but the newspaper offices regulate the prices—at a minimum. There are no scruples here of the dignity of the trade against small profits. There is no publishing season. All controlling regulations are levelled. The two newspaper offices in this city, the *Brother Jonathan* and the *New World*, publish each at least one work weekly. The low rate of profits compels them to be in the market frequently, and exercise the utmost possible ingenuity in creating and meeting the public taste. The system is thus a self-multiplying one. Not only a reading appetite is created which advances in a rapid ratio, but the resources of a large newspaper establishment must be constantly employed.

At the commencement of the increased republication, when the books were fewer, the editions were much larger than at present. The average edition of a new novel, book of travels, or history, is now about five thousand, varying somewhat, from the conflict of other books in the same office, the reputation of the author, the state of the weather; a rainy day and foul streets being matters of some importance in the large city sale. An edition of two thousand would probably

* Most of these works are sold at newspaper offices and in the streets. One of the most flourishing of these establishments in Broadway is a candy-shop!

Digitized by Google

pay expenses, and beyond that the profit on each thousand would be from forty to fifty dollars.

The class of works is very far from being limited to the fashionable novels. The republications of this week in New York alone are O'Connell's 'Memoir of Ireland,' (25 cents); Dr. Arnold's 'Lectures on History,' (25 cents); Mrs. Ellis's 'Wives of England,' (25 cents); the last number of the *Edinburgh Review*, (25 cents); and 'The Roué,' (12½ cents), an old novel now published as Bulwer's on the faith and recommendation of some former advertisements in the *Times*. There have been four cheap editions of Borrow's 'Bible in Spain' by two publishers, and three of the 'Zincali;' at least 35,000 copies in all. The translation of D'Aubigné's 'History of the Reformation' has been widely circulated. Alison's 'History of Europe' will be soon entirely published for four dollars, with some additions by the author.[?] Taylor's 'Edwin the Fair' was published for 6¼ cents. The whole twenty parts of 'Martin Chuzzlewit' will be published by the Messrs. Harpers, with fourteen well executed plates, for forty-four cents, less than the cost of two numbers in England, and the edition is as good as that of Ballantyne's 'British Novelists,' in double columns. Of Bulwer's 'Last of the Barons,' at least 50,000 were circulated. Bulwer's 'Eva, and other Poems' attained a large edition at sixpence—in the old form it would have remained on the shelves. Brande's 'Encyclopædia' may be had complete for three dollars. 'The Pictorial History of England' will soon be republished. What think you of Liebig's works and old Froissart in this popular form? Several editions of the former have been published, and the latter is in hand. So you will see that the Commissioners of Customs will have full employment for at least one sub-official in keeping the list of contraband books.

The first most obvious consequence of the effects of all this is the virtual extinction of an American Popular Literature, by which I mean, not merely a literature that is read (for there is already reading enough), but a noble, honourable, patriotic literature to be believed in, and constituting a part of the national life. This great foundation and support of an elevated public character is wanting, and you may read the result far from the author's starved fireside or the publisher's counting-room. The incidental evils that flow from this *unnatural* trade, violating the laws of social morality, are greater than the immediate ones. The absence of the wholesome restraints of an independent self-regulated literature are felt in the public press, in public speaking, in the national heart and mind. Under cover of the cheap reprints are sent forth a whole series of the present French school of romance. Immoralities of all kinds will be avenged, and literary immoralities are no exception to the rule.

The American author is, in every way, in a false position—with his publisher, with the public. The evil is not to be weighed by the difficulties in the way of the few who write, but in the dead silence, worse than the sufferings of oppression, throughout the country. There is, to be sure, a slow under-current in the scholastic labours of men like Professor Robinson, Prescott, Wilde, and others, but even the labours of this class are checked—if it were only through the loss of a large market in England for their works by the want of an *international* law.

There is no doubt that this vast dissemination of good literature must fertilize the public mind. It has been the origin of a great revolution in the publishing of books, commensurate with the diminished pecuniary resources of the country. Books must hereafter always be cheap in a land where the reading classes cannot be wealthy, but of course the simple self-controlling principles of demand and supply would regulate this. Books must be cheap where they are a universal necessary of life, but they are not cheap when we procure them at the expense of good faith. We esteem the little extra payment to the author much, and we esteem the want of sympathy between the English author and his American reader still more. The recognition of an international Copyright Law would be a first step towards cosmopolitanism. These are considerations which any one may pursue for himself. On some other occasion I will give a history of the efforts made here towards the attainment of such a law; of the present state of the question; a sketch of the probable Bill that will be proposed at the next session, and a few reasonable conjectures as to its fate.

Here are a few items of literary news that may interest your readers:—

'The Life and Remains of the late Dr. James Marsh, of the University of Vermont,' (who wrote the Essay prefixed to Pickering's edition of Coleridge's 'Aids to Reflection,') embracing various professional works, and a collection of letters, will be published at Burlington this next summer, with a memoir by Professor Torrey, his successor in the department of Moral and Intellectual Philosophy.

Prescott's 'History of the Conquest of Mexico,' and Bancroft's fourth volume of 'The History of the United States,' coming down to the Declaration of Independence, will soon be published.

The Harpers have issued, this week, Stephens's new work on Yucatan, with Catherwood's daguerréotype views of the ancient ruins, the most valuable contribution to the antiquities of that country yet published. This edition is sold simultaneously in London, where I suppose the very expensive plates will be a virtual copyright. Here the sale is expected to fall short of the first series, in consequence of the supply of cheap literature.

Audubon has taken his departure for the Rocky Mountains, with a professional corps of friends, to complete the material for the new work already commenced, 'The Viviparous Quadrupeds of North America, embracing the United States, Texas, California, and the N.W. Coast to the British Possessions and Arctic Regions.' The work is to be published in thirty numbers, six annually, on imperial folio paper, twenty-two by twenty-eight inches, at ten dollars each. It is lithographed at Philadelphia.

The *National Intelligencer* contains the prospectus of an American, English, and French daily journal to be published at Paris, under the charge of Henry Wheaton, American Minister at Berlin, Dr. John Bowring, of London, and "one of the most prominent statesmen and moralists of France." Its objects are peace and international philanthropy. The subscription proposed is 600,000 francs, in shares of 1000 each, to be distributed between the three countries.

The New York Historical Society at its last monthly meeting, elected Sir James B. Williams, Bart., Shrewsbury, Esq., and Robert Lemon, Esq. F.S.A, Chief Clerk in Her Majesty's State Paper Office, London, Honorary Members. The Hon. Albert Gallatin is the President of the Society. Mr. Folsom, a member of the Society, is about to publish a translation of the official narration of Cortes, of 'The Conquest of Mexico,' addressed to the emperor Charles V. These despatches, or letters, were written in Mexico, and printed in Spain soon after, the first in 1522, two years after it was written. They are referred to by Robertson, but have never before been translated into English.

The subject of solitary imprisonment is exciting considerable inquiry. Dickens's instincts as a man has anticipated the slow result of experiment. Two recent Prison Reports, in Rhode Island and Massachusetts, justify his inferences of its inhumanity. At the state prison of the former, of thirty-seven convicts under this system, six have become insane.

A portion of a letter from Sir E. L. Bulwer has been published in the *Boston Times*, in which he says—"With the last page of 'The Last of the Barons' closed my career as a writer of fiction. You have long been aware that my graver studies have been gradually unfitting me for the task of the 'Romancier.' 'The light of other days is faded,' and my fancy no longer kindles at a spark, as in happier hours of yore. I am too wise to jeopardize what little credit I have won already, and therefore bid farewell—a mournful farewell it may be—to the light labours and flowing dreams of the novelist."

ROYAL ACADEMY.

We must begin our second notice of the Academy by recording, to our own condemnation, some sins of omission. In noticing the historical pictures, we ought, perhaps, to have begun with the largest and the most ambitious—the one which in size and subject is the picture *à prétension* in this style—

67, *Dante, accompanied by Virgil, in his descent to the Inferno, recognizes his three countrymen, Rustitucci, Aldobrandi, and Guidoguerra*, George Patten, A. The figures rather above life size.—The mechanical merit of this picture is great. The forms are boldly and correctly drawn; the execution careful throughout. The failure is in the poetry of the effect—a great failure in a picture of a subject so essentially poetical. Mr. Patten is fond of choosing epic subjects, but he treats them somewhat prosaically. The critic can but coldly applaud what leaves him cold. Here it would not be easy to discern whether the scene be in Heaven or Hell. There is no horror in the gloom around; the light below from the "*Città dolente*"—the city of eternal agonies—is more like the tint of a splendid sunset than the lurid flames of Tartarus. The heads want the expression we look for, though we should perhaps shudder to find it; in short, the choice of the subject every way daring, required to be treated with a daring spirit, as well as with the mastery of hand which has been exhibited in the design.

561, *The Festival of Bacchus*, E. V. Rippingille, is a poetical composition also of merit, but somewhat diffuse, and tone of colour too monotonous and brick-dusty.

579, *The Heroine of Saragossa*, B. R. Haydon. Figures life size.—Haydon is, no doubt, a man of genius, but his vanity has led him into the very extremes of bad taste and extravagance, blended every now and then with a feebleness and impotence which renders the attempt at force and epic grandeur quite ludicrous. The Heroine of Saragossa is a melodramatic looking figure, who clenches one hand, like the fist of a boxer, and holds a torch with the other, just as she would handle a fan. The whole picture is full of such turgid imbecilities. We should have passed it altogether unnoticed, but for our respect for what Mr. Haydon has done in his time, and our remembrance of Wordsworth's sonnet.

263, *Prince Charles asleep after the Battle of Culloden, watched by Flora Macdonald, and Highland Outlaws*, T. Duncan.—This is history in the *genre* style: an interesting picture, reminding us much of Wilkie, in subject, in style, in colour, and even in the streaky handling here and there.

377, *Christ in the Sepulchre lamented by two Angels*, M. Claxton. The figure well drawn, well foreshortened, the angels common-place; and the solemnity of effect, which ought to give the poetry and religion of the subject, wanting.

There are many other pictures of sacred subjects (Nativities, and Annunciations, &c.), such as we are not used to see on the walls of the Academy, but all painted with such a vapid timidity, that it is as if the remembrance of the old masters had paralyzed hands no longer guided by the same devout spirit. We shall leave them to their inevitable fate, therefore, and pass on to the second class of pictures—the domestic and familiar subjects: a style of painting in which the English school has long excelled all others; and in the present Exhibition we have some pictures of this class of surpassing merit; not as we have had too generally, merely effective bits of sentiment and colour; not merely pretty pictures, but *good* pictures; painted with more care, more thought, and more character than usual: even Leslie, always charming, is finer than ever, at least in his first picture.

164, *Scene from the Vicar of Wakefield*.—This beautiful picture has all Leslie's acknowledged excellence in conception, grouping, colour, and airy elegance, and none of that *spottiness* of effect, into which he had fallen, and which we were once afraid would have degenerated into a trick of manner unworthy so great an artist. Here there is nothing of the kind, but, on the contrary, the utmost harmony and brilliance; while the delicacy with which the characters are felt and discriminated, the quiet humour, the absence of all caricature in the two town ladies, are merits of a higher kind.

416, *Scene from Molière's Malade Imaginaire*, is, we think, much inferior. Monsieur Purgon is the best figure; but the Toinette is as far as possible from the clever, arch French *soubrette*, depicted by Molière.

137, *The Actor's reception of the Author—Scene from Gil Blas*, D. Maclise, R.A. Full of genius—full of marvellous workmanship. Humorous invention and character, felicitous imitation in the details, can hardly be carried farther. The sneer of the titled coxcomb, "Le Seigneur Carlos Alonzo de Vento-leria," is excellent; better still the broad im-

Digitized by Google

pertinence of the comedians; and all the accessories put in with the most exquisite finish and vivacity of touch. Yet we observe with regret that there is no amendment in Maclise's usual faults, which are as palpable as his merits; that we have the same hardness, the same scattered effect of light and colour, the same predominance of cold bluish tones, even in the flesh tints, so out of keeping with a subject which is at once jovial and Spanish, and ought to be lighted by a warm afternoon sun. In the other little picture, 172, *A Waterfall in Cornwall*, which represents an Irish girl (for she is Irish all over) in an English scene, this bluish tint prevails till the effect is almost spectral: but here the exceeding coldness of tone might arise from the reflected watery lights; at least, it does not strike us as so discordant as in the other picture.

Mr. Uwins, R.A., and one of our veteran painters, has seven pictures this year, all in the same style—small pieces of elegant sentiment and vivid colour. The best is 485, from Crabbe's story of the sailor who returns home only to die in the presence of his affianced bride—full of simple character and pathos.

W. Collins, R.A., another of our oldest favourites, who used to paint to perfection homely English nature, till he went to Italy and came back *Italianized*, has five pictures this year. 309, *The Nativity*, we must pass over, for the reasons already given: it will not do at all. In two others, 94, *The World or the Cloister*, and 457, *The Girl of Torrento Spinning*, it is clear that the same face has served for a model—for the Torrento girl and the young lady of fashion; and the character and intention are so different, that we have reason to complain of such a want of taste and selection; meaning thereby no disparagement to the face itself. Two others, 204, *A Windy Day, Sussex*, and 217, *A Sultry Day, Naples*, are of unequal merit; the first excellent and characteristic, the second miscalled—it is not sultry nor Naples, but as cold and as English as can well be conceived.

232, *Dinner-time in the Refectory of the Convent of Ogni Santi, with the Friars at Table*, S. A. Hart, R.A. A piece of perspective effect, well painted, in emulation of Granet.

534, *The Last Appeal*, Frank Stone.—There is more power of every kind in this picture than any thing of Mr. Stone's we have yet seen. The story is simply and intelligibly told. The rustic lover meets his obdurate sweetheart at the rocky well, and makes a last appeal to her pity—and you see that it is hopeless. There are days and nights of pining love in his anxious, earnest, pleading and despairing look; and in the unrelenting loveliness of her averted face, a settled resolve, mingled with pain. Then the painting is exquisite in every part: all the accessories—the wet, mossy well, the moist foliage, the pail, the pitcher—all are finished with a conscientious care, in which there is nothing obtrusive. We consider this picture far in advance of the sentimental elegance of Mr. Stone's former pictures, showing more depth of feeling and purpose, as well as an improved hand.

193, *The Cotter's Saturday Night*, C. W. Cope.—Though this picture has much merit in parts, it has disappointed us; because we have watched Mr. Cope's progress hitherto with great interest, and this picture is not equal to what he can do, nor even to what he has already done. The poet's pretty Jenny, and her suitor, are sadly common-place.

362, *Passing the Cross in Brittany*, F. Goodall.—The French peasantry in Goodall's pictures are as full of character and nationality as the Flemish boors of Teniers, and much more interesting. This is a bright beautiful picture, and the heads touched with great delicacy.

128, *Sickness and Health*, T. Webster, A.—A sick child looking on while other children are dancing. A simple subject, treated with infinite grace and pathos, and also carefully painted.

397, *The Fortune Hunter*—468, *Going to Service*—553, *The Poor Teacher*, R. Redgrave, A.—The general style of this painter reminds us of that of Mrs. Opie as a writer. His forte, like hers, is the pathetic; it is the same manner of appealing to the same class of feelings. For instance, the expression in the face of the forsaken girl, in No. 397, is almost too true and painful. But why is the gentleman styled the Fortune Hunter? There is nothing in the picture to point him out as such. 'Going to Service' is better. All Mr. Redgrave's pictures *tell a story*, either moral or pathetic, or both; and tell it very significantly: a great merit.

Charles Landseer, A., has two pictures here (the index to the catalogue gives him but one), the best is 376, the *Monks of Melrose*; it has all his usual merits, but the finished picture is not quite equal, we think, to the first sketch engraved for Mr. Scrope's book ('Salmon and Fly Fishing'). Charles Landseer improves generally every year that he exhibits, but he cannot—we wish he could—lift himself out of a certain heaviness: this is not merely of touch, tone, and treatment, but in the very conception of his subject some leaden influence weighs down his talent; we long to put more life and spirit into him, or at least into his pictures, which are really worth vivifying, if it were only for the care and truth with which they are painted.

38, *Arabs seeking Treasure*, and 547, *Prayers in the Desert*, W. Müller, have great merit, much poetry in the treatment, and a fine rich tone of colour. Mr. Müller has evidently lived amid the scenes and personages he represents.

218, *Dr. Johnson perusing the MS. of the Vicar of Wakefield*, E. M. Ward, and 315, *Sir Joshua Reynolds and his Friends*, 606, *The Village Coquette*, G. Lane, deserve notice for careful painting, or character. There are some hundreds of pictures of the same kind, but we believe no others that deserve any particular notice here; we have mentioned all that have struck us as displaying mind, and as above mere prettiness and mediocrity.

Hereafter, we shall offer some remarks on landscapes and portraits.

Architectural Drawings.

A cloud has come over the Academy's Architectural room this season; we miss from the catalogue the names of most of those whose productions have hitherto given *éclat* to this part of the Exhibition. Where is the Royal Professor of Architecture, Mr. Cockerell? where the Professors of University College and King's College? they have not a single design or drawing of any kind! Something was to be looked for from Mr. Cockerell, since by virtue of the office which he holds in the Academy, he may be considered bound to exert himself to keep up the credit of the Architectural Room. It was not thus in the days of Soane, who, whether it was chiefly out of vanity and self-conceit or not, was a constant and liberal contributor, and in himself alone a host. But not only have the Architectural Professors turned their backs on the Academy, but the Architectural Academicians, and the members of the Institute. Of the Professors, not one exhibits: of the Academicians, only one: and of the members of the Institute very few. There is no occasion to say, that the Academician is not Sir Robert Smirke; but that it should not be Mr. Charles Barry is indeed to be regretted; more especially as he could have shown us what he now so strongly recommends, in order to obtain a more extended and imposing façade on the west side of the Houses of Parliament (*ante*, p. 440). Of course, no one can be compelled to be zealous, or active, or generous; but it amounts to moral delinquency, if those who can do much in aiding the interests of their art, do comparatively nothing; and those who have made themselves conspicuous in the eyes of the public, must not be surprised if they find that eminence has not altogether the same privileges as obscurity; and that whether justified in doing so or not, people will animadvert on the indifference or supineness of those to whom they look up for examples of something more than negative good conduct. If the Professor of Architecture at the Academy, and Mr. Barry, choose to make themselves ciphers there, *à la Sir Robert*, they may do so with impunity, supposing it to be impunity to subject themselves to public opinion, and to such remarks as we take the opportunity of here making,—and which, though not likely to be so considered, are well-intentioned, having in view the serving and encouraging the art, without regard to individuals, be they ever so eminent.

To quit reflections of this sort for remarks bearing more immediately on the drawings exhibited, we should say, that while the mass of them are poor as designs, there are few which are of interest or importance on account of the subjects they represent. From the one hundred and thirty drawings mentioned in the catalogue, one hundred may fairly be deducted, as either not worth looking at, or so placed that when looked for and found they cannot be seen,—we do not mean cannot be discerned, but cannot be examined, nor at all understood in their details. Of competition designs there are fewer than usual; nor are those for buildings either of much consequence in themselves, or rendered so by the skill with which they are treated. It may, however, be presumed, that although not so described, most of the designs for churches are competition subjects, and among them are one or two interiors of considerable merit. We need not notice that of the Temple Church, No. 1193, as the drawing is no more than an architectural portrait; and though scrupulously faithful as such, deficient in pictorial effect, wherein it yields to No. 1222, 'Stone Church in the palmy days of the fourteenth century,' A. Smith; an imaginary scene of similar character in regard to the extent to which *polychrome* embellishment is carried. But No. 1185, 'Design for the restoration of the interior of the Church of the Holy Trinity, at Hull,' by Messrs. Lockwood and Allom, is captivating as a drawing and as a good specimen of church architecture. It would have been more satisfactory had there been a small sketch exhibiting the present state of the building, and showing thereby how far we are indebted for what we here see to the suggestions of the restorers. Nos. 1247 and 1260 are also interiors of the same class, manifesting much better taste than usual in regard both to quality of architecture and to arrangement and mode of fitting up. The first of them, 'Church about to be erected at Whitstable, Kent,' R. C. Carpenter, is marked by unaffected simplicity of character, in which the parts, instead of being impoverished or neglected, are carefully considered, boldly marked, and pleasingly combined. A great deal of character is produced by the timber roof, with its springing arches of the same material; which being both of high pitch, and lofty in proportion to the height of the side walls, gives the edifice a peculiar expression of humble solemnity, the loftiness being that of the roof itself, not of the fabric generally. The other design, 'Church of St. Mary, Herne Hill, Dulwich,' G. Alexander, is of a different character from the preceding, having a lofty nave with clerestory windows, and a low-pitched gable, timber roof and sloping ceilings of the same material over the aisles, formed into panels, and decorated with colours. In one respect, both churches agree, neither of them having side galleries, which so sadly disfigure our modern Gothic churches, and the pews are little more than low open seats. No. 1317, 'Interior of the Cemetery Chapel erecting at Cambridge,' E. B. Lamb: a much smaller subject than either of those just mentioned, although shown upon a larger scale, displays more of genuine architectural *gusto* and energy of style than we are accustomed to meet with in designs of higher pretensions. We perceive from it how much may be made by conception and treatment alone, with what amounts in itself to no more than the minimum of an opportunity; for though in the subject itself there is scarcely anything to speak of—merely a timber roof, a paved floor, some arches, and a painted window seen at the end—there is a great deal of effect and architectural expression put into it. Of designs for the exteriors of churches, that for the one 'now erecting at Marchwood, Hants,' by J. M. Derick, and which has a tower and branch spire at the south-west angle, struck us as one of the best, both for its general composition and its style.

Nos. 1252 and 1262 show us two works which are now actually in progress, and of which the first, viz. 'South-east view of the Hall and Library at Lincoln's Inn,' P. Hardwick, R.A., will be an important and conspicuous piece of architecture, similar in style to Middle Temple Hall, and, like that, constructed of red brick and stone. To enable us to judge better of the entire design, there ought to have been another view in the opposite direction, showing the north building, or library portion of this architectural group more distinctly, for at present its effect can only be guessed at. We may, however, venture to say, that the whole will prove a redeeming feature in the architecture of Lincoln's Inn, or rather will produce some architectural character there, whereas the present buildings are a strange incoherent jumble—a medley of styles and no-styles, and some of them in the worst taste imaginable. The other subject, No. 1262, shows us also an additional building, now considerably advanced, at another Inn, viz. the new

Digitized by Google

"Chambers in the South Court of Staple Inn," by Messrs. Wigg and Pownall. To say that it is a better specimen of architecture than the older buildings there, would be no compliment, since they are of a most shabby, dismal, and sulky-looking physiognomy, without being in the slightest degree picturesque in their wretchedness; yet, although not without merit in design, as a specimen of the Elizabethan style, this new building is not so satisfactory as it might have been rendered by a little more study. The character of the style is rather subdued than refined: whereas we could have wished to see it refined, and at the same time rendered more energetic, by its better qualities being brought out more decidedly:—but enough for the present.

PICTURE SALES.

THREE Collections sold since our last report, all of them at Messrs. Christie & Manson's, have claims, greater or less, on our notice. The late Sir Richard Borough's pictures, forty-six in number, comprised few worth mention, and none to exhaust the superlatives of panegyric: two 'Venice Canal scenes,' clever, toast-coloured things, with *Canaletti's* warmth but not his mellowness, had about equal merit, and brought correspondent prices, 63 and 61 guineas.—The collection of F. B. West, Esq., late member for Dublin, demands more lengthened details and remarks, as well because of its superior worth, as its furnishing some criterion whereby to estimate the wealth and taste which we may assign that metropolis. Both would seem, thus tested, to be limited enough. Half the stock, of eighty articles, was little beyond just vendible; the other half netted 3,000 guineas or upwards—say the whole, 3,500*l.* Perhaps no finer *gallery* had been formed since the Union by any private citizen of Dublin, yet a London shopkeeper would lay out almost as large a sum in adorning his obscure domicile at Finsbury Square, or his sunbright box at Brentford! For the taste this collection indicated, we should entitle it rather comprehensive than discriminative, not very exalted, if not vulgar: it admitted specimens of all Schools and all styles, but the highest; most, however, spoke the cit-amateur, being of Dutch character and cabinet dimensions. We must except two large Italian pictures by *Corradi*, yet neither are these by the great Corradi, mental father of Michaelangelo, nor any of that renowned old choir; a certain *Francesco* Corradi, one of the much later "cavalier" artists, who won temporal easier than immortal honours, has preferable claims. His style somewhat resembles Furini's, with which our readers may be more acquainted, —a soft, coal-black *sfumatezza*, spreading like a veil over pallid flesh-tints, and opposed by Corradi to strong reds, yellows, &c. in the draperies. This produces powerful effect—too powerful: the atmosphere of Erebus itself could not harmonize such colours, flame, sulphur, and ghastly-white relieved against sable! It is just the palette Satan himself would set if he turned limner. Still these pictures sold beneath their value; 'Lot and his Daughters' for 19 guineas, 'Bathsheba and Attendants' for 32. A large apocryphal *Ruysdael*, flat, cold, and feeble, brought 290 guineas. A small indubitable landscape, by ditto, pure and exquisite, 200 guineas: thus we see painted canvas for the saloon-wall is valued like that for the hall-floor, according to the table of Square Measure, so much per yard! This little "waterfall" would refresh a desert of sands, as far as it could be seen there: the cottage above it looks a piece of its rocky bank, rude, and gray, and irregular; the humid clouds are its offspring, and appear descending in drops to its bosom whence they rose: all blend into one accordant effect—the woods reek with moisture, and the dark-green herbage seems to exude at every pore. We have not often beheld a better production of Ruysdael's hand; Nature's alternately dilative and contractile fingers could alone manipulate a work more broadly, yet minutely. Another admirable sample of harmonious composition deserves no less praise, 'Horsemen on the Road,' by *Wouvermans;* a wild and desolate scene, over which a winter-evening sun from behind chill masses of brightened clouds reflects its fierce splendour, and where the leafless trees quiver at once to the beam and the blast, is represented in the finest unison of tone and subject possible, proving what a deep poetic sense these Dutch painters could display amidst their matter-of-fact details: 222 guineas was little for such an excellent specimen. 'Peasants, Cattle, and Itinerant Musician,' by Berghem, small and pretty, but Berghems are the samenesses of sameness, 170 guineas. 'St. John with the Lamb,' fathered upon *Murillo*, who has weakly progeny enough of his own to depress him, 100 guineas. 'A Girl feeding Chickens,'—little Lady Catherine Clinton in farm-yard character—by *Sir Joshua*, very small, and a mere *ébauche*, 28 guineas. 'Italian Lake,' by *Wilson*, from Col. Fox's collection, a brilliant failure, 53 guineas. *Northcote's* 'Sleeping Girl' merited more than 25 guineas, though a hot-cheeked Blowsabel, and servile imitation of Sir Joshua. 'View in Flanders,' after *Rubens's* large original, 53 guineas. 'Tobit,' a clever pretence for *Salvator*, 62 guineas. 'Interior,' ascribed to *De Hooghe*, and the distant group worthy of him, were its brightness somewhat mellower, 73 guineas. 'Italian Landscape,' a beautiful little work by *Botte*, wanting alone that which all his productions want—breadth of composition—to render it as attractive a woodland scene as sun ever shone upon "since summer first was leafy," 273 guineas. 'The Campo Vaccino,' doubtless reckoned a true *Claude* by its late possessor, and such will be reckoned by every future one, 80 guineas. 'Madonna and Child,' catalogued as a *Correggio*, but which we could not believe to be by him, though he rose from the dead to assert it, 83 guineas. 'A Woodland View,' by *Hobbema*, and a 'River Scene,' by *Cuyp*, considered the stars of this collection, 400 and 440 guineas. These two painters proceeded on opposite principles of illumination: Hobbema loves to sequester the sunlight within close vistas or vaulted shades, Cuyp to spread it abroad through the open champaign. Here we have the principles exemplified: in one picture is a roadway under a dark wood, like an illuminated tunnel, stretching from the foreground to the distant horizon, along which path the sun pours his radiance beneath a roof of thick-woven boughs and foliage: in the other, hill, valley, grove, stream, and sky, all reflect light around, and redouble the power of the sun by their free interaction. Nothing that Cuyp ever painted exceeds the rich mellow sunny green of the river-bank, with its village embosomed amidst luxuriant copsewood, nor have we ever seen any hand beside his equal it; but there are certain defects elsewhere, great enough even to suggest some doubt whether he painted the whole picture. Cuyp's earlier works evince too much decision of outline and hardness, not irresolution, as exhibited here. Another landscape, like an early Cuyp, illustrates our assertion; it wants the glow and perfect harmony which afterwards became his chief objects, yet has much of the firmness he always possessed. 'Horsemen near a Ford' may, however, be an imitation by some able artist; it brought 190 guineas. We have thus paid the Sister Isle due respect in devoting so much space to her once-vaunted collection.—A third sale, that came off on Monday last, will give us less trouble. It was anonymous and very miscellaneous; the best articles were all modern, none first-rate, a few good. Several *Morlands* went at low prices: the 'Gipsy Scene,' which obtained 210 guineas two years ago, when Lady Stuart's sale took place, fetched now but 161; a 'Cottage Door, with Peasants, and a Waggon-horse,' 52*l.*; 'A Mountainous Sea-shore,' large, and not without grandeur, 110 guineas; the 'Village Cart,' meritorious, 30 guineas; a delicious little 'Pig-piece,' that almost rendered the sty picturesque, and its habitants interesting, 15*l.*; a 'Shipwreck,' very small, 9½ guineas. *T. S. Cooper's* large 'Cow-piece,' a chef-d'œuvre, 120*l.* 'Cicero at his Villa,' an indifferent namesake of the great picture at Wynnstay, by *Wilson*, 155 guineas. *Harlow's* 'Hubert and Prince Arthur,' ridiculously sublime, or sublimely ridiculous, 22 guineas. 'A Sea-shore,' by *Stanfield*, of his earlier, more circumspect days, 50 guineas. 'The Avalanche,' by *Loutherbourg*, from Lord de Tabley's collection, a large and fine picture, though somewhat too sharp in the execution, 100 guineas. 'A Sea-piece,' by *J. Wilson*, very large, and largely but superficially handled, 45 guineas. 'The Opening of Waterloo Bridge,' by *Constable*, a still larger and more ambitious work, no felicitous specimen of a style which requires to be seen at its utmost perfection ere it can extort approval, 80 guineas. Sketch for ditto, 32 guineas. A clever 'Interior, with several figures,' by *Leduc*, 77 guineas; and a good 'Landscape,' many a worse passing for *Wouvermans*, 73 guineas. There were various other items of this collection worth the amateur's notice, though not public enumeration.

OUR WEEKLY GOSSIP.

Mr. Murray has just enlivened an unusually dull May by a few pleasant promises: amongst them are, 'The Life and Adventures of Admiral Sir Francis Drake, compiled from various Chronicles and Original MS. sources in the State Paper Office, British Museum, and the Archives of Madrid, never before Published,' by John Barrow, Esq.; 'Closing Events of the Campaign in China,' by Capt. Grenville Loch, R.N.; 'Australia and the East; being a Narrative of a Voyage to New South Wales in an emigrant ship, with a Residence of some months in Sydney and the Bush, and the Route Home by way of India and Egypt,' by John Hood, Esq.; 'Memoir of the late Lord Sydenham, with a Narrative of his Administration of Affairs in Canada,' by his Brother, G. Poulett Scrope, Esq., M.P., and Thomas C. Murdoch, Esq., Civil Secretary; 'Letters from the Bye-Ways of Italy,' by Col. and Mrs. Stisted; and 'Memoirs of William Smith, L.L.D., Author of the Map of the Strata of England and Wales,' by John Phillips, F.R.S. To these we may add, on the authority of Mr. Colburn, as forthcoming, 'A Diary of the Time of Charles II.,' by the Hon. Henry Sydney, afterwards Earl of Romney, including his Correspondence with the Countess of Sunderland, and other distinguished Personages,' under the editorship of R. W. Blencowe, Esq.: and Messrs. Wiley and Putnam, the American publishers, promise us 'Change for the American Notes: Letters from an American Lady in London to her Friend in New York.'

On Tuesday a deputation from the Metropolitan Improvement Society, consisting of Lord Robert Grosvenor and other members of the committee, had an interview with the Commissioners for improving the communications of the Metropolis. The object of the deputation was to recommend a new line of roadway, partly running along the north bank of the Thames, to connect the great Essex road with the West end of London. A plan showing the projected line was submitted and favourably received by the Commissioners.

Since our last publication we have learnt that Mr. Thomas has left directions that his unrivalled collection of coins and medals shall be offered, in the first instance, at the price of 12,600*l.*, to the British Museum, then to the Bodleian and the Fitzwilliam; each to be allowed two months to consider the proposal, but if not accepted, then the whole to be sold by auction.

We observe, with great satisfaction, that Mr. Lockhart has been appointed Auditor of the Duchy of Cornwall, vacated by the death of the late Mr. Allen, of Dulwich. The income is stated to be 400*l.* a-year.

Sporting literature has received a heavy loss in the decease of Mr. Apperley, best known to the public as "Nimrod." From the gossipping autobiography communicated last year to *Fraser's Magazine*, we learn, that he was the second son of a Denbighshire Squire; that, from his youth upwards, he was addicted to buckskins and the box-seat; that circumstances subsequently drove him upon foreign residence and authorship, and that the last was, happily, as lucrative to himself as it was acceptable to the public. His earlier writings, whether in the shape of encyclopædia, review, or magazine articles, had all the spirit of open-air life, without any of the coarseness of the kennel; and if, of late, he indulged in a wider range of personal anecdote than could be approved, there will be found surprisingly little offence in his revelations.

On looking over the obituaries of the past week, our eye has been caught in the *Paris Journal*, by a name, having some pretension to a record as of an oriental scholar, but principally remarkable as a great historic designation, which dies with the subject of this notice. M. Gaultier d'Arc was the last descendant from Pierre d'Arc, the brother of the great French heroine—had long been secretary, in Paris, to the

Digitized by Google

School of Living Oriental Languages, and was recently Consul-General in Egypt.

We understand that the large east window in the Great Hall at Hampton Court is about to be filled with stained glass, to correspond with the window at the west end. The window is to be completed by Mr. Willement before the end of June. The continued progress of improvements at this, the people's palace, is most praiseworthy. The admirer of chesnut trees in full blossom should visit the groves in Bushy Park next week, when they will be found at the highest point of their annual perfection.

The Shakspeare autograph, sold two years since for 165*l.* 15*s.* (see No. 709), has already again passed under the hammer, and been purchased for the library of the Corporation of London, for 145*l.*

Since our last notice of the Italian Opera, the performances have been revivals of 'I Puritani,' and 'Lucrezia Borgia.' On Thursday next, however, we are to be treated to a novelty, in 'Linda de Chamouni,' given for Madame Persiani's benefit. 'Don Pasquale,' we presume, will shortly follow.

Some late sittings at the Academy of Moral and Political Sciences, in Paris, have been occupied with the reading of a Memoir, by M. Emile de Bonnechose, on the Influence of the Roman Traditions and Germanic Customs, in the Comparative Governments of France and England, during the Middle Age; being an extract from an important work on which that historian has been for some years engaged, having for its subject a History of the Political Institutions of England up to the time of Charles the First.

In Bamberg, in Bavaria, a curious discovery has been made, on removing the covering of a subterranean passage beneath the ancient Hôtel de Ville,—that of six large chests of wrought iron, containing about 22,000 arrows, the heads of which are not rounded and pointed, like those of the present day, but flattened in the manner of a chisel, and the shafts furnished with chips instead of feathers. The Municipal Council has forwarded specimens of these arrows to the various learned bodies who devote themselves more especially to the illustration of Germanic antiquities, as well as to the societies of Northern Archæology in Copenhagen, Christiania, and Stockholm.

The city of Leipsic has conferred the freedom of the city on Dr. Mendelssohn Bartholdy, and the letters patent were presented to him in a beautiful silver-gilt box. We wish that our English corporations would testify a like respect for those who instruct, or improve, or delight mankind, by conferring like inexpensive honours on such of their townsmen as have become distinguished in literature, in art, or in science. It is not the value of the thing—a deal box would do as well as one of silver or gold—it is the example and its influences.

ROYAL ACADEMY OF ARTS, TRAFALGAR SQUARE.
The EXHIBITION of the ROYAL ACADEMY is NOW OPEN. Admission (from 8 o'Clock till 7), 1*s.* Catalogue, 1*s.*
HENRY HOWARD, R.A., Sec.

The NEW SOCIETY of PAINTERS in WATER COLOURS.—The NINTH ANNUAL EXHIBITION of this Society is NOW OPEN, at their GALLERY, 53, PALL MALL, next the British Institution, from 9 till Dusk, daily. Admittance, 1*s.* Catalogue, 6*d.*
JAMES FAHEY, Secretary.

DIORAMA, REGENT'S PARK.
JUST OPENED, with a NEW EXHIBITION, representing the CATHEDRAL of NOTRE DAME at Paris, with effects of Sunset and Moonlight, painted by M. RENOUX, and the BASILICA of ST. PAUL, near Rome, before and after its destruction by Fire, painted by M. BOUTON. Open from Ten till Five.

EXHIBITION of Sir GEORGE HAYTER'S GREAT PICTURE of the HOUSE of COMMONS, painted on 170 square feet of canvas, and containing portraits of all the Members of Parliament, also a portrait of Her Majesty Queen Victoria, and various other works, forming a collection of more than 800 portraits of eminent personages of the present day. Open from 10 till dusk.—At the Egyptian-hall, Piccadilly. Admission, 1*s.*

AERIAL NAVIGATION.—ROYAL POLYTECHNIC INSTITUTION.—A LECTURE on this subject, illustrated by MODELS of several kinds, which elevate themselves by MECHANICAL FORCE alone, is delivered at Two o'Clock daily, in addition to all the varied and instructive amusements of the Institution. Admission, One Shilling. Schools, Half-price. Open Mornings and Evenings, except Saturday Evening.

SCIENTIFIC AND LITERARY

INSTITUTE OF BRITISH ARCHITECTS.—*May* 15.—Mr. S. Angell in the chair.—Mr. Hosking explained his proposal to improve the design of arched bridges, by the introduction of a transverse arch, groined into the longitudinal arch, or series of arches, and showed the effect of this, and of other suggestions which he had made for the improvement of bridges, in a design for remodelling Westminster Bridge. Mr. Hosking had, on a former occasion, made some remarks upon the subject of bridge-building generally, when he had urged that the piers of bridges were built for the most part of much greater substance in thickness than was necessary for either safety or agreeable effect; that they might therefore be greatly reduced in bulk, both for economy and for their effect upon the water-way and the navigation, without diminishing their efficiency. It had been objected—with the too common fault of architects, who would sacrifice use to effect, instead of compelling the useful to be effective,—that his proposal tended to destroy the due proportion, in appearance, of the pier to the opening. Mr. Hosking thought that the eye which had been accustomed to the bridges upon the Tiber at Rome, of which the piers are rarely less than one-third the span of the larger of the two arches resting upon them respectively, would be offended by the absence of that proportion of solid to void in London and Waterloo Bridges, in which the same relation is but one-sixth, whilst the eye accustomed to the bridges upon the Thames, at London, would condemn the bridge at Staines and the bridges of Jena and Neuilly, upon the Seine, of which the piers are but one-eighth, one-ninth, and one-tenth respectively of the span of the arches resting upon them. Nor had we yet reached the limit to which the solid might be reduced in proportion to the void with safety and with good effect. To justify further reduction was one of the ends to be answered by the arrangement he was then to explain, which had the effect of reducing also the weight to be sustained by the piers of an arched bridge. The proposed improvement in this respect Mr. Hosking stated to consist in groining a bridge arch, or of carrying a groined transverse arch through the length of a series of arches, and the advantages derivable from this plan to be in lessening the weight of the bridging constructions; in reducing the thrust upon the abutments; in diminishing the liability of the bridging constructions to vibrate under the action of pulsating or of rolling bodies; and, generally, in greatly reducing the cost of construction. The weight is obviously lessened by the difference between the massive haunches of the main vaults and of the requisite backing to them throughout the extent of the transverse arch, and the thickness of the pier, and the comparatively light inner transverse arch, which, being of slight span, may be of stones of much less depth than the main vaults require. The thrust of the main vaults is dissipated throughout so much of the width of the bridge as the inner transverse arch occupies, and so that the abutments might be almost reduced to mere wing walls: the vibrations arising from the traffic would be checked at the groin points, as at nodal points in a vibrating cord; and the cost of construction would be lessened by the reduction in quantity of the materials of the piers and of the vaults; by the smaller amount of labour required for the softer stone available for the inner transverse arch, and by the greater lightness of the centering which would be sufficient for the same. Mr. Hosking then stated that he had endeavoured to illustrate the suggestion as to an inner transverse arch groined to the longitudinal vaults, by applying what he proposed in that respect upon a compartment of London Bridge, as a familiar instance, and illustrated his views by reference to diagrams. He then proceeded in further explanation:—"The only indication of what I have suggested in any existing work with which I am acquainted is in Perronet's bridge of St. Maxence, where low arches are introduced over the divided parts of the piers, transversely of the bridge, to take the springings of the great longitudinal arches; but these have neither the intention nor the effect of what I propose, and are a source of weakness and expense rather than of economy and endurance. The transverse arches are low and flat, and the great vaults spring from the backs of these arches, so that no relief, either in weight or thrust, is obtained, as by the proposed mode of groining the one inner transverse arch with, and to the full height and extent of, the longitudinal arches; but the only possible injurious effect is retained to the fullest extent in the thrust of the low flat arches, tending to separate the already divided parts of the pier." Mr. Hosking went on to justify, by example, the sufficiency of the provision he had made for restraining the thrust of the inner transverse arch, and to show the sufficiency of the area of bearing surface upon the piers at the springings of the main vaults, and then described his proposal to form more bold and effective cornices, and to extend the available surface upon a bridge by corbelling out the parapets. He then proceeded to show the effect of his suggestions in a design for re-modelling Westminster Bridge, rendered, by circumstances which had grown up around it, altogether unfit, both in its design and arrangement, for the position it occupies, and mentioned that he had written the remarks in his Treatise, and sketched the design which he exhibited, in September last, and which coincided in a remarkable degree with the observations upon the same subject in the Report lately presented by Mr. Barry to the Commission on the Fine Arts. "It is true," Mr. Hosking went on to say, "that my suggestions stand alone in the particulars, in which it was almost certain that mine would be peculiar; as it regards the introduction of the inner transverse arch groined to the main vaults; in the increase of the span of the arches upon the same piers, and thereby greatly reducing the piers (for I do not understand Mr. Barry in his Report to contemplate that), and in widening the approaches, and winding and dividing the roadway upon them, for the double purpose of use and delight."

GEOGRAPHICAL SOCIETY.—*May* 22.—The Anniversary Meeting took place this day at the Society's rooms, for the election of officers, &c.; W. R. Hamilton, Esq. President, in the chair.

The Society during the past year has had an increase of 14 members, and now consists of 655 members, besides 60 Foreign Honorary and Corresponding Members. The donations during the same period have been 417 volumes, and 206 maps and charts, 30 of the latter presented by the Hydrographic department of the Admiralty.

The gold medal, entitled the Patron's Medal, having been awarded to Lieut. J. F. Symonds, R.E., for his triangulations over a great portion of Palestine, and for his determination of the difference between the levels of the Dead Sea and Lake Tiberias, and that of the Mediterranean, was received for him by his father, Sir W. Symonds; and the gold medal, entitled the Founder's Medal, which was awarded to Mr. Edward John Eyre, for his zealous and enterprising explorations in Australia under circumstances of peculiar difficulty, was handed over to the Secretary to be forwarded to Mr. Eyre.

The President then read his Anniversary Address, after which the ballot took place, when the following were elected:—R. I. Murchison, Esq., President, *vice* W. R. Hamilton, Esq., who retires; Sir John Rennie and W. R. Hamilton, Esq., Vice-Presidents, *vice* R. I. Murchison, Esq., and Sir Charles Malcolm, retiring from the Vice-Presidency; Rear-Admiral Bowles, T. G. B. Estcourt, Esq., W. P. Crauford, Esq., G. Dod, Esq., Sir Charles Malcolm, H. Long, Esq., W. C. Trevelyan, Esq., and Sir W. Chatterton, Members of the Council, *vice* an equal number who retire. The members will dine together on Monday the 19th of June, at half-past six, at the New Thatched House Tavern, St. James's Street.

MICROSCOPICAL SOCIETY.—*May* 17.—J. S. Bowerbank, Esq. in the chair. A paper was read from E. J. Quekett, Esq. 'On the nature of vessels possessing longitudinal as well as spiral fibres found in certain plants.'

SOCIETY OF ARTS.—*May* 24.—George Moore, Esq. V.P. in the chair.—Edward Romilly, Esq., J. K. Perring, Esq., Stephen Bencroft, Esq., and seven other gentlemen, were elected members.—The secretary read a description of Mr. Lee's Safety Railway Carriage, a model of which was on the table. The object of Mr. Lee's invention is to prevent railway accidents, either from the breaking of axles, or from carriages running off the rails: to obtain these desiderata Mr. Lee introduces improved bearings for the axles of the wheels, and forms each axle in two parts, so arranged as to obtain the requisite stiffness, and at the same time enable either half of the axle which may become fractured or otherwise made unfit for use, to be readily removed without disturbing the other or uninjured half.

Digitized by Google

Another point is the application of very powerful brakes, to stop the action of the wheels when required, though the train be proceeding at full speed; these brakes are adapted to act simultaneously as well on the rails on which the wheels run, as on the rims of the wheels themselves, and are therefore called "compound brakes."—Mr. James Faraday described and illustrated Professor Faraday's invention for the Ventilation of Lamp-burners. [See description, *ante*, p. 394.]

INSTITUTION OF CIVIL ENGINEERS.—*May* 23.—The President in the chair.—Some specimens of unburnt bricks from the Pyramids of Daskoor (Egypt), were exhibited by Mr. Newton. From the description by Mr. Perring, who brought them to England, it appeared that they were made from the alluvial soil of the Valley of the Nile, mixed up with chopped straw; that they were made with cavities in the sides like the modern bricks, and that the interior of the Pyramids was formed of *arches*, the bricks composing them being either packed behind with pieces of flat pottery, or cut away to radiate equally from the centre. There existed at Thebes some extensive ranges of arches, of about twelve feet span, the bricks of which they were built bearing the name of Sesostris, and consequently they must have stood uninjured upwards of 3180 years; the arches were turned in concentric half-brick rings.—Capt. Handcock produced a brass and cone of his improved axle, which had been used under an engine on the Southampton Railway, and had run upwards of 21,000 miles; the brass scarcely exhibited any signs of wear, while a brass of an axle of the old form, which had only run 8,000 miles, was nearly one inch shorter than when it was first put on, besides having worn considerably into the journal and the box.—The first part was read of a paper, by Mr. Mallet, 'On the action of Air and Water upon Cast and Wrought Iron and Steel;' but as from its length the second part was necessarily reserved until the next meeting, the whole will be noticed together.

MEETINGS FOR THE ENSUING WEEK.

SAT. Botanic Society, 4.
MON. Institute of British Architects, 8.
TUES. Institution of Civil Engineers, 8.—'On the durability of Iron Ships, the method of preventing their Corrosion and becoming Foul, by the application of a coating of Alloy of Zinc, of Varnish, and a Poisonous Paint,' by R. Mallet.—'Description of an improved arrangement of a Surveying Instrument,' by H. Carr.
WED. Society of Arts, 8.
THUR. Royal Society, half-past 8.
— Zoological Society, 8.—General Business.
— Society of Antiquaries, 8.
FRI. Royal Institution, half-past 9.—'On the Structure and Functions of the Organ of Hearing in relation to Sound,' by Mr. Brooke.
— Botanical Society, 8.

MUSIC AND THE DRAMA

CONTEMPORARY MUSICAL COMPOSERS.

FRANZ LISZT.

SINCE the days of Stradella, Salvator Rosa, or Benvenuto Cellini, a more picturesque subject does not present itself to the historian of Art, than Franz Liszt; nor would a journal of his progresses and pilgrimages be the least edifying of the many books of travel which the time produces. One year he would be found electrifying a Hungarian audience to such a pitch of enthusiasm, that nobles became eager to claim him for a brother; and heralds were set to work to prove a closer bond of fellowship between prince and artist than that of mere sympathy: another year he would be discovered fraternizing with the wildest, heartiest of all European classes, the students of a German university, till cautious authorities were compelled to restrain the exuberant manifestations of *burschen* fealty and homage:—in the evenings of a third season, bandying repartees with Vienna courtiers, wits, and statesmen, and as often the conqueror as the conquered in the war of words: in the morning, giving brotherly and patient audience to the obscure and friendless artist; and morning and evening of every year lavishing the gains earned by his two wondrous hands on all worthy and generous objects. On the side of Art, too, the chapter would be full of interest. M. Liszt's stupendous executive powers must be conceded by the least cordial of his chroniclers—his memory, without limit, can be questioned by no one; while, as regards taste, the enthusiasm which marks the choice of music he performs, and the singularities of his manner of execution, would furnish matter for as pretty a debate as often presents itself to the historian. But we must leave these things to Posterity.

Rumour has declared that M. Liszt will ere long enter upon a new career, and devote himself to composition and artistic criticism. The publication before us, entitled 'Années de Pélerinage Suisse,' Première Partie, gives some show of probability to the report. It is a curiosity worthy of examination, not merely as an utterance of the favourite fancies of a remarkable man, during many years; not merely as an illustration of what now-a-days has been done by the piano-forte player, but as the example put forth in support of a picturesque theory, frankly stated by the author in his preface.

"Having visited," says M. Liszt, in his *Avant-propos*, "during these late years, many new countries—many places hallowed by History and Poetry—having felt that the varied aspects of Nature and the scenes displaying them did not pass before my eyes as vain images, but that they excited in my soul profound emotions—that between them and myself was established a relation vague but immediate, a connexion indefinite but real, a communication inexplicable but certain—I have attempted to render in Music some of my strongest sensations—some of my liveliest perceptions. That ideality which exists in every thing, and is its poetic spirit, seems particularly to manifest itself in the creations of Art, which speak to the soul by their beauty, and their form. Although Music be the least plastic of the arts, she, too, has, nevertheless, her symbols, and it is not unjustly that she has been defined as an architecture of sounds. But, in the same manner that Architecture, besides its different orders, as Tuscan, Ionic, Corinthian, &c., has still its sentiment, whether Pagan or Christian, voluptuous or mystical, military or industrial—thus, and perhaps yet more, Music has its hidden meaning, its ideal sense, the existence of which the majority does not suspect; for in the matter of art, the majority does not rise beyond the comparative judgment of the general outline and the easy appreciation of the skill displayed on the surface. In proportion as instrumental music advances, develops itself, disengages itself from its earlier trammels, its tendency is more and more to be stamped with that ideality which characterizes the perfection of plastic arts; to become no longer a simple combination of sounds, but a poetical language, perhaps more apt than Poetry itself to express everything in us which passes the customary horizon lines—everything which escapes analysis—everything which stirs from their depths the unperishable desire, the infinite presentiments of Man. It is under this conviction, and with this tendency, that I have undertaken the work I now publish. I address myself to the few, rather than to the many, and do not aspire to success, but to the suffrage of the small number of those who concede that Art may have another destination than the amusement of idle hours, and who may demand from it something besides the fruitless distraction of a fleeting diversion."

Here are large powers claimed for Music; and yet we believe, however, that none among the great intellectual artists—of whom Beethoven is king—have wrought without an inner consciousness, if not a precise acknowledgment, of their existence. But granting this, the metaphysical musician, without the restraint of a sound guiding taste, runs great danger of becoming obscure; without a deep and wide basis of science, which includes perfect command over symmetry, climax, and contrast, the poetical composer stands a chance of losing himself in fragmentary rhapsodies. It is well that we have Beethoven's pianoforte Sonatas—yet more, his Symphonies, the Overtures of Weber and Mendelssohn, the characteristic Studies of Moscheles, the more fitful and delicate reveries of Chopin, to prove the possibility and the beauty of music written with a wider purpose than a mere insulated artistic display. M. Liszt would venture further into cloudland than any of his predecessors.

The volume before us contains seven movements, or *fantasias*, of widely contrasted character—the heroic, the Swiss-pastoral, the meditative, the religious, &c. Our author would have conveyed a clearer insight into his meaning, had he given a prose page from his journal, stating under what circumstances each was written, in preference to the mystical and enigmatical mottos which are prefixed. Still more certain is it, that if he meant others to enjoy his visions, he should have delivered them in language less cabalistic. With little exception, we have the thunder of the piano throughout the volume—extensions which few men (*no* women) can master, volleys of reiterated chords, cataracts of impossibly-difficult passages, and melodies supported by accompaniments so florid in their complication, that the expression of the air must almost be lost in the attempt to grasp one half of the notes. Such is the orthography, so to say, which must be mastered, ere the intention of the book can be comprehended.

Stripping the movements in question, as far as is possible, of all the superincumbent weight of clothing, and looking at their first ideas, the conviction forces itself upon us, that M. Liszt has displayed in them more aspiration than invention. In the first, 'Lyon,' we have a sort of turbulent, manly march, probably representing a popular commotion: the main subject, announced by a pompous and lengthy *crescendo*, is hardly worth the waiting for, and appears at widely severed intervals; while a trite and prosaic phrase is harmoniously tormented, page after page, till the ear can bear no more. The close, nevertheless, in spite of some crudity in the harmonic progressions, has a satisfactory nerve and coherence.—No. 2. is a complete contrast to the above; being a scene on the Wallenstadt-see—all repose and loneliness—with a certain Swiss wildness thrown over it, by the employment of those intervals, representing mountain calls and mountain echoes, which give the music of the Cantons its individuality. But the melody is forced, rather than simple, and the hearer, we suspect, will be more apt to listen for the even execution of the peculiar and lulling accompaniment, than to long for the coming back of the strain which it is meant to decorate and support.—No. 3, 'At the Margin of a Spring,' is less accessible, since its undulating theme (one of the most graceful inventions in the volume) is carried through paths more rugged than such gentle waters ought even to flow along; and nothing but an execution of most marvellous liquidity will reconcile the ear to some of the digressions. The next is a reverie with a distant bell-chime anxiously and pertinaciously repeated, and asserting its neighbourhood, even throughout the soothing episode introduced. This, though one of the most difficult of the series, is, perhaps, one of the clearest in its construction. The next, 'The Valley of Obermann,' is a maze that few could thread, we suspect, even if the composer held out the clue. In 'The Chapel of Guillaume Tell,' we meet with a broad and simple leading melody, somewhat too much in the manner of Bellini; while in the 'Psalm of the Church of Geneva,' the inequality of rhythm, caused by one strain of *five bars*, is more eminent than the originality of the *cantilena*, or the richness of the harmony. In fact, the latter is purposely plain to poverty, till the close of the movement is reached.

It must be remembered, that we can do little beyond offer guesses at these compositions, so entirely is their difficulty calculated to baffle the usual powers of piano-forte players. Nevertheless, their most important portion, the first idea, is also the easiest to master; and however we may pause in pronouncing judgment upon the effect of the whole, we feel little hesitation as to the quality of this part. Whether from an encyclopedic familiarity with the music of all schools and times, or from natural conformation, we are not prepared to assert, but, while we are never disappointed by our musical Childe Harold, of the most prodigious passages which fingers can execute, we are rarely gratified by one of those spontaneous and simple phrases, which "chambers itself in the memory," to haunt our dreams, and to bear us company in our walks; and without these, there is no great musical composition, poetical or prosaic. Even in that gigantic and mystical work, the masonic Symphony of Beethoven; even in his pianoforte Sonata (B flat) with fugue; nay, even in his yet more chaotic posthumous quartetts, there is never wanting some *prima intenzione* of an originality and a harmony that will make its way, however recondite or crabbed the construction. If thought, enthusiasm, and resolution suffice for a composer, M. Liszt will assuredly one day prove himself foremost. But a vein of fresh invention has yet to be found by him. We have faith, however, in his future efforts; for noble aim, and indomitable will,

Digitized by Google

are not the worst divining rods with which the pilgrim can go forth on his journey of discovery.

Philharmonic Society.—Bad management and a royal visit (to be plain and brief) spoiled the effect of the *Fifth Concert*. As the *programme* stood, it appeared far more as if the 'Lobgesang' was given as make-weight to Beethoven's Choral Fantasia, than as if Mrs. Anderson had been allowed to repeat the latter, because the performance of Mendelssohn's Cantata afforded an occasion. Again, the first act was prolonged a needless half-hour for the sake of a chamber quartett, *commanded* by Her Majesty the Queen Dowager: the effect of which, however charming it might have been in Marlborough House, was felt on Monday as "stale, flat, and unprofitable." Thus the principal work of the evening was not commenced till *half-past ten*, when the yawning half of the audience were thinking of their pillows, and the livelier moiety of balls and routs still to come. It is needless to point out, that, under such circumstances, the success of another 'Israel in Egypt'—were there such a work—must have been hopeless. The 'Lobgesang,' however, was more heartily relished than might have been expected. The *allegretto* of the symphony, and the subsequent *adagio*, were both taken too fast, whence a loss of elegance from the one and solemnity from the other. The tenor *aria* introduced since the performance of the work at Birmingham, was sacrificed owing to its singer being *seen* and not *heard*: while the second *soprano*, in the delicious duett, 'I waited on the Lord,' was coarser and huskier than can be tolerated in a movement, where sweetness of tone must be employed, or the composer's meaning is totally lost. Though not agreeable, it is necessary to note these things, since there are those abroad who, when Mendelssohn's music is in question, charge every fault not to managers and executants, but to the master's account. The concert was conducted by Mr. W. S. Bennett, and opened with Beethoven's Symphony in A minor, the slow movement of which was *encored*. In the first act, too, Miss Birch sang the *scena*, 'Ah! perfido,' in her best manner. Had a little judgment and firmness been exercised, the meeting would have been as delightful as it proved wearisome. The engagement of M. Spohr for the eighth concert was formally notified to the subscribers.

Concerts of the Week.—The grand morning concert of *Madame Caradori Allan*, given yesterday week, was a brilliant entertainment. We there made our first acquaintance with Signor Fornasari as a concert-singer—not to our satisfaction. Each new hearing renders us additionally alive to the want of finish of his style, the uncertainty of his vocalization, and the artifices by which these are concealed. It becomes necessary to state the truth, without mitigation, because an amount of panegyric is current concerning this singer, so outrageously extravagant as to resemble the plaudits bought by the dozen of the Parisian *claqueur*, rather than admiration legitimately due and honestly bestowed. There is no possible chance of Signor Fornasari becoming the eminent artist his be-praisers announce him to be, under the disadvantage of such laudation. Had not Lablache been the best-humoured as well as the best-experienced of musicians, 'Se fiato,' that most hackneyed of duets, might have *gone to pieces*. Madame Grisi sang magnificently: Madame Caradori with her usual grace, high finish, and versatility: and Mrs. Alfred Shaw, by her genial calmness of style, and the beauty of her voice, proved the fallacy of the assertion—often repeated by those whose war-cry is "native talent"—that an English singer has no chance against the Italians.—The second *soirée* given by *Mr. Mudie*, one of our younger composers, was also held on the same day. With every sympathy enlisted in behalf of one whose aim is so obviously classical composition, we must express our fears that Mr. Mudie has not power sufficient to justify his presenting himself to the public as a pianist. His performance of one of Beethoven's easiest *trios* was below par: we liked him better in a characteristic movement or study of his own, 'La Disputa,' in which there was a good idea. A *canzone*, set by him to the well-known 'Pace non trovo' of Petrarch, and sung by Miss Bassano, was *encored*. To give those words to a female voice is gratuitously to throw away half their effect—the music, however, is impassioned, and the composition creditable. One of the most agreeable pieces performed was the *terzetto* from 'Zemira and Azor;' the slow movement of which (and it is very difficult) was firmly sung by Miss Birch, Miss Marshall, and Miss Bassano.—Tuesday brought us the Concert of *Miss Bruce Wyatt and Mr. Handel Gear*, at which we had Madame Albertazzi singing *Joselin's* romance from Costa's 'Malek Adel,' so charmingly as to make us remember that opera somewhat wistfully, and long more eagerly than is our wont for the new musical drama announced as in progress by its composer. The other "stars" were the indefatigable Herr Staudigl and Mr. John Parry, whose 'Accomplished Young Lady,' as a picture of modern education and its consequences, is only one degree less piquante than Hood's 'Schoolmistress abroad.' The concert was well attended.—On Thursday morning, *Mr. Braham and Mr. Charles Braham* received their friends at Willis's Rooms:—while, in the evening, the second of Mr. Blagrove's *Séances Musicales* was held. In this the imperfections complained of on a former occasion were most liberally rectified. We had violin studies by De Beriot and Rode—a Trio by Mendelssohn, and a pianoforte Sonata by Beethoven, to diversify the instrumental music,—Madame Caradori singing the sweetest of German romances, 'Einsam Wandle ich,' Miss Bassano carefully executing Mozart's pianoforte cantata, 'Non temer,'—and, further, Miss Novello, Mr. John Parry and Herr Staudigl. Here, then, was a very interesting Concert. We must add yet a word regarding the violin-playing of its giver. He is obviously and meritoriously attempting that passion and *bravura* of style, the want of which was to be felt in his performance; but let him take heed that in *getting up* dash and boldness, he does not lose that truth and purity which made his execution so praiseworthy.

Drury Lane.—The tragedy of 'Athelwold,' which was produced here last week, on the occasion of Miss Helen Faucit's benefit, was so far successful as to be repeated on Monday last; but the effect of its second representation was so unfavourable to its continuance on the stage, that it has not been announced again among the final arrangements of the season, now about to close. Having already recorded our opinion of its merits (No. 772), it is superfluous to say more upon the subject of the undramatic construction of the play, the inconsistency of the characters, and the absence of passion in the dialogue. The subject itself, indeed, is unfitted for tragedy: the motives of the principal persons are selfish, and their conduct base; they consequently create no sympathy towards themselves, nor do their actions excite either pity or terror. *Dunstan* alone commands attention, and that not by what he does but what he says; and his character becomes a mere cipher in the representation, though ably personated by Mr. Phelps. The part of *Elfrida* afforded Miss Helen Faucit an opportunity of exhibiting her powers of expressing varied emotions: the joyous elation of the beloved maiden chequered by hopes and fears—the blissful contentment of the happy wife giving place to the resentment of mortified vanity—the remorse and humiliation of the repentant woman turned to the reckless desperation of frantic self-will—these different states of unbridled passion were portrayed by this actress with an abandonment of feeling which showed not only great skill in her art, but a bold reliance on her idea of the character, that denotes the true *artiste*. In the most violent passages, her physical energies were too severely taxed: an appearance of effort and exhaustion marred the grandeur of the personation, and the repulsive nature of the scene shocked the feelings of the audience; but the force of her acting alone saved the play. Mr. Macready, as *Athelwold*, seemed actuated by a sense of duty in performing a part which it was pretty evident he had no great liking for.

Haymarket.—The entertainments at this cheerful and elegant little theatre, are of the light and pleasant kind that disarms criticism by amusing willing audiences, who come to enjoy a laugh, and are bent on accomplishing their object. The late farces of Mr. Mark Lemon have been less successful than usual; but there is always 'Married Life'—'My Wife's Mother'—'Grandfather Whitehead,' or some other domestic relationship to fall back upon, in which Mrs. Glover, Farren and Buckstone never fail to raise a laugh. Then there are Madame Vestris and Charles Mathews in their range of characters, which has been extended by the production of 'The Little Devil,' an English version of 'La Part du Diable:'—Scribe's ingenious drama, stripped of Auber's musical embellishment, for only one or two pieces are retained. It cuts rather a meagre figure for three acts; but the address and pleasantry of Madame Vestris as the *Little Devil*, and of Charles Mathews as a student in "pursuit of fortune under difficulties," to whose summons of the arch-fiend, an arch wag appears who passes for an imp of darkness, carry the piece through merrily. The stage appointments are splendid and appropriate; and a general completeness, shown in attention to trifles as main points, contributes to the gratification of the visitors. 'The Critic' has been produced this week, with Farren as *Sir Fretful Plagiary*, C. Mathews as *Puff*, and an efficient cast of the burlesque parts: it promises to be a standing dish at the Haymarket feast of fun, the condiments with which *Mr. Puff* seasons *à discrétion* the *sauce piquante* of Sheridan's wit being very much to the taste of the audience.

MISCELLANEA

Paris Academy of Sciences.—May 15.—The proceedings in this sitting were less interesting than usual; they were chiefly reports on works of a purely scientific character, and of which a very imperfect notion could be formed from any analysis within reasonable limits. A paper was read, 'On the progressive increase of the results obtained from the operations on the auriferous sand of Siberia.' It is shown in the following table:—

	Pouds of gold.		Pouds of gold.		Pouds of gold.
1830 ..	5	1835 ..	93	1839 ..	183
1831 ..	10	1836 ..	105	1840 ..	255
1832 ..	21	1837 ..	139	1841 ..	358
1833 ..	36	1838 ..	163	1842 ..	631
1834 ..	65				

and, according to all probability, the result of 1843 will show a great increase on that of 1842. The workmen employed in the extraction of the gold are almost exclusively convicts, of whom there were not less than 11,000 in Eastern Siberia in 1842. They are allowed the proceeds of one day in the week for themselves, but they are not permitted to dispose of the gold as they please. They are bound, on the contrary, to sell it to the persons who hold the privilege of the extraction, and are, consequently, paid less than its value.

Poetry and Painting.—"I will venture to make a short parallel between a passage in the works of two great poets of another age, to show how nearly are poetry and the fine arts allied in the effects they produce on the hearts and the sentiments of mankind. The one is that in which Homer, the great father of poetry, describes Ulysses at the table of a prince at which a bard, with the accompaniment of that music which ever adds grace and beauty even to poetry itself, is reciting the events of the fall of Troy, and the death of the former companions of Ulysses. The warrior, you will remember, is so overcome by the truth of the description, that he bows his head in sorrow, overpowered by the loss of his companions and the memory of his sufferings. Again, where, in the 'Æneid,' Virgil describes his hero, after his arrival in Italy, entertained in the house of the prince of the country, we see that the first thing which brings to his mind the memory of what he has endured is, to see on the walls around him the paintings which represent the scenes in which his youth and manhood have been passed, and the persons of those with whom he has suffered—the faces of the relatives he has lost. '*En Priamus!*' exclaims the pious Æneas, and bursts into tears, overwhelmed with grief at the memory of the past. Does not this parallel of these two great poets show in what way the heart may be effected by the arts of poetry and of painting? And in describing their heroes, the one as affected by the power of poetry, and the other by the representations of painting, do they not show that these two things were made to call forth the best emotions of the heart, and to excite nobility of sentiment and purity of feeling, whilst, at the same time, they satisfy the greatest wants of the intellect? Such, then, being the perfection, such the capacities, such the results of these arts, I say that all those who partake of these advantages which they give us should, in gratitude, be ready to assist those who exercise them in the

Digitized by Google

necessities and misfortunes by which they may be visited. I trust, therefore, that this institution may flourish from year to year, that its funds may be enlarged, and that, in proportion as the taste for art increases in this country, we shall see such a society as this continue to prosper."—From Lord John Russell's speech at the Anniversary Dinner of the Artists' Benevolent Fund on Saturday last.

Census of Ireland.—An abstract of the census of Ireland, for 1841, has lately been presented to Parliament, and although it only gives general results, yet when the latter are compared with returns of a similar nature for 1821 and 1831, they assume considerable interest. The following table is compiled from the abstract of the census for 1841, and the similar official returns for 1821 and 1831.

Population of Ireland.

Province.	1821.	1831.	1841.
Leinster	1,757,493	1,909,713	1,973,731
Munster	1,935,612	2,227,152	2,396,161
Ulster	1,998,494	2,286,622	2,386,373
Connaught	1,170,229	1,343,914	1,418,973
Total.....	6,861,827	7,767,401	8,175,238

The per-centage increase between 1821 and 1831 amounted to 13.19, and that between 1831 and 1841 to only 5.25! The increase in Great Britain between 1821 and 1831 was 15 per cent., and between 1831 and 1841, 14 per cent. The falling-off may be in some measure accounted for by the numbers who annually leave Ireland to settle in our Colonies and elsewhere. It is to be regretted that no account is preserved of the total number of emigrants from the United Kingdom; the Custom-house returns merely including those who leave in ships specially employed for emigration purposes, whereas it is well known that large numbers sail in private trading vessels. Taking, however, the Custom-house returns exclusively, the comparison between the two decennary periods will be as follows:—

Between 1821 and 1831.		Between 1831 and 1841.	
Population, 1821..	6,861,827	Population, 1831..	7,767,401
Emigrated in 10 years, to 1831	31,195	Emigrated in 10 years, to 1841	254,307
	6,830,632		7,513,094
Population, 1831..	7,767,401	Population, 1841..	8,175,238
Increase	936,769	Increase	662,144
or 13.65 per cent.		or 8.52 per cent.	

The number of families comprised in the above return were 1,472,917, which gives 5.55 persons to each family. The number of inhabited houses has increased from 1,249,816 in 1831, to 1,328,889 in 1841, giving 1.10 families, and 6.19 persons to each house in 1831, and 1.10 families and 6.15 persons in 1841. In Great Britain the average number of persons to each house, in 1841, was England, 5.77, Scotland, 5.22, Wales, 4.84. The number of uninhabited houses, in 1831, was 40,654, or 3.11 per cent., and in 1841, 52,219, or 3.07 per cent. In Great Britain the proportions were 4.44 per cent. in 1831, and 5.41 per cent. in 1841. The number of houses building in 1841, compared with those of 1831, present so extraordinary a decrease, that it is difficult to account for it otherwise than by assuming that different instructions must have been given with respect to the exact nature of houses to be returned as in the process of building, or that there is some error. The following table gives the returns in each province at the two decennary periods:—

Houses Building.

Province.	1831.	1841.
Leinster.....	3,715	1,272
Munster.....	3,796	1,023
Ulster.....	3,997	626
Connaught.....	3,800	392
Total.....	15,308	3,313

The returns are more remarkable when examined in detail. In Dublin, for example, in 1831 there were 152 houses building, and in 1841 only 101. In Kilkenny, in 1831, 84, and in 1841, 15. In Cork, in 1831, 146, and in 1841, 24. In Limerick 138 in 1831, and 15 in 1841. In Carrickfergus 29 in 1831, and in 1841, none.

Proposed Improvements in the City of London.—The Report of the Committee of the Common Council has been presented, and the suggestions are on a scale of such magnitude as to leave little hope that any man can live long enough to see them carried into effect. Still we think the Committee right in treating the subject as a whole, and suggesting what ought to be done, that, at least, all future alterations may have reference to the proposed improvements. The following is a mere outline, classed according to their relative importance:—A. From the east end of Paternoster-row to Fetter-lane, and a branch street to Holborn, commencing with the houses at the west end of Cheapside, projecting beyond the line of St. Martin's-le-Grand, all between Paternoster-row, St. Paul's Churchyard, as far as Ave Maria-lane, Amen Corner, crossing the Old Bailey, to Farringdon-street, to Shoe-lane, Printer-street, Great New-street, to Fetter-lane, to the city boundary; and the branch street from Little New-street, to the north end of Fetter-lane, Holborn, about 3,360 feet in length. The greatest acclivity in the whole of this line will not be more than 1 in 31, and that for only about 370 feet. B. From the north end of Dowgate-hill to the east end of St. Paul's Churchyard, thence to Earl-street, Blackfriars, through Tower Royal, Little and Great Distaff-lanes, crossing the Old Change into St. Paul's Churchyard, about 1,360 feet in length, and from the Old Change through Knightrider-court, Carter-lane, Godliman-street, Bell-yard, Addle-hill, to the east end of Earl-street, about 1,200 feet in length. C. Watling-street, from Aldermary Church to the west end of St. Paul's Churchyard, about 1,055 feet in length. D. The Poultry, on the north side, to the Old Jewry, and 100 feet of the north side of Mansion-house-street, about 1,055 feet in length; from the Mansion-house across Bucklersbury and Size-lane to Queen-street, from Watling-street to the east end of Basing-lane, the east side of Queen-street from Watling-street to Thames-street, about 1,400 feet in length. E. Lime-street, east side, from Cullum-street to Fenchurch-street, Leadenhall-market from Fenchurch-street through to the south end of Gracechurch-street, about 800 feet in length; Aldgate, south side, from the Saracen's Head to Jewry-street, and the east end of Leadenhall-street, at its junction with Fenchurch-street. F. Broad-street-buildings to the Curtain-road, through Halfmoon-street to Sun-street, thence to Skinner-street, and on to Worship-street, about 1,550 feet in length. G. From Aldersgate-street, opposite the end of Jewin-street, to Smithfield, and from the corner of Little Britain across Bartholomew-close, to communicate with the above line of street to Smithfield, about 1,280 feet in length. H. Treadneedle-street, north side, at its junction with Broad-street, and south side, from the church of St. Benet Fink, to Finch-lane, about 265 feet in length. I. Holborn-bridge, north side, about 90 feet in length; Butcherhall-lane, east side, about 85 feet in length; St. Martin's-le-Grand, north-east corner, Angel-street. K. Maiden-lane, north and south sides, about 275 feet in length; Jewin-street, south side from the corner; Redcross-street to Redcross-square, and north corner next Aldersgate-street; Aldermanbury, the west side of the south end; Milk-street, east side next Cheapside; White Rose-court, Coleman-street, and Mason's-alley, Moor-lane, south side, east corner, and north end, west side, from White-street to Type-street, and south end, Milton-street, east side; New Bridge-street, Blackfriars, through Tudor-street to the Temple.

The City of Hamburgh has resolved to present to the Sovereigns, who assisted the inhabitants after the conflagration of last year, letters of thanks, to be painted upon tablets of oak saved from the ancient city hall, and framed in bronze of the bells of the churches that were destroyed. Each individual who contributed to the relief is to be presented with a medal of the same material, and those foreigners who on the spot assisted in checking the progress of the calamity are to be honoured with the freedom of the city.

To Correspondents.—E. L. E.—W. C. B.—Two "Old Subscribers"—G. B.—C. F.—A. E. E.—R. P.—A Reader.—A Subscriber.—R. J. B.—R. M.—T. W.—F. W.—D.—Der Grief—I. R.—L. C.—I. M.—P. C. H.—received.

We are obliged to "A Constant Reader," and should be still more so, if he would favour us with the particulars of the cases mentioned, and his name (in confidence).

Erratum.—P. 490, col. 2, for "Lusa to Persia," read "Susa to Peris."

COMMERCIAL and GENERAL LIFE ASSURANCE, ANNUITY, FAMILY ENDOWMENT, and LOAN ASSOCIATION, 112, Cheapside, London.
Every description of Life Assurance entertained, premiums payable quarterly, half-yearly, or yearly; loans advanced from 25l. to 500l. for three or more years, on approved personal or other security, on the borrower assuring his or her life for a moderate amount.
Endowments for children to receive a stated sum of money on arriving at 14 or 21; in case of death the whole of the money returned to the parents. Annuities, immediate or deferred. Prospectuses and every information to be had of
FRED. LAWRANCE, Resident Sec. 112, Cheapside.

BRITISH EMPIRE LIFE ASSURANCE, ANNUITY, and ENDOWMENT COMPANY, 5, Whitehall, and 36, Old Jewry, London.
Directors—Sir George Staunton, Bart. M.P. *President.*
Sir Herbert Compton, *Vice-President.*

Charles Forbes, Esq.	Arthur Helps, Esq.
James Mackillop, Esq.	Thomas E. Headlam, Esq.
J. Phillimore, Esq. D.C.L.	Robert J. Grieg, Esq.
W. Wilkinson, Esq.	G. Bicknell, Esq. (Resident).

Bankers—Messrs. Coutts & Co.
Solicitors—Messrs. Ogle & Younghusband.
The peculiar advantages offered by this Company are:—
1st. That where the assurance is for life, one-half of the premiums may remain unpaid for seven years.
2nd. A Table peculiarly fitted for policies for loans, the premiums commencing very low, and varying every three years.

Age.	1st period of 3 years.	2d period of 3 years.	3d period of 3 years.	4th period of 3 years.	Remainder of Life.
27	1 3 7	1 8 7	1 15 9	2 4 6	2 14 10

3rd. For Survivorship Annuities, on a principle peculiar to this Office, avoiding the loss of the premium paid, if the party does not survive to take the annuity.
Every information may be obtained at the Offices, at Whitehall, and 36, Old Jewry.
The usual Commission to Solicitors and Agents.
GEO. BICKNELL, Resident Director.

ARGUS LIFE ASSURANCE COMPANY, 39, Throgmorton-street, Bank.
Empowered by special Act of Parliament, 5 & 6 Will. IV. c. 76.
Thomas Farncomb, Esq. Alderman, *Chairman.*
William Leaf, Esq. *Deputy-Chairman.*

William Banbury, Esq.	Rupert Ingleby, Esq.
Edward Bates, Esq.	Thomas Kelly, Esq. Ald.
Thomas Camplin, Esq.	Jeremiah Pilcher, Esq. Sheriff of London and Middlesex
James Clift, Esq.	Lewis Pocock, Esq.
Rt. Hon. J. Humphery, M.P. Lord Mayor of London	

Physician—Dr. Jeaffreson, 2, Finsbury-square.
Surgeon—W. Coulson, Esq. 2, Frederick's-place, Old Jewry.
Consulting Actuary—Professor Hall, of King's College.
Advantages of the Argus Life Assurance Company.
Low Rates of Premiums.
In addition to the subscribed Capital of 300,000l. the assured have the security of the Company's Income of nearly 60,000l. per annum, yearly increasing, and an accumulating Assurance Fund invested in Government and other available Securities, of considerably larger amount than the estimated liabilities of the Company.
The Rates of Premium are reduced to the lowest scale compatible with the safety of the Assured and the stability of the Company, thereby, in effect, giving to every policy-holder an immediate and certain bonus without risk, in lieu of the deferred and frequently delusive prospect of a periodical division of profits.
Annual Premium to Assure £100.

Age.	For One Year.	For Seven Years.	Whole Term.
20	£0 17 8	£0 19 1	£1 11 10
30	1 1 8	1 2 7	2 0 7
40	1 5 0	1 6 9	2 14 10
50	1 14 1	1 19 10	4 0 11
60	3 2 4	3 17 0	6 0 10

One-third of whole-term Premiums may remain unpaid at 5 per cent. comp. int. as a debt upon the Policy for life, or may be paid off at any time without notice.
In Assurances for advances of money, as security for debts, or as a provision for a family, when the least present outlay is desirable, the varied and comprehensive Tables of the Argus Office will be found to be particularly favourable to the assured.
A Board of Directors, with the Medical Officers, attend daily, at a quarter before 2 o'clock.
EDWARD BATES, Resident Director.
A Liberal Commission to Solicitors and Agents.

LOW RATES.—PARTICIPATION IN PROFITS.

THE MANAGERS OF THE SUN LIFE OFFICE beg leave to inform the public that their Rates, on Young Lives, are much lower than those of many other Offices, and that the Assured are entitled to a participation in the Profits of this Society.—Persons having Life Interests, such as Clergymen, Medical Men, and others deriving incomes from their Professions or Trades, also those holding Estates on Lives, will see the advantage of effecting Insurances in the Sun Life Office.

Tables of Rates may be had at the Sun Life Office, in Cornhill, at the Sun Fire Office in Craig's-court, and at No. 65, Welbeck-street, Cavendish-square, London; also of any of the Agents for the Sun Fire Office.

NATIONAL LOAN FUND LIFE ASSURANCE SOCIETY, for granting Life Assurances, Deferred Annuities, &c. &c., 26, Cornhill, London.—Capital, 500,000*l.*—Empowered by Special Act of Parliament.

Directors—T. LAMIE MURRAY, Esq. *Chairman.*

Hamilton Blair Avarne, Esq. | F. Charles Maitland, Esq.
Edw. Boyd, Esq. *Resident* | William Railton, Esq.
E. Lennox Boyd, Esq. *Assist. Resident* | John Ritchie, Esq.
Charles Downes, Esq. | F. H. Thomson, Esq.

Secretary—Patrick Macintyre, Esq.

This Company, established by Act of Parliament, affords the most perfect security in an ample paid-up Capital, and in the great success which has attended it since its commencement in 1834. In 1841, the Company declared an addition to the Shareholders of one-half of their Stock, and also added 2*l.* per cent. per annum, from the date of the policies to those parties who had insured with profits. The premiums, nevertheless, are on the most moderate scale, and only a moiety need be paid for the first five years, where the Insurance is for life.

The amount of bonus added to policies since the commencement of the Company in March, 1834, to the 31st Dec. 1840, is as follows:

Sum Assured.	Time Assured.	Sum added to Policy.
£1000	6 Years 10 Months	£136 13 4
1000	4 Years	80 0 0
1000	3 Years	60 0 0
1000	1 Year	20 0 0

Every information will be afforded on application to the Resident Directors, Edward Boyd, Esq. and E. Lennox Boyd, Esq., of No. 8, Waterloo-place, Pall Mall, London.

Frederick Hale Thomson, Esq. *Surgeon*, 48, Berners-street, attends at the Office daily, about half-past Two o'clock.

CORPORATION of the LONDON ASSURANCE. Established by Royal Charter, A.D. 1720.

FOR FIRE, LIFE, AND MARINE ASSURANCES.
Offices, 19, Birchin-lane, Cornhill, and 10, Regent-street.
John Clark Powell, Esq., *Governor.*
Abel Chapman, Esq., *Sub-Governor.*
Lestock Peach Wilson, Esq., *Deputy Governor.*

Directors.

Robert Allen, Esq. | Richard Drew, Esq.
John A. Arbuthnot, Esq. | John Furse, Esq.
George Barnes, Esq. | Edwin Gower, Esq.
Henry Blanshard, Esq. | Samuel Gregson, Esq.
John Watson Borradaile, Esq. | Edward Harnage, Esq.
Edward Burmester, Esq. | Robert King, Esq.
Henry Cayley, Esq. | William King, Esq.
Aaron Chapman, Esq. M.P. | John Ord, Esq.
Robert Cotesworth, Esq. | George Probyn, Esq.
Charles Crawley, Esq. | John Rees, Esq.
John Deffell, Esq. | Daniel Stephenson, Esq.
James Dowie, Esq. | Thomas Weeding, Esq.

Persons effecting Life Assurances with this Corporation have the choice of two plans:

The one entitling them to an annual abatement of premium after five years' payment;

The other at a lower fixed rate without abatement.

The leading features which distinguish the first of these plans from those of other Life Assurance offices are—

The guarantee of the Corporation for the full payment of the sums assured:

Annual abatements of premium, commencing after five full years' payments:

Total absence of partnership of any kind whatever:

Absolute exemption from the possibility of being called upon to contribute towards making good any losses:

And freedom from all charges of management.

The abatement of premium for the year 1843 on policies of five years' standing, under the first of the above plans, was 31*l.* 10*s.* 2*d.* per cent.

It may be here sufficient to state, as an example, that under the above system a person having effected a policy on or before the 1st of January, 1838, at an annual premium of 100*l.*, had, on the 1st of January, 1843, only the sum of 68*l.* 9*s.* 10*d.* to pay as that year's premium.

The future annual abatement must vary according to the success of this branch of the Corporation's business.

In the Fire Department assurances are effected at the lowest rates.

Attendance daily, from Ten till Four, at both Offices, where prospectuses and every information may be obtained.

ABEL PEYTON PHELPS, Esq.,
Superintendent of the Office in Regent-street.
JOHN LAURENCE, Secretary.

The Corporation having determined to increase the number of their agents, are desirous of receiving applications for appointments from parties of respectability and influence residing in the several towns and districts of England and Wales.

IMPORTANT PATENT IMPROVEMENTS in CHRONOMETERS, WATCHES, and CLOCKS.—E. J. DENT, sole patentee, has OPENED his West-end PREMISES, 39, Cockspur-street, Charing-cross, in addition to 82, Strand, with an entirely new stock of Watches and Clocks. Lady's Gold Watches, 8 guineas each; Gentlemen's ditto, 10 guineas; and Silver Levers at 6 guineas each.—A new edition of Dent's Lectures, price 1*s.*, but to customers gratis.

MAGNETS, ELECTRO-MAGNETIC and ELECTRICAL MACHINES, Improved Batteries, Callan's Coils for giving powerful shocks, Dissolving Views, Cameras, and all kinds of Optical and Philosophical Apparatus, made and sold by C. W. COLLINS, Instrument Maker and Accurator to the Royal Polytechnic Institution, No. 3, Wardour-street, third house from Oxford-street, London.

FRAMES FOR ART-UNION PRINTS.

C. F. BIELEFELD begs to call the attention of Artists, Printsellers, &c. to his numerous assortment of PICTURE-FRAMES, appropriate for the Art-Union and other Prints, &c., manufactured in his improved Papier Mâché. "The specimens of these frames which we have seen are certainly very beautiful." *Globe*, 17th Jan. 1843.—"They look exceedingly attractive, and are in reality as much so as if they had passed through the hands of the carver, and been produced at about ten times the expense. They have a clearness and sharpness we have seldom or never seen obtained in composition." *Art-Union.*

C. F. B. has just published a New Tariff of the Papier Mâché Frames, illustrated with Sketches of the various Patterns, &c., which will be immediately forwarded to order on receipt of six post-office stamps.—Works, 15, Wellington-street North, Strand.

PATENT PERRYIAN GRAVITATING INKSTAND, as cheap as the common Inkstand.—This neat and novel invention is exceedingly well adapted for general use; it preserves the ink in great perfection for months together, without the trouble of refilling; it excludes dust, &c., and at any moment the writer is supplied with ink in the most perfect state. The Patentees strongly recommend it to the notice of Bankers, Merchants, Solicitors, Government Offices, Public Companies, Shops, Schools, &c., as a great improvement over the ordinary inkstand, both as regards convenience and considerable saving of ink. This inkstand will be found invaluable in keeping the ink always clear and fit for use in every climate. It is of a cylindrical form, with a gravitating action, adjusted so as to supply the dipping cup with ink, which can be returned into the cylinder when not in use. Economy, cleanliness, and usefulness are secured by it, and it cannot get out of order.—Sold by all Stationers, &c. throughout the Empire.

Manufactory, 37, Red Lion-square, London.

COMPOSITION FOR WRITING WITH STEEL PENS.
STEPHENS' WRITING FLUID.

THESE COMPOSITIONS, which have so remarkably extended the use of the STEEL PEN, are brought to very great perfection, being more easy to write with, more durable, and in every respect preferable to the ordinary Ink. In warm climates they have become essential. They consist of—An INSTANTANEOUS BLACK INK—A BLUE FLUID, changing to an intense Black colour—PATENT UNCHANGEABLE BLUE FLUIDS, remaining a deep Blue colour—A SUPERIOR BLACK INK, of the common character, but more fluid—A SUPERIOR CARMINE RED for Contrast Writing—A CARBONACEOUS RECORD INK, unchangeable by any Chemical Agent—Also, a new kind of MARKING INK for Linen; and Inkholders adapted for preserving Ink from Evaporation and Dust. Bottles at 3*d.* each, convenient for writing from, are prepared, which will enable those who may wish to try either of these articles to do so at a small expense. Prepared by HENRY STEPHENS, the Inventor, 54, Stamford-street, Blackfriars-road, London; and sold by Stationers and Booksellers.—N.B. These unchangeable Blue Fluids are Patent Articles; the public are therefore cautioned against imitations, which are infringements; to sell or use which is illegal.

STEPHENS' SELECT STEEL PENS.—The utmost possible care having been bestowed upon the manufacture of these articles so as to procure the highest finish, they can be confidently recommended both for flexibility and durability.

STONE-COLOURED CEMENT.

FELIX AUSTIN, of the New Road, Regent's Park, begs to inform Architects, Builders, Plasterers, &c. that during the process of manufacturing a very superior composition which he has greatly improved his well-known Artificial Stone Ornaments, he has succeeded in making an excellent STONE-COLOURED CEMENT, adapted to building, more especially for facing brick walls and repairing decayed stone work, which he can supply at 2*s.* 6*d.* per bushel, at his Manufactory, near the Thames Tunnel, Rotherhithe.

METCALFE'S NEW PATTERN TOOTH-BRUSH and SMYRNA SPONGES.—The Tooth-Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose—1*s.* An improved Clothes-Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-Brushes, with the durable unbleached Russian Bristles, which do not soften like common hair. Flesh-Brushes of improved graduated and powerful friction. Velvet-Brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment, 130 B, Oxford-street, two doors from Hollesstreet.

CAUTION—Beware of the words "From Metcalfe's" adopted by some houses.

WATCHES by WEBSTER & SON, Chronometer Makers to the Lords of the Admiralty (Established 132 years), 3, BIRCHIN-LANE. The largest assortment of fine Second-hand Watches of any house in London, by the most eminent makers—many nearly equal to new, and at little above half their original cost, all of which W. & Son warrant. They consist of fine Repeaters, Duplex, Lever, and Horizontal Escapements, all of superior manufacture. New Watches of the most elegant patterns upon the principle of their Chronometers, to which the Government awarded the prizes three years in succession, with compensation balances to counteract the variations of temperature. Also a large assortment of Lever and elegant Horizontal Watches, for Ladies and Gentlemen, at considerably reduced prices. Old Watches taken in exchange. The most experienced workmen are employed on the premises in the repairing department.

Webster & Son, 3, Birchin-lane, Cornhill.

MOULD CANDLES to BURN WITHOUT SNUFFING.—KEMPTON'S PATENT.—These candles do not require snuffing; they burn longer and are cheaper than any other candle; the flame is steady and brilliant. No metallic or deleterious matter is used in the manufacture. Price 8*d.* per lb. Sold by G. K. Parish, agent for exportation, 21½, Bread-street, City, and by Slodden & Stocking, 42, High-street, Marylebone; W. Gethem, Broadley-terrace, Blandford-square; W. Evans, Italian warehouse, Greenwich; John Hawkins, grocer, High-street, Whitechapel; George Hawley, grocer, Pitfield-street, Hoxton; S. Game, Fish-street-hill; J. Pain, grocer, Bethnal-green-road; G. H. Hudson, 229, Blackfriars-road; C. H. Nicholas, 19, Bolingbroke-row, Walworth; and at the manufactory, Old Bargehouse, Christchurch, Surrey.

LEA & PERRIN'S 'WORCESTERSHIRE SAUCE.' Prepared from the Recipe of a Nobleman in the County.—The above celebrated Sauce has, from the time of its introduction, been steadily progressing in public favour. Its peculiar piquancy, combined with exquisite flavour, establish it of a character unequalled in sauces. Noblemen and others, of acknowledged gout, pronounce it to be 'the only good sauce; and for enriching gravies, or as a zest for fish, curries, steaks, game, cold meat, &c., especially unrivalled. As a rapidly-increasing inquiry is now made for it in all parts of the kingdom, the Proprietors beg to state that druggists, grocers, and others may be supplied by their agents—Messrs. Barclay & Sons, Farringdon-street; Mr. J. Harding, 59, King-street, Stepney; Messrs. Metcalfe & Co. 16, Southampton-row; and by the Wholesale Oil and Italian Warehousemen in London, upon the same terms as at their Warehouse at Worcester.—Sold retail, in half-pint bottles, at 1*s.* 6*d.*; pints, 2*s.* 6*d.*; and quarts, 5*s.* each, with the Proprietor's stamp over the cork of every bottle.

MESSRS. BARRY & SON, Stationers and Engravers, beg to inform the Nobility and Gentry that they are now enabled to PRINT ARMS, CRESTS, &c., for book plates, in their proper heraldic colours, and at very moderate prices. Crests engraved on visiting cards in the first-rate style, 6*s.*; without the crest, 2*s.* 6*d.*; and 100 cards, 2*s.* 6*d.*: also every description of elegant engraving. Specimens of the above may be selected from a large and fashionable assortment, at their warehouses, Egyptian Hall, Piccadilly, and 127, Bishopsgate-street Within, or sent on application any distance free of expense. Superfine letter papers, 27*s.*, 22*s.*, 20*s.*, 18*s.*, 17*s.*, 14*s.*, 12*s.* and 8*s.* per ream; Note ditto, 18*s.*, 16*s.*, 12*s.*, 8*s.*, 6*s.* and 4*s.* per ream. An additional charge is made for stamping either of the above with arms, crest, coronet, or initials. Their miscellaneous stock, which is very large and particularly adapted for presents, consists of dressing cases, writing desks, inkstands, envelope cases, albums, blotting-books, bibles and prayers, gold and silver pencil cases, penholders, toilet and smelling bottles, souvenirs, ladies' companions, sachets, card and glove cases, pocket-books, papeterie, and envelopes, suitable for invitations, complimentary notes, weddings, &c. Either of the above articles may be had plain, or of the most costly description, with every description of useful stationery. Postage stamps and envelopes at Government prices. Messrs. Barry & Son are also the West-end Agents for Mr. Robert Best Ede's Perfumery.

FOR BEAUTIFYING THE SKIN.—GODFREY'S EXTRACT of ELDER FLOWERS, a most fragrant perfume, and delightful cosmetic. It speedily and completely removes tan, redness, &c., and by its cooling, balsamic, and healing qualities, renders the skin soft, pliable, and free from dryness, scurf, &c., and clears it from every humour, pimple, or eruption. By its use the skin becomes, and continues, delicately clear and soft, and the complexion fair and beautiful. In shaving, it is invaluable, rendering the skin smooth and firm, and protects it from the effects of sun and dust. It is beyond all praise as a general family lotion. Sold in bottles, price 2*s.* 9*d.*, by all respectable Medicine Venders and Perfumers.

ROWLAND'S ODONTO, or PEARL DENTIFRICE.—This is an efficient White Powder for the Teeth, solely prepared from *Oriental Herbs* of the most *delightful odour*, and of sovereign virtue for *strengthening, preserving, and thoroughly cleansing the Teeth.* It eradicates *Tartar* from the Teeth, removes *spots of incipient decay, polishes* and *preserves* the enamel—to which it gives a *pearl-like whiteness*; and, above all, from its *disinfecting* properties, gives SWEETNESS TO THE BREATH. As an *anti-scorbutic*, the *gums* also share in its transcendant powers. *Scurvy* is eradicated from them, a healthy action and redness are induced, that offer to the notice of the medical practitioner the most indubitable signs of their *healthful state.* Price 2*s.* 9*d* per box, duty included.

☞ NOTICE—The Name and Address of the Proprietors, *A. ROWLAND & SON, 20, HATTON GARDEN, LONDON*, are engraved on the Government Stamp, which is pasted on each. Be sure to ask for "ROWLAND'S ODONTO." Sold by Chemists and Perfumers.

HANSARD'S PARLIAMENTARY DEBATES.

THE unqualified terms in which this Work is received in both Houses of Parliament as the Record of their Debates appear to justify Mr. HANSARD in asking the support of

PUBLIC LIBRARIES, LITERARY INSTITUTIONS, AND CORPORATE BODIES,

(Especially those of Cities and Boroughs returning Representatives to Parliament.)

This direct application is made upon the following considerations:—It cannot but be admitted to be extremely desirable, that some Record of the Spoken Proceedings of Parliament should exist, in an accessible and permanent form, in every part of the Kingdom; and that it is a strange anomaly that Constituencies, which hold the right of returning Representatives to the British Parliament the proudest privilege of Englishmen, should yet possess no means of referring to the Reasoning and Argumentative Part of the Proceedings of the British Legislature.

Now, as the witnessing and reporting what takes place within the walls of Parliament is breach of Privilege and is done solely upon sufferance; and as, of consequence, Parliament can issue no official report of its debates, but permits it to be done by the enterprise of private individuals—a work having such an object is deprived, by the natural jealousy of Parliament, of the slightest portion of that official countenance which would ensure an extensive circulation, and the undertaker must seek by every legitimate means to render his work known and appreciated.—That the work for which support is now sought well and effectually supplies this constitutional deficiency, Parliament itself acknowledges, when it nightly refers to "HANSARD" as a record and an authority, even within its own forbidden precincts.

It seems, therefore, no presumption in Mr. HANSARD in seeking to place his publication in the Libraries of every City and Borough town, where Constituencies exist.

The work is published Weekly, in Parts, or may be had in Volumes as completed—the cost necessarily varies with the length of the Debates; but is estimated at £7 7 10 per Session.

The following are the prices of Sets; but as it is probable that many Institutions may be desirous of placing so invaluable a collection of National History on their shelves, whose funds may be inadequate to the disbursement of so large a sum, without excluding many works of temporary interest, Mr. HANSARD will readily enter into arrangements to receive the purchase-money in two, three, or more payments.

PRICE OF SETS.

The Reign of Her Majesty, Queen Victoria, is now in course of publication.

Parliamentary Debate Office, 32 *Paternoster Row.*

PUNCH;

OR,

THE LONDON CHARIVARI.

This Periodical is published every SATURDAY, in 4to. price 3*d.*; or, Stamped for Country circulation, 4*d.* It is illustrated with one large Engraving, political or humorous, and from Twelve to Twenty smaller ones.

The increasing popularity of this Publication induces the Proprietors to lay before the Public the following Extracts from some of the leading Journals, as expressing more fully than anything they can say, the principles upon which it is conducted, and to which it owes its present celebrity.

"In the most successful follower that (*John*) '*Bull*' has had in political satire of the broader sort—PUNCH—we scarcely ever see any trace of sour or malevolent feeling. Tories and Whigs chuckle alike over such things as George Robins's advertisement of the Gates of Somnauth, (neat and entire, as carried off by Samson Affghanistes), or Lord Brougham's Battle with the Giants of Guildhall."—*Quarterly Review*, 143, May, 1843.

"The career of this little publication, from its outset till now, has been one of unfailing success; week after week it has sustained itself with astonishing constancy, and shown that its authors are inexhaustible in their resources; Ministers of Momus, they reign over the kingdoms of satire and burlesque with unlimited sway. There is one thing, in addition to the cleverness of PUNCH, which has not a little contributed to its success, and that is the unvarying good humour and propriety which prevail in it, and the total exclusion from its pages of all that is gross, low, or coarsely personal,—a discipline the absence of which has swamped many previous attempts of the same kind."—*Times.*

"Looking at the quality of the writing, and to the profusion of pictorial illustrations which grace this publication, there can be no doubt that it is got up at an expense which nothing under a very extensive circulation can maintain. Its existence, therefore, is evidence of the wide spread of the love of broad humour, which Englishmen are not wrong in thinking peculiar to their countrymen....With respect to their staple contents, there is a much closer approximation in PUNCH's contributors to those of a high-priced periodical than can readily be explained. The cheap PUNCH may, in its prevailing tone and manner, be advantageously compared with many works printed for the special use of the club-houses and circulating libraries of genteel society. We conclude with wishing our facetious contemporary all the success he deserves."—*Athenæum.*

"Of this agreeable, well-conducted paper, free from offence, and full of pleasantries, it has occurred to us more than once to speak in terms of great praise. Attempts in PUNCH's vein had been often made, but none with the cleverness of various kinds, and, above all, with the taste and feeling which have, at last, secured success."—*Examiner.*

CONTENTS OF No. 98, FOR MAY 27:

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 814. LONDON, SATURDAY, JUNE 3, 1843. PRICE FOURPENCE (Stamped Edition, 5d.)

For the convenience of Subscribers residing in remote places, the weekly numbers are reissued in Monthly Parts, stitched in a wrapper, and forwarded with the Magazines.—Subscriptions for the Stamped Edition for the Continent, for not less than Three Months, and in advance, are received by M. BAUDRY, 3, Quai Malaquais, Paris, or at the Athenæum Office, London. For France, and other Countries not requiring the postage to be paid in London, 28fr. or 1l. 2s. the year. To other Countries, the postage in addition. [JAMES HOLMES, TOOK'S COURT, CHANCERY LANE.]

ROYAL COMMISSION of FINE ARTS.

Whitehall, 26th May, 1843.

Her Majesty's Commissioners hereby give notice:—

1. That whereas various statues in bronze and in marble, of British Sovereigns and illustrious personages, will be required for the decoration of the New Palace at Westminster, artists are invited to send models to be exhibited for the purpose of assisting the Commissioners in the selection of sculptors to be employed.

2. The models are to be sent in the course of the first week in June, 1844, to a place of exhibition hereafter to be appointed.

3. The specimen, or specimens not exceeding two in number, to be sent by each artist, may be either prepared for the occasion, or selected from works already executed by him within five years prior to the date of this notice.

4. The works may be ideal or portrait statues, or groups, but not rilievi. The subjects are left to the choice of the artists. The materials are to be such as are commonly used for models and casts. The dimensions are to be on the scale of an erect human figure not less than three nor more than six feet.

5. The invitation to send works for the proposed exhibition is confined to British artists, including foreigners who may have resided ten years or upwards in the United Kingdom.

6. Artists who propose to exhibit are required to signify their intention to the Secretary on or before the 15th of March, 1844.

By command of the Commissioners,
C. L. EASTLAKE, Secretary.

PRIVATE TUTOR.—A VACANCY for a PUPIL is now open in the Family of a CLERGYMAN of long experience, residing twelve miles from London, the number of whose Pupils does not exceed six. He can offer the most satisfactory references to Gentlemen whose Sons have been under his care.—Letters to be directed for the Rev. R. H., Post-office, Petersham, Surrey.

BIRMINGHAM AND EDGBASTON PROPRIETARY SCHOOL.

A SECOND MASTER, qualified to teach the Classics and Mathematics, is required for this School.

Every information may be obtained on application to the Honorary Secretary, 13, Newhall-street, Birmingham, to whom Gentlemen intending to become Candidates are requested to send in their testimonials, free of expense, on or before the 30th of June. W. H. PARTRIDGE,

May 22, 1843. Honorary Secretary.

DAILY GOVERNESS.—A LADY of the Established Church, who has had considerable experience in Tuition, and who can produce high testimonials of her claims to the confidence of Parents, wishes to OBTAIN ONE OR MORE PUPILS in a family where Music and Drawing would not be required. She instructs both in the elementary and higher branches of Education, has passed several years on the Continent, and has an extensive acquaintance with English, French, and Italian literature.—Address to X. Y. Z., Treacher's Library, Torrington-place, Woburn-square.

EDUCATION IN GERMANY.—The English Institution at MANNHEIM, directed by Dr. LOVELL, was established in 1836 under the patronage of the Grand Duchess Stephanie of Baden, and it offers peculiar advantages to all wishing to combine a solid English Education with the rapid acquisition of the FRENCH and GERMAN languages.—The fullest particulars can be obtained of Frederick Lover, Publisher, Aldine Chambers, Paternoster-row, London.

A MOTHER, experienced in the Management of Children, wishes to RECEIVE into her Family FOUR LITTLE BOYS, under eight years of age, to EDUCATE with her own. Her personal attention will be given to the health, comfort, and happiness of her young charge, who will be treated with maternal kindness, and their moral as well as intellectual improvement will be studiously regarded. The instruction will be suited to their tender years, by being made pleasurable instead of irksome; and it will be of a kind tending to develope the mental faculties through the exercise of the senses: in accordance with this plan, Drawing, Music, and Dancing will be taught, amongst other branches of elementary knowledge; and activity and cheerfulness will be encouraged. The situation is airy and healthful, and in the neighbourhood of Kensington Gardens. Terms, Six Guineas per Quarter. No extra charges. Address, M. S. W., 3, Campden Hill-terrace, Kensington.

THE HAND-BOOK OF NEEDLEWORK,
By Miss LAMBERT (of New Burlington-street).

CAUTION TO BOOKSELLERS.—NOTICE is hereby given, that the Works entitled "THE LADIES' HAND-BOOK OF KNITTING, NETTING, AND CROTCHET," and "THE LADIES' WORK-TABLE BOOK," have been withdrawn from publication, and agreed to be suppressed by the Author and Publishers thereof; and that any future piracy of the Work entitled "THE HAND-BOOK OF NEEDLEWORK," by Miss Lambert, of which a New Edition has just been published by Mr. MURRAY, of ALBEMARLE-STREET, will be visited with the utmost severity of the Law.—Dated this 27th day of May, 1843.

UNITARIAN ASSOCIATION.

THE EIGHTEENTH ANNIVERSARY of the BRITISH and FOREIGN UNITARIAN ASSOCIATION will be held on WEDNESDAY and THURSDAY, the 7th and 8th of June. On Wednesday, the Annual General Meeting of the Members and Subscribers will be held in the CHAPEL in ESSEX-STREET, STRAND, to receive the Report of the Committee, and to transact the usual business, and for the discussion of various matters relating to the Association. The Chair will be taken at one o'clock precisely, by J. B. ESTLIN, Esq. of Bristol.

On THURSDAY, a SERMON will be preached in aid of the Funds, in the same Chapel, by the Rev. HENRY MONTGOMERY, D.D., of Belfast. Service to commence at Twelve o'clock.

At the close of the Service, the Subscribers and Friends will adjourn to a BREAKFAST at the CROWN AND ANCHOR TAVERN, STRAND. The Chair will be taken at Half-past Two, by the Rev. Dr. Montgomery. Tickets (Four Shillings each—Family Tickets to admit Six Persons, 1l.) may be had of the Stewards; of the Officers and Committee; at the Office of the Association, 31, St. Swithin's-lane, London; and at the Tavern.

To prevent the inconvenience and loss arising from uncertainty as to the number of those that will attend, the price of each ticket sold on the 8th of June will be 5s.

T. R. HORWOOD, Resident Secretary.

TO PARENTS AND GUARDIANS.

A SURGEON, of considerable practice in NORWICH, has a VACANCY for a well-educated YOUTH as a PUPIL to the Medical Profession, who will be allowed to avail himself of the great professional advantages which the many charitable institutions of that city afford.—For further particulars apply to Messrs. Corbyn & Co. Chemists, 300, Holborn; or, by letter, to G. F. Esq., Tombland, Norwich.

BIRMINGHAM TRIENNIAL MUSICAL FESTIVAL.

(THE RIGHT HONOURABLE THE EARL OF CRAVEN, PRESIDENT.)

Will take place on TUESDAY, WEDNESDAY, THURSDAY, and FRIDAY, the 19th, 20th, 21st, and 22nd of SEPTEMBER NEXT. GEORGE BARKER,

Chairman of the Committee.

Birmingham, May 23, 1843.

Further Subscriptions and Donations in aid of these benevolent objects will be thankfully received and acknowledged by the Treasurers, John Griffin, Esq., 21, Bedford-place; Sir Henry Ellis, K.H., British Museum; and William Tooke, Esq., Bedford-row; and by the Secretary, at the Society's Chambers, 73, Great Russell-street.

The Annual Subscription is 1*l.* 1*s.*; a Donation of 10*l.* 10*s.* constitutes a Member for Life.

OCTAVIAN BLEWITT, Secretary.

TESTIMONIAL OF ESTEEM TO MISS MARTINEAU.

MANY friends of MISS HARRIET MARTINEAU have intimated a wish that an opportunity might be afforded them of expressing their sympathy and esteem, and of giving some Testimonial of the sense they entertain of the valuable public services rendered by that lady in various ways, and of the exalted motives which have uniformly influenced her conduct.

In order to give effect to the wishes of such persons, the following gentlemen have agreed to receive Subscriptions, and it is proposed that the sum subscribed should be left entirely to the disposal of Miss Martineau.

E. DARWIN, Esq. 43, Great Marlborough-street.
The Rev. WM. HARNESS, 19, Heathcote-street, Mecklenburgh-square.
W. E. HICKSON, Esq. 13, Pall Mall East.
R. HUTTON, Esq. Putney Park.
The Rev. Dr. HUTTON, 5, Hamilton-place, King's-cross.
J. ROBERTSON, Esq. 122, Pall Mall.
S. SMITH, Esq. Combe Hurst, Kingston.
H. WEDGWOOD, Esq. 16, Gower-street, Bedford-square.

Post-office orders for any amount may be sent to any of the above-named gentlemen; and Subscriptions may also be paid at the Bank of Messrs. Coutts & Co. London; Sir B. Heywood, Bart. & Co. Manchester; Messrs. A. Heywood & Sons, Liverpool; Messrs. Gurney & Co. Norwich; Messrs. Brown, Janson & Co. Leeds.

MORTGAGE TRUST MONEY.—£50,000 is ready to be advanced, in one or more sums, on MORTGAGE, for and during the minority of an Infant, now in his fourth year, at the rate of THREE PER CENT. PER ANNUM.—Address John James Coward, Esq., Lansdowne Crescent, Bath, who is one of the Trustees.—From Principals only.

THE System for REMOVING IMPEDIMENTS of SPEECH, and Restoring the Vocal Powers, enfeebled by over-exertion in public speaking or reading, continues to be practised by Mr. BROSTER (late of Edinburgh), its original discoverer. References of the first distinction, and proofs of the perfect efficacy of the system, may be had on application to Mr. Broster, Ivy Lodge, Mount Pleasant, West Cowes, Isle of Wight.

MINERALS, SHELLS, and FOSSILS.—An extensive Assortment of the above is kept for Sale by J. TENNANT (late Mawe), 149, STRAND, LONDON.

J. Tennant arranges Elementary Collections to facilitate the study of Geology, Mineralogy, or Conchology, from Two to Fifty Guineas each. He also gives Private Instruction in MINERALOGY with a view to facilitate the study of GEOLOGY, and of the application of Mineral Substances in the ARTS.

CLAUDET'S DAGUERRÉOTYPE PORTRAITS, taken daily at the ROYAL ADELAIDE GALLERY. The wonderful art by which perfect likenesses are taken in a few seconds, has lately received very important improvements, and has arrived to such perfection, that former productions, however extraordinary they were, cannot be compared with the new specimens produced by M. Claudet, and which are exhibited at the Adelaide Gallery. By the very short duration of the sitting required, the sitter is enabled to preserve a pleasing expression of countenance; and nothing can be more striking than portraits taken by this improved process, that not only drew forth the admiration of King Louis Philippe, when M. Claudet lately had the honour of taking His Majesty's portrait, but has also obtained the high encomiums of several scientific bodies. These pictures are fixed, and do not fade. Price of a single Portrait, 1 Guinea, upon plates 3¼ by 2½ inches; and 5 guineas upon plates 8¾ by 6½ inches; intermediate sizes in proportion. Colouring from 5*s.* to 10*s.*

MESSRS. J. C. & S. STEVENS respectfully beg to announce, that the Trustees of the British Museum have become the purchasers of Mr. Kock's Collection of ORGANIC REMAINS, and that the Sale of them by Auction will consequently NOT TAKE PLACE, as advertised, on the 8th June.

38, King-street, Covent-garden, June 2, 1843.

Sales by Auction.

SOUTHGATE'S ROOMS.

By HENRY SOUTHGATE & Co., at their Rooms, 22, Fleet-street, on THURSDAY, June 8, and two following days, at 1,

A MISCELLANEOUS COLLECTION of BOOKS, including Valuable and Standard Works in Divinity and Ecclesiastical History, Classics and Translations, Dictionaries, Grammars, History, Mathematics, Medicine, Law, Architecture, Botany, Heraldry, &c. Also a great number of Modern Novels and Romances by popular Authors—an extensive assortment of royal 32mo. English Classics—a variety of recent Magazines and Periodicals, &c. &c.

*** Valuations made of Law and Miscellaneous Libraries, Printing Establishments, &c.

NOBLE MARBLE GROUPS, STATUES, AND BUSTS, FROM THE ROYAL GALLERY OF DRESDEN.

Messrs. FOSTER & SON beg to announce to the Nobility, Gentry, and Connoisseurs, that they are directed to SELL by AUCTION, at the Gallery, 11, Davies-street, Grosvenor-square, on WEDNESDAY, June 7, at 2 precisely, in Forty Lots,

A COLLECTION of SCULPTURE of the highest class, formerly a portion of the Royal Gallery of his Majesty Frederick Augustus, King of Poland and Elector of Saxony, purchased by the present proprietor at Dresden, in the year 1836. These distinguished works of art, then ornamenting the royal palace in the Grosse Garten, in the Saxon capital, were carried off with others by Frederick the Great of Prussia, in 1745, to his palace at Potsdam, were restored to the gallery of Dresden in 1763, and are known to all lovers of the arts by Laplat's celebrated engravings of the Dresden Gallery. The collection consists of Eight Mythological and Allegorical Groups and Two single Statues, all in Carrara marble, of the size of life, and executed by the first Artists of the Age; also Three Groups of Children by the celebrated Algardi, and 27 Busts, of which a few are Antique, and some are Portraits of distinguished characters of the Saxon Court at that period.—May now be publicly viewed, gratis, and Catalogues had at the Gallery; and of Messrs. Foster & Son, 14, Greek-street, and 54, Pall Mall.

BOOKS IN QUIRES, STEREOTYPE PLATES, WOOD BLOCKS, CASTS, COPPERPLATES, COPYRIGHTS, &c.

Mr. L. A. LEWIS will SELL, at his House, 125, Fleet-street, on FRIDAY, June 9,

ALL the Remaining Stock of Wachsmuth's Antiquities of the Greeks, 2 vols. 8vo. elegantly printed at Oxford, 700 copies—Menzel's History of German Literature, 4 vols. 8vo. lately printed at Oxford, 440 copies—Doering's Horace, 8vo. 300 copies—Dr. Donne's Devotions, elegantly printed at Oxford, 1400 copies—Selections from Dr. Donne, 1250 copies—Walker's Games and Sports, 700 copies, with the Stereotype Plates, Steel Plates, and Copyright—Also the Steel Plates and Copyright of Walker's Ladies' Exercises—the Stereotype Plates and Copyright of the Pearl, or Daily Refreshment for Christians, with 7250 copies—Drawing-room Botany, 840 copies, and Copyright—the Stereotype Plates to Border's Village Sermons, 8vo.—De Quincy on the Fine Arts, by Kent, 180 copies—Percy's Reliques, 3 vols. 28 copies—Camilla, by Miss Burney, 3 vols. 580 copies—Thomas's Burlesque Drama, 221 copies—large quantities of the Pictorial Miscellany—9 reams of Printing Imperial—18 reams Buff Double Crown—upwards of 700 Wood Blocks and Casts, and 100 Copperplates from Pinnock's Guide to Knowledge, &c.

MESSRS. BARRY & SON, Stationers and Engravers, beg to inform the Nobility and Gentry that they are now enabled to PRINT ARMS, CRESTS, &c., for book plates, in their proper heraldic colours, and at very moderate prices. Crests engraved on visiting cards in the first-rate style, 6*s.*; without the crest, 2*s.* 6*d.*; and 100 cards, 2*s.* 6*d.*: also every description of elegant engraving. Specimens of the above may be selected from a large and fashionable assortment, at their warehouses, Egyptian Hall, Piccadilly, and 122, Bishopsgate-street Within, or sent on application any distance free of expense. Superfine letter papers, 27*s.*, 22*s.*, 20*s.*, 18*s.*, 17*s.*, 14*s.*, 12*s.* and 8*s.* per ream; Note ditto, 18*s.*, 16*s.*, 12*s.*, 8*s.*, 6*s.* and 4*s.* per ream. An additional charge is made for stamping either of the above with arms, crest, coronet, or initials. Their miscellaneous stock, which is very large and particularly adapted for presents, consists of dressing cases, writing desks, inkstands, envelope cases, albums, blotting-books, bibles and prayers, gold and silver pencil cases, penholders, toilet and smelling bottles, souvenirs, ladies' companions, sachets, card and glove cases, pocket-books, papeterie, and envelopes, suitable for invitations, complimentary notes, weddings, &c. Either of the above articles may be had plain, or of the most costly description, with every description of useful stationery. Postage stamps and envelopes at Government prices. Messrs. Barry & Son are also the West-end Agents for Mr. Robert Best Ede's Perfumery.

BLUE LIAS LIME, at RICHARD GREAVES' WHARF, Blue Lias Wharf, Paddington.—The Canal have offered such reductions in their tonnages, that the above valuable Lime can be offered on the same terms as Lime from Dorking.—As MORTAR for all Foundations, Sewers, &c., it is superior to any, as it sets as hard as stone under water.—As CONCRETE, it has more power than any other Cement or Lime.—As CEMENT, it has the colour of, and sets as hard as, stone, and does not vegetate. Mr. GREAVES is now supplying the Works at Woolwich Dockyard, the Tower, and for the Sewers of the Hatton-garden Commissioners; also the Metropolitan Wood Paving Company, London Docks, and Grand Junction Water Works.

"Hamburgh, 14th March, 1843.

"Sir,—Respecting Blue Lias Lime I am fully aware of its quality, having always specified for its use for Hydraulic and Sewer Works, and, as technical adviser, for the rebuilding of this City I have done the same. "WILLIAM LINDLEY."

"Oxford, 4th May, 1843.

"Dear Sir,—I am quite prepared to certify that your quarries near Stratford-on-Avon are true Blue Lias Stone, and that stone of this formation is an excellent material for making Mortar for setting in Water Works and damp foundations.

"W. BUCKLAND."

TO READING and BOOK SOCIETIES, CLERGYMEN and FAMILIES throughout ENGLAND, SCOTLAND, and IRELAND.

New Plan for obtaining all the NEW PUBLICATIONS and STANDARD WORKS for Perusal, without purchase.

NOW READY, Gratis and Post-free.

HINTS for the FORMATION of READING SOCIETIES.

The plan advocated in this little pamphlet will effect two important objects—that of adding to the supply of the current literature the choice of all the most valuable Works in the various languages; and that of extending the choice of *New Books* to the entire productions of the press. It is especially adapted to provincial readers, as by a small annual subscription the perusal of all the New Works, as they appear, may be obtained.

Saunders & Otley, Publishers, Conduit-street.

REVIEWS

The Life and Times of Girolamo Savonarola. Whittaker & Co.

With all the faults of this work, and it has serious ones, we regard it as a service to literature; inasmuch as it draws attention to a remarkable series of events, and to one of the most extraordinary characters in ecclesiastical or civil history. Although the sound of his name has come down so faintly to our times, few men have made more noise in their day than Savonarola—not merely in Florence, which was the theatre of his actions and his passions, or even in Italy, vexed and agitated for many years by his doctrines and intrigues,—but throughout all Europe, which, while he was at the top of his reputation, he filled with the fame of his enterprises and the eloquent fury of his preaching. Considering his life, without reference to the motives that governed it, it is certain that it was mainly consecrated to an active war with the vices and disorders of the Italian clergy, the secularity and immoralities of the Court of Rome, under Pope Alexander the Sixth, and still more extensively with the sensuality and dissoluteness of manners which at the period of the death of Lorenzo de' Medici prevailed through the Florentine republic, resulting, in part, from the excess of luxury and refinement which the reign of that polished sovereign had introduced and cultivated. It is not surprising that Savonarola, having devoted his wonderful energies to such objects, should be termed by Protestant writers "the Luther of Italy," although, as Bayle remarks, the events of his stormy life run more parallel with the fortunes of John Huss. That Savonarola was distinguished by an austere purity of life is also beyond question; he was honoured with the title of "the True Monk," and appeared as the reformer of monastic abuses before he hurled his thunders at the Papacy itself. It has nevertheless been a grave question whether he was a sincere apostle of truth and virtue, or an ambitious hypocrite, aiming, in the mask of sanctity, at personal importance and ascendancy. This, as usual, has been debated with the spirit of party, and the extreme views of his character maintained according as it suited the purposes of the writer. But history abounds with examples of fanaticism dashed with imposture, and the pursuit of noble objects concurrent with the chace of popularity and schemes of self-exaltation. The types of human character are seldom met with in their single and naked forms. There is generally a complicity of passions, talents, interests, and motives, determining the course of life, like a system of forces in mechanics, resulting in one line or orbit, in which the body moves by their combined action. One passion, or one motive, may predominate over the rest of the impulses, but all must be considered and estimated, to enable us to judge correctly of any actor upon the stage of life. The prevailing error is to look for a single key to open the mystery of human conduct, as if there were but one chamber in the heart of man, or but one room in the spacious palace of the mind. With the writers guilty of this error, the man they paint is always either angel or devil; Mohammed and Cromwell either pious fanatics or calculating cheats; Luther and Savonarola heaven-sent reformers or selfish disturbers of society. The present biographer of Savonarola believes stoutly in his divine mission, and prophetic as well as apostolic character; not more confidently does he believe that Alexander the Sixth was an incarnation of Anti-Christ, if not Satan himself manifest in the flesh. Alexander, however, was merely a profligate pope, and the bold monk who defied him from the pulpit of San Marco was a mere human demagogue. In that capacity, however, he was certainly one of the most remarkable men whose voices have at any time been heard above the roar of multitudes or the turmoil of events. That he thoroughly and intensely hated the corruptions of the Church, and passionately sought to bring it back to primitive purity of morals, we are not disposed to question. To this enterprise he brought the highest qualifications: the enthusiastic temperament of genius; a fervid, vehement and tempestuous eloquence; a strict personal morality, that silenced scandal; and a fierce and arrogant spirit, which, supported by the consciousness of mental power, urged him to measure himself, a simple monk, with all the state and dominion of the triple crown. But Savonarola was a political as well as a religious reformer; a Rienzi, as well as a Luther; the leader of a party, as much as the head of a sect; and he exhibited all the ordinary characteristics of a popular chieftain—daring, violent, inconsistent, reckless in assertion, unscrupulous in attack, voracious of applause, vindictive in hostility, even to the seeking of his adversaries' blood. To this passion for leadership, and delight in the shouts of the populace, we are to ascribe the *charlatanerie* of his public conduct in several passages of his romantic life. It was probably the intoxicating cheers of his inflamed audiences that wrought him to those heights of rhetorical extravagance in which he hazarded the assumption of the prophetic mantle, and proclaimed himself a plenipotentiary from the Court of Heaven.

The first effort of Savonarola as a preacher, was made in the Church of Lorenzo, at Florence, during the Lent of 1483, the year of the birth of Luther, and there had never been witnessed a more total failure in the pulpit. He had neither voice, nor action, nor any one requisite of an orator; as he afterwards declared himself, "he could not have moved a chicken."

In the course of two years of indomitable perseverance, he that "could not have moved a chicken," produced extraordinary effects by his sermons in the churches of Brescia. Here is a specimen of the roundness of speech with which he assailed corruptions in high places:—

"The popes have attained through the most shameful simony and subtlety the highest priestly dignities, and even then, when seated in the holy chair, surrender themselves to a shamefully voluptuous life and an insatiable avarice. The cardinals and bishops follow their example. No discipline, no fear of God is in them. Many believe in no God. The chastity of the cloister is slain, and they who should serve God with holy zeal have become cold or lukewarm. The princes openly exercise tyranny. Their subjects encourage them in their evil propensities, their robberies, their adulteries, their sacrileges. But, after the corrupted human race has abused for so many centuries the long-suffering of God, then at last the justice of God appears, demanding that the rulers of the people, who with base examples corrupt all the rest, should be brought to heavy punishment, and that the people of Asia and Africa, now dwelling in the darkness of ignorance, should be made partakers of the light."

This was in 1485. There ensued an interval of four years, which were passed in study, the practice of oratory, and the general ripening and developement of the faculties. The biographer, however, takes a more enthusiastic view of this period and its uses:—

"Throughout most of this period he comports himself rather as a contemplatist, than as an apostle. It is with him a season of preparation. And this is according to the usual manner of God's dealings with his prophets. Thus He prepared Joseph in the dungeon, David on the mountains, Elijah in Horeb, the Baptist in the desert, the Messiah in the wilderness, St. Paul in Arabia, and St. John on Patmos. During these un-historical periods it is, that the most important experiences are vouchsafed to the sanctified intelligence. Thus it was, that during his voluntary abstraction, and while refusing to converse with flesh and blood, the apostle of the Gentiles was caught up into the third heaven, and heard things not lawful to utter. Thus also in the seclusion and solitude of his island imprisonment, the beloved disciple beheld visions of the trials and triumphs of the Church."

The year 1489 beheld Savonarola Prior of San Marco, in Florence, by the grace and policy of Lorenzo the Magnificent. The following is an account of his first public appearance in this new station:—

"It was, according to his own account, on the 1st of August, 1489, that Savonarola began in the garden of the cloister at San Marco, under a shrubbery of Damascus roses, to expound to a numerous audience his favourite book—the book so dear to the poetico-religious enthusiast—the Apocalypse of St. John the Divine. The throng of people was so great that there was scarcely room for the monks themselves, many of whom stood on the choir-wall, and it was difficult to find one who would do the customary duty at the door or in the sacristy. It was not the first time, as we know, that Savonarola had undertaken the interpretation of this very prophecy, in order to denounce the moral degeneracy of his times with the threatenings of Divine anger. Now again, he is heard discussing and enforcing the necessity of an earnest reformation in the collective Church, and in individual life. Three points he contends for—that the Church of God must be renewed, and that in his time—that all Italy would be first heavily visited—and that the punishment would soon arrive. 'The sword of the Lord,' he repeatedly exclaimed, 'will soon and suddenly come upon the earth.'"

The relations that subsisted between the reforming monk and the politic and brilliant sovereign of the falling state of Florence—the studious insolence of the one, and the prudent condescension of the other—supply a series of striking pictures, which the author has painted in more lively than judicious colours. Savonarola refuses to pay a visit, as much of gratitude as of ceremony, to the Medici; and the biographer, in his usual transcendental and metaphysico-religious strain, proceeds to observe:—

"The natural man accordingly determined to make concessions. If the spiritual man will not visit him, he must needs visit the spiritual man. And so it is that Lorenzo frequently visits the church and the cloister of San Marco, apparently to join in the devotional exercises, and partake the mass with the faithful, but really to facilitate a union and agreement between himself and the austere prior. Accordingly, Lorenzo would, after the service, proceed into the garden and there walk awhile, thus affording to Savonarola the opportunity of meeting and conversing with him on amicable terms. But this Savonarola avoided, saying, 'The communion I hold is with God, and not with man.' Sometimes the brethren would go and inform the prior of the Medici's condescension. 'Lorenzo is in the garden,' they said. 'Has he desired my presence?' asked Savonarola. 'No,' replied the brethren. 'Be it so! Let him tarry and continue his devotions!' said Savonarola; and remained at his post, leaving Lorenzo to take his departure unaddressed."

Lorenzo would fain have used Savonarola's eloquence and influence to stem the torrent of social impurity which was beginning to inundate the republic; he would have moderated his fervour, and even encouraged him to become the moral regenerator of Florence; but moderation neither suited the temper of the ambitious prior, nor the circumstances of the people and the times. To the eye of Savonarola, at least, there was no salvation for the state but through a revolution both in religion and in government; a view which placed him in antagonism both with his spiritual and temporal superiors. The

Digitized by Google

author quotes an interesting passage from the discourses of Macchiavelli, which points out the great defect of the political system of the Medici, and accounts for the brief ascendancy which Savonarola was enabled to acquire.

Savonarola was one of those prophets who set about realizing their own visions: he foretold a second invasion of Italy by Charles VIII., "the chosen Cyrus of God," and he actually intrigued to fulfil the prediction. Bayle well remarks, that "it was a strange if not a mad project, to think of making the sword of a king of France the instrument of reforming the Church. Did he want him to employ dragooning, or was it only his desire that he should oblige the Court of Rome, by the terror of his arms, to call a council? But what freedom could there be in an assembly held by the will of a conqueror?" The author of the present Life expresses no such disapproval of the martial reforms contemplated by his "spiritual" hero. He admits, however, explicitly enough, that Savonarola sometimes felt that he went dangerous lengths in the invocation of foreign arms, and resorted to the usual sophistical shifts of men in his position to screen himself from the imputation of treasonable undertakings:—

"This conviction, that the renewing of the Church, and the Reformation of Italy, might only be wrought by the force of arms, or at least only amidst such sensible demonstrations, Savonarola continually expressed with as much decision, as that the renovation itself was inevitable. With this notion he had been accused, indeed, of stirring up the people—but he defended himself from the charge by pleading the manner in which he had been careful to announce it. No doubt, however, in the popular sense in which it was understood by the majority of hearers, it had great influence. They could not fail to be moved by the authoritative announcement that foreign armies should invade Italy for a scourge, and as the actual signs of the wrath of God, because of the corruption of the Church, and the obstinacy of those who were unprepared for improvement. Even though such improvement itself should thereby suffer, yet would Savonarola have his hearers pray for the hastening of the troubles, that therewith the renewing of the Church might be hastened. But for these troubles he warned them not to make ready with arms, but to equip themselves with penitence and prayer. With such admonitions he sought to soothe the public agitation. For himself, he appears at this stage of his progress to have become all at once remarkably collected and concentrated. So passionless, so clear, so quiet and meditative, that not only could he himself appeal subsequently to this singular tranquillity of mind, but his contemporaries have testified to the fact, and quoted it as evidence of his having been confirmed in his course by the assurance of an inward voice."

How resolute the author is to see nothing but the beauty of holiness in the subject of his book, the following account of one of Savonarola's wildest excesses will sufficiently prove:—

"The poetic life that Savonarola had commenced in the garden of San Marco, he evidently wished to see brought forth into the public streets; and to substitute all profane celebrations by religious ones, he desired to inscribe on the meanest things, Holiness to the Lord. He called, therefore, frequent meetings of the people, and encouraged at them what he denominated spiritual dances, accompanied with hymns, chiefly composed by Girolamo Benivieni, one of his disciples. The Piagnoni would rush from the churches and the convents to join in these sacred exercises, shouting 'Viva Christo!' leaping and dancing in exultation at the thought of the Messiah's approaching reign, sometimes in a circle composed of a monk and a citizen alternately, singing spiritual songs composed for the occasion."

Savonarola is a conspicuous and terrifying example of the incompatibility between the life of a Christian minister and that of a political partisan. Had he sought only to recal the Church to pristine purity, his greatest faults had been merely the aberrations and extravagances of enthusiasm; but when he headed a political faction, he met the ordinary fate of demagogues and party leaders; it became necessary to support himself by intrigues, plots, tumults; even by proscription and bloodshed: and one sanguinary excess, in particular, laid the foundation of his ruin. This was the lawless execution—more properly the massacre—of the five illustrious Florentines who conspired to reinstate Pietro de' Medici. All that his idolizing biographer has to say for him on this point, is, "that he was not in a condition to prevent it." But it is sufficient to remark, that he was then at the height of his popularity, and, of course, his power. The author was evidently sore puzzled by his hero's share in this indefensible atrocity. He says, in another place (the reader will mark the words which we have italicized):—

"Owing to the circumstance just mentioned and exclusive spiritual contemplations, Savonarola showed too little sympathy with the body and the organs that serve for the channels of the soul. At all times systematically denying it any indulgence, he was willing to surrender it at the shortest notice. He murmured not at being used as God's hammer, and then thrown away. *But this state of feeling removed him to too great a distance from some minds, and rendered him less careful of the impressions made by danger and death on others than policy would have dictated.* If it were in his power, he might with advantage to his influence have interposed effectually in behalf of those who were beheaded for the conspiracy to restore the Medici. It is said, that in claiming their right of appeal, they were opposed by the Piagnoni, and especially by Valori, at whose feet the relatives of the unfortunate men threw themselves in the humblest entreaty, his obduracy being ascribed to personal resentment. Public sympathy was moved by the injustice of the case and the venerable age of two of the sufferers; and though Savonarola was not individually implicated, yet either his silence or his impotency was not without an immediate effect, and his credit with the populace was in consequence considerably diminished; a proof this, how much his former authority rested on the just and wholesome influence of elevated character."

The apology given here amounts to this, that Savonarola, entertaining no sympathy with his own mortal part, having by a life of rapture and contemplation become almost a pure spirit, was equally unsympathizing with the mortal parts of his fellow-men, and consequently felt the less difficulty in sanctioning, or conniving at, an execution or a murder. Thus it might be pleaded for a thief or swindler, that so little was the value he set upon money himself, he acted as if it were equally contemptible and worthless in the eyes of others. The truth is, that Savonarola committed in this transaction the usual combination of a great crime and a great blunder. There is no fact stated to show that up to this period his popularity had at all waned; and by not exerting the extraordinary influence he possessed to prevent the criminal effusion of blood, he both involved himself in the guilt of those that shed it, and (supposing him to have been averse to the execution,) must have seriously damaged his reputation, by suggesting the idea of declining power. At all events, it is certain that his fortunes slipped and fell in the blood of the butchered partizans of the house of Medici.

Nothing can be more unfair than the author's mode of stating the case between Savonarola and the Franciscans, in the singular transaction of the ordeal, in which the former was reluctantly involved by the indiscreet zeal of Fra Domenico, his follower, and himself a popular preacher in the church of San Lorenzo. The object of the ordeal was to bring the mission of Savonarola to the test of miraculous interposition. He disliked this species of trial himself, much preferring that of public controversy and the truth of predictions which he might himself fulfil. However, he had too often appealed to supernatural testimony in support of his claims, to be in a condition to refuse the challenge of Francesco di Puglia. Probably, too, "his own mind became excited;" for we can readily believe that "it was not altogether free from superstition;" and it is also credible that "he believed in some magical power in the sacraments, and in particular placed great faith in the host." Nevertheless, neither his excitement nor his superstition urged him to the length of submitting to the ordeal in person! He no doubt thought it more convenient and decorous to expose himself to the flames by proxy! His biographer, however, perceives no marks of cowardice except in the conduct of the Franciscans:—

"Francesco di Puglia, in his reply, declared his 'readiness to stand the ordeal at the request of the Signory, touching the matters in hand, of which many, though not all, required supernatural proof; yet not with Fra Domenico, concerning whom he had nothing to say, but (as a salvo for his cowardice) with Savonarola himself, from whom these contests proceeded (and who, he had reason to suspect, would not accept the challenge); another brother of his order might undergo the trial with Fra Domenico.' One, indeed, made the offer, but soon withdrew, when Giuliano Rondelli, a simple-minded man, presented himself for the trial. The fanaticism of this individual was extreme, as he had no faith in the ordeal itself, but was willing to die for the pope's honour, provided his opponent might also be burned. So great was his zeal to murder, that he was willing to die in the committal. 'He was,' he said, 'convinced that he should perish in the fire, but willingly yielded his life, since he was certain the same fate would come upon others, and the people would thus be disabused concerning these men's pretensions; nay, he thought Christian charity required the sacrifice of his life, if he could thereby remove the cause of so much error, and send the heresiarch to hell.'"

Francesco di Puglia may have singled out Savonarola in the belief that he was not enough of a fanatic to accept his challenge; but he had a clear right to have the heresiarch himself for his antagonist, if a holy duel was to be fought to bring the question that agitated Italy to an issue. The reproach of cowardice comes with an ill grace from Savonarola's advocates; but the attack on poor Rondelli as a murderer is still more preposterous. "So great was his *zeal for murder*," says the writer, "that he was willing to die in the committal!"—a monstrous accusation, negatived by the very words of Rondelli himself, quoted to sustain it. As the sincerity of Rondelli seems unquestionable, it is not possible to deny him the honour of having been actuated by a noble spirit of martyrdom; for surely it is as glorious to die, or offer to meet death, to deliver mankind from the ascendancy of bad men, or of fatal errors, as to attest a divine mission or establish a saving truth.

There is nothing more curious in church history, than the manifesto signed by Savonarola on the part of the Dominicans, whom he so liberally exposed to the fiery trial:—

"I, brother Girolamo, of Ferrara, unworthy vicar of the congregation of San Marco, of the Order of Frati predicatori dell' Osservanza, accept the proposition of the brothers, who have subscribed this document, and of all the brothers in San Marco and San Domenico di Fièsole; and I promise to give one, two, three, or four, or ten, as many as shall be required for the work,—that is, entering the fire to establish the truth which I preach; and I trust in our Lord and Saviour Jesus Christ, and in his evangelical life, that every one whom I give shall come out untouched, that is, without any hurt; if I doubted this, I would not give them up for fear of being a murderer. In token whereof, I subscribe this with my own hand, to the praise and glory of Almighty God, the salvation of souls, and the preservation of the truth of our Saviour Jesus Christ, who alone does innumerable great and inscrutable acts, to whom be honour and dominion for ever. Amen."

The remark of the author on this document

Digitized by Google

is a very strange one. He says that "as its terms were dictated, they are no evidence of his opinions!" This is singular enough from one who believes so stoutly in the sanctity and almost the divine inspiration of the Vicar of St. Mark. That the writer's enthusiasm goes this length, appears from the very next passage of his work. He quotes the following truly Delphic words from Savonarola's sermon on the day preceding the ordeal: they will remind the reader of the prophecy of Tiresias—"O Laertiade, quicquid dicam aut erit, aut non."

"As far as it is revealed to me, I think the victory is ours, and brother Domenico will come out unhurt if the trial take place. But whether it will take place or not, is not revealed to me by the Lord: if you ask me what I believe, I say, as a man, that seeing such preparation is made, I think it more likely than not."

And remarks thus upon them:—

"These words, taken in connexion with other ambiguous expressions attributed to him, show not only that he could not, but that he did not, pretend always to distinguish accurately between the thoughts which arose in his mind, according to the known general law of the Almighty, and those which he believed to proceed from the immediate inspiration of the Holy Spirit; an uncertainty which has been considered by some as throwing discredit on the assertions of all who have claimed more than ordinary intercourse with God; as if we knew so perfectly the manner in which He is pleased to regulate his communication with mankind, that He could not deviate from his laws without our being immediately conscious of it: yet it would be a more reasonable inference to believe, that the control constantly exercised by the Father of spirits over our inmost souls, is far greater than we usually perceive, and that we should not expect the transition to be so striking from his ordinary to his extraordinary influence, if we were aware of the extent of the former."

We would gladly extract the account of the proceedings on the day of the ordeal, which is given with some graphical power, and pursue the thread of this exciting story to the tragic close of Girolamo's adventurous and turbulent career; but the necessary quotations would carry us too far, and we must, therefore, send the reader who is interested in the subject to the pages of the book itself, particularly cautioning him, however, to receive, with many grains of salt, the statements of a writer who manifests, in every line, the spirit of the most determined partizanship. He even exceeds the *Piagnoni* of the day in blind admiration of his hero, for *their* eyes were at length opened by the subterfuges of Savonarola and his followers at the ordeal, but nothing can remove the mist through which our biographer beholds his Italian Luther dilated beyond the ordinary stature of man, and, indeed, but "little lower than the angels."

We shall only add, by way of moral to Savonarola's story, the pregnant maxim of Macchiavelli,—"that prophets who are not supported by the secular arm, nor by any other weapon beside their own tongue and the prepossession of the people, *are exposed to terrible changes of fortune.*"

Letters from the Pyrenees. By T. Clifton Paris. Murray.

WHILE speculating, not long since, on the untravelled corners of the Continent, it surprised us to find how fallacious is the prevalent idea, that the Pyrenees are still a virgin field for the tourist and picture-writer. A few moments of reflection brought to mind a round hundred of the scenes and wonders of the district which have been carefully described. To mention only a few, we have had the episode in 'De Vere,' and more than one graphically executed picture by Mr. James, for those who love Nature served up in romance, while Mrs. Boddington's pleasant volumes gave invitation to the picturesque traveller. More recently Mrs. Ellis has beckoned the serious, and Lady Chatterton the sentimental part of society, to try Cauterets instead of Interlacken, and the circle of Gavarnie instead of the glaciers of Chamouni. Then, to lure still more adventurous spirits, it is not so long since we had M. le Prince de la Moskowa's account of his scramble up the Vignemale (*Athen.* No. 571). Possibly some desire to emulate the feats of the son of Marshal Ney incited Mr. Clifton Paris to dare the journeys here recorded: at all events, his is no lady-like book of watering-place sketches, and such gentle perils as are only a seasonable preparation for an arm-chair and a cup of coffee, but a "rough and ready" narrative of excursions not to be undertaken without courage, or carried through without fatigue. The style is sometimes too ambitious, but the matter is good.

We get rid of the journey across France in two chapters, the first of which brings us to that strange old town, Limoges, the second to the rich thriving city of Bordeaux. In the third we start across the Landes to Bayonne: a dreary journey, through a district of which the peculiar features have been better described by the author of 'Richelieu,' in his 'Desultory Man,' unless our memory deceive us. Therefore, there is no occasion "to draw bridle" till we reach Biaritz, and we only loiter a moment at that well-frequented watering-place to notice a way of bathing which seems to us new and curious:

"The water is as clear as the brightest crystal, and through its azure depths the eye can discern the white sand that sparkles at the bottom. This constitutes the famous bathing-place; and here the *beau monde* of Biaritz are to be seen during the heat of the morning executing their watery purposes; *beaux* and *belles* alike, sporting and flirting as though the sea were their native element. The ladies are dressed in the thinnest linen garments, with gigantic hats of straw as a protection from the sun's rays. They are kept in a buoyant position by bladders passed under their arms, while expert bathing-men push them over the bay, by holding their feet with one hand and swimming with the other."

On an excursion from Biaritz to the mouth of the Adour, a striking and desolate scene, Mr. Paris was treated to a frog-concert, rivalling the most celebrated performance of which American tourists have given account. The tones he describes as "something between the quack of a duck and the jug-jug of a superannuated nightingale."

From Biaritz to St. Jean de Luz, was literally a "bad step:" our author making the journey, as all wise men will do, on foot. Having reached the town at night-fall, after taking a bath by moonlight (rather a dangerous luxury by the way), the next *desideratum* was a night's lodging. This was miserable when found, and Mr. Paris was up at four in the morning *en route* over the hill for St. Sebastian. He soon felt that he was in a new country:—

"The prospect was very pleasing: beneath me flowed the Bidassoa, if its sluggish stream could be said to flow, clear as the sky, and reflecting the black wooden bridge that crossed to France; far beyond appeared the blue waters of the main, and on either side rose the many-tinted mountains of France and Spain; but behind me was the most curious feature of the scene, the aforesaid little church of St. Miguel, perched aloft like an eagle's nest and thrown boldly into relief by a background of dark sky. Having rested for about three-quarters of an hour, I started like a giant refreshed; filled with various vague, and yet not unpleasing, anticipations: the very idea of a day's walk into Spain was sufficient to excite the coldest temperament. Yrun, the frontier-town, was the first object in my route, and towards it I bent my steps over a level marsh bounded by mountains, my attention being kept alive by the many novelties that successively presented themselves. Here, a fierce fellow passed me with scarred features and gay attire, mounted on a wild steed covered with trappings, and bearing the portmanteau and pistols of its rider: there, I caught a glimpse of a Spanish girl, with classical features and hair hanging down her back in a long braid, with a tight velvet boddice, bright skirt, and naked feet: and anon, I passed one of those strangely picturesque houses, bearing about it an air of oriental magnificence in its curiously carved woodwork, its deep, overhanging roof, and its fretted balcony; but, anxious to reach Yrun, I bestowed only a rapid and passing glance upon these objects, rightly conjecturing that my curiosity would be yet more gratified by the novelties which that town would afford. Situated on a hill, it is characteristically Spanish in its appearance; for it consists of a group of low-roofed houses of gaunt and cheerless aspect, built of rough and undressed stone, and with windowless apertures of diminutive size, admitting some air and less light; they are overshadowed by the tower of the church, singular from the great bell that hangs aloft and the quaint style of its architecture. Such was the view of this town as seen upon its approach; the entrance was more cheering: young Spanish highlanders with the *berét Bearnais* upon their heads, and dressed *à la mode Française*, were busily engaged at a game of ball resembling tennis, and which I afterwards witnessed in other villages; soldiers were exercising in the Plaza, amidst the braying of trumpets and the clash of martial music, and behind them was the town-hall, or whatever it might be called in Spanish,—a very extraordinary-looking building, emblazoned with arms and elaborately ornamented, and backed by the dark mountains and still darker ground of thunder-clouds. The general effect was perfectly theatrical, and had more the air of a melodramatic scene than one of reality; it being further heightened by the figures of Spanish women gliding about in black dresses and mantillas."

Another mountain pass opens about three or four miles beyond Yrun: the walk, however interesting from its wildness, is cruelly "punishing," the path being paved with angular stones, point upwards! Mr. Paris entered St. Sebastian on Sunday evening, the sprightliest hour of the week in the South, when the town, too, was enlivened by crowds of the fashionable of Madrid, who had fled from the capital in search of coolness. The return from St. Sebastian to Bayonne is pleasantly described: but we are bound for Pau: our author's powers of "roughing it" were tested on the very first stage of his ramble to Peyréhorade, he being compelled, like Balfour of Burley, to take up his night-quarters in a hay-loft, which, in default of hostel more comfortable, he entered without leave. At Peyréhorade, Mr. Paris wisely "abjured walking" till he should reach the mountains: and we, too, will, in imagination, avail ourselves of Prince Houssein's enchanted carpet, and overpassing all the level ground—despising even, as too tame for our present humour, the routes from Orthés to Eaux Bonnes, and from the latter place to Eaux Chaudes,—will take the reader with our author on a scramble to the Lake of the Bear, in the neighbourhood of Gabas. Like a discreet man, ere the fatigues of the adventure, Mr. Paris took counsel with his landlady:—

"I questioned her as to the facility of its access, and whether I could visit it by the daylight that yet remained. She answered,—it was a long way distant, that the road to it was a ladder of broken rocks, an ascent that was most difficult and laborious, and that it would be impossible to go there and return before sunset; 'but,' she added, 'there is an old man below who is on the point of starting for the lake, and he will no doubt be happy to act as guide, should you wish it.' This was most desirable, and I instantly expressed a wish to be introduced to him, and accordingly in about two minutes he entered, and cheerfully volunteered his services. He was one of a party who were tending a herd of three hundred cattle on the higher mountain-pastures, and he was about to return, with his donkey and a supply of bread, from a foraging excursion to these lower regions. His appearance was agreeable: he wore a highland garb,

—the round cap of Bearn, a jacket, which he now carried over his shoulders, knee-breeches and leggings, all of the same rough woollen materials, and of a russet-brown colour; long black hair flowed down his back, he was exceedingly deaf, and appeared of extreme age. He said I must make up my mind to sleep in his *cabane*, and be content with black bread and milk, his only fare; and he warned me of a mist on the morrow that might obstruct my plan of ascending to the lake: I nevertheless joyfully accepted these conditions, being quite ready for any adventure, and equally indifferent as to food and lodging. Accordingly, we sallied forth, at about half-past one, for the wild residence of my 'Old Man of the Mountain.'"

For awhile the scenery reminded Mr. Paris of the Alpine Faulhorn: and he took the ascent easily, since the old man's Rosinante was a donkey well nigh as old as himself, "possessed with a strange spirit of contradiction, and an appetite perfectly marvellous:"—

"Hitherto we had been climbing the roots of the Pic du Midi de Pau, as if we had meditated the ascent of that mountain, but at this point we turned to the right and bore down towards the bank of the torrent, where the ass had to be unpacked previous to its being driven through the stream, since the slight pine-bridge that was thrown across was not of sufficient breadth or strength to sustain it. After this passage we began the labour of the excursion; my highland guide having here thought proper to protect his naked feet by immersing them in a huge pair of *sabots* or wooden shoes. We ascended by a crooked path of rock, through wild firs and immediately opposite to the Pic du Midi; so you may well imagine the grandeur of the scenery. This famous mountain is bare and precipitous, soaring aloft in a huge cone, and having a notch in its impending crest like a pair of gaping jaws, with which it would seem eager to grasp the heavens. I should think it impossible to find a better point for viewing it than that afforded by this ascent; and to those who, being struck by its singular form and wild aspect as seen from the *Parc* at Pau, may wish to view the giant nearer, I could give no better advice than that they should undertake a pilgrimage to the *Lac de l'Ours*. Among the rocks of this wilderness we met three young mountaineers conducting a white steed to the country below. As a matter of course they took off their caps to me,—for such even is the universal custom among these sons of nature,—and they then laughed and joked with the old man, with whom they seemed on terms of familiarity, probably belonging to the same settlement. I was very much struck with the magnificent appearance of one of them: he was upwards of six feet in height, with dark curling hair, full expressive eyes, and with a mouth that disclosed a row of teeth as white as they were regular. He inquired where I was going, and then wished me every delight and happiness: such is the innate politeness of a Frenchman, even in his most uncivilized condition. The air became now sharp and chilly; we had left the shelter of the pine-woods and had entered the open regions of pasture, where nothing met the eye but huge rocks, gorges deep and dangerous, wherein the snow yet lay unmelted, and a wild expanse of grass bedecked with the purple flower of the *Iris*. About five o'clock in the day my aged guide and his donkey came to a sudden pause in the midst of an assemblage of granite boulders, but my eye, unacquainted as yet with mountain dwellings, did not comprehend the object of our delay: the old man, however, began to unpack, and upon observing a pile of stones that appeared to have been artificially arranged, I was told that it was the hut where I was to pass the night. This wild habitation, composed of pieces of rock roughly piled together to the height of four or five feet, was covered in by rude planks of pine-wood, which in turn were kept in their places by an outer layer of stones. Stooping low I entered, and found two highlanders asleep, covered with bear-skins and heavy cloaks, upon a raised platform composed of the leaves of the fir, which occupied the whole *cabane*, with the exception of a narrow strip at the end, where a wood-fire was burning, before which I eagerly seated myself, and was soon joined by my venerable guide, who invited me out to eat some black bread and drink a bowl of milk with him after our fatigues. Upon issuing forth the air felt both cold and wintry, and was strongly contrasted with the temperature to which I had been lately accustomed, whence I inferred the great elevation of my present position. I perceived that we were among barren summits and dreary hills of grass, and at length I discerned the tawny cattle hitherto lost to my careless eye from the immensity of the slopes upon which they were feeding. The dews now began to fall and the mists to boil up from the deep gulf below, and ere I had finished my rude repast they came careering along the mountain-sides, and shortly involved us in a premature night."

The evening, though long, was got over, by the aid of ill-understood colloquy with the occupants of the hut, four men and a boy, and a supper of boiled milk and black bread.

"Having satiated our appetites we retired to rest, but it was stifling work, the *cabane* being far too small for five men and a stout boy; for we lay close to each other like *niggers* in a slave-ship, the heels of the alternate bodies being placed in juxtaposition with the heads of their neighbours, and the entire mass being then covered with cloaks and the skins of sheep and bears. You may well imagine that sleep came with some reluctance: I was desperately cramped, the cattle-bells rang incessantly, and the fleas came in troops and marked me as their own. At length the Lethean dew fell upon me, and I tossed about in disturbed slumbers, pursued with agony through my dreams by wild goblin clouds, or by mountains quickened into life and preparing to smother me. I awoke at sunrise with most unpleasing sensations of cold; the *cabane* was empty, and the doorless aperture gave access to the heavy mist of the morning. At about half-past five my old friend returned from the cattle, and we then sat down to bread and milk, after which, having received from him all proper instructions, I started for the lake, which was about an hour's scramble distant. The day overhead promised fairly, but bodies of mist were whisking and flying round the shoulders of the Pic du Midi, like the giant's dress fluttering in the wind: I, however, commenced by climbing a steep hill of stones and slippery grass, and then traversing the sloping side of a most dismal and barren ridge. There was one very awkward place to pass, where the rock was smooth and slaty, and ran down with an inclination that was almost perpendicular towards the torrent: it was luckily only about six yards across, but yet of sufficient width to render its passage unpleasant. I crept over that distance on the sides of my feet, but not without the expectation of being shot like an arrow to the regions below. I found the lake as I had supposed, a small sheet of water, with the attributes of the mountain element,—transparency and beauty of colouring: it was surrounded also by savage summits of austere aspect, sprinkled with snows and strewed with *débris*. I looked around in vain for the bears which have given it their name; they no longer range the mountains unmolested, and it is but seldom that one visits even this remote spot. I gazed, however, with infinite satisfaction upon the desolate scene, where not a sound disturbed the air save the rushing of water, neither did a living object present itself except an eagle, whose majestic movements I watched with much interest; but soon the rising mists shrouded the prospect, and heavy clouds came battling up the hollows, reminding me that I had to recross the slaty pass which I had before encountered. It was lucky that I took the hint; for suddenly so dense a fog enveloped me, that I could see only a few yards in advance: however, I reached the herdsman's hut in safety."

We must not begin another adventure this week, however strongly invited, since Mr. Paris describes too minutely to be brief. Ere long, however, we shall again tempt the summer tourist.

George Selwyn and his Contemporaries; with Memoirs and Notes. By J. Heneage Jesse.

[Second Notice.]

Concerning the portraiture which these volumes exhibit of the habits and manners of the pleasure-seeking portion of the aristocracy, it is difficult to afford extended specimens. Scattered up and down the pages will be found an abundance of little traits, which collectively tell, but which individually would not be thought very significant. On the whole, however, there is no mistaking a few leading points of distinction between the contemporaries of Selwyn and their successors of our times.

The first, (to which we have already alluded,) is the absence, or at least the inertness, of the antagonist force of democracy, with all the jealousies, the fears, and the bitternesses which its present activity occasions. The politics of Selwyn's days were a pastime, or a breathing exercise of the intellects, rather than the serious business of a gentleman's life. The passions excited were expended chiefly in the struggle for the loaves and fishes,—the perquisites of a few parliamentary families, dealt out according to the shuffling and cutting of parties, of which the interests of the country were the pretexts, rather than the end. The war of opinions, which has since so much embittered life throughout all Europe, was, then, scarcely commenced. Materials indeed for the formation and demonstration of opinion were gradually collecting; and a slow and silent improvement in the self-education and position of the middle classes was preparing the way for that explosion, of which the American revolt afforded the first spark; but the truth was not yet felt, that party faction in the people was, indeed, but the madness of the many for the benefit of the few; or that higher objects were attainable by a wiser course. Accordingly, the political topics and allusions contained in these letters, turn chiefly on who is, or is not, to have certain places, or on imputed intrigues going forward to strengthen or to overthrow the ministry of the hour; with an occasional reference to the arts and practices of borough-mongering and vote-bartering. The only occasions, in which we have discovered in the correspondence anything like excitement, occurs in the notice of an opposition got up against Selwyn for the representation of Gloucester; (where the *gravamen* of offence is the invasion by mere wealth of the birth-rights of aristocracy; or, rather, of commerce upon the privilege of land;) and in reference to the Wilkes contest,—contemporaneous events: yet in these passages, ridicule and contempt are more conspicuous than resentment. Thus Gilly Williams writes:—

"I am heartily sorry, my dear George, that this d—d carpenter* has made matters so serious with you; but in the end it will only make your return more expensive to you. However, let your confusion be ever so great, it is composure to the city of London. Wilkes is at the head of a thousand people, a declared candidate, and the bets in Change Alley, whether he will succeed or no, make another regular stock, and find as much employment for the brokers as ever the India business did. To-day they gave sixty to return one hundred if he was elected. Mackereth was in the Alley, and had various negotiations."

And again, in other letters:—

"I have nothing to say, my dear George, but to wish you joy on being safely landed. Wilkes succeeds just as you wished him to do. To-day he is one hundred and seventy-two, while all the others are between five and six hundred. I believe the opposition was nibbling at this precious child to see what could be made of him, and now he is ——, they will leave him so. The mob of both cities, [Gloucester and London] equally drunk, insulted his Majesty last night with 'Wilkes for ever, and no Jack Bute!' but it is all English liberty, at which the foreigners stare, but the natives perfectly understand. They have all been to see what they call the Election, and some of them stood up on the hustings by Wilkes himself. If Lauraguais had been here, I am not certain that he would not have proposed himself a candidate, and with

* A timber-merchant, who, in the general election which took place in this year, canvassed the city of Gloucester in opposition to Selwyn, but with very indifferent success.

Digitized by Google

almost as good pretensions as the other. * * Indeed, my dear George, I received a very great pleasure from your note of yesterday. I hope you gave the carpenter a duster in his retreat, which will teach him not to be so frolicsome for the future. I hear he was tempted by Leadbeater's men, who had often found you napping on great occasions in the middle of your constituents. Is not this a proper time to mark Alderman Harris's services to you with something lucrative from the D. of Grafton? I believe he would join with me, that some such thing would be a great encouragement to your friends. * * Squinting Wilkes and 'liberty' are everything with us. It is scarce safe to go the other side of Temple Bar, without having that obliquity of vision."

The aristocratic feeling is even more strongly expressed by Lord Carlisle; but still half laughingly:—

"I was very sorry to find by your last you had an opposition at Gloucester. Why did you not set his timber-yard a fire? What can a man mean, who has not an idea separated from the foot-square of a Norway deal plank, by desiring to be in Parliament? Perhaps, if you could have got any body to have asked him his reasons for such an unnatural attempt, the fact of his being unable to answer what he had never thought about, might have made him desist. But these beasts are monstrously obstinate, and about as well bred as the great dogs they keep in their yards. But I hope to hear soon that you have chained this animal, and prevented him from doing you much harm."

At this time, also, the social circles were as little exposed, as the political, to the invasion of the Goths. The steam-engine had not as yet raised the cotton lords to a level with the lords of acres. Commercial wealth was but sporadic, and extended not epidemically to whole classes. In those days, with few exceptions, birds of a feather alone flocked together; and there were no newspapers expressly dedicated to laying bare the nakedness of the exclusive circles. Accordingly, Selwyn's correspondence may be considered as something like family letters, in which formality and ofttimes decency are set aside, in the consciousness that "it would go no further," that facts or strictures would be confined to the circle, within which a conventional and good-humoured morality was ready to pardon any sins which did not misbecome a man of station. In those times, also, high-pressure religion had not been called into the service of politics; and ultra-rigorism was not adopted on reasons of state. The consequences were, that with more plain speaking, there was less hypocrisy and less moral pretension; while they, whose passions would ill brook the control of opinion, were less cynical in their disorders, and preserved amidst their orgies and dissipations something of the habits, the conversation, and the accomplishments of gentlemen.

Another characteristic of the times strongly marked in these letters, is, that science had not as yet forced itself upon the attention of the upper classes; few or no traces are to be found in these letters of political economy, political morality, or any of the graver questions of ethics, the maxims and dicta of which enter either, as fact or figure, into the common communications of the nineteenth century; and even the literature of the day,—as exhibited in the letters of Lords Holland and Carlisle,—is purely imaginative,—and was as much an amusement, as the card-table or the turf. This absence of important topics gives to the correspondence a frippery air of levity, that will shock the more prudish readers, quite as much as the frequent looseness of language and matter; which, truth to say, are now and then somewhat offensive. The manners of the young aristocrats were then little better than an heir-loom descending from the Regent Orleans and Louis the Fifteenth's courts, and imported into England not much the worse for wear: some remnants also of the verbal coarsenesses and "selling of bargains" of the two first Georges' reigns, were still in vogue; and did not, indeed, quite disappear till the present generation. George IV., it is said, could be as rude and plain-spoken on occasions, as if he had not been "the best bred gentleman in Europe."

In all these characteristics of fashionable life, Lord March (afterwards Duke of Queensberry) bears the bell. Involved in a perpetual series of horse-racing, gambling and intrigue, he has always two (occasionally three) mistresses on his hands at the same time, and he speaks of these things as if they were the natural graces of high life. But he writes with such a happy flow of spirits, that the reader forgets how far his conduct is "pleasant, but wrong." Take, for instance, the following letter:—

"The muff you sent me by the Duke of Richmond I like prodigiously; vastly better than if it had been *tigré*, or of any glaring colour: several are now making after it. I send you by this post full directions about all my commissions, as I quite despair of coming to you. I wish I had set out immediately after Newmarket, which I believe I should have done if I had not taken a violent fancy for one of the opera girls.* This passion is a little abated, and I hope it will be quite so before you and the Rena come over, else I fear it will interrupt our society. But whatever is the case, as I have a real friendship and affection for the Rena, I shall show her every mark of regard and consideration, and be vastly happy to see her. I consider her as a friend, and certainly as one that I love very much, and as such, I hope she will have some indulgence for my follies. A contrary behaviour will only separate us entirely, which I should be sorry for, and upon the footing that we have lived for some time past, it would be quite ridiculous and affected. You may talk to her a little about this at a distance. I spoke to the Duke of Grafton about your being in France, and I will take an opportunity of saying something about it to him again, only to show your attention as to the Parliament. This moment my servant brings me your letter by le Roi. I will enquire for a lodging for the Rena, for I agree with you entirely, that you have no room for her in your house, and it is as well to avoid all the nonsense that would be said about it. I shall have every thing in readiness, that she may immediately go to her own hotel, for she certainly cannot come either to yours or mine.—&c. &c."

Everything in this letter is remarkable. The muff—the appeal to Selwyn to negotiate with the deposed favourite,—and the Earl's own interference with the minister to excuse Selwyn's absence from his parliamentary duties:—happy days, in which whippers-in and treasury letters were unknown, or disregarded. The muff, the least intelligible to our readers of the three, was part and parcel of the full dress of bag, sword, solitaire and embroidery, then commonly worn by gentlemen; a dress which must have exercised a considerable influence on manners, by restraining the wearer, for the time being, from athletic pursuits, confining him to his sedan chair, and separating him from all close contact with the people. Mr. Jesse, quoting Wraxall, observes that—

—"the costume, which is now confined to the levee, or drawing-room, was then worn by persons of condition, with few exceptions, everywhere and every day. Mr. Fox and his friends, who might be said to dictate to the town, affecting a style of neglect about their persons, and manifesting a contempt of all the usages hitherto established, first threw a sort of discredit on dress. From the House of Commons, and the clubs in St. James's Street, it spread through the private assemblies of London. But, though gradually undermined, and insensibly perishing of an atrophy, dress never fell till the era of Jacobinism and of Equality, in 1793 and 1794. It was then that pantaloons, cropped hair, and shoe-strings, as well as the total abolition of buckles and ruffles, together with the disuse of hair-powder, characterized the men; while ladies exhibited heads rounded '*à la victime et à la guillotine*,' as if ready for the stroke of the axe."

This we consider to be somewhat overstated. The full dress suit, though still used at assemblies, balls, the opera, &c., seems on less solemn occasions to have been gradually, and at the dictate of convenience, abandoned, somewhere about the close of the American war; but cocked hats and swords lingered on: we ourselves remember one, and but one, old gentleman, in snuff-coloured dittos, garnished with gold lace, and with cocked hat to match. But as the Duke of Orleans (*Egalité*), after his residence in England, introduced into France the English buckskin breeches and boots, (of which the top boots still to be seen on the French stage are the legitimate descendants,) such must have been the morning costume of that day. The gradual decline of fine dressing was more referable to the *rouérie* of the young men of fashion than to imitation; and as far as individual influence was concerned, it is probable that the Prince of Wales had as much to do with it as Mr. Fox. The immediate and death blow, however, to aristocratic distinctions of dress, was the hair-powder tax; on which occasion the fashion of unpowdered crops was set by the then Duke of Norfolk.

But to return from this episode, there is something amusing in Lord March's *naïve* appeal to Selwyn, (which is repeated again and again in other letters,) to help him out of his scrape with his old mistress, when he takes to a newer love. It shows that the young man was not destitute of good-nature, within the bounds of his conventional morality; but it does not the less mark the heartless selfishness of what is called gallantry, which, even in a good-natured man, can thus require a woman to raise or to depress her sensibility and affection, as it may suit his temporary convenience, and which whistles the object of passion on and off, as the hot or cold fit happens to prevail. The anecdote, too, throws a glimmer of light on the imputed double parentage of Mdlle. Fagniani, not otherwise very comprehensible.

We cannot find space for the many striking extracts which we have marked as exhibiting the laborious idleness of Selwyn and his friends; but the following may serve as an illustration. The writer is Mr. Rigby (Horace Walpole's Rigby):—

"I am just got home from a cock-match, where I have won *forty pounds* in ready money; and, not having dined, am waiting till I hear the rattle of the coaches from the House of Commons, in order to dine at White's; and now I will begin my journal, for in that style I believe my letters will be best received, considering our situations. I held my resolution of not going to the Ridotto till past three o'clock; when, finding nobody was willing to sit any longer but Boone, who was not able, I took, as I thought, the least of two evils, and so went there rather than to bed, but found it so infinitely dull that I retired in half an hour. The next morning I heard there had been extreme deep play, and that Harry Furnese went drunk from White's at six o'clock, and won the *dear memorable* sum of one thousand guineas. He won the chief part of Doneraile and Bob Bertie. * * Friday night I was at the Oratorio, where there was very little company, and Saturday at the Opera, where there was less. * * I supped that night *tête-à-tête* with Metham, who was d—d angry with Hubby Bubby† for having invited all the Musquetaires to supper but him. He went to sleep at twelve, and I to White's, where I stayed till six. Sunday I dined out of town, at Chelsea College, with Mr. Winnington and Mr. Townshend, whom I think a good agreeable man. Yesterday I spent good part of the day with my Lord Coke at a cock-match, and went, towards the latter end of Quin's benefit, to Marianne, where I found he had not greatly pleased."

* "The Zamperini," [of whom a most coquettish and bewitching engraving is given among the illustrations].

† Probably the famous Bubb Doddington."

Digitized by Google

In reference to Garrick's acting *Othello*, there is a note of some interest :—

"Determined to judge for himself, in regard to the merits of Garrick's acting, Quin, on the night on which his rival was announced to perform Othello, secured himself a place in the pit of the rival theatre. About this period had been published Hogarth's famous prints of 'Marriage à la Mode,' in one of which, it will be remembered, is introduced a negro foot-boy entering the apartment with a tea-equipage. To the quick fancy of Quin, (naturally on the watch to turn his rival into ridicule,) it may readily be imagined that there appeared a ludicrous similarity between the appearance of the foot-boy and the blackened face and diminutive figure of Garrick. Accordingly, when the latter made his re-appearance in the third or fourth act, Quin suddenly exclaimed, loud enough to afford amusement to half the pit, 'Here is Pompey, but where are the tea-things?'"

Garrick, it appears, was aware of his failure: for he is recorded as having said, "I once acted the part to my cost."

The letters of Walpole to be found in this collection are not many; nor do they differ from the generality of his already printed correspondence. We venture, however, on a short extract from one, as glittering with well-known names :—

"I was in your debt before, for making over Madame du Deffand to me, who is delicious; that is, as often as I can get her fifty years back; but she is as eager about what happens every day as I am about the last century. I sup there twice a week, and bear all her dull company for the sake of the Regent. I might go to her much oftener, but my curiosity to see every body and every thing is insatiable, especially having lost so much time by my confinement. I have been very ill a long time, and mending much longer, for every two days undo the ground I get. The fogs and damps which, with your leave, are greater and more frequent than in England, kill me. However it is the country in the world to be sick and grow old in. The first step towards being in fashion is to lose an eye or a tooth. Young people I conclude there are, but where they exist I don't guess: not that I complain; it is charming to totter into vogue. If I could but run about all the morning, I should be content to limp into good company in the evening. They humour me and fondle me so, and are so good natured, and make me keep my armed chair, and rise for nobody, and hand out nobody, and don't stare at one's being a skeleton, that I grow to like them exceedingly, and to be pleased with living here, which was far from the case at first: but then there was no soul in Paris but philosophers, whom I wished in heaven, though they do not wish themselves so. They are so overbearing and so underbred. Your old flame, the Queen, was exceedingly kind to me at my presentation. Madame Geoffrin is extremely what I had figured her, only with less wit and more sense than I expected. The Duchess d'Aiguillon is delightful, frank, and jolly, and handsome and good-humoured, with dignity too. There is another set in which I live much, and to my taste, but very different from all I have named, Madame de Rochford, and the set at the Luxembourg. My newest acquaintance is Monsieur de Maurepas, with whom I am much taken, though his countenance and person are so like the late Lord Hardwicke. From the little I have seen of him, we have reason I believe to thank Madame de Pompadour for his disgrace. At the Marquis de Brancas' I dined with the Duc de Brissac, in his red stockings: in short, I think my winter will be very well amused, whether Mr. Garrick and Mr. Pitt act or not. I beg your pardon, my dear sir, for this idle letter; yet don't let it lie in your work-basket. When you have a quarter of an hour, awake, and to spare, I wish you would bestow it on me. There are no such things as *bons mots* here to send you, and I cannot hope that you will send me your own. Next to them, I should like Charles Townshend's, but I don't desire Betty's. I forgot to tell you that I sometimes go to Baron d'Olbach's, but I have left off his dinners, as there was no bearing the authors, and philosophers, and savants, of which he has a pigeon-house full. They soon turned my head with a new system of antediluvian deluges, which they have invented to prove the eternity of matter. The Baron is persuaded that Pall Mall is paved with lava or deluge stones. In short, nonsense for nonsense, I like the Jesuits better than the philosophers. * * Say a great deal for me to Lord March, and to the Rena's dog's *touffe ébourifée*. The old President would send his compliments to you, if he remembered you or any thing else."

Among the more lively and elegant letters in these volumes, are three of the Earl of Carlisle, written from Italy; there are also a very few from Charles Fox, and from the Hon. H. St. John, who was in waiting on George the Third's brother, the Duke of York, at the time when that Prince died, at Monaco. Among these last, there is one letter of some historic value in reference to the silly reports, not long ago revived, of the Duke's having perished by poison. Of G. Selwyn's own letters we have scarcely a specimen; but he is amply depicted in the letters of his correspondents, in which he figures as one very universally liked, and by many even loved,—apparently for an easy good nature, an Aristippus-like power of accommodation to other men's tastes, and above all for principles nicely attuned in harmony with those of his friends.

The second volume brings us down to the year 1770; and as Selwyn's life extended over twenty years beyond that date, we are at no distant day to have (it may be presumed) two more volumes to range with the present. These, as they approach our own times, must rise in interest; and we shall, for the present, reserve our strictures, and say nothing that may tend to delay their appearance.

In taking leave of the present publication, a question suggests itself for consideration, as to the relative merits of Selwyn's days and our own; whether our hair shirts and confessionals, our Low Church fanaticism, our bitter polemical politics, and political polemics, our prudish private morals and public cynicism, are to be received as evidence of a higher state of civilization, than the coarse jollity and careless unmasked profligacy of the olden time! Are the open and distinct avowal and defence of class interests better or worse than the pensioned subserviency of our fathers to "wha-ever might be meenister"? Are the wholesale bribery of entire populations, the "doing what we like with our own" tenantry, the close union of political demoralization with personal pretences to superhuman virtue, better or worse than family boroughs, parliamentary jobbing, and a candid, though barefaced, avowal of not being, personally, better than we should be?

This is a question which we will not pretend to decide: let every one judge for himself. For us, it is enough to say, that the comparison speaks of a vast change in the condition of the aristocratic classes, and in that of the people at large. Be it for good or for evil, it is a step from which there is no retreat,—a step dependent on material and moral causes which cannot be annihilated, and which the strong man must follow, no less than the weak. Some there are who look back on the past with a fond and anxious regret: it were wiser, far wiser, to look forward to the coming on of a (no very remote) time, for an hereafter requiring forethought and preparation, and pregnant with changes of a far more consequential import.

Hints to Servants: a Poetical and Modernized Version of Dean Swift's celebrated Directions, &c. By an Upper Servant. With twelve Original Designs by Kenny Meadows. Wilson.

Lord Orrery, looking from the heights of his own aristocratic station, upon the *jeu d'esprit* here "modernized," taxed the Dean with want of dignity in condescending to so low a subject; and Faulkener insulted the mighty majesty of the Drapier with his lackadaisical praise. But these outrages on genius, perpetrated by presumptuous mediocrity, are trifles when compared with the onslaught at present before us. Less, perhaps, could not be expected from one who could so far mistake, as to contemplate a versified improvement on the nervous prose and condensed irony of such an original. Garrick, indeed, for the purposes of the stage, strung a few of the sentences in a gingling rhyme, and contrived not to let the wit wholly evaporate; but not even he could make verse a better medium for the conveyance of a bright thought, than the prose of the greatest prose writer of his day. What, then, can be said for the self-delusion which has misled this our transverser into so complete a forgetfulness of the Horatian *quid valeant humeri?* Instead of a concentration of the matter, he has diluted it beyond the infinitesimality of an homœopathic potion. In the place of the vigorous, energetic cadences of the Dean's lively and Saxon English, we have an unmusical succession of pointless couplets, of the true Touchstone dogtrot sempiternity. "Eating, drinking, and sleeping hours excepted," the author might have gone on to the end of time. But of his fitness for the task he has undertaken, it is fairest, perhaps, to let himself afford the measure.

Once on a time a Rev'rend Dean
There lived (and you know whom I mean),
Keen as a hawk each fault to seize,
And *Swift* to blame, as slow to please;
Swell'd up with pride to height of tumour,
Though all admired his dogged humour.
But since our Pompey knew not how
To speak, as 'twere, but in 'bow wow!'
The muse invites me to rehearse
His constant bark in doggrel verse:
Keen irony can't hope to chime
Without some small relief from rhyme,
Though where you'd feel the sharpest tingle,
You lose the smart amidst the jingle!
* * * * *
I've tried to make him look more recent,
And dock'd him where he's quite indecent.
On one thing you may quite rely,—
I am no busy, base Paul Pry.
My best advices really flow,
From what I really 'happ'n' to know,
Nor could escape in any wise,
Save shutting both my ears and eyes.

Although the book extends to seventy-six pages, it is not a complete rendering of Swift's matter, but a selection, rather, of particular passages. The professed cause of omission is to prune away the indecencies, which modern prudery will not tolerate; but inapprehensiveness of the wit of Swift has perhaps more to do than prudery with the curtailment. Thus, in the advice to the butler, we find—

Wipe knives, rub tables, clean your plate—
What can be more appropriate?—
With table-cloths: 'tis bold and dashing,
But saves in dusters and in washing.

in which we miss the humorous conclusion of Swift: "and in reward for such good husbandry, my judgment is that you may lawfully make use of the finest damask napkins for nightcaps for yourself."

Another passage, of the quaintest Rabelaisian fun almost wholly omitted, claims our notice :—"A servant's candlesticks are generally broken, for nothing can last for ever. But you may find out many expedients. You may conveniently stick your candle into a bottle; or with a lump of butter against the wainscot; in a powder-horn, or in an old shoe, or in a cleft stick, or in the barrel of a pistol, or upon its own grease on a table; in a coffee-cup or a drinking-glass, a horn-can, a tea-pot, a twisted napkin, a mustard-pot, an ink-horn, a marrow-bone, a piece of dough, or you may cut a hole in a loaf, and stick it there." In the advice to the butler there is yet another omission :—"If any one desires a glass of bottled ale, first shake the bottle, to see whether anything be in it; then taste it, to see what liquor it is, that you may not be mistaken; and, lastly, wipe the mouth of

Digitized by Google

the bottle with the palm of your hand, to show your cleanliness." We could find in our hearts to continue our quotation of passages overlooked or neglected in the version, as compensation for the dreary task through which we have been led by this wretched rhymester, would time and space permit.

It may be asked, perhaps, why we have bestowed a column on a work of which we have spoken so slightingly, and we will answer the question. It is by comparisons such as it suggests and affords between the past and the present, that the fullest notion may be obtained of the vast abyss of dulness, into which the paths that literature at present affects, is rapidly leading. If flimsy publications prevail, it is because their Mæcenases prevail also. The fault lies principally with the public; and the discouragement cast before all attempts at manly or profound thought, and the eager demand for picture-books, or illustrated works, as they are called, are among the prominent causes which have brought us to this pass. Every year the productions of the press are becoming more feeble and worthless—too fortunate when they are not vulgar, slangy, and demoralizing. To dip occasionally into the pages of Swift, of Fielding, of Pope, of Smollett, is to be transported into another world—a world of wisdom without cant, and of truthful morality without affectation; and above all, a world which keeps the mind on a wholesome stretch, and which, while it excites the imagination, does not leave the reasoning faculty without its due pabulum: and this must be our excuse. Why and how modern literature has sunk to its present level, is, moreover, a question that cannot too often be put to the public. Here, too, we see one of the prevailing follies of the day fully displayed,—the substitution of the pencil for the pen. The twelve engravings will probably serve as a passport to a volume which otherwise must have fallen still-born. We know not, indeed, whether the pictures may not have been the cause of the poem; such things are of daily occurrence: at all events, they monopolize the merit of the publication.

OUR LIBRARY TABLE.

The Pastor Chief; or the Escape of the Vaudois: a Tale of the Seventeenth Century, 3 vols.—'The Pastor Chief' has agreeably surprised us. Upon so many a party banner has been written, the name of that heroic people, the Waldenses, that we shrunk from this novel. Its author, however, though wholly Protestant, as any one undertaking so lofty a theme, with Milton's immortal sonnet by way of device, should be, is honest, liberal, and charitable in his manner of viewing the events and personages of history. He not only finds excuses for Madame de Maintenon, but paints her as having been in reality the sincere and saintly person she so long and wearily personified. But how, asks some reader, does a full-length portrait of Madame de Maintenon and life at Versailles come into such a tale? It is thus. A certain Anima di Solara, brought up in the valley of Angrogna, by the Vaudois pastor Arnaud, is claimed by her legal protector, Madame de Soany, conducted (in tears at having to part from a certain Walter Durand) to the court of Paris: there, by gentle devices of court favour, seduced into the court of 'the scarlet Lady,' and, what is sadder, persuaded to forget her old lover, and to make a brilliant marriage with a Piedmontese nobleman, the Marquis of Pianezza. She accompanies him to the court of Victor Amadeus, and thus gets involved in the persecution of the friends of her childhood. Let no one, however, fancy this unworthy Anima to be the heroine of the novel: that honour is claimed by Marie Arnaud, the Vaudois pastor's daughter, who stands by her father's side in the hour of prayer, in the moment of escape, and in the terrors of battle, calm, womanly, but resolved; and who even confronts torture fearlessly rather than deny her faith or betray her cause. The heroic maiden, however, is a true woman: she loves Walter Durand, and dreams the love to be reciprocal, till awakened by a disclosure forced from him by the return of the renegade Anima to the scene of conflict, and his desire to save her. But in this trying and terrible crisis, even Marie does not falter, the lofty tone of the character being never, for one instant, forgotten by the novelist. We have told enough of the invention of the story. Many, however, will not read it so much for the imaginary interest powerfully conjured up, as to find in it one more recapitulation of the marches and countermarches, the sufferings and the sieges, of the faithful people among whom the scene is laid. So be it. As singularly clear of party feelings and prejudices, we can recommend 'The Pastor Chief' to all classes of readers.

The Renewal, and other Poems, by C. Shaw.—'The Renewal' is a descriptive poem; whose subject is the village of Netherbury, near the town of Bridport, in the county of Dorset. The author states, truly enough, that "local descriptions are seldom interesting to the general reader:"—to make them so is, nevertheless, an achievement within the resources of poetry; but the pen, for the purpose, should be such a one as his who sang of 'Sweet Auburn,' and presents it to all hearts as the "loveliest village of the plain." As if to prevent the possibility of our consenting to this author's notion, that the cause of his failure resides in his theme, he has published some minor poems—of which a favourable specimen, in the following verse, will show our readers what he makes of it when his subject is a poetical and popular one. If he wants the power for exalting an unpropitious theme, he possesses, by way of compensation, the converse faculty of applying the "art of sinking," with considerable effect, to a spiritual or tender one:—

> When he who now utters this sad farewell!
> In sorrow departing has left you behind,
> Think still that his heart of affection will tell,
> Will tell of his sisters so fond and so kind.

Papers of Regnault, edited by William de Bary.—*Waste* papers.

Leisure Hours, by C. B. Greatrex, jun.—Here we have again the old plea of minority urged. If, while young, Mr. Greatrex were to employ his "leisure hours" better than in the composition of such rhymes as these, he might greatly increase his chance of one day producing something which might be offered to the public without apology.

Study of Creation, by P. J. Wright.—This little *brochure* contains the substance of a lecture delivered at Truro in Cornwall. It is full of suggestive matter, and may profitably be read by those who wish to know something of the nature of physical philosophy without having leisure to pursue a regular course of study.

Oriental Cylinders, No. I.—Mr. Cullimore has published engravings of the Babylonian cylinders in the British Museum, for the purpose of exciting attention to these curious relics of remote antiquity. As the engravings are unaccompanied by any descriptive letter-press, we can do no more than announce the publication.

FOREIGN CORRESPONDENCE.

WHILE the Comet which now forms such a remarkable appearance in the southern hemisphere is, no doubt, the subject of speculation among the learned, and of terror among the uneducated and superstitious, in Europe, it will, perhaps, prove of interest, if I describe the feelings which its sudden appearance aroused in me, and among the Indians—

The Stoics of the wood, the men without a tear.

We were ascending the Essequibo, that noble river which, though a small rill among the mountains of the Equator, disembogues its accumulated waters through three channels, nearly twenty miles wide. The weather was unfavourable; torrents of rain had descended, and the sky had been covered with clouds for weeks. We were approaching the cataract Ouropocari, in 4° 11′ north latitude, and had encamped, on the 8th of March, three miles below it, when, for the first time since our departure from the coast, the sky, hitherto a uniform mass of greyish clouds, cleared in the evening, and exposed towards the south-west the deep tropical blue, spangled with stars. We hailed with pleasure the prediction of better weather; but what was our amazement, when we observed, in the W.S.W., a broad, white, nebulous band, inclining towards the horizon, and stretching to an altitude of 45°! The zenith was covered with those beautiful clouds which the meteorologist calls cirro-cumulus; the sky was, however, perfectly clear on both sides of the band, which, 64′ (in arc) broad, and of a pure white, almost transparent, formed a strong contrast with the deep azure of the tropical sky. I could not observe whether the band rested apparently on the horizon, as the wall-like forest, near the edge of which we were encamped, prevented me from seeing that portion of the sky. From the point where the band became visible, it appeared of a uniform breadth, becoming more transparent, and slightly diverging near the summit.

What can it be? was the first question. My Indian friends stood around, looking now with wonder at the phenomenon, now askance at me. Was it a lunar rainbow? Its diagonal position, without any curvature, besides the situation of the moon, then near her quarter, and a little to the westward of the meridian, prevented such a supposition. Some of the crew from the coast cried out, "it is a waterspout," which evidently it was not; and after many profitless conjectures, we agreed that it was an extraordinary appearance, highly interesting, but of a nature which I could not satisfactorily explain. Opaque clouds, in detached bodies, were soon after drawing rapidly from the east toward the west, and partly covered the white band, which remained still visible, where the broken clouds did not cover it, proving that the phenomenon belonged to a higher atmosphere than the opaque clouds.

Our doubts were, however, solved next evening (March 9): it was a comet! Our camp was so favourably situated, that the south-western horizon was exposed to our view. The sky was partially clouded until seven o'clock, when the clouds to the west cleared away, and there stood the comet in all its grandeur; the nucleus being about 12° above the horizon, and the tail extending to the star υ Eridani, then about 45° high. The nucleus appeared to the naked eye like a star of the second magnitude; its tail near the base, like a narrow band, spread in its broadest part 1° 10′ and lost itself in the constellation Eridanus. The whitish light and transparent vapour of its tail, resembling more those clouds compared to

The beauteous semblance of a flock at rest,

diverged about 20° below the foot of Orion, in nebulous stripes.

We stood amazed. A bright moon somewhat lessened the effect which this most wonderful of all natural phenomena would have produced, had all else been hidden in darkness; but the extent of the tail rendered it remarkable; indeed it was the largest which we, who stood assembled, had ever witnessed in our lifetime.

I still recollect the beautiful comet of 1811, with its diverging beams of fiery hue; but its tail was much less in length than the one we now looked upon. It was a scene which has fixed itself firmly upon my memory. There we stood, upon a small island in the middle of the Essequibo, surrounded by foaming waters, which, opposed in their course by dykes of granite, went thundering away over the black stony

Digitized by Google

masses, I the only European among a number of naked savages, the coppery tint of whose bodies shone in strong contrast, when the burning embers of the camp-fires threw a ray upon their figures; some standing upright, with their arms across their breast, others squatting on the ground, but their fearful eyes all directed towards the strange star with its luminous train. No word was spoken. The rush of the foaming waters was the only interruption of the silence. Tamanua, a young Wapisiana, of more intelligence than is generally met with among his tribe, broke at last the silence, "This is the Spirit of the stars, the dreadful Capishi —famine and pestilence await us;" and, as if they had only wanted the utterance of a syllable to give vent to their feelings, the assembled Indians burst into a torrent of declamation, lamenting the appearance of this dreaded Capishi, as the precursor of pestilence and famine, and raising, with violent gesticulations, their arms towards the comet.

I was surprised to find among my Indian followers the same superstitious dread of a comet which, in all ages, rendered their celestial appearance the terror of the uninstructed and vulgar, as

> Threatening the world with famine, plague, and war;
> To princes death, to kingdoms many crosses.

The Indians around me consisted of Arécunas, Wapisianas, and Macusis. They first called the comet Wátaimá, signifying, like Capishi, the spirit of the stars. The Macusi Indians named it Cá-po-éséimá, "a fiery cloud," or Wæ-inopsa, "a sun casting its light behind."

Must we not acknowledge that these simple children of Nature, have given to this magnificent phenomenon a more expressive name than we civilized nations? certainly, comet, derived from *coma*, does by no means convey any idea of its appearance.

We recognize in the idea which the Arécuna and Wapisiana have of the comets, the opinion of Kepler, who asserted that they were monsters; and of Paracelsus, who considered them as formed and composed of spirits. The opinion of the Macusi has a more poetic turn; the comet is called Capo-escima* a "fiery cloud." Who does not recollect the pillar of the cloud, and the pillar of fire, by which God guided the Israelites out of Egypt? And Wæ-inopsa, the synonymous term, a sun which casts its light backwards, is as descriptive of the appearance of this magnificent phenomenon, as if modern astronomy had given the appellation.

The tail is now less in length, and appears not only more vaporous, but likewise more dim and diffused. The open savannahs, on which Pirara stands, afford a splendid view of it, and I only regret that I was not here, when the gentlemen, who are attached to the Boundary Expedition, saw it from Pirara for the first time on the 4th of March.

R. H. SCHOMBURGK.

Carlsbad, May.

I went the other day to the annual examination at the school here. The *Stadt Schule* (Town School) is about the largest building in the town. There are four large rooms, in each of which is a class—two of boys, two of girls; and in each, of course, a master. The same instruction is given to all: reading, writing, and arithmetic. The boys alone, I think, learn a little geography; but that is their only prerogative, and it is not enough to found any very high pretensions upon. The doctrines and precepts of the Catholic religion are taught. The little things were called upon to demonstrate the immortality of the soul, the doctrine of purgatory, of transubstantiation, and a few subjects of that sort: they repeated certain words, just as they would have repeated any others that had been taught them. This, however, is what is universally received as "religious instruction," and is exactly what you at home think so much more valuable than any other, that, rather than abate one iota of it, you will let the people go without any instruction at all. It is certain, that mixed up with these high and difficult questions, a great deal is taught here which the children do understand, and which has a powerful and permanent effect on their lives. The excellent men who superintend the religious instruction, are not negligent of that; and the natural docility of the children renders their task easy, as one of them admitted to me.

As to the secular instruction, and the intellectual state of the children, I was, of course, prepared to find it immeasurably behind that in our best schools, such as Norwood, Limehouse, the Borough Road, &c. At the same time, it is as much before many of the schools I have seen. The reading was very fair, writing excellent, mental arithmetic (*kopfrechnen*) feeble enough, as compared with the wonders I have heard at the Borough Road, but still sufficient to be extremely useful to tradesmen and their wives. Any higher mental activity is neither promoted nor desired—indeed, would be suppressed, as is sufficiently seen in the Gymnasia and higher schools of the empire. The reading books are average school-books, and contain some good things. One remarkable feature is the chapter on the duties of subjects to their rulers. Nothing can be more prettily written, more attractively set forth than the doctrine of passive obedience and non-resistance. It is, however, inculcated in the most positive and distinct manner. If, as I believe, this leaves a lasting impression on the mind—if it is possible to expound and inculcate one sort of political or public duty so that it forms a part of the unquestioned faith of every young mind, why not, I must ask, others? Why, for instance, is it harder to make children understand the duty of respecting the right of every man to sell his own labour on any terms he thinks fit, than the duty of respecting the right of the monarch to dispose of us all, our lives and goods, in any way *he* thinks fit? For my own part, I had rather, as a mere matter of ease and convenience, undertake the former than the latter. We think it better to let people grow up with opinions which lead them to throw vitriol into the eyes of a man who chooses to sell his labour at a cheaper rate than themselves, and then transport them for it. Let us not affect to say, that the people of England have ever been taught one iota of their duties as members of the State (except by the policeman and the gallows). I confess I admire the pleasing and affectionate way in which the Austrian Government familiarizes the little child's mind with a doctrine which we are bound to suppose it thinks salutary. I wish we took half as much pains to make really important truths palatable. It's all for its own interest, you'll say. No doubt. It would have been for ours, in England, where the people have a substantive existence, and are not mere wax in the hand, if they had been taught their duties to the State, and to themselves, as acting members of it. One of these days you shall have the chapter on passive obedience; you will see how people write for children when their hearts are in the cause.

It must be owned we English have not such winning ways. The Church, for instance, would like the same thing as the Emperor of Austria—passive obedience and non-resistance; but alas! alas! she seems further than ever from obtaining her wish. Seriously —the spectacle now offered to Europe by England, is one which is quite enough to chastize whatever pride of country one may cherish. The bigotted and selfish pretensions on one side—the bigotted and selfish opposition on the other—the total and profound indifference of both parties to the real interest and improvement of the people—the blind and preposterous self-delusion which leads them to fancy that men acted upon by such passions and influences can be in a state of mind to understand, much less to teach, Christianity—all this one contemplates from afar with amazement, and if one loves England, profound sorrow—if one hates her, with triumphant contempt.

Sir James Graham's speech proves how much the government is in advance of the nation on this question. But what avails it? It seems as if reason were powerless against so dense a mass of prejudice and egotism, conceit and antipathy. I have since read an article extracted from the *Times*, which, if it proves anything, proves that the education of the English people is simply impossible. A glorious result, truly, for a Christian people to arrive at! Candid and reasonable observers, at a distance from the strife, when they compare this conclusion with the precepts of Christianity, or with the principles of Protestantism, are obliged to admit, that the one is just as little understood in England as the other; and that it is, in fact, something quite foreign to either which actuates both parties.

The blessing of unborn generations would fall upon the man who could find the solution of this fearful problem; but human wisdom seems at fault here. The lust of domination and wealth—the intolerance of equality before God or man—the utter want of self-knowledge, and the consequent blind conceit—the equal ignorance of others, and the consequent blind antipathy—these are obstacles which a stronger hand than man's must break down.

If ever the patience of Heaven should be wearied of our altercations, it will not want instruments, more terrible than its own lightnings, wherewith to shatter in pieces this monstrous fabric of human pride—instruments provided by our own hands. The ignorance we have left unenlightened, the passions untamed, the reason undisciplined, the heart unawakened—these will execute the dreadful vengeance. Rushing from their dark hiding-places, they will overwhelm us, our vain disputes and arrogant pretensions, in one mighty ruin. Where, then, will be our obstinate controversies and our jealous bickerings? Lost in the roar of the tempest. Who will ask, then, about churchman or dissenter? Perhaps, when the storm has silenced all these disputes, and levelled all these distinctions in a common destruction, some voice will arise out of the ruins and will preach CHRISTIANITY—the forgotten religion of self-abasement and self-denial, voluntary suffering for the good of others, forbearance, indulgence, moderation. The first evidence of its adoption would be a complete and visible recognition of the inborn spiritual equality of man; not expressed in dry forms, to be repeated in church and forgotten at the door; nor yet in anarchical theories of an equality which is merely secular, and as worthless as it is unattainable: but a recognition ever present, ever active, compelling us to respect in every human creature the faculty and the right of self-developement; the faculty and the right of elevating and expanding his own spiritual being in the direction which his nature renders accessible to him; compelling us to provide for each and all the occasion and the means necessary to that awful work, but to forbear to intrude our own narrow, imperfect judgments, our own baseless usurped authority, into the sanctuary which the Former of Spirit has reserved for himself. In the meanwhile, the struggle for mastery goes on, and people fancy themselves champions of a holy cause.

Here are no Protestants, so that the matter is simplified; but there are Jew children, who are at perfect liberty to leave the school when the religious instruction begins, or to stay if they prefer it.

One lesson in Christianity they all learn, viz. that the poor are not to be rejected and kept aloof because of their poverty. There is not the slightest distinction of ranks. *All* the children in the town attend this school for the elementary branches of learning—for any others they are at liberty to seek private instruction. But these, all must learn, and learn together. The school fee is 8 kreutzers (not 3*d*.) a month each child. The very poor are not required to pay at all. The salary of the masters is from 200 to 300 gulden a-year. On this they marry, and make a very respectable appearance. They add to their small income by giving private lessons. They all seem to me zealous, good teachers, within the narrow bounds permitted to them. No deviation from the prescribed plan is allowed—as I need not tell any one who knows the least about Austria.

As the system of education here is founded on the principle that all special instruction must be procured by the parents elsewhere, there are no girls' schools (so called), and no school mistresses employed by the state. The knitting and sewing schools are private undertakings, and this very essential part of a woman's education is comparatively neglected. The girls, of the lower class, are not adroit needlewomen. This is a great evil, but not nearly so great a one as the handing them over to a half-educated, feeble-minded woman, because she can sew. Happily, neither is necessary.—Yours, &c.

ROYAL ACADEMY.

Sculpture Gallery.

WE have pledged ourselves to let no year pass, without recording our protest against the continuance of that arrangement which consigns the national sculptures to a repository that would be far more appropriately described as the "*Tomb* of Sculpture"

---

* Ca-po is the contraction of Ca "cloud," apo "fire," and escima denotes the form of the adjective, similar to the English syllable *ly*.

Digitized by Google

than as a "Sculpture Gallery":—but to that protest our remarks on the subject must, for the present occasion, be limited. On behalf of the public, we have done our part towards the abatement of this wrong, alike to them and to the exhibitors; but the sculptors must bestir themselves. The time when they could do so with effect is, perhaps, gone by—or not yet. Two only of their number rank with the present body of Academicians; and, of these, only one is an exhibitor: but the English sculptor will do well to prepare himself for that change which, as he no doubt foresees, is coming over the spirit of national Art, and which, in its consequences, will give him a better academical place, or less need of it. The forward move in Art, which is announced by many signs, cannot leave him behind, because it cannot complete its work without him; and, in its result, he will find nobler exhibition rooms for his productions than the walls of Academies inclose. A still better result will be, that there will be room for his genius, as well as his *art;* and the powers which the careful training of the present English school has brought to great perfection, will find higher employment than the Gorgon-like office of turning all the human faces that come in their way to stone.

This year, as last—and more than last—after making all needful deductions for the disadvantages of light and position in which the marbles are to be viewed, there is, to those who visit the Gallery as a mere *Exhibition*-room, and who naturally carry with them the expectation of striking effects, a first feeling of disappointment—and, for those who look further into the matter, a resulting one of satisfaction. The technical of the art has more scope than the spiritual—its prose than its poetry. The consummate hand has had more to do with its marble population than the informing mind and the enhancing imagination. The principles that are the fitting preparation for that better time which we have predicted as coming for the sculptor, are adhered to with integrity, and carefully wrought out; but there are none of the triumphs in which these should issue, to illustrate the new era. The pedestal of Sculpture is here—most skilfully elaborated and artistically enriched—but the crowning divinity is wanting. There is no work of high conception or enchaining beauty—no *great work*, in any sense—but much good workmanship and a sound tone. The Englishman, who should conduct an intelligent foreigner to the sculpture room, has no *point* to which he would at once lead his companion with an air of triumph; but, warning the stranger beforehand to expect no miracles, he might refer him to the exhibition, as a whole, and reckon confidently on his testimony, afterwards, to the healthy and promising condition of the school which it represents. It is true, the *genius* of the school, its imaginative faculty, which nowhere, on this occasion, soars very loftily, descends too often to the common-place, and sometimes to the trivial and mean: it is true, also, that the old conventionalities are still in force. (And here it may be observed, episodically, that one of the most important benefits conferred by the new order of things for which we are hoping in Art, will be the expulsion of these ancient tyrants from their rule in modern sculpture. A national demand, when it shall arise, will be for a national sculpture. The gods and heroes of Academies are not the gods and heroes of the people—a European people, of the nineteenth century. In this particular, it is right to admit that there is some improvement in the present exhibition. We have still 'Hero and Leander,' and 'Cupid,' and 'Hercules and Lychas,'—but we have, also, 'Ophelia,' and 'Lavinia,' and 'Hagar and Ishmael,' and 'Mazeppa,' and 'Prospero and Miranda,'—'Hope,' always and everywhere a goddess—and we will add 'Psyche'—because, though a classical fable, it is one of those exquisitely spiritual and intensely beautiful creations which the poetry of every nation takes at once into its heart.) But, to return to the list of weaknesses which an intelligent foreigner, whose good opinion we might be anxious to secure, would be likely to detect in our school, as represented in the cellar of the Academy this year. The finest of these marbles are wanting (with one or two exceptions at most,—if, in truth, we ought to allow any) not so much in vitality as in spirituality. In the best conceived and executed of them, there is that consent between the forms, and action or attitude, and muscular accidents, and attributes, and sentiment, which is necessary to a perfect work, and does all but constitute it—we do not say a great work, because comparative greatness depends upon another element, the loftiness of conception, the more or less of ideality embodied—but a work perfect in its order. But this sentiment, like the forms and attributes, shows as a gift to the figure, not an inspiration from it. It seems chiselled into the marble, not breathing out of it. It appears rather to harmonize with the material expressions than to have subdued and moulded them all to itself. The sculptor is too apparent, when we should see only his thought. We look through the figure to the meaning, rather than see figure and everything clearly revealed in the light of the meaning, looking forth from the marble like a soul. Here lay the highest secret and consummation of Greek art; but then it must be admitted that it was at the culminating period of art in Greece—that the English school has produced examples in which it is attained—and that portraiture, in which that school is most practised, is not the best exercise for the grasp of this highest kind of the spiritual. The candid stranger will admit, that, in most of the qualities which are the foundations of excellence, the English sculptor is well furnished for his new destinies; and, for this highest quality of all, we will undertake to show him, by very good evidence, that there is every reason to promise that it, too, may be had, when it shall come to be asked for.

Apart from the disparaging manner in which the works are crowded together in this Black Hole of sculpture, nowhere could they individually show to greater disadvantage than here—a circumstance of discouragement to the sculptor beyond what any, perhaps, but an artist can appreciate. The cold, white aspect of so many marble forms, seen over and against each other, without relief, is an evil common, more or less, to all exhibitions of mere sculpture, but capable, of course, of being greatly diminished by space and treatment. In the gallery of the great National Institute of England this evil is exaggerated to the utmost. The material obstruction on the floor of the cellar, we may observe, is this year somewhat less than last; because, though the works of the two years are in number nearly the same, (143 last, 145 this,) the larger groups and figures bear a less proportion to the whole. Of all the works in this exhibition, about sixty per cent. are portraiture—some dozen only of which are elevated into sculptural dignity, by connexion with monumental design, or by dramatic treatment. These, of course, are statues: all the rest are busts. More and more, every year, does the love for this form of portraiture appear to be gaining ground—in proportion, as it should seem, to its ungraceful character and unsatisfactory results. Were we to draw our warnings from the past history of the art, we should deduce but unfavourable omens from the unquestionable excellence of portrait-sculpture among ourselves, taken in connexion with the paucity of great achievement in other sculptural departments. It was amid the final decline of Greek Art in the Roman empire, following the reigns of the Antonines, and under the influence and patronage of a vain and luxurious people, that some of the noblest works of marble portraiture were produced. Happily, the omen need not be strictly read. Of the powers which had grown perfect together, and built up, in their union, the perfect sculptor, the more material and technical lingered last, and sufficed for the admirable achievements of the consummate copyist, when the spirit which had produced the poetic miracles of the art was gone. The skill which could put such life into the marble portrait, could scarcely have been acquired but in connexion with qualities that reached further, and thoughts that tended higher, than to any mere copy of living nature, though it might survive them. But the same thing is obviously and equally compatible with that condition of progressive Art when the full growth of its capacities has just been attained, and they are ready, in their matured strength, for loftier efforts than have been, as yet, required of them. As, in the one case, the excellence of portrait-sculpture testified of greater things departed, so, in the other, we will hope that it prophesies of greater things to come—when there shall be a public for their reception—when the sculptor shall be called on to perpetuate national feeling, not individual conceit. Among the present encouragers of the sculptor's art, by far the greater number patronize it in the spirit of that Roman emperor who caused the beautiful statues of antiquity to be deprived of their heads, for the purpose of substituting his own. In that version of the moral, perhaps, it may not be difficult to make the modern sitters see, that the degradation of the art, as exhibited in those matchless works, was much more certain than the illustration of the imperial coxcomb's self, in the new combination.

Our own opinion of the value and dignity of bust-making is already on record; but of the busts themselves, which abound in this exhibition, it is impossible to speak too highly. Nothing seems wanting to their perfection, in so far as this form of art admits of perfection. In this department, Baily and Behnes are supreme; yet there are sculptors who are treading close upon their heels: and so many are the works of merit in this class, that in naming some which have particularly struck us, it is scarcely just (save in a few instances) to offer them as selected. Of the excellence of a bust, resemblance is, of course, an essential element; and of this, in most cases, we are, necessarily, imperfect judges. Baily has two marble busts of the highest excellence—full of life and character—one (1525) of *Thalberg*, and another (1524) of *Kiallmark*, as he is affectedly called. This gentleman, whoever he may be—one of the sons, we suppose, of the late eminent composer—has been determined, it should seem, to illustrate himself after the fashion of Caligula; for the catalogue of this Exhibition exhibits his name in each of its departments, save one! Here, we have him in stone, by Baily; up stairs, in oils, by F. P. Knight; in the Architecture room, there is the design of a cottage, erecting for the same gentleman, in Upper Harmer Street, Gravesend, by E. H. Browne; and, finding him everywhere else, we turned to the list of Academicians, and were somewhat disappointed at missing him there! It is in no spirit of offence that we have singled out this individual case, but because it offers a conspicuous example of the kind of services to which modern art is subdued, and must suggest serious reflections on its prospects under such a servitude. It is probable that something more than mere personal vanity suggests this repeated presentation of himself by a—relatively speaking—obscure individual, at all the issues by which Art appeals to the public. It might seem harsh to refer to the fable of the fly on the coach-wheel, but, in fact, this is Mr. Kiallmark's advertisement; like the obsolete gold-headed cane and the modern carriage of the physician, a costly medium for putting himself in an imposing attitude before the public: and, under such and kindred influences, the walls of the Academy become a sort of *petites affiches* of the most expensive and—thus far, at least,—select description. Last year, Mr. Stephens was very successful with *Sir William Follett;*—Mr. Behnes's marble bust of the same eminent lawyer, in the present Exhibition (1520), is, in all the qualities which can combine to give value to a bust, one of the most perfect performances in the collection. The likeness here is one of which a large public are judges, and it is most striking. The same artist has admirable bust likenesses of *Count D'Orsay* (plaster, 1519), *The Lord Bishop of Llandaff* (marble, 1514), and *George Grote, Esq.* (marble, 1521); and one, in plaster, of *Lord Lyndhurst* (1523), which is less to our taste. A bust of *Lord John Russell* (1530), by R. Westmacott, is of great excellence; and the same artist has two others, one of *B. Greenough, Esq.* (1529), and one of *Lieut.-General Sir H. Douglas* (1526), which will be noticed even in this collection. A marble bust of the late *Walter de Winton, Esq.* (1443), by J. E. Thomas; one of *T. S. Duncombe, Esq.* (1452), by A. Hone; one of *Mrs. Robertson* (1466), by P. Park—from whose merit a deduction must be made for the stone ringlets on each side of the finely-chiselled and life-like face; J. H. Foley's marble bust (1468) of *Miss Helen Faucit;* a bust by Lough (1507) of *The Duke of Northumberland;* one of the late *Rev. Charles Manning* (1508) by S. Manning; one of *The Earl of Shaftesbury* (1513), by H. Weekes; and one of the Baboo *Dwarkanauth Tagore* (1467), by the same; are all deserving of remark:—and we stop here, only because if we go a step further our notice, to be just,

Digitized by Google

must embrace many. In fact, this department is the strong point of the Sculpture Exhibition;—a fact which at once explains satisfactorily the comparative absence of achievement in forms which we value far more highly, and speaks of the skill ripe for the supply of the art in any shape in which it may be decidedly demanded. Before quitting this part of the subject, we will mention a very fine and characteristic bust, in marble, of *Juno* (1437), by P. J. Chardini,—not as properly ranking with portrait sculpture, but because to pass it by would be unjust to a very clever work,—and because, belonging exactly to neither, but partaking partially of the character of each, it carries us, by an easy gradation, to the few observations which we have to offer on the more important works that belong to the other, and in our view far higher, branch—imaginative Sculpture.

And here, as up stairs, the first remark by which we are met, is one of regret for vacancies among the old familiar names in the list of exhibitors. The Professor is wanting; but he has been so for some years, and may yet be an exhibitor again,—so that we have become partly reconciled to his absence, and are partly hopeful of his re-appearance. But, as with Wilkie up stairs, so this dim cavern is haunted by the ghost of Chantrey. We cannot, at once, reconcile ourselves to an exhibition here, in which the works of the master take no part. We feel this the more strongly, because the modern school of English sculpture is emphatically Chantrey's. Last year, it is true, the great sculptor had gone from amongst us; but he still survived to the Exhibition, by the latest of his works. This year we have no sign of him, but a small full-length Sketch, in plaster, (1492), by J. Legrew, of the deceased Academician,—nearly out of sight,—but in which, so far as we can judge, the likeness seems good, and the attitude (that of reclining in an easy chair) natural. Baily has, here, two monumental statues, and two figures belonging to the class of ideal and poetical sculpture. The monumental figures—(1387), a statue in marble of *The late Very Rev. Dr. Wood, Master of St. John's College, Cambridge*, to be erected to his memory in the College chapel, and (1412), a full-sized model of *The late Lord Bishop of Lichfield*, to be executed in marble, and erected to his memory in St. Mary's Church, Shrewsbury,—are both fine, but somewhat similar in treatment. The latter, however, though very finely modelled, is, we imagine, rather too youthful in countenance, and wanting, certainly, in that breadth and grandeur of style which befit the solemnity and repose of monumental sculpture. The statue of Dr. Wood is a remarkable example of conquest over one of the difficulties with which portrait-sculpture has to contend. The sentiment of the work is not confined, in its expression, to the gently bowed frame and muscles of the face, but is obtained, in part, from the open eye itself, to which the effect of pupil is wonderfully given, and which has none of the raylessness common to statues in general, most of whom may be said to be *stone*-blind. Of this artist's two ideal works, neither can take rank as poetical conceptions beside some former productions of his; yet both are beautiful figures. The marble statue of *Psyche* (1388), a form of great loveliness, exquisitely chiselled, is wanting in any feature of novelty which an artist of Baily's fancy might have been expected to communicate to the familiar, though beautiful, allegory; and, with much of the serious sweetness appropriate to the youthful features intent upon the solution of her spiritual secret, there is, yet, less of the inner heart outwardly revealed, and shedding a grace over the whole, than made the charm of 'Eve at the Fountain' and 'Eve listening to the Voice.' *Helen unveiling herself to Paris* (1410), is another beautiful figure, in marble; in which, however, the art by which attitude and expression are made to combine in telling their own story, and every accident and pronunciation to confirm it—the presidence, in fact, of mind over matter, yet the perfect sympathy of matter with mind,—are more ably displayed. The sentiment of conscious and triumphant beauty speaks in the raised face and head slightly thrown back; and the lifted arm, whose hand removes the veil, at once contributes to the material arrangement which expresses the action of the story, and is appropriate and aiding to the moral expression which renders its sentiment and spirit.

While speaking of Baily's works, it is the time to mention a group, in marble, by E. B. Stephens (1413), intended to represent *Maternal Love;* because it, at least, proves, in favour of the latter sculptor, that he is an admirer of the former. Baily's 'Mother and Child' has furnished the idea of this group; but only to make the poverty of the copy conspicuous, by comparison with the rich beauty of the original. Both groups are of the kind called columnar, and each represents a mother at play with a child resting on her shoulder: but, as if to avoid too close a copy of a subject which a better wisdom would have taught the artist to shun altogether, the face of Mr. Stephens's mother is turned *away from*, instead of *towards*, her infant; and, thereby, not only is the entire sentiment of such a conjunction lost—nay, falsified—but the opportunity is sacrificed, at the same time, for that fine arrangement of the mingling heads and interlacing arms of the two figures, which makes this portion of Baily's group one of the boldest pieces of composition in modern sculpture. It is true, the later artist could not have copied this, without an audacity of plagiarism, which no man having any hope for himself would venture on; but then, as we said before, he should have avoided the subject altogether. The same artist has been unfortunate, too, in his selection of another subject (1414), *Hagar and Ishmael*, in the Wilderness, inasmuch as it brings him, undesignedly, into comparison with one of the finest works in the Picture Exhibition up-stairs. The sculptor's work is an unfinished sketch, apparently; and, as such, has merit. The story is well told, and the wasted limbs and fainting frame of the boy are modelled with great ability; but they who have brought away in their memory the look of anguish in the mother's face, from Eastlake's picture above, and the intense earnestness of her offering to the parched lips of her child, find neither in the look nor attitude of the sculptor's Hagar the true maternal sentiment of the moment satisfactorily conveyed. The long stretch of desert in the picture, with its eloquent suggestion, is a resource which the sculptor could not have; and, in fact, the coincidence is an unlucky one for him: but he has here, nevertheless, the idea of a fine work, which may be wrought out and improved, for the marble.

Mr. F. Thrupp has a marble statue of *Arethusa* (1406) bent over her fountain, with that sweet and serious—almost melancholy—expression of face, which might become the attendant of Diana, when her heart had yearnings, amid its stillness, towards the distant and long-pining Alpheius. The forms, too, are fine,—remembering that Arethusa was a huntress, and is not to be too delicately modelled,—and the attitude is agreeable, without being quite natural or appropriate to the languor of the hour. But the substance of the limbs is marble, not flesh; and what expression there is, is chiselled *on* the marble,—not, as it were, evoked from out it. The *Hope* of the same artist (1416) looks more like *Despair*, or, at the best, like *Resignation*, in the old conventional attitude of the Catholic saint expressing that sentiment. Mr. W. Geefs has two works in this Exhibition, which must have a word of notice. The first (1392), a cabinet statue, representing *The Apotheosis of Malibran*, is portrait-sculpture idealized; and has merit,—though, altogether, we dislike it. The carving of the drapery is admirable; and if, beneath its ample folds, a little more attention had been given to the occasional pronunciation of the human forms, the statue must have been called a fine one. The fancy of it, however, and the seraphic attitude, are little to our taste. Mr. Geefs's second work (1393) is a group, in marble, representing *Geneviève of Brabant and her Child*, ministered to by the faun, in the forest. These personages are the Hagar and Ishmael of European romance. The composition has faults and merits. The face and form of Geneviève are too full and round for the pain and privation which she has undergone; and are, besides, a reminiscence of Canova's 'Magdalen.' But there is some fine modelling in the group; and, altogether, the composition is a poetical one, and belongs to the class of subjects which Mr. Geefs will do well to select for his chisel.

The work of most pretension in this department of the Sculpture Exhibition, both as regards its size and the number of figures which compose it, is a group, in marble, by Mr. Lough, of *A Bacchanalian Revel* (1399). The composition is pyramidal in form; and represents two Bacchantes, male and female, bearing aloft a third—apparently the god Bacchus in person—in that state of excited action, under the inspiration peculiar to himself, which requires that his supporters should have lusty arms and steady footing. There is, unquestionably, much life and spirit in this group,—more, it may be, than suits the calm and epic character of sculpture, according to the old Greek canons. The composition is a *picture*, ready for the canvas; to whose resources its rich complication and lively action commend it more readily than to the colourless and positive material in which Sculpture works. Still, the story is well and consistently told by each of the individual figures, and by the combined group. Each one of its members has a separate and independent action, but which is well subordinated and tributary to the action and purpose of the whole. The limbs are well modelled, and the bearers, amid their "tipsy revelry," have the firm tread, yet free and elastic motion, which befit their office. Mr. Lough has certainly produced a clever, as well as an ambitious, work; but it may be questioned whether he has not planted himself at the extreme limit of that ground within which Sculpture works her miracles, and the sculptor is safe, with the great masters for his companions and guides. The same gentleman's *Ophelia* (1394) is a marble monstrosity,—no more the maiden whom Hamlet loved and half the world has wept for, than "the owl was a baker's daughter."

> How should I your true love know
> From another one?
> *By his cockle hat and staff,*
> *And his sandal shoon,*

says Ophelia herself—but only when her wits were gone; and Shakspeare's sweet Ophelia, in her madness, is not to be rendered into art by any profession of the mere "straws and flowers" in which, according to the stage direction, she is "fantastically dressed." Mr. Lough is here on right English ground; but his imagination has been led astray by the tipsy bacchanals with whom it has been consorting. The same artist has still another work in this collection, of considerable pretension, and of considerable merit, too,—but in which he has again sought to compel his art to effects, to which it is avowedly unequal. This is a *Bas-Relief, from Homer* (1425), and undertakes to embrace, in one view, the several incidents and episodes of the battle recorded in the eighth book. These, of course, can only be represented, in their distance and diversity, by the attainment of several planes,—an achievement which has been considered beyond the limits of the sculptor's skill, dealing, as he does, wholly with rounded or raised forms, and working not, like the painter, with any of the aids to illusion, such as colour and chiaroscuro. It cannot be denied, however, that the efforts which Mr. Lough has made at overcoming this difficulty,—while they offer fresh proof that it is *not to be* overcome,—furnish proof of very skilful art. The number of episodes, and multiplicity of details, and variety of figures, which cover his model, for want of artistic means to give them due distance and relation and subordination, render the story of the sculpture difficult to be deciphered in the sculptor's own language; and, beyond the fact that a battle is going on, and has hovering witnesses in the clouds, the spectator must know the text of Homer, to read this translation of him. Let us give the reader some notion of what the sculptor has here attempted. In the lower field,—or first plane, if we may so call these divisions,—battle is raging between the Greeks and Trojans; and on a background, to the right, somewhat raised,—intended perhaps to represent the walls of Troy,—are seen a party of bowmen. In mid air are two separate groups,—that on the right, looking towards the bas-relief, representing Venus wounded,—and the one on the left exhibiting Death and Sleep carrying off the dead body of Sarpedon. In the centre, between these two episodes, is Night, with the stars in her robe, and the crescent on her brow, rising over the field. Higher up again, on either hand, are seen Juno and Minerva, each preparing to aid the Grecians; and yet higher in the centre, Isis is descending, on her bow, with a message from the father of the gods, to stay them; while, at the top of the relief, are visible some signs of the source from whence the order comes, appearing amid the parted clouds that form the footstool of the throne

Digitized by Google

of Jupiter. All this on the cold ground of sculpture, in its unplastic material, and with only such means of perspective as the chisel can give! There is very fine modelling in this relief:—the struggling combatants, in the foreground, or lower plane, (for we *must* use these terms,) in the shock and fury of whose contest the very horses are tearing at each other, are cut with admirable spirit, in clear and vigorous relief;—the floating figures in the episodes of Venus and Sarpedon, offer a fine and visionary contrast, in their graceful outline and soft sleepy motion, to the hard, fierce realities going on below;—and the heaven-born steeds that draw the chariots of the goddesses, on high, are full of the fiery action of their divine breed. Mr. Lough, it will be seen, is an important contributor to this Exhibition, and a bold and adventurous sculptor;—prone to push his art to consequences in which it will not bear him out,—but who, if he be careful to subdue his imagination to its means, is likely to do yet better things.

We must not conclude our notice of this Exhibition, without a word in appreciation of an equestrian figure of *Napoleon* (1469), designed for a public monument, by Count D'Orsay. The Count is an exhibitor upstairs, as well as here; and the small model in question is one of remarkable merit. To the stale device of Napoleon, on horseback, a character of marked originality has been given,—and that in the absence of all theatrical effort at effect. Without any conspicuous action of feet (all four are touching the ground), or head, or tail, the horse is visibly in easy motion; and, in his plain familiar garb, of European notoriety, the rider sits him with the simplicity of a soldier and the dignity of an emperor. This is high art. There is another work, by the same gentleman, in the Exhibition-room—a small full-length model of *Lieut.-General Count D'Orsay* (1491), which has likewise great merit of the same kind—excellent effect, produced by an art which conceals itself. Nor must we pass, without a word of commendation, a small plaster model (1485), by J. H. Foley, of *Prospero relating his Adventures to Miranda.*

Lough's statue (1403) of *The eldest Son of R. Hedley, Esq.*, in the character of a young Falconer, is a marble of extraordinary beauty—a first-rate work, if the likeness equal the treatment and execution:—and Campbell's marble statue of *The Earl of Dalkeith* (1395), in the character of a young Huntsman, is not unworthy of a place by its side. W. C. Marshall's *Paul and Virginia* (1391) is a fine and characteristic group. The same artist's *David with the Head of Goliath* (1398) may stand as well—better—for Jack the Giant-killer. By the huge head at his feet, the long sword on which he leans, and the particularly complacent smirk upon his countenance, the spectator has no difficulty in conjecturing that the hero has killed a giant; and, from his perfect ease and freedom from excitement, it may further be presumed that such is his frequent occupation, and he thinks little of it. The figure itself has no sentiment; and nothing in eye or brow marks the Heaven-appointed—the shepherd monarch, or future harpist of Israel.—Mr. Papworth's *Cupid, with the Attributes of Mars* (1408), in its unfinished state, scarcely promises the sentiment of playful mischief and mock-heroic, which should be its character:—and Mr. Carew's *Sleeping Falconer*, in marble, (1405), is not of kin to the falconer with whom the public made acquaintance, on his introduction, long ago.—Mr. Park has this year another of his giants (1420)—quieter than usual, however—being *Hector Reflective*, as the Catalogue informs us—and happily, for there are no other possible means of identification; his sole clothing and accoutrements being a helmet and a fig-leaf. To be reduced to the condition of nakedness in which this hero appears, is enough to make a lighter man "reflect." The idea conveyed—and well conveyed—by the thoughtful cast of his countenance, in assent with the denuded state of his limbs, is, that he is mentally casting up his accounts with his tailor, with a view to a new pair of inexpressibles,—and uneasy at the result;—a circumstance scarcely to be wondered at, as *his* bill can be no trifle who has to cover those colossal proportions. Nevertheless, it is our hope that he will obtain a pair.

In this friendly mood, we will take leave of the sculptures for the present year.

OUR WEEKLY GOSSIP.

The interest attracted to the monuments of Central America, by the popular publications of Messrs. Stephens and Norman, has led to the starting of a project by some distinguished Frenchmen of letters and science, for the furtherance of which M. le Comte de St. Priest, the editor of 'Antiquités Mexicaines,' is at present in London. This publication, by the way, a 'Narrative of the Expeditions of 1805, 6, and 7,' undertaken by the command of the King of Spain, and copiously illustrated after the drawings of Señor Castaneda, the originals of which are in the museum of Mexico, is well worthy the attention of all occupying themselves with the subject—the collection of details being more curious and copious than any yet laid before the public. The project is, that a Commission of Artists and Antiquaries should be appointed by the leading governments of Europe, for the purpose of fully and scientifically exploring those rich stores of antiquity; and that a fund should be subscribed to defray the expenses of the expedition. The Geographical Society of Paris, proprietors of the work just mentioned, are willing to devote the profits arising from its sale to the cause. Twelve thousand pounds is the sum estimated as necessary for the expedition, the promoters of which are anxious to obtain support and countenance from some of our English *millionaires*, Government being, of course, out of the question. We cannot discuss the probability of their wishes being fulfilled:—enough to state, by way of recommendation, that any light which could be thrown upon the history of those strange monuments (and it is not surely past hope, that some second Champollion might discover the key to their hieroglyphic alphabet,) must be valuable to the world of European art and science.

A new screen has just been completed before the Marquis of Westminster's house, in Grosvenor Street, which makes quite a feature in that characterless locality. It consists of two gateways each supported by duplicated columns, with an open colonnade between them. The columns are Roman Doric, and between each is a handsome candelabra supporting a single light. Both these, and the gates, are fine specimens of casting in iron, and have been painted to look like bronze. Why were they not of bronze? Surely a hundred pounds more or less could be no consideration. Bronze, too, would greatly have added to their beauty—for which, even as it is, let the passers-by be grateful. It would have admitted of some additional hand-chasing, and taken away that heavy look which all modern mechanical castings have, by comparison with the fine metal work of the Middle Ages, the work of the hand. Though the façade provokes criticism, it is an ornament to the street, and amidst the dearth of architectural beauty in our streets, is to be welcomed.

The reports of the Court doings on the recent occasion of the Queen's birth-day, mention as among the gifts presented to Her Majesty, one from Prince Albert, consisting of twelve gilt bronze figures, copies (in miniature) of the twelve colossal statues in the Throne-room of the Palace at Munich, made for the Prince by the Sculptor Schwanthaler.

A correspondent observes, that—"The competition for the cartoons seems to be in a fair way of being decided before they are sent in. Go where you will among those interested in Art, and you are asked, Have you seen A.'s Angel, B.'s Devil, C.'s Eve, &c.? Not seen them? all the world has seen them. Conversazioni have been formed on purpose to discuss their merits! It seems something like a farce, that the Commissioners should make rules to insure secrecy and prevent jobbing, and the artists themselves should be taking all possible pains to render them nugatory."

Among the forthcoming foreign works may be mentioned, Le Portefeuille of M. le Comte de Forbin, so many years director of the *Musée*, which will include engravings of his most celebrated pictures, and the publication of his sketch books, the contents of which are known to be singularly rich and various. Letter-press descriptions of the subjects, &c. will be contributed by M. le Comte de Marcellus.

At the Anniversary Meeting of the Cambridge Antiquarian Society, held last week, an interesting paper was read, by Professor Willis, on an appropriate nomenclature for the mouldings of Gothic Architecture, contained in a note-book of William of Worcester, preserved in the Library of Corpus Christi; illustrated by a reference to the Door of the Porch of St. Stephen's, and the great Western entrance of St. Mary Redcliffe, at Bristol.

At an Extraordinary General Meeting of the Society of Arts, which took place on Thursday afternoon, for the purpose of electing a President, in the room of His late Royal Highness the Duke of Sussex, His Grace the Duke of Sutherland in the chair, His Royal Highness Prince Albert was unanimously elected.

From the Report read at the Annual Meeting of the subscribers to the *London Library*, it appears that the number of members is increasing; that since March, 1842, an addition of 4,000 volumes had been made to the Library; that the receipts of the past year amounted to 1,768*l.* 10*s.*, and the expenditure to 1,538*l.* 7*s.*, leaving a balance in hand of about 230*l.*

The *Dublin Evening Post* has a paragraph, founded on a letter from India, and whose statement we should lay before our readers with equal delight, if, in the face of the circumstantial details and seeming official character of the intelligence formerly conveyed, we could venture to attach the same credence to it which the editor appears to do. This letter gives a positive contradiction to the report which announced the murder of Colonel Stoddart and Captain Conolly, in Bokhara. The account, says the letter in question, comes *vid* Meshid, and is grounded on letters received by certain Jewish houses in that place; and the writer, it is observed, has no doubt of their veracity.

Among the strange things which this season of pleasure has brought together in our refined capital, a conspicuous place is due to the troop of Arabs engaged at the Victoria Theatre. Though not great men themselves, they are, we are told, natives of the Great Mount Atlas; and truly one of them is himself an Atlas, and seems ready to bear, if not the globe, at least its inhabitants. The performance of these Arabs (who might perhaps be more properly called Berbers) is the perfection of rude agility, but is wholly deficient in the "*decoræ more palæstræ*": in grace, indeed, and variety of posture, they are outdone by our street practitioners in the Herculean and Mercurial lines. On the other hand their nimbleness is such as can only be acquired by men living on the flesh of antelopes and dromedaries. The very sight of their jumping would cure a plethora.

The French journals announce the arrival of Rossini in Paris; an event which, if managers are but half the magicians they ought to be, should surely be turned to account. The Chevalier Spontini is there also: and if M. Léon Pillet does not take care, he may possibly find himself the possessor of another 'Agnes von Hohenstauffen,' instead of another 'Guillaume Tell,' since the elder composer is as anxious as the younger is unwilling to appear before the public. We are glad—our friends the French should be thankful—to observe, that in spite of Lablache's farewell address, he is re-engaged at the Italian Opera in Paris. No musical theatre is in a condition to spare him.—After all that has been said, M. Duprez is about to appear at Her Majesty's Theatre. Our public may expect *the Otello*, and *the Arnold* in 'Guillaume Tell.' The managers of the Birmingham Musical Festival, we believe, are desirous to enter into treaty with this great singer, who has, for the last eighteen months, been anxiously qualifying himself to sing in English. It is notorious, too, that the most effective bass of the day in Handel's music—so long deemed our countrymen's exclusive property—is Herr Staudigl. How long will our young men allow themselves to be thus distanced? We look east and west for vocalists (not voices) *in the bud*; yet, alas, vainly! Within the last few weeks, however, we have been hearing excellent promises of Mr. John Braham, who is warranted as possessing a magnificent baritone voice. If this be but thoroughly trained, now is the time for him to make a sensation.

Time and engineering have made sad havoc with the fields of imagination, and day by day, some one of the ancient play-grounds of Romance is disenchanted and broken up for exploitation in the practical and utilitarian spirit of the age. The lovers of the wild and marvellous had long the Oriental desert to themselves, protected in its mysteries, as it was, by distance, by the horrors which beset its paths, and by the often exaggerated narratives of adventurous tra

Digitized by Google

vellers ; but one by one, this stronghold of the imagination has been stripped of its defences, nor have these Eastern scenes ever recovered their entire sanctity since the day when the "pink spencer" was reported at the foot of the pyramid. First, *distance* was taken away, and steam brought the desert to our doors; then came *facility*, under the banner of the Pasha, and routed half the monsters with which fancy had peopled the desert, and half the genii, too. The Mirage is a pageant now, not a snare; and the "ship of the desert," like many another picturesque craft of the old time, has fallen from its glory in the presence of a new and inexhaustible power, and become but a camel in the prospect of flying caravans and tram-roads. But the time has come at last, when the spirit of modern arrangement and useful common-place has done its worst, and the desert is for ever disenchanted. Prospectuses are in town from Alexandria of an insurance company, which, under the business-like name of 'The Egyptinn Terrestrial and Maritime Assurance Company,' proposes, amongst its other objects, to insure against "the dangers incurred in crossing the desert." Henceforth, the stroke of the Simoom or the theft of the Arab may be accounted for indifferently in Alexandria or Threadneedle Street: and thus, in the slow reading of centuries, the riddle of commercial security, on this, the rudest of the highways of commerce, against which the Sphynx herself must have dashed her head, is solved.

ROYAL ACADEMY OF ARTS, TRAFALGAR SQUARE.
The EXHIBITION of the ROYAL ACADEMY is NOW OPEN. Admission (from 8 o'Clock till 7), 1*s*. Catalogue, 1*s*.
HENRY HOWARD, R.A., Sec.

THUR. Royal Society of Literature, 4.
FRI. Royal Institution, half-past 8.
— Astronomical Society, 8.
— Philological Society, 8.

MUSIC AND THE DRAMA

THEATRE ROYAL DRURY LANE.
LAST NIGHT but One. For the BENEFIT of HERR STAUDIGL. This EVENING, SATURDAY, June 3, 1843. The Performance, on this occasion, to consist of the Fourth Act of Shakspeare's Second Part of KING HENRY THE FOURTH. *King Henry*, Mr. Macready. The First Act of DER FREISCHUTZ. *Caspar*, Herr Staudigl (his last appearance this season). After which a CONCERT, consisting of selections of Classical Music; in which Mrs. Alfred Shaw, Miss Birch, Miss Rainforth, Messrs. H. Phillips, Allen, Stretton, and Herr Staudigl, &c. &c. will sing. To conclude with FORTUNIO.
Tickets and places to be taken at the Box Office, and of Herr Staudigl, 8, Tavistock-row, Covent-Garden.

MR. T. M. MUDIE'S THIRD CONCERT WILL TAKE PLACE at the HANOVER SQUARE ROOMS, on THURSDAY MORNING, June 8, to commence at Half-past Two. Vocalists—Miss Birch, Miss E. Birch, Miss Marshall, Miss Messant, Miss Bassano, Mr. Cox, and Mr. Stretton. Tickets, 10*s*. 6*d*. each; to the Subscribers to his Concerts, 7*s*. each. To be had of Mr. T. M. Mudie, 87, Great Portland-street, and at the principal Music Shops. Mr. Mudie's songs are published by R. Mills, 140, New Bond-street.

ANCIENT CONCERTS.—The Ancient Concerts are now over; the eighth and last having been honoured by the presence of Her Majesty. It is with surprise we learn that the list of annual subscribers has this year diminished: the influx of casual visitors, however, appears to have counterbalanced this falling-off. Be the audience what it may, the Ancient Concerts have greatly increased in interest, thanks to the research of Sir H. R. Bishop, who is now, we presume, to be considered as permanent conductor. Reviewing only the last two *programmes*, we find specimens of the music of Palestrina, Bai, Luther, Gluck, Graun, Hasse, Leo, Handel, Haydn, Mozart, Beethoven, Mehul, Cherubini, Paiesiello, Jomelli, Piccini, Righini, and these not the for-ever repeated *morceaux*, by which alone the many are aware of the existence of some among the elder composers, but novelties worth the trouble of disinterring. The increased attention paid to the operas of Gluck is beginning to excite that "movement" in our musical circles, which is certain to lead to their entire performance: if carefully produced, they would mark an epoch in the history of our musical stage as forcibly as they have done in the operatic history of France and Germany. The selections from Cherubini's and Hummel's masses, too, have been most welcome; we know of no orchestral service-music which comes so near the dignity of Mozart's 'Requiem,' or Beethoven's mass in c major. On the whole, the execution of these difficult and complicated movements has been commendably precise. To expect such a *pianissimo* from the orchestra, or such a *crescendo* from the voices, as is to be found in Germany, would be at present Utopian. We have already entered our protest against the accompaniments often added to the ancient music. We have pointed, too, to Sir H. Bishop's peculiarities as a conductor, by which effect is often so largely impaired: no more, then, need be said on these subjects. Among the leading "incidents" of the past Ancient Concert season has been the appearance of Herr Staudigl. It was a fine thing on Wednesday evening to hear him, measured against Lablache. No voice, we apprehend, will ever *tell*, as the voice of the latter in concerted music, whether he puts in a short *contra basso* note to mark the time, or leads one of those magnificent chains of sound in which the writers of Palestrina's school delighted: on the other hand, we have never heard a certain class of songs given so well as by the arch-bass of Vienna; who is always, too, to be heard with the certainty that there is neither falsity nor fatigue in the organ, so powerful, so sensitive, and so voluminous. Signor Mario, this year, has also distinguished himself. We can but add, that the established *corps* of solo singers have proved themselves, generally, to be fully equal to the various and novel tasks assigned to them. These concerts, in short, tend to keep up the standard of taste and performance in England, and we leave them with pleasant feelings, as regards the past, and good hope for the future.

CONCERTS OF THE WEEK.—The assertion that Sig. Sivori is a reproduction of Paganini, can but live among those who jump at conclusions, and delight in the marvellous. As far as the new violinist's performances, on Monday night, warrant us in pronouncing an opinion, though he did play a "Clochette" and a "Carnival" in close imitation of his patron, he also displayed an individuality worthy of honour,—inasmuch as, though belonging to the spasmodic and fanciful school originated by Paganini, he allowed us now and then to hear several bars, in which not the most transient palsy-shake of tone was discernible; with passages of as regulated a temperance as if Molique had played them. Where, in short, he does not *ex proposito* ape his original, it appears to us that his eccentricities have been much exaggerated by report. His mechanical acquirements are prodigious; and though he is decidedly a player on too small a scale to make the stage of Her Majesty's Theatre the proportionate arena for his exhibitions, he appears to us no less incontestibly the best violinist of the romantic school that has recently come among us.

While this artist was wasting his *pizzicati*, harmonics, and feats of the bow, if not upon "the desert air," at least upon a very meagre audience, Messrs. *E. Roeckel* and *Hausmann* were manfully standing up for classicism in Hanover Square. The former we have more than once noticed as Hummel's nephew, and the pianist, among all whom we have recently heard, best qualified to keep alive the traditions of that admirable player. He has improved, too, since he was last in London; has gained fire and executive courage, without losing the high finish which is required from any who aspire to the post we have indicated. M. Hausmann is one of our best resident players of classical music; he has not Lindley's tone, it is true, but then he is guiltless of Lindley's style—phrases his music with emphasis and discretion, and respects his author rather than himself, as every cultivated artist will do. He, too, has advanced in certainty and firmness since he first presented himself to a London audience. We were glad, from the aspect of the Concert room, to believe that talents as solid and praiseworthy as were here united are increasingly recognized among us.

Here our chronicle of the miscellaneous events of the musical week, narrowed by the distractions of Epsom, would of strict right close, but we must have a word or two, by way of introduction of two of the latest-arrived artists—M. Filtsch and M. Hallé; the first a boy of no ordinary merit, who plays Chopin's music like one who, though so young, felt the delicate beauties of that engaging composer. M. Hallé is older in style, power, and experience: he, too, is worth inquiring after by all amateurs of Chopin, since the few *morceaux* we have heard him play were executed by him with a grace, correctness, and a fineness of feeling, which recalled to us very agreeably the performance of the master himself. There may not be nerve enough in the romances, studies, *fantasias*, *notturnos*, however rendered, to sustain them in competition against the healthier and more massive music of the great pianoforte composers, but they have an exquisite charm wholly their own; and the number is increasing of those who will be grateful to all administering it so skilfully, as the prodigy and the artist here mentioned.

MISCELLANEA

Antiquities.—The dredging machine, employed in clearing the bed of the Saone at Chalons, has brought up many interesting remnants of antiquity.—Among them are some coins of Charles, Cardinal de Bourbon, of great rarity—a small brass plate, on which appears a Christ on the cross, with symbolical animals at the four corners, and some Gothic characters which have not yet been deciphered, apparently a work of the earliest part of the middle age—some amphoræ and cinerary urns in good preservation. But the most valuable prize is a beautiful vitrified cup. It is shallow and broad like a dish, but the outside is enriched with wavy and spiral ornaments in relief; affording a new proof that the art of moulding in glass was well known in ancient days, and indicating the residence of the Romans at Cabillonum, after the Eduens and previously to the Burgundians.

Derby "Sweeps."—At the very lowest computation 50,000*l*. awaited the judge's fiat yesterday afternoon. This is one of the consequences of the lotteries—for such they are, to all intents and purposes—but not the only one; many of the persons whose money has thus flowed into a new channel, having drawn favourites, have become layers of the odds, in order to hedge their chances, and so realize a little either way.—*Morning Post.* So that 50,000*l*. in "Sweeps," distributed by lottery in one day, only whets the appetite, and sends the "Sweepers" to make up "a book," as it is called in the betting ring. We have a law expressly made to put down lotteries, and yet we are told these things are legal.

TO CORRESPONDENTS.—A Subscriber, received.—We are obliged to the Editor of the *Bristol Archæological Magazine* for his offer of the loan of the wood-cuts; but we have declined at least a bushel of wood-cuts during the last twelvemonth.

Richard Bentley, New Burlington-street,

(*Publisher in Ordinary to Her Majesty.*)

MR. MURRAY'S HAND-BOOK for FRANCE and the PYRENEES will be ready on the 15th Instant.

John Murray, Albemarle-street.

EUROPEAN LIFE INSURANCE and ANNUITY OFFICE, No. 10, Chatham-place, Blackfriars, London. Established January, 1819.

President—Sir James Rivett Carnac, Bart. Rook Cliff, Lymington.
Vice-President—Geo. Forbes, Esq. 9, Fitzroy-square.

With Twelve Directors.

FACILITIES are offered by this long-established Society to suit the views and means of every class of insurers. Premiums are received yearly, half-yearly, or quarterly, or upon an increasing or decreasing scale. The insured for life participate septennially in the profits realized. A liberal commission is allowed to Solicitors and Agents.

DAVID FOGGO, Secretary.

N.B. Agents are wanted in towns where none have yet been appointed.

ECONOMIC LIFE ASSURANCE SOCIETY, No. 34, Bridge-street, Blackfriars, London; established 1823. Empowered by Act of Parliament, 3 William IV.

Lower Rates of Premium than those of any other office that entitle the assured to participate in the profits.

The bonus declared in 1834 amounted upon an average to 16*l.* per cent. on the premiums then paid; and in 1830 a second bonus was awarded, amounting on the average to 31*l.* per cent. on the premiums paid during the preceding five years.

Prospectuses and other particulars may be obtained at the Office, between the hours of ten and four, or will be forwarded to persons resident in the country, on application.

CAMPBELL JAMES DOWNER, Sec.

THE WESTMINSTER and GENERAL LIFE ASSURANCE ASSOCIATION,

At the WESTMINSTER FIRE OFFICE, No. 27, King-street, Covent-garden.

A DIVIDEND OF THE PROFITS OF THIS SOCIETY WAS DECLARED ON THE 1ST JANUARY, 1842, by which an addition, amounting on the average to 45 PER CENT. on the Premiums received was made to all Policies entitled to share therein.

FOUR-FIFTHS, or 80 PER CENT. of the total profits, are divided among the Assured at intervals of five years; and all Policies on which two payments have been made, participate in the division.

The Profits respectively allotted may be received by the Assured in present money, by a reduction of the Annual Premium, or by adding to the Policy an equivalent reversionary sum.

All Persons Assured on their own lives for 1,000*l.* or upwards, have the right (after two Annual payments) to attend and vote at the General Meetings of the Society.

W. M. BROWNE, Actuary.

PELICAN LIFE ASSURANCE OFFICES, 70, Lombard-street, and 57, Charing-cross.—Established 1797.

Directors.

Matthias Attwood, Esq. M.P.	Sir W. Heygate, Bart. and Ald.
W. Stanley Clarke, Esq. F.R.S.	Kirkman D. Hodgson, Esq.
John Coope, Esq.	R. Henshaw Lawrence, Esq.
William Cotton, Esq. F.R.S.	J. Petty Muspratt, Esq.
Sir William Curtis, Bart.	George Shum Storey, Esq.
William Davis, Esq.	C. Hampden Turner, Esq.
J. A. Gordon, Esq. M.D. F.R.S.	Matthew Whiting, Esq.

The Plan of this Office will be found to comprise all the Solid Advantages of Life Assurance.

Persons have the option of insuring upon the Return or Non-Return Systems; and the Tables, which include Ascending and Descending Scales of Premium, have been framed to suit the convenience of all parties.

The Rates have recently been reduced agreeably to the most approved calculations, and these being verified by the experience of the Office during Forty Years, are as low as consistent with safety; those adapted to the RETURN SYSTEM entitle its assured to an equitable participation in the surplus premium, according to the plan detailed in the Company's prospectus.

The Assured under both Systems will possess the guarantee of a large PAID-UP Capital, and the further security of a responsible body of Proprietors, without being exposed to the liabilities of partnership.

Policies are purchased on liberal terms when the object of an assurance is effected;—or, loans will be granted thereon to the extent of five-sixths of such purchase-money.

Prospectuses and every information obtained on application at the Offices as above, or to the Agents of the Company appointed in every City and principal Town in the Kingdom.

R. TUCKER, Secretary.

EDINBURGH LIFE ASSURANCE COMPANY. Established 1823.—Constituted by Act of Parliament. Capital Half a Million sterling.

Edinburgh—24, GEORGE-STREET,

and 11, KING WILLIAM-STREET, CITY, LONDON.

The mode in which this Company is constituted presents to the assured the benefits of Mutual Assurance, combined with the influence and security of a large proprietary all assured with the Company;

Perfect security to the assured, and freedom from all liability;

A Right of Participating in the whole Profits of the Company to the extent of Four-fifths;

A principle of division, making the distribution among those who participate in proportion to the amount severally contributed by them;

The highest benefits to all *First Class Lives*, by no unjust liberality being shown to those who die early;

Very Moderate Rates, without participation, which, on young lives, are equivalent to a *present bonus* of very considerable amount;

No Entry-Money or other charge beyond Policy Stamp.

Assurances effected on equal, or ascending or descending scales, or in any other way that the interests of parties may require.

G. L. FINLAY, Manager.
WM. DICKSON, Secretary.

ACHILLES BRITISH and FOREIGN LIFE ASSURANCE ASSOCIATION, No. 24, Lombard-street.

Loans granted to Policy Holders.

Every description of Life Assurance may be effected, upon a moderate scale of premium, either with or without participation in profits.

Endowments for Children or Widows, and immediate or deferred Annuities, granted upon fair and equitable terms.

Loans may be obtained on personal or other security by individuals Assuring their lives with this Association.

Risks taken on the Lives of Master Mariners and Passengers by sea, either for the whole term of life, or for the voyage.

EDWARD GILBERTSON, Secretary.

Prospectuses, and every other information, may be obtained by applying at the Offices, No. 24, Lombard-street, City.

BRITISH EMPIRE LIFE ASSURANCE, ANNUITY, and ENDOWMENT COMPANY, 5, Whitehall, and 36, Old Jewry, London.

Directors—Sir George Staunton, Bart. M.P. *President.*
Sir Herbert Compton, *Vice-President.*

Charles Forbes, Esq.	Arthur Helps, Esq.
James Mackillop, Esq.	Thomas E. Headlam, Esq.
J. Phillimore, Esq. D.C.L.	Robert J. Grigg, Esq.
W. Wilkinson, Esq.	G. Bicknell, Esq. (Resident).

Bankers—Messrs. Coutts & Co.

Solicitors—Messrs. Ogle & Younghusband.

The peculiar advantages offered by this Company are:—

1st. That where the assurance is for life, one-half of the premiums may remain unpaid for seven years.

2nd. A Table peculiarly fitted for loans, the premiums commencing very low, and varying every three years.

Age.	1st period of 3 years.	2d period of 3 years.	3d period of 3 years.	4th period of 3 years.	Remainder of Life.
27	1 3 7	1 8 7	1 15 9	2 4 6	2 14 10

3rd. For Survivorship Annuities, on a principle peculiar to this Office, avoiding the loss of the premium paid, if the party does not survive to take the annuity.

Every information may be obtained at the Offices, at Whitehall, and 36, Old Jewry.

The usual Commission to Solicitors and Agents.

GEO. BICKNELL, Resident Director.

IMPORTANT PATENT IMPROVEMENTS in CHRONOMETERS, WATCHES, and CLOCKS.—E. J. DENT, sole patentee, has OPENED his West-end PREMISES, 33, Cockspur-street, Charing-cross, in addition to 82, Strand, with an entirely new stock of Watches and Clocks, Lady's Gold Watches, 8 guineas each; Gentlemen's ditto, 10 guineas; and Silver Levers at 6 guineas each.—A new edition of Dent's Lectures, price 1s., but to customers gratis.

MOULD CANDLES to BURN WITHOUT SNUFFING.—KEMPTON'S PATENT.—These candles do not require snuffing; they burn longer and are cheaper than any other candle; the flame is steady and brilliant. No metallic or deleterious matter is used in the manufacture. Price 8d. per lb. Sold by G. F. Parish, agent for exportation, 21½, Bread-street, City, and by Slodden & Stocking, 43, High-street, Marylebone; W. Gethem, Broadley-terrace, Blandford-square; W. Evans, Italian warehouse, Greenwich; John Hawkins, grocer, High-street, Whitechapel; George Hawley, grocer, Pitfield-street, Hoxton; S. Game, Fish-street-hill; J. Pain, grocer, Bethnal-green-road; G. H. Hudson, 229, Blackfriars-road; C. H. Nicholas, 19, Bolingbroke-row, Walworth; and at the manufactory, Old Bargehouse, Christchurch, Surrey.

DOUBLE PATENT PERRYIAN FILTER INKSTAND.—Great improvement has recently been made in the manufacture of this article. The Patentees can with confidence recommend it as complete for general use, combined with elegance and simplicity in its action. J. Perry & Co. take this opportunity to announce that they will repair any of their Inkstands, without charge; or, if preferred, will apply the present improved principle to any of their preceding sorts at 2s. 6d. each. N.B. All Inkstands returned for the above purpose must be sent carriage-free.—PERRYIAN LIMPID INK. This Ink has a flowing property peculiar to itself, and does not corrode Metallic Pens as other Inks. In Bottles, 6d., 1s., and 2s. each. Also, in POWDER, 6d. and 1s. per Packet. Sold by all Stationers, &c. throughout the Empire.

Manufactory, 37, Red Lion-square, London.

WARM WEATHER.—Ease and Comfort for the Feet.—HALL & CO. Wellington-street, Strand, London, sole Patentees of the PANNUS CORIUM, or Leather Cloth Boots and Shoes. These articles have borne the test and received the approbation of all who have worn them. Such as are troubled with corns, bunions, gout, or tenderness of feet from any other cause, will find them the softest and most comfortable ever invented; they never draw the feet or get hard, and for warm climates they are found easier and more durable than any other kind of shoes; they resemble the finest leather, and are cleaned with common blacking. Their Elastic Spring Boots are worthy attention; they supersede lacing and buttoning, and effectually support the ankle. The material sold by the yard in any quantity. Any respectable boot and shoe maker may be appointed agent.—The much-improved PATENT INDIAN-RUBBER GOLOSHES are light, durable, and perfectly waterproof.—HALL & CO.'S PORTABLE WATERPROOF DRESSES claim the attention of all who are exposed to the wet. Ladies' Cardinal Cloaks, with hoods, from 18s. Gentlemen's Dresses, comprising Cape, Overalls, and Hood, 21s. The whole can be carried with convenience in the pocket.

DELICACY OF COMPLEXION.—The use of GOWLAND'S LOTION is speedily followed by the disappearance of every species of cutaneous defect and discolouration, and the establishment of a pure surface of the skin, accompanied by the brilliant crenelation which constitutes the tint of beauty; whilst as a refresher it preserves the most susceptible complexion from the effects of heat, freckle, and sallowness, and sustains in all cases to a protracted period the softness of texture and vivacity peculiar to earlier years.—'Robt. Shaw, London,' is in white letters on the Government stamp, without which it is not genuine.—Prices, 2s. 9d., 5s. 6d.; quarts, 8s. 6d. Sold by all Perfumers and Medicine Venders.

ROWLAND'S MACASSAR OIL, under the Special Patronage of Her Most Gracious Majesty, the Royal Family, and the several Courts of Europe.—This Oil has acquired celebrity for its truly extraordinary efficacy and fecundity in nourishing, preserving, and beautifying the Human Hair. It imparts an additional vigour to the roots, together with a glossy brightness, and a beautiful tendency to curl. For inducing an accelerated growth of Whiskers or Moustaches, the MACASSAR is unfailing in its stimulative operation. In reference even to the Hair of early childhood, the use of the Oil is found attended with the happiest effects.—Mild, invigorating, stimulative, and purifying, it materially assists in dispelling scurf or dandriff, and renders supererogatory the use of the fine-comb. Price 3s. 6d., 7s., Family (equal to four small) 10s. 6d., and double that size 21s. per Bottle.

CAUTION.—Ask for 'ROWLAND'S MACASSAR OIL,' and see that those words are on the Wrapper, as much pernicious trash is now offered to the Public as 'MACASSAR OIL' by Perfumers of apparent respectability.

Sold by the Proprietors, A. ROWLAND & SON, 20, Hatton-garden, and by Chemists and Perfumers.

Richard and John E. Taylor, Red Lion-court, Fleet-street; or to Mr. Pickering, Bookseller, 177, Piccadilly, Agent to the Society, by whom Subscriptions will be received. Communications may be addressed to Mr. Thoms, the Secretary, to the care of Mr. Pickering.

Now ready, in 2 vols. 8vo. with Portraits, 28s. bound,

DIARY OF THE TIMES OF CHARLES THE SECOND.

By the Hon. HENRY SIDNEY,
Afterwards EARL OF ROMNEY.

Including numerous Letters of the Celebrated COUNTESS of SUNDERLAND, and other Distinguished Personages.

Edited, with Notes, by R. W. BLENCOWE, Esq.

The nature of this "Diary and Correspondence" may be in some degree anticipated from the fact that the Diarist was, not only a brother of the celebrated Algernon Sidney, but that he successively filled the high Court and Political Offices of Groom of the Bedchamber, Master of the Robes, Envoy to the States of Holland, one of the Chief Secretaries of State, Lord Lieutenant, General and Governor of Ireland, Master-General of the Ordnance, Lieutenant-General of the Forces, and finally, Groom of the Stole and First Gentleman of the Bedchamber. He was also Member of Parliament for Bramber; and (no trifling advantage in the Times and Court in which he figured) confessedly the handsomest man of his day. That the Diary of such a person, so placed in regard to the Court and Times of Charles II., must abound in features of unsurpassed interest and amusement need scarcely to be stated. The nature and quality of the Correspondence may be as readily guessed at from the following list of some of the personages who figure in that portion of the work:—Charles II.—The Duke of York—Princess Anne—The King of Denmark—The Prince of Orange—The Duke of Montagu—The Countess of Sunderland—The Earl of Halifax—The Duchess of Portsmouth—The Earl of Rochester—The Earl of Sunderland—Lord Godolphin—The Earl of Essex—The Earl of Ossory—Sir William Temple—Sir Robert Southwell—William Penn—Marshal Schomberg, &c. &c.

HENRY COLBURN, Publisher, 13, Great Marlborough-street.

COSTUMES OF BRITISH LADIES.

Beginning at the Time of William the Conqueror.

The authorities for all the details have been collected, during a period of twenty-three years, by a Lady of distinction well known in fashionable life, and will be found appended to each Number. The Work will be completed in Twelve Numbers, Drawn and Lithographed by Mr. T. SAMPSON, to appear the 1st of each month. Price, single Number, in case, coloured and mounted, 10s. 6d.; three Numbers, 25s.; twelve Numbers, 4l. 10s. 6d.
N.B.—The Publishers depend on success from the absence of any similar work that can be depended upon, and they presume on its finding admission into every library in the United Kingdom. The Second Number will be published the 1st of July.

HON. EMILY EDEN'S PRINCES AND PEOPLE OF INDIA.

The Second Part will be ready in a week.
The Work to be completed in Four Parts. Price of the entire Work, 4l. 4s.; coloured, 10l. 10s.

LIEUT. V. EYRE'S PORTRAITS OF THE CABUL PRISONERS,

PRISON SCENES, &c.

Adapted to bind up with Lady Sale's Journal or with Lieut. V. Eyre's Narrative. 32 Plates, 21s.; coloured, 2l. 12s. 6d.
*** Capt. Colin Mackenzie, the only one of the prisoners arrived in England, has seen the portraits, and pronounced them all—with one or two exceptions, which have since been revised,—excellent likenesses, more especially those of Mohammed Akbar, Lady Sale, Sir Wm. M'Naghten, Sir A. Burnes, &c. The Publishers recommend those desirous of completing their volumes to apply immediately, as very few more can be printed. The twelfth hundred is now ready, and the great expense of this undertaking will preclude the drawings being done over again.
DICKINSON & SON, No. 114, New Bond-street.

London: JAMES HOLMES, 4, Took's Court, Chancery Lane. Published every Saturday, at the ATHENÆUM OFFICE, 14, Wellington Street North, Strand, by JOHN FRANCIS, and sold by all Booksellers and Newsvenders.—Agents: for SCOTLAND, Messrs. Bell & Bradfute, Edinburgh; for IRELAND, J. Cumming, Dublin.

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 815. LONDON, SATURDAY, JUNE 10, 1843. PRICE FOURPENCE (Stamped Edition, 5d.)

For the convenience of Subscribers residing in remote places, the weekly numbers are reissued in Monthly Parts, stitched in a wrapper, and forwarded with the Magazines.—Subscriptions for the Stamped Edition for the Continent, for not less than Three Months, and in advance, are received by M. BAUDRY, 3, Quai Malaquais, Paris, or at the Athenæum Office, London. For France, and other Countries not requiring the postage to be paid in London, 28 fr. or 1l. 2s. the year. To other Countries, the postage in addition. [JAMES HOLMES, TOOK'S COURT, CHANCERY LANE.]

UNIVERSITY OF LONDON.

NOTICE IS HEREBY GIVEN, That the Annual Examination for MATRICULATION in this University will commence on MONDAY, the 3rd of JULY. Candidates will be approved by the Examiners if they show a competent knowledge in Classics, Mathematics, Natural Philosophy, and one of the three remaining subjects of Examination, viz. 1. Chemistry; 2. Botany; 3. Zoology.

The only Certificate required from Candidates is that of having attained Sixteen years of age. This Certificate must be transmitted to the Registrar fourteen days before the Examination begins.

Somerset House, 1st June, 1843. By order of the Senate, R. W. ROTHMAN, Registrar.

ACADEMICAL DEGREES.—Gentlemen of LITERARY or SCIENTIFIC PURSUITS, MINISTERS, or Others properly qualified, desirous of GRADUATING, may RECEIVE EFFICIENT ASSISTANCE from the Advertiser.—Address (pre-paid), stating qualifications, to M. D., 15, Tottenham-court New-road.

GOVERNESSES AND TEACHERS.—MONS. DE PORQUET respectfully informs the Nobility, Gentry, and Principals of Schools, that he is prepared to supply English and Foreign Governesses and Teachers, with excellent references, and duly qualified for every branch of education.—School Property transferred.

Apply at 11, Tavistock-street, Covent-garden. Office hours 11 to 4.

A MOTHER, experienced in the Management of Children, wishes to RECEIVE into her Family FOUR LITTLE BOYS, under eight years of age, to EDUCATE with her own. Her personal attention will be given to the health, comfort, and happiness of her young charge, who will be treated with maternal kindness, and their moral as well as intellectual improvement will be studiously regarded. The instruction will be suited to their tender years, by being made pleasurable instead of irksome; and it will be of a kind tending to develope the mental faculties through the exercise of the senses: in accordance with this plan, Drawing, Music, and Dancing will be taught, amongst other branches of elementary knowledge; and activity and cheerfulness will be encouraged. The situation is airy and healthful, and in the neighbourhood of Kensington Gardens. Terms, Six Guineas per Quarter. No extra charges. Address, M. S. W., 3, Campden Hill-terrace, Kensington.

AGRICULTURAL CHEMISTRY.

THE COMMITTEE of MANAGEMENT of the AGRICULTURAL CHEMISTRY ASSOCIATION OF SCOTLAND hereby request such persons as have intimated their intention to be Candidates for the Office of CHEMIST, and such as intend being so, to transmit their proposals to Mr. COVENTRY, 28, Moray-place, on or before the 16th instant, as the Election is to take place on Wednesday the 21st.

MR. CHARLES ROGERS, Dentist, begs to inform his friends, that he has REMOVED to No. 52, SOUTHAMPTON-ROW, RUSSELL-SQUARE, where he may be consulted in the various departments of his Profession, from 10 till 5 o'clock daily. Mr. C. Rogers was for several years sole assistant to Mr. Imrie, Saville-row, and subsequently with Messrs. Clark & Rogers, of Sackville-street.

TO LET, in REGENT-STREET, THREE ROOMS on the Second Floor, UNFURNISHED, with the USE of a large MEETING ROOM. They are suited for the purposes of a SOCIETY, and have for some years past been so occupied.—Apply to the Porter, 21, Regent-street.

LONDON and BRIGHTON RAILWAY COMPANY.—NOTICE is hereby given, that a SPECIAL GENERAL MEETING of the PROPRIETORS of this Company will be held at the London Tavern, Bishopsgate-street, in the City of London, on FRIDAY, the 16th day of June instant, at One o'clock precisely, for the purpose of ELECTING TEN PERSONS, duly qualified, to be the future Directors of the Company, according to the provisions of the amended Act of Parliament. JOHN HARMAN, Chairman.

C. R. MACKENZIE, Secretary.

10, Angel-court, Throgmorton-street, June 1, 1843.

THE SUBSCRIBERS to ART-UNIONS are respectfully reminded that the ROYAL POLYTECHNIC UNION of LONDON cannot receive SUBSCRIPTIONS after the 1st of JULY next, to which period the SEVENTEEN FINE ETCHINGS, illustrative of the SONGS of SHAKESPEARE, on India paper in an elegant wrapper, may be obtained. The Prizes will be allotted on the 8th of July, at Eight o'clock in the Evening, at No. 5, Cavendish-square, in the presence of the Subscribers.

In consequence of the Legality of this Union being questioned, a Consultation has been held by eminent Counsel, who affirmed its Legality, and have themselves become Subscribers. The President and other Members of the Royal Academy are also on the Subscription List.

R. I. LONGBOTTOM, Hon. Sec.

CONCHOLOGY.—LOVELL REEVE earnestly invites the attention of Amateurs to his present Collection of Recent Shells, which has received many new and valuable additions during the past week. Gentlemen residing in the country may have specimens (with the names and prices) forwarded to any amount to select from at their leisure.

Conchologia Iconica.—*Notice of Improvement.*—The Author and sole Proprietor of this elaborate work of conchological illustration, respectfully announces that on and after the 1st of July next, in order that the Subscribers may profit by the encouraging success that attends its present issue, the whole of the figures will be drawn, lithographed, and coloured by Mr. G. B. Sowerby, jun., the only living artist in this branch of science whose complete knowledge of the subject enables him to delineate his subjects with both scientific and artistic accuracy. No. 6 of the Conchologia Iconica on the 1st of July; to be continued in Monthly Parts of eight large quarto plates, price 10s. coloured, until every known Shell is fully described and illustrated.

Lovell Reeve, Bookseller and Naturalist, 8, King William-street, Strand.

N.B. The above work delivered with regularity in any part of Great Britain or Ireland free of expense. Subscriptions collected quarterly *after* delivery (not in advance).

THE SECOND CHORAL MEETING of the UPPER SINGING SCHOOLS assembling at Exeter Hall, under the sanction and approval of the Committee of Council on Education, and instructed by Mr. JOHN HULLAH and his Assistants on the Method of WILHEM, will be held on WEDNESDAY EVENING, June 21, at EXETER HALL, at EIGHT o'clock precisely.

The CHORUS will consist of 1,500 Members of Upper Schools.

Tickets, for the Platform, price 10s. 6d.; for the Upper Platform, price 7s.; for the Western Gallery, price 5s.; and under the Western Gallery, price 2s. 6d. May be obtained from Mr. Parker, Publisher, 445, West Strand, between the hours of 12 and 5 daily.

HORTICULTURAL SOCIETY of LONDON.—EXHIBITIONS at the GARDEN.—The next Exhibition will take place on SATURDAY, the 17th of June; subjects for Exhibition must be at this Office, on Friday, the 16th of June, or at the Garden before half-past EIGHT o'clock, A.M., on the day of Exhibition.

The gates will be opened at One, P.M. Tickets are issued to Fellows at this Office, price 5s. each; or at the Garden in the afternoon of the days of Exhibition, at 7s. 6d. each; but only to Orders from Fellows of the Society.—N.B. No TICKETS WILL BE ISSUED IN REGENT-STREET ON THE DAY OF EXHIBITION. 21, Regent-street.

TO PUBLISHERS, PRINTERS, ETC.

LIBRARY OF USEFUL KNOWLEDGE, including FARMERS' SERIES.

The TRUSTEES of the ESTATE of Messrs. BALDWIN and CRADOCK are now prepared to DISPOSE of the STOCK, STEREOTYPE PLATES, and ALL their INTEREST in this Important and Popular Series of Works, which consists of the Library in 337 numbers, and the Farmers' Series in 109 numbers; the whole of which are Stereotyped, and reprints can be produced with a very small outlay. The Trustees suggest that this property is admirably adapted to publishers desirous of extending their business, or for Capitalists seeking a business investment.

The Trustees will dispose of it either as an entirety or in divisions. Particulars may be obtained of Mr. Baldwin, 47, Paternoster-row, with whom appointments may be made for negotiating with the Trustees.

جيمس مدن ليدنهال

J. MADDEN & CO.'S CATALOGUE of ORIENTAL BOOKS and MANUSCRIPTS for 1843, is now ready.

This Catalogue contains nearly all the Works in Oriental Literature obtainable at the present day. Gratis to written or personal application.

Eight penny stamps will free the post.

8, Leadenhall-street.

Just published, 1 vol. royal 8vo. cloth boards, price 7s.

BOSSANGE, BARTHÈS and LOWELL'S GENERAL CATALOGUE of FOREIGN BOOKS for 1843.

This Catalogue contains all the best productions of French, Italian, and Spanish Literature of the last century, and is the only one of any importance that has appeared in England for many years.

The prices have been marked generally at the rate of shillings for francs, for modern French Works. With regard to Second-hand Books, their rarity, condition, and circumstances attending their purchase, preclude the same plan from being followed; but, in every instance, the most reasonable prices have been affixed.

For the convenience of teachers and heads of families, the elementary part may be had separate, price 2s.

*** It is presumed that this Catalogue will be found useful to public libraries and literary institutions, as it contains a copious index, and a detailed notice of the Transactions of many celebrated Learned Societies of Europe, and all the most important Works now publishing under the sanction of the French Government, and of various Antiquarian and Historical Societies of that country.

14, Great Marlborough-street.

CHOICE AND VALUABLE SECOND-HAND BOOKS.

Just published, GRATIS, and forwarded, on application, to any distant part, at the cost of a double postage Part 3 of

DOWDING'S GENERAL CATALOGUE for 1843; comprising a very superior Collection of the best Standard Works in English Literature, with extraordinary low prices affixed.

Among others of leading interest, and exclusive cheapness, are Copies of

The Encyclopædia Britannica.

The Encyclopædia Metropolitana.

Hansard's Parliamentary History and Debates.

And

The Annual Register; or, View of History, Politics, and Literature.

On sale at No. 83, Newgate-street.

MESSRS. BARRY & SON, Stationers and Engravers, beg to inform the Nobility and Gentry that they are now enabled to PRINT ARMS, CRESTS, &c., for book plates, in their proper heraldic colours, and at very moderate prices. Crests engraved on visiting cards in the first-rate style, 6s.; without the crest, 2s. 6d.; and 100 cards, 2s. 6d.: also every description of elegant engraving. Specimens of the above may be selected from a large and fashionable assortment, at their warehouses, Egyptian Hall, Piccadilly, and 122, Bishopsgate-street Within, or sent on application any distance free of expense. Superfine letter papers, 27s., 22s., 20s., 18s., 17s., 14s., 12s. and 8s. per ream; Note ditto, 18s., 16s., 12s., 8s., 6s. and 4s. per ream. An additional charge is made for stamping either of the above with arms, crest, coronet, or initials. Their miscellaneous stock, which is very large and particularly adapted for presents, consists of dressing cases, writing desks, inkstands, envelope cases, albums, blotting-books, bibles and prayers, gold and silver pencil cases, penholders, toilet and smelling bottles, souvenirs, ladies' companions, sachets, card and glove cases, pocket-books, papeterie, and envelopes, suitable for invitations, complimentary notes, weddings, &c. Either of the above articles may be had plain, or of the most costly description, with every description of useful stationery. Postage stamps and envelopes at Government prices. Messrs. Barry & Son are also the West-end Agents for Mr. Robert Best Ede's Perfumery.

CHISWICK MEETING.—The GARDENERS' CHRONICLE of SATURDAY, JUNE 24, will contain a FULL REPORT of the MEETING of the 17th of the HORTICULTURAL SOCIETY, with the award of the Prizes. The Gardeners' Chronicle, edited by Professor Lindley, is published every Saturday, price 6d. stamped, to go free by post, and may be ordered of all Newsmen.

THE NEW NAVAL ROMANCE.

Now ready at all the Libraries, in 3 vols.

THE LOST SHIP; or, THE ATLANTIC STEAMER.

By the Author of 'Cavendish,' 'The Flying Dutchman,' &c.

"This new naval romance will not merely sustain the reputation already acquired by the popular author of 'Cavendish,' but it will confer on its writer the distinction of being the first to avail himself of the wide field which the all-powerful agent of modern times, steam, has opened to the enterprise of the naval novelist as to all the rest of the world. We are not among those who believe that our literature of fiction has busied itself with naval incidents and character till the reading world has grown tired of them; but even if this could be shown to be the case, the line now adopted by the clever author of 'Cavendish' is so entirely new, and affords scope for so much in the way of incident and description which has not yet been touched upon in works of naval fiction, that this circumstance alone, and the curiosity it is calculated to excite, would be enough to command attention to the novel before us, even if it were less full of action, character, and excitement than it is."—*Naval and Military Gazette.*

Henry Colburn, Publisher, 13, Great Marlborough-street.

LAVOISNE'S ATLAS IMPROVED.

LAVOISNE'S GENEALOGICAL, HISTORICAL, CHRONOLOGICAL, AND GEOGRAPHICAL ATLAS. 4th edition, extended and improved by the following additional Tables: a new Genealogical Table of the House of Saxony, exhibiting in the branch of Saxe Coburg and Gotha the Ancestry and Family of Her Majesty and H.R.H. Prince Albert—Two Addenda Maps, continuing the Genealogical Tables of all the Royal Families of Europe to the year 1843—and Tables of Chronological Events, Population Tables, &c. to the same period, forming a General and Complete Guide to Ancient and Modern History, now comprising Eighty-three Maps. Price Five Guineas, handsomely half-bound morocco, gilt leaves.

Gardiner & Son, 20, Princes-street, Cavendish-square.

Now ready, in 2 vols. 8vo. with Portraits, 28s. bound,

DIARY OF THE TIMES OF CHARLES THE SECOND.

NEW AND IMPROVED CHURCH AND CHAMBER ORGAN,

MANUFACTURED BY H. C. LINCOLN,

Organ Builder to Her Majesty the Queen,
And to their late Majesties George the Fourth and William the Fourth;

AND BUILDER OF THE ORGANS IN
HER MAJESTY'S CHAPEL ROYAL, BRIGHTON.
HER MAJESTY'S PALACE, THE PAVILION, BRIGHTON.
HER MAJESTY'S CHAPEL, DEVONPORT.

MR. LINCOLN has just had the honour to receive the following testimonial from the Rev. W. F. H. HOOPER, Incumbent of Withington:—

Withington, Manchester, March 27, 1843.

MR. LINCOLN has just completed an Organ for my Church, which was opened by DR. GAUNTLETT on Friday the 17th, and Sunday the 19th, of this month. The Instrument has given the most complete satisfaction to me and to all who have felt an interest in its erection. The best judges both amongst my own people and of persons unconnected with the Church have pronounced it perfect—unsurpassed in its softness, richness, and variety of tone. I have pleasure in adding that MR. LINCOLN has treated us with considerable liberality, has acted with openness and uprightness, and as becomes a tradesman of the highest respectability—has spared neither labour nor (I may add) expense in fulfilling his contract to the utmost, and has devoted himself strenuously, not to say enthusiastically, to the work of turning out an Instrument that should give perfect satisfaction to the Committee of gentlemen concerned in its erection. In this he has completely succeeded; and I shall be happy if my recommendation secures him further patronage.

W. F. H. HOOPER, Incumbent of Withington.

ORGAN MANUFACTORY, 196, HIGH HOLBORN.

MR. LINCOLN solicits the attention of the Nobility, Clergy, and the Professors and Amateurs of Church Vocal and Instrumental Music, to the peculiarities and advantages of the great and numerous improvements he has recently adopted in the construction and arrangement of the Church and Chamber Organ. These alterations have been made with a view of affording an increased efficacy to the Organ, in rendering its support to a large Congregation, and in the performance of Church Instrumental Music. The effect gained is such, as to combine the breadth and variety which distinguish the Continental Organ, with the universally recognised sweet and silvery tones produced by the English mode of voicing and finishing the pipes.

The advantages gained by the adoption of the new mode of construction, are unquestionable,—

1st. The Organ has a more weighty and solemn character of tone, which is gained by the introduction of the new Stops, called the Bourdon, Tenoroon, and Quint.

2nd. It has a more brilliant and silvery character, from the new mode of arranging the Sesquialteras, Mixtures, and by the use of a new Stop, called the Doublette.

3rd. It has a more soft and varied character, from the circumstance, that instead of the Instrument only possessing one Flute, it has three, four, or even six, all of which combine with the new Stops in producing an entirely new quality of tone to the Organ, and which is admirably adapted to the purposes of Psalmody. These flutes are called the Claribel-Flute, the Oboe-Flute, the Wald-Flute, the Suabe-Flute, the Piccolo, and the Flageolet.

4th. It has more breadth and body of tone, from the adoption of a new method of manufacturing the Reed Stops. These are made to speak, so as to combine the weight of a Diapason with the fullest tone which it is possible to give to a Reed Pipe. The new Reed Stops are called the Posaune, the Trombone, the Cornopean, the Soft Horn, the Corno-Flute, the Clarionet, the Trumpet, the Clarion, the Oboe, and the Octave Clarion.

5th. A distant, subdued, and piano effect, combined with brilliancy sufficiently prominent to keep up the voices, is gained by the Tenoroon Dulciana, a new Reedy-toned Dulciana, and the Echo Dulciana Cornet, a Stop of five ranks of Pipes, which has been copied from one in the celebrated Organ of Cologne Cathedral.

6th. More Pipes are obtained to each Key than has yet been attained, and at a less expense; and it must be evident, the greater number of Pipes of differing qualities of tone that can be brought to bear upon each Key, the greater must be the musical resources of the instrument.

7th. The Sound-boards are made to contain nearly double the work of the ordinary sound-boards, and the wind chests nearly double the quantity of wind.

8th. No money is thrown away upon useless mechanism, but the greatest attention is paid to create music in every possible variety and combination.

9th. Although the compass of the Keys is apparently contracted to CC, in effect the Organ extends to CCC, as every Key on the Manual has it with its Unisons, the Octave below; thus, in fact, the instrument has the same compass as the Organ in St. Paul's Cathedral, without the disadvantages attending the old compass.

MR. LINCOLN begs to refer to the following Organs, as examples of the new manner of combining great power and variety at a small expense.

The New Organ in the Church of St. Thomas, the Rolls, Chancery Lane; (*Opened in Nov.*)
The New Organ in Crosby Hall, Bishopsgate Street; (*Opened in Dec.*)
The New Organ in the Church, Withington, Manchester; (*Opened in March.*)
The New Grand Organ now erecting in the Cathedral Church of St. David.

MR. LINCOLN submits the following TESTIMONIALS from distinguished Organists, the late Dr. Clarke Whitfield, Mr. Attwood, Mr. Thomas Adams, Dr. Gauntlett, and Mr. Purkis, as to the Character of his style of Organ Building:

From DR. J. CLARKE WHITFIELD, *Professor of Music to the University, Cambridge.*

I have employed Mr. Lincoln at Trinity and St. John's Colleges, during my residence at Cambridge, and therefore can vouch for the superiority and durability of his work, as well as for his moderate charges. It is my opinion that the Diapasons of Mr. Lincoln possess more of the sweetness of the celebrated "Father Schmidt" than those of any other Organ Builder of the present day.

From MR. ATTWOOD, *Organist of St. Paul's Cathedral, and Composer to the King.*

I have the pleasure to inform you that I think the Organ built by Mr. Lincoln an instrument possessing a fine quality of tone, great power, and very complete in all its parts.

Testimonial from the NEW CHURCH COMMITTEE, *Newington, and* MR. PURKIS, *Organist.*

The undersigned feel highly gratified in expressing our opinion upon the Organ built by Mr. Lincoln for the said Church; and testifying to the great satisfaction he has given therein, not only with respect to its internal construction, mechanism, and powers, but also to the very fine and superior quality of tone it so eminently possesses, and of which it is scarcely possible to convey a sufficiently just and adequate idea.

(Signed) A. CYRIL ONSLOW, Rector.
GILBERT ELLIOTT, Minister.
JOHN PURKIS, Organist.
(And all the Committee.)

Testimonial from the NEW CHURCH COMMITTEE, *Camberwell, and* MR. THOMAS ADAMS, *Organist.*

The undersigned deem it only common justice to Mr. Lincoln to express the very high and general satisfaction which he has given in the erection of an Organ in such new Church: without any written contract, he completed, within the time stipulated, all, and even more than in his tender he had engaged to perform, without claiming a single extra. Of the appearance of the Organ, of its internal mechanism and workmanship, and above all of its powerful yet mellow and most beautiful tone, it is scarcely possible to convey a just idea of the praise which has been bestowed upon it by all who have seen and heard it.

(Signed) JOHN GEORGE STORIE, Vicar.
JOHN VANE, Minister.
THOS. ADAMS, Organist.
(And all the Committee.)

Testimonial from DR. GAUNTLETT, *Organist of Christ Church, Newgate Street, London, and of St. Olave's, Southwark.*

Mr. Henry C. Lincoln has erected two Organs on my new plan, and has two others now in progress. I have much pleasure in recording my opinion of his merits. In the contracts which he has executed under my superintendence, I have ever found him, although exceedingly moderate in his price, yet very desirous to give his employers every advantage. The internal mechanism and the outward decoration of his work have been finished in the best style. The metal and manufacture of his pipes have been of high excellence; and every portion of his instrument has been completed with the same uniform attention to its durability and due effect.

MR. LINCOLN has the honour to announce
A New and improved CHURCH BARREL ORGAN;
Also the CONCERT ORGAN, for the SALOON or DRAWING ROOM; and
The APOLLONICON, or SELF-ACTING ORGAN,
For the mechanical Performance of Symphonies, Overtures, Choruses, &c.

MR. LINCOLN continues to Manufacture **The OLD ENGLISH UNISON and GG CHURCH ORGAN,**
To which he gives some new Characteristics by means of his newly-invented Flute, Reed, and Diapason Stops.
He also reconstructs the Old Instruments upon the New Plan.

Vol. 3, Part 1, will be published on the 1st of OCTOBER.

To be continued Quarterly.

THE WORK WILL PROBABLY NOT EXCEED THIRTY VOLUMES.

There is also a Monthly issue in Parts, each containing one-sixth of the volume, 4*s.* sewed.

Part XII. was published on the 1st Instant.

In completing the First Two Volumes of this Work, the Committee think it only just to those engaged in it to express their satisfaction that a task so extensive and difficult as that which the Society has undertaken, has hitherto been accomplished with a far greater share of success than they had reason to hope for.

The labour of preparing a Biographical Dictionary, according to the plan laid down in the Editor's Preface, may be estimated by the fact that in the Two Volumes just completed are contained more than 3,000 Memoirs. To each, with scarcely an exception, are added, the authorities on which it is founded. And when it is observed that many of these Memoirs, whether from the inadequacy of materials, or from the want of interest in the personal incidents of the life, occupy only a few lines, the preparation of which must have cost, in almost all cases, much research, and required the exercise of discretion, the Committee think it not unfitting that they should express how deeply they feel indebted to those gentlemen who have assisted them in this undertaking, and of whose names they now give a list.

LONGMAN, BROWN, GREEN AND LONGMANS.

NEW WORKS AND RECENT PUBLICATIONS.

Capt. Postans' Work on Sindh.

PERSONAL OBSERVATIONS ON SINDH,

The Manners and Customs of its Inhabitants, and its Productive Capabilities; with a Narrative of the Recent Events.

By CAPT. POSTANS,
Bombay Army, late Assistant to the Political Agent, Sindh.

8vo. with Map and Illustrations. [*In the press.*

The Cartoons and Picture Galleries.

THE HAND-BOOK OF TASTE;

Or, HOW TO OBSERVE WORKS OF ART, especially Cartoons, Pictures, and Statues. By FABIUS PICTOR.

Fcap. 8vo. [*On Saturday, June 17.*

Danish Historical Romance.

KING ERIC AND THE OUTLAWS;

Or, the THRONE, the CHURCH, and the PEOPLE, in the THIRTEENTH CENTURY.

By INGEMANN.

Translated from the Danish, by JANE FRANCES CHAPMAN.

3 vols. post 8vo. 31*s.* 6*d.* boards. [*Ready.*

The Chinese Novel.

THE RAMBLES OF THE EMPEROR CHING TIH.

Translated from the Chinese by TKIN SHEN, and Edited by DR. LEGGE. 2 vols. post 8vo. 21*s.* cloth.

"As the native production of a people of whom we have hitherto known nothing, as a picture of their manners, their customs, their modes of government, and their military tactics, delivered, like early Grecian history, through the medium of fiction, the Rambles of Ching Tih will become a very general favourite."—*Atlas.*

Miss Aikin's New Work.

THE LIFE OF ADDISON.

By LUCY AIKIN.

2 vols. post 8vo. with Portrait, 18*s.* cloth.

"Miss Aikin has not left a stone unturned, that her monument to one of our most polished writers and complete minds may be fair, upright, and symmetrical. Her book contains the first complete life of Addison ever put forth. As a literary biography it is a model; and its pages are besides enriched by many hitherto unpublished letters of Addison."—*Athenæum.*

"It adds to the attractiveness of Miss Aikin's work, that she is Addison's warm and thorough apologist: and hers is certainly the completest biography that has yet been published of the essayist, not merely because it takes the fullest view of his character and career, but because of the new lights that have been brought to his history from sources not previously investigated or duly considered."—*Monthly Review.*

Continental Life and Manners.

THE LIFE OF A TRAVELLING PHYSICIAN,

From his first Introduction to Practice.

3 vols. post 8vo. 31*s.* 6*d.* cloth.

"The 'travelling life of a physician' might have more accurately described three of the most agreeable volumes we have taken up for a long time."—*Court Journal.*

"When he obtained the appointment of physician for five years to the family of a Polish nobleman residing in Paris, we should say the work becomes for a time quite a supplement to Gil Blas. His country-town and his village sketches are even more racy to English readers than his metropolitan and Parisian adventures. The one is as Crabbe-like as the other resembles Le Sage."—*Tait's Magazine.*

Diseases of the Testis and Scrotum.

A PRACTICAL TREATISE ON THE DISEASES OF THE TESTIS,

And of the SPERMATIC CORD and SCROTUM.

By T. B. CURLING, Lecturer on Surgery, and Assistant-Surgeon to the London Hospital; Surgeon to the Jews' Hospital, &c. Author of 'A Treatise on Tetanus.'

8vo. with Illustrations by Bagg, 18*s.* cloth.

"This work is ably written, and especially practical in its contents. The wood engravings are very beautifully executed." *Lancet.*

Essays on Insanity.

ESSAYS ON PARTIAL DERANGEMENT OF THE MIND,

In supposed connexion with Religion.

By the late JOHN CHEYNE, M.D. F.R.S.E. M.R.I.A., Physician General to His Majesty's Forces in Ireland, &c.

With a Portrait and Autobiographical Sketch of the Author. Crown 8vo. 7*s.* 6*d.* cloth.

London: LONGMAN, BROWN, GREEN and LONGMANS.

REVIEWS

The Harmony of Form. By D. R. Hay. London, Blackwood.

Is it true then that "we need little knowledge but that which clothes and feeds us," that which works our steam engines, spins our cotton, grows our corn, sails our ships, rules our colonies, makes our laws and executes them? Is the useful and the sensible the only real in nature?—Is gold the great good, and wealth the chief happiness?—or is it, on the other hand, true that the human mind is to itself the most real of existencies—that moral right and moral wrong are powers more mighty than wealth or want—that the acquisition of truth, the attainment of worth, and the appreciation of the beautiful, are purposes of life and of death, incontrovertible and momentous?

The study of *the true*, *the good*, and *the beautiful*, has formed an important occupation of life in all highly civilized nations, and has been inculcated by the truest patriots and the highest philanthropists.—Science, virtue and beauty form the noblest elements of creation and of the human soul—they form the first objects of our national institutions, the highest elements of a national character and the best themes of a national literature. To quote a distinguished modern moralist, "a people should honour and cultivate that literature which expresses and communicates energy of thought, fruitfulness of invention, force of moral purpose, a thirst for the true, and a delight in the beautiful."

It would be a great step in the advancement of our national civilization, were the love of the beautiful and the power of appreciating the value of its manifestations more intimately mixed up with the associations and habits of our countrymen. That we have artists of high powers—architects of consummate skill—that we have, or have had, Barrys and Cockerells, Wilkies and Ettys, Landseers and Mulreadys, Flaxmans and Chantreys, and Westmacotts, is matter of national congratulation; but does little to prove the existence of a high standard of national taste. The habit of enjoying the beautiful, and the power of appreciating it, should pervade the national character, should determine its national institutions, and be diffused among the peasantry of our streets and hamlets. "The farmer and the mechanic (we quote Channing once more) should cultivate the *perception of beauty*."—"Every man should aim to impart this perfection to his labours." Were every man a judge and appreciator of beauty, then indeed might we expect forms of loveliness and grace to pervade the regions of domestic and every-day life, to replace, in our streets, the expensive ugliness of our street decoration—in our homes the vulgarities of ornamental deformity—and in our churches the distortions and anomalies of meretricious decoration. It is in the cottage and the church that national taste must receive its best lessons, and until the love of beauty and the intelligence of its principles pervade the national character, it can never sustain a high standard of national art. To educate the community in the beautiful, is the first condition of a high state of art. High art, to be encouraged, must be widely appreciated and highly enjoyed, and it is most true of works of taste and genius, as of profound investigations of philosophy, that they "can only be estimated and enjoyed through a culture and power corresponding to that from which themselves have sprung."

We hail, therefore, with delight the appearance among us of any evidence of progress towards the diffusion of correct principles in taste, of accurate knowledge in art. The critical handbooks of our national galleries and our national edifices—the critical tours of our cognoscenti—the better specimens of our illustrated literature, such as we have lately noticed, evince the progress of our national mind in æsthetical knowledge, its increasing appreciation of æsthetical enjoyments—and we receive the work before as a harbinger of better times—as an index of the wider diffusion of knowledge in art.

Not that we pledge ourselves to the soundness of all Mr. Hay's peculiar views. There is much matter in his work for friendly argument, and some for severer discussion; but "a grain of truth is above a bushel of chaff," and we welcome with pleasure contributions to a theory of beauty. Even a wrong theory is much better than none, and leads sooner to truth than the absence of all system. It is often easier to correct the errors of others, than to create their inventions. In æsthetics, as in physics, we may adopt the aphorism of Bacon—"Citius enim emerget veritas e falsitate, quam e confusione, et facilius ratio corriget partitionem quam penetrabit massam."

'Hay on Harmonious Colouring' formed the precursor to 'Hay on Harmony of Form.' The former work was chiefly designed to correct and direct the public taste in the decorations of domestic life; the present has a higher aim—the determination of the forms and proportions which give to objects and structures a maximum of beauty.

The very words themselves—'Harmony of Form,' imply a theory. The association of a word which expresses a physical phenomenon cognizable to only one of the senses, and the transference of this word into the domain of another sense; which recognises none of even the most striking objects of the former, is a stretch of language which, if it imply the reliance of the theory on no firmer basis than an analogy drawn from sound, and transferred, without further reason, as a sufficient cause into the domain of visible beauty, would hardly be recognised as having a strong claim on general and immediate acceptance. Analogies between numbers, sounds, colours, and geometrical figures, have often been speculated and theorized on, even from the earliest periods of science and art. The seven sounds, the seven colours, the seven planets, have formed numerical analogies which were fancifully adopted, century after century, as foundations for speculation; and after affording much pretty speculation, have successively been forgotten: the association between harmony of sound and beauty of form, does not, therefore, appear at first sight to promise an important or valuable physical analogy.

It is this analogy, however, which forms the basis of Mr. Hay's 'Theory of Proportion' in Architecture.' We proceed to consider the validity of this analogy, and to examine in how far the investigation is attended with useful results. Premising, however, this observation, that whether we agree with Mr. Hay's views, or differ from him, we equally regard the attention he has bestowed on the subject, and the interest his investigation must awaken in the readers of his book to examine for themselves, and search in works of art for its illustrations and tests, as benefits conferred on the public, and as valuable contributions to the progress of æsthetical science.

We have said that the harmony of sounds is made the basis of Mr. Hay's theory of the harmony of forms. In other words, he infers that those figures will please the eye which have the same proportions as the elements of a harmonic chord have to each other: and that the same steps in proportion will please the eye which in a pleasing melody succeed each other in the relations of sounds.

The relations of sound to number appear to be very remarkable; and it is equally remarkable, that all nations appear to have united in their opinions regarding the beauty of certain great relations of sound. A learned theorist remarks on this subject:—"We have heard the songs of the Iroquois, the Cherokee, and the Esquimaux, of the Carib, and the inhabitant of Paraguay; of the African of Negroland, and of the Cape; and of the Hindoo, the Malay, and the native of Otaheite; and we have found none that made use of a different scale from our own, although several seemed to be very sorry performers by any scale." When to this we add that the musical scales of agreeable sounds in China, Ancient Egypt, and Greece were in the most important points identical with our own, we are forced to recognise a standard of taste in sound, which holds out strong reasons to wish that this scale should contribute to beauty in form—its own definite scale of proportion. It is not, perhaps, unworthy of remark, that in the times of Pericles and Phidias, music, geometry, and number, were sciences of the highest order, and formed the elementary studies of the distinguished men of Greece in that classic period of art.

The numerical relations of harmonious sounds may be understood by our readers without difficulty, if they will follow us through a very simple demonstration. We presume that the string of a bow formed the earliest and simplest instrument of music; indeed, it is frequently represented on ancient monuments in this capacity, and the string formed from an animal substance, and, as we know, of great strength, must have corresponded very closely with a Roman harp-string of the present day. Let our readers then take a bow in a state of tension, or let them try its close representative, one of the long strings of the modern harp or violoncello. We believe that the relations of musical notes may be thoroughly understood in this way better than in any other, and we believe that the true origin of instrumental scales is fully explained by a very simple process. Let our reader, then, whom we suppose to have a delicate ear and a dexterous hand, apply himself to the string which he has selected towards the bottom of the harp, or the bow-string; then let him, by measurement or a good eye, place his finger precisely on the centre of the string, from stop to stop, (it is well that the pedal connected with this string, and, indeed, all the pedals, be pushed down as far as possible,) and let him then strike the string with his right finger, so as to twang it in the usual way; it is well known that the sound he will elicit is the octave above the sound which the string will produce when not touched in the middle by the finger: now this octave is universally known to sound in harmony with the original (or fundamental) note of the string, therefore the relation of a string to its half corresponds to the relation of the natural note of the string to the natural note produced by one half length. Hence the proportion of any note and its octave has been identified from the earliest times with the numbers one and two, that is,—a note is to its octave above as 1 : ½.

This may be said to be only an analogy; it is, but it is a strong one, and we proceed to strengthen it. Galileo was the first to prove that the vibrations of the string when sounding the octave are precisely double in number of those made by it when sounding the original note; thus confirming and deciding, by unquestionable physical proof, the necessary indissoluble connexion between the octave sound and the number *two*.

There are two views of this relation: first as regards the length of a given string, the sound is to its octave as 1 to ½; but if we take the number of vibrations in the string, (or it may be

Digitized by Google

flute, or organ-pipe, or voice, indifferently, for all the relations of vibration are identical, whatever the origin of the sound,) the number of vibrations in the octave above is double the number of the vibrations in the octave below, or the former proportion inverted, being two to one—(call the sound of the original note DO, and that of the octave DO).

Next we request our reader to raise the finger of his left hand till it be twice as far from the lower end of the string as from the upper end, thus leaving the upper part one-third part of the length of the whole string, and resting the point of his finger gently on this spot, let him strike or twang the upper part (near the middle of that division), with a finger of his right hand (immediately after striking, both hands may be removed, with advantage to the sound). The tone thus produced is in perfect harmony with the two former, but it is produced by one-third part of the original string. Let us call this tone SOL, and we have this note designated by the number ⅓; or, if we consider the number of vibrations, these, when measured, are to the first note in the relation of three to one. The following notes are, therefore, truly represented thus, both physically and geometrically:—

DO	DO	SOL	note.
One	Two	Three	vibrations.
1	½	⅓	length of string.

We beg our (patient?) reader next to place the finger of his left hand nearer the upper end than formerly, till the part below his hand becomes three times as long as the part remaining above his hand—the upper part is now one-fourth part of the whole length of the string—let him strike this as formerly—the clear tone emitted is another harmonic note, and would, if sounded along with the former, harmonize agreeably with all or any of them. Its vibrations have been measured and ascertained to be quadruple in number of the first note DO, and therefore double of those of the second harmonic note DO—call this note *do*, then we have now educed from this single string the following notes, all in harmony with each other, and represented by the four first ordinal numbers.

DO	DO	SOL.	do	note.
One	Two	Three	Four	vibrations.
1	½	⅓	¼	length of string.

The next steps are similar, but as the results increase rapidly in interest as we go forward, we beg for ourselves the reader's pardon, and for himself no little patience; but will hope that if he be either a lover of music, of beauty, or truth (beautiful for its own sake) he will have his reward.

The reader is now requested to place the tip of the little finger of his left hand on the division four which he last found—let him now allow the tip of the second finger to touch the string naturally, and with ease to himself, and let him take off the little finger, and then strike the string as formerly with the right hand, the tone will be clear and full; if not, a little adjustment of the finger will make it so—where this is done, the upper division of the string is exactly one-fifth part of the whole length—the note is harmonious when sounded with any of the former—let us call it MI. Its vibrations have been found to be five to one of DO, and its length of string is ⅕. In like manner, the first finger of the left hand, in the position formerly denoted, will fall upon a point ⅙ of the length of the string from the top—the string will make six vibrations for one of the first, and give the note *sol*,—and if the thumb of the left hand be alone allowed to touch the string, it will cut off ⅛ of its length, and give a harmonious sound to all the rest, vibrating eight times while the whole string would vibrate once.

Thus then we find, under the fingers of the left hand, the following notes, which are called the common chord, being harmonious when sounded together, and so agreeable to the ear, that in modern instrumental performance they rarely appear without accompanying each other: they are thus related to numbers.

do	MI	*sol*	—	*do*
Four	Five	Six	—	Eight
¼	⅕	⅙	—	⅛

On the whole, then, we find in the series of natural numbers an harmonious system of sounds, to which the name of Natural Harmonics is appropriately applied. These are sounds which in physics are most perfectly adapted to the constitution of matter in vibration, which a string most readily and spontaneously gives out, and which are best adapted to the organization of the human ear, and our perceptions of pleasurable sound, and stand thus:—

DO	DO	SOL	*do*	MI	*sol*	—	*do*	note.
One	Two	Three	Four	Five	Six	—	Eight	vibrations.
1	½	⅓	¼	⅕	⅙	—	⅛	length.

These are the notes, by producing which in great variety, and with perfect readiness, precision, and ease, Paganini used to delight and thrill his audience. It is strange that this subject has not been followed up and legitimatized in Art. To apply these notes with success, the violin should not be tuned, as now, in fifths, but in a fourth and a fifth; then placing the first finger gently one-eighth up, from the nut towards the bridge, all the notes of the diatonic scale will find themselves immediately under the other fingers without any further artifice; if to this we add the further artifice of an artificial nut formed by the fingers, and a harmonic stopped by other fingers, we immediately acquire a wide range of these harmonic notes. Much study of these principles, with a delicate organization, are necessary for success in using the natural harmonics; but the rich mine of beauty, hitherto almost unworked, would amply repay the artist for his toil. None who have not heard the dexterous and quiet use of them made by their great master, when unostentatiously playing the quartett music of our older classic authors, can have an adequate idea of their value, their admirable truth, and wonderful powers of expression.

But we have forgotten our ratios—they extend from one to eight;—but why, our readers may, and must, ask, why not the number *seven*—why not that magical, most interesting, most perfect of numbers, *seven*. Alas, why but that the sound it makes is a most unseemly and unmanageable one—like some members of some cabinets, it is very good in itself, but impracticable to work with others. Thus, then, our beautiful theory among the Platonists of the casual virtue of number, slips from under our feet. The best of numbers that should have produced the best of sounds and of harmonies, gives the worst.

Let us not, however, because of one impracticable member, reject a body that are themselves practicable and useful. All the useful numbers we have got, are 1, 2, 3, 4, 5, 6, 8; and of these, 1, 2, 3, 5, are all the simple numbers; four being compounded of 2 by 2, six of 2 by 3, and eight of 2 by 2 by 2; so that the harmonious numbers are in this view, 1, 5, 3, 2, which in their combinations make up complete diatonic HARMONY.

But in melody, the truth stands thus with reference to number. Taking our former range of the common chord, *do*, MI, *sol*, do, or ¼, ⅕, ⅙, ⅛, the proportions of the diatonic scale of melody, or rather of harmony with melody, is as follows:

Table of Numerical Proportions of Sounds and Intervals of the Common Scale of Musical Sounds.

I.	do	(re)	mi	(fa)	sol	(la)	(si)	*do*	Notes.
II.	1	(⅞)	⅘	(¾)	⅔	(⅗)	(⅝)	½	Lengths of string.
III.	4	(4½)	5	(5⅓)	6	(6⅔)	(7½)	8	Number of vibrations relative to I.
IV.	24	27	30	32	36	40	45	48	Proportions of line above, when reduced to whole numbers.
V.		3/24	3/27	2/30	4/32	4/36	5/40	3/45	Ratio of diatonic intervals.
VI.		⅛	⅛	1/15	⅛	⅛	⅛	1/15	
VII.		45/360	40/360	24/360	45/360	40/360	45/360	24/360	

I. The first line in this table corresponds with the common progressions of the diatonic scale.

II. The second line shows the length of string producing each tone proportionally to the primary length of string.

III. The third line shows the number of vibrations forming each note, in the same time that the original string makes one vibration. In this it will be observed, that do, MI, sol, *do*, the members of the common chord, are whole numbers, and the others are fractional; therefore we have multiplied them all by six, to form whole numbers in the same proportion, as a mere matter of convenience, and we have placed these in the next line.

IV. Consists of numbers in the same proportions as those above without fractions: these numbers represent the number of vibrations actually made in a given time in forming each note; thus, while a string sounding *do* makes 24 vibrations, that sounding *re* makes 27, MI 30, and so on.

V. From line IV. it is apparent that the note *re* requires 3 vibrations out of every 27 more than *do; mi* requires 3, out of every 27, more than *re; fa*, 2/30 more than *mi;* and *sol*, 4/32 more than *fa;* and so on. These measures are the numerical values of the intervals between the notes, and form line V.

VI. In line VI. we have taken fractions equal in value, but simpler in form, to those in line V. We see by inspecting the table, that the intervals between *do* and *re, fa* and *sol, la* and *si,* are all equal to ⅛ (called a major tone); that the intervals between *re* and *mi*, also between *sol* and *la*, are only 1/15 (called a minor tone); and between *mi fa* and *si do*, only 1/15, being each a semitone.

VII. In line VII. we have reduced these values of notes of the scale to the same denomination, whence we find that the successive values of the notes are as the numbers 45, 40, and 24; that is, that the value of a major interval or tone being 45, that of a minor tone is 40, and that of a semitone 24: (there are distinctions of semitones which we do not require to investigate at present.)

The true intervals of an octave are, therefore,
45, 40, 24, 45, 40, 45, 24: total 263.

Our readers are now in a favourable position to judge of the extent to which Mr. Hay is right or in error, when he rests his rules for proportions of harmony of form on the numerical relations of the intervals in the diatonic scale of music.

Mr. Hay represents (as is frequently done) an octave by the length of the circumference of a circle. He divides this into twelve equal parts, numbered successively 0, 1, 2, 3, ... 12: he takes the two first, 0 to 2, as a tone; the two second, 2 to 4, as a tone; the next, 4 to 5, as a semitone; 5 to 7 as a tone; 7 to 9 as a tone; 9 to 11 as a tone; and 11 to 12 as a semitone.

Let us see the consequence of this. We have seen that the sum of all the true intervals of an octave makes up 263: dividing this by 12 w

Digitized by Google

get, on Mr. Hay's principle, $21\frac{11}{12}$ as the value of his semitone, and double this, or $43\frac{10}{12}$, as the value of his tone; his numbers are, therefore, given as below, and the true numbers under them:—

	Do	*re*	*mi*	*fa*	*sol*	*la*	*si*	*do*	Total.
Hay's numbers	$43\frac{10}{12}$	$43\frac{10}{12}$	$21\frac{11}{12}$	$43\frac{10}{12}$	$43\frac{10}{12}$	$43\frac{10}{12}$	$21\frac{11}{12}$		263
The true numbers	45	40	24	45	40	45	24		263

Whence we conclude that the scale which Mr. Hay has adopted for his laws of proportion and beauty of form does not coincide with the true physical relations of the scale of music,—that his melody of form would not, if transposed to music, please the rude or the cultivated ear of man.

The popular mode of speech, which represents each tetrachord as made up of two tones and a semitone, with an interval of a whole tone between them, or the octave as composed of five equal intervals and two half intervals, making up six full tones, is merely a convenient form of speech, and is very far from representing the true relations of the actual sounds. It is easy to see that a general notion of this kind is a most insufficient basis even for a plausible theory.

Are we, therefore, to reject the whole of Mr. Hay's theory, because he has rested it upon an unsound foundation? This is a curious instance (not without parallel either in science or art) of most sound conclusions drawn from false premises. Let us then reject its errors and repair its foundations. Shall we demolish the exquisite Tower of Pisa because its foundation has proved false to it? nay, rather let us try to prop it up and repair the foundation, and place a structure of merit on an appropriate foundation.

Mr. Hay is wrong when he asserts that certain proportions are beautiful, *because* they are those of the notes which in all the combinations of harmony and melody of sounds are most pleasing. His proportions, as assigned to form, are most correct and most beautiful: they are *not*, however, those of the beautiful sounds to which he assigns them, and are not *therefore* beautiful. But it does not follow that because they are *not therefore* beautiful, they are necessarily *therefore not* beautiful;—on the contrary, the beauty, whose proportions he assigns, has been the beautiful of all time—at least, of all civilization.

It is only necessary to glance the eye over Mr. Hay's eighteen beautiful plates, to learn that, however we may differ from him as to *why beauty is*, we cannot dissent from him as to *what is beautiful*. We feast the eye with geometrical symmetry as we turn over the figures on his plates.

We shall next week proceed to discuss with him what the proportions of beauty are, and why they are so.

Diary of the Times of Charles the Second. By the Hon. H. Sidney, afterwards Earl of Romney, including his Correspondence, &c. Edited by R. W. Blencowe, Esq. A.M. 2 vols. Colburn.

We are at times so weary of the artifice and pretension of modern literature, that a downright dull book, like this, comes as a welcome relief. To be sure, it is more than reasonably dull, but that is seen in a moment; and the reader may therefore dip here and there, according to his leisure or humour, or fairly go to sleep over it, satisfied that he has not lost much by his idleness or indifference. The Diary is a very meagre affair,—a mere outline of personal proceedings for some eighteen months, during the greater part of which time the writer was resident abroad, as Envoy to the States of Holland; and the Letters have little historical value: the best are from his sister (Waller's Saccharissa,—the Lady Dorothy, afterwards Countess of Sunderland,) and relate to family matters and arrangements, from which we occasionally get an insight into the morals, such as they were, and the manners of the age. Henry Sidney himself appears to have been a very common-place person—handsome, dissolute, and intriguing,—although, from his position and the progress of events, he was enabled to play a somewhat conspicuous part in the Revolution of 1688, and was proportionally honoured and rewarded by William, who created him Earl of Romney. The historical value of these papers is, indeed, so small, that it would be mere waste of time to hunt for the few paragraphs that incidentally throw a light either on characters or events; we shall, therefore, confine ourselves to the gossip. Our starting point shall be two letters from an unfortunate person of the name of Worthley, who, we are told, was "of an ancient family and highly connected, who, unfortunately for herself, upon the death of her husband, fell in Sidney's way, and lived with him as his mistress for twenty years. At length, deserted and in distress, having in vain applied to Sidney, she threw herself at the feet both of Charles and James, and published her case and her injuries to the world. From among many of her letters of appeal to him, the two following have been selected as written in a milder and quieter spirit of remonstrance than many others."

The boldness of her remonstrances is very much in the spirit of the women who figured in the days of Charles the Second:—

"June 18th, 1689.

"My Lord,—I wish some good angel would instruct my pen to express something that would incline your Lordship to moderate your hate towards me that have loved you only too well, and would increase that slender portion of love you have for your own honour. Could your Lordship make cripples of my tongue and pen, by confining me to a jail, as well as my limbs, you might then hope for a conquest; but, my Lord, though I am perfectly lame, and have in a manner quite lost the use of my limbs, yet my pen will never lose its vigour, nor will my tongue be silent. How happy should I now esteem myself if I could say or do anything that would make you reassume your former good-nature! but do not misconstrue me, my Lord; I mean only that part of your good-nature that would oblige you to do what is reasonable, and not to return to your embraces. Your Lordship must pardon me if I still am perfectly yours without desiring your conversation. I am the best-natured fool living, but it is not to that degree as to be a silent fool neither. I would willingly, if your Lordship pleases, take a little fresh air between this time and Michaelmas, and all that at present I desire your Lordship to do is to let me have half a year's money next Monday. You know that I have lately begged that you would be pleased to send me a 100*l.* to pay some small debts,..... Pray, my dear Lord, do not deny me so poor a business as a little money now at Midsummer, for fear it may again transport me to do something that will go very much against the grain with me to do towards the man that in my soul I do adore and still love too well. I wish I did not. I am sure you never loved money well enough to deny me or anybody any reasonable sum out of a meanly miserable esteem for dross, but you have no other way to be revenged on me but to strip me naked and confine me; but, my Lord, how poor and how ignoble a revenge is this of yours to me, a poor, deluded woman, that hath loved you above myself, nay, above heaven or honour, and hath generously spent my youth with you in discontent and suffering! Whereas I might have had plenty and ease with others; and, if my too great confidence in your great worth and honour and generosity has betrayed me to irrecoverable ruin, yet, my Lord, you must certainly pity me, though you hate me: but I will not yet despair but that I may live to hear my Lord Sidney say, that he hates himself because he hated her, without any just cause, who is sincerely yours, "G. Worthley.

"P.S. My Lord, though there was too much noise in King Charles's and King James's Court, let me humbly beg of your Lordship not to be, by your continued cruelty to her (who is not envious, but happy in seeing you so), the author of any new noise in King William's and Queen Mary's Court; for I assure your Lordship I do not desire it, for I am now wholly inclined to peace, love, and Christian amity. I hope you do not forget your hopeful son in Holland; and that you had my letter, with the inclosed bill, that came to me from him.

"July 6th, 1694.

"My Lord,—My creditors' unreasonable proposals, which I hope Colonel Fitz Patrick has acquainted you with, have obliged me to withdraw from London for the present, till I know what your Lordship would have me to do; and I wish you would consider that you must one day come to die, and that it will be too late when you come to lie upon a deathbed to wish you had been more kind and considerate of my sufferings for so many years together, and that now I must abscond or else bring your name upon the public stage, which you, if you please, may see I am very unwilling to do. I must now beg of your Lordship to order me another quarter's money, or I must return to London sooner than I am willing. How I wish I were to accompany King William in his progress into Cheshire; that I might once before I die make a visit to the good old wooden house at Stoak, within three miles of Nantwich, where I was born and bred; and, if your Lordship does attend on the King in his progress, let me beg of you to make a step to Stoak; 'tis but fourteen miles from West Chester, and I hear the King goes to Chester. You will find my cousin, Edward Mynshull, will give you a very generous entertainment, and so will my cousin, Sir Thomas Mainwaring, of Badelly; and Stanley, of Houghton; and Chemley, of Vale Royal; and forty more of my relatives there, if you please to do them the honour of visiting their innocent, clownish habitations; and when you have viewed Stoak Hall, where I was born (for so it is vulgarly called), then I must beg of your Lordship to tell me whether you don't think it was an agreeable portion for me to be attended from your door by a Constable and a Beadle. Gaysworth, too, will be able to entertain you—that was my great grandfather's: but my Lord Macclesfield complains that the old house is ready to fall upon his head. I love Gaysworth, because my mother was born there. I remember you told me you had been at Brewerton Green. I like Stoak as well—you will find my Lady Brewerton and her daughters at the good old house on Brewerton Green—the young ladies live there like nuns. I wish Queen Mary would make them courtiers, and I wish your Lordship would incline to do what is reasonable by me, that I might go into Cheshire and there end my days. I should enjoy more happiness in one month in Cheshire than I have done in all the twenty-five years I have misspent in London. My Lord, I wish you a pleasant progress, and that you may meet with as much satisfaction as you desire. And if your Lordship will please to order me a 100*l.* as I have desired, it will be a satisfaction to me to pay poor people that want bread. If, my Lord, you will be so kind as to make a visit to Stoak, pray ask my cousin Ned Mynshull whether the heir of Pool be likely to outlive me or not, for if he were dead the estate comes to me, and, though it be but 400*l.* a year, yet it will be acceptable to me, if it be but to pay her debts who is sincerely yours till death,

"G. Worthley."

The fragment of another letter shows that the spirit of this woman was not broken by her misfortunes. She thus wrote to her cousin, Lord Brandon:—

"I am sorry Mr. Sidney is so credulous as to believe all the idle inventions of malicious people against me and my son, which, if he were not perfectly blind, he might see is only pure spite and malice. He treats me with a great deal of cruelty, which I think is very severe, first to have spent my precious youth so dismally as I have done, and now, for a reward of all my sufferings, to be abused and despised, and my son rejected, as if he were none of his, and all this to please his great Mistress; but he will find I have more than an ordinary soul, and, though I cannot manage a sword, a pistol I can; and, if he does not think good to make me some

Digitized by Google

better satisfaction for the many years of my youth which he has obliged me to spend with him, I shall pistol him and be hanged for him, which I had rather do than sit still and starve, or be any longer a laughing-stock."

During his residence abroad, Henry Sidney was elected member for Bramber. The following letter from his agent gives the particulars, and contains some historical names of interest:

London, Sept. 1, 1679.

"Most Honoured Sir,—We have at last now dispatched the business at Bramber, though we met with great difficulties, lying under several disadvantages, as that of your not being there, nor in England, nor known to any of them; this made for the Gorings, both Henry Goring and Peircy, who have been formerly chosen there: then, what you will be surprised at, your brother Algernon made an interest for one Sir Charles Woosley, who was one of Oliver's friends, and he seems to be mightily disgusted because you should stand at Bramber, where he intended once to stand, which I have taken upon me to answer to Sir Jo. Pelham, that you knew nothing of it. It seems he had a great desire to be a Member, and therefore Penn, and Sir John Fagg, and such men, made him interest in several places; and the design, as I find since, was to get Woosley in, if he got in anywhere else. Penn (as I presume you will hear by a better hand) wrote to Sir Jo. Pelham that your standing at Bramber would make a greater feud between you and your brothers than is between you and the elder; unless, for an expedient, your interest and Sir Jo. Pelham's credit were engaged for that worthy patriot, C. W.: whether this were only cunning in Penn, or true in your brother, I cannot well say; but I believe you have the most cause to take the matter ill from him, who, after he knew you stood, should have turned by and put in a stranger; this added to the trouble and your charge, for he having been there about eight days before the election, and given money to some in the town, and made his learned speech with thanks for their good will to him, and recommended to them that gent., and left ten or twelve guineas to thank them as was pretended, and left instructions and promises with some of that party of 10*l.* a man, which works powerfully under hand. Those promises on the one hand, and Mr. Goring's frequent treats and drinkings on the other, made us spend much more than we should, to keep our party firm. Mr. Westbrooke wishes us well, but durst not appear against his friends and neighbours, the Gorings; but we had an indefatigable friend of Mr. Turner, who lives on the spot, who, by the credit he had with the Burgers, and the powerful charms we urged of feasting and drinking, made your interest so great, that the day before the election, after some treaty on the points, Mr. Peircy Goring consented to desist, if he might have his charge reimbursed, which was readily consented to; for I found by this you would prevent all grudges between the Gorings and the Bridgers, and which was more, it would prevent any ill-will between Sir Jo. Pelham and those who, a few days before, had been at the election of knights for the putting by of Sir J. Fagg, who lost it; and the two brothers, Sir Jo. and Sir Nicholas Pelham, carried it. The charge he was at, he says, was 80*l.*, which I have engaged to pay this week; 'twas more than we thought it could have been, but it is not to be imagined what those fellows, their wives, and children, will devour in a day and night, and what extraordinary reckonings the taverns and alehouses make, who, being Burgers, are not to be disputed with on that point. And now, Sir, I am coming to tell you we have spent you almost 200*l.* more, and have been no ill husbands neither; but, if we had not met with the difficulties aforesaid, half this expense would have served. And, if ever there should be the like occasion, you are sure of Bramber; for Peircy, I reckon has passed over his interest for ever. They long very much to see you, when you come over (which I begin to hope to hear of); Mr. Pelham and I have engaged they shall have that satisfaction; Mr. Pelham was so kind as to go over with me, and came again the day of election, though very wet; Sir Jo. sent over half a buck, with which we treated bravely. I made it an article that the gentleman should declare amongst the Burgers that he did desist, and that he would take it as well if they were for you as for him; and, to do him right, he owned a great respect for your family, and, in particular, for yourself; and, if they would choose a stranger, he knew none more worthy; but this could not be brought into example to leave the neighbours and gentlemen of the country; but he having his residence at Maidstone, we thought him as much a stranger as you, Sir. I have now given you an account of all the most serious parts of this affair: there are many things I might add, which are too long and impertinent, and therefore I shall say no more of that matter, unless I beg leave to tell you, that you would have laughed to see how pleased I seemed to be in kissing of old women, and drinking wine with handfuls of sugar, and great glasses of burnt brandy, three things much against the stomach, yet with a very good will, because to serve him I most honoured. I hope, Sir, you will pardon this tedious, indigested matter, which you find strangely huddled together, as it came into the mind of,

Sir—

"Your most obedient and most dutiful servant,

"G. Spencer."

Algernon Sidney is several times mentioned by the Countess Dowager of Sunderland, but he does not appear to have been much liked:—

"My brother Algernon, upon my sending to know how he did when he was ill, has come to me three times, and I believe will continue it, for he seems very well pleased with it. We have never said one word of any difference, and I never contradict him when he says such things as that Sir William Coventry is no more an able man than a handsome man."

Other family matters are occasionally touched on in these letters; indeed, the letters of Saccharissa are the best in the collection, and remarkable for their homely good feeling and good sense:—

"February 19th, 1679.

"Your kind letter does so delight me, I would fain say something that would be the portrait of my heart, but I am so dull. Though my Lord Halifax has sent for his family, I hope he will come up himself before everybody disperses. He can be without them here, but not very well there, because company comes to him. Nan Savile hath no regret but to be at her cousin's wedding. I think all is agreed upon now. The articles were signed yesterday, and the gentleman had leave to wait upon his mistress. My brother is gone home, and the writings are to be drawn. The marriage must be at Holland*. In some respects I am sorry for it. My sister had a great mind to come, and I should have been glad to have seen her. My brother thought it would be more expense, and not handsome, because of his great relations: I believe he did consider this the more. Mr. Algernon never goes to them, though they have sought him, so that I have wondered at it often. All the women went to see him; the married Pelham and the two sisters, and the men did; but he has used them so abominably, they are ashamed of it, though he did before the treaty of this marriage: they would some of them lay it upon that. I told them, if anybody would bring a better, I would change my party. I had no bride, but I saw some thought this too good. For my part, I think neither of them well married, but this is a good deal better than Montague, though she calls him her pretty dear, and kisses him a thousand times in a day. I tell Lucy she shall not do so; her's will be much such a pretty dear. Nan Savile is very comical about this business; sometimes they are great friends and very familiar. Mr. Pierpoint has promised her, that if he is so happy as to have Mrs. Pelham, and that she is willing, they shall come to Rufford this summer. This is an article of marriage that has given great satisfaction. The thing has been done that I did not much approve of, but I said nothing. Mr. Pierpoint readily did consent to it, but I thought it so little a thing for them to ask, which is, that if she dies and leaves no child, the 2000*l.* to be paid at her father's death shall not be paid, or returned again if it be. This was a foresight of Tom Pelham's. For our friends at court, my Lord Sunderland is as well as anybody; how long, God knows! as long as it does, I must tell you nobody has a truer friend at court than you have of him. Hyde and Godolphin, his supporters, are never from him, with her [the Duchess of Portsmouth] at Little Ombre. The players have been disturbed again by drunken people's jokes. They called my Lord Arran a rogue; and one Fitzpatrick pointed at Mr. Thinne, and called him that petitioning fool, and swore a hundred oaths; he said that he deserved 20,000*l.* a-year, but that fool deserved nothing. My Lady Scroope writes to me, that Mr. Saville is sometimes a very impertinent minister; he is more than ever with her, in what he writ hitherto. She is in as ill hands as can be for her. They are treacherous creatures. I wish a good speedy end of your embassy, and that you were a simple gentleman in my chamber again. My Lady Lisle has another boy; the two grandfathers and the Duchess of Albermarle did christen it. Our brother made her Grace stay above two hours for him, and she had not many more to stay in town. I am yours, with a very true affection, D. S."

* The ancient seat of the Pelhams, in Sussex.

The following paragraphs also contain characteristic traits of the age:—

"I have but little time, and am not well. I must not forget my business, which is for Mr. Pierpoint; he has in Holland some pictures, of considerable value he thinks them, and he says they are prohibited goods; most of them are Popish pictures, but not a crucifix amongst them. If you can, without inconvenience to yourself, get them over for him, you will do him a great favour, and I will let you know where they are as soon as I hear from you. * * You must needs hear of the abominable disorders amongst us, calling all the women whores and the men rogues in the playhouses—throwing candles and links—calling my Lord Sunderland traitor, but in good company; the Duke, rascal; and all ended in 'God bless his Highness the Duke of Monmouth. We will be for him against all the world.' I am told they may be fined a great deal if they are prosecuted. Two of these are knights of shires, Sir Scroope How, and my Lord Wharton's eldest son; the only sufferer yet is Porter. * * His majesty and his City of London are upon very good terms. When he supped this week at the Mayor's, the people showed as much of affection and duty as the expressions at such a time could be. The Lady Mayoress sat next to the King, all over scarlet and ermine, and half over diamonds. The Aldermen drank the King's health over and over upon their knees, and wished all hanged and damned that would not serve him with their lives and fortunes. They attended him to Whitehall at two o'clock in the morning; they would not trust him with his guards, who were all drunk, but brought some of their own, and they all went merry out of the King's cellar. The next day they came in a full body, to give both the King and Duke thanks for the honour they had done them. The Mayor is now as well affected as anybody, and was as ill."

The following is from the Diary:—

"Monsieur Campricht, dining here, told me of a Doctor who undertakes to get gold out of the sand of the sea. He is of Spire; his name is Doctor Becker. The first experiment was made before the Pensioner at Haarlem, and some other of the States; then they made the report of it, and they think it feasible, and have agreed to give him 50,000 crowns, and two in the hundred of all he makes; he undertakes that the profit shall be a hundred in a hundred; next week the experiment is to be made at the house for casting of cannon. The States that saw the experiment are sworn to secrecy. In April he proposed this. Mr. Rockwood thinks he is a cheat: he hath had thoughts of going into England; he is as poor as other chymists use to be."

A Manual of Gold and Silver Coins of all Nations, struck within the Past Century. By Jacob R. Eckfeldt and William E. Du Bois, Assayers of the Mint of the United States. 4to. Philadelphia, Wiley & Putnam.

Various causes combine to render a new work like the present necessary once in about every twenty years. While some states disappear from the list of independent nations, others are rising into existence, or passing under the rule of new dynasties; and in many of those countries which undergo neither national nor territorial mutation, alterations from time to time take place in the denominations or standard of the currency. Thus, the 'Traité des Monnaies' of M. de Bonneville, in 1806, and Dr.

Digitized by Google

Kelly's 'Universal Cambist,' the last edition of which appeared in 1821, have now become, in a great measure, useless; and Messrs. Eckfeldt and Du Bois, who hold the office of Assayers in the Mint of the United States, have, in consequence, undertaken the laborious task of giving to the commercial world this new guide to their monetary transactions.

The work consists of six divisions, or chapters. The first briefly explains the general and well-known principles of coinage, and the reasons which have in all ages led to the use of gold, silver, and copper, for that purpose. The next chapter, which forms the bulk of the volume, details at length the systems of coinage of various nations; giving the order of succession in each, with such historical facts as bear upon the metallic currency, the legal standards, the annual production of the precious metals, if any, and tables of the gold and silver coins: these tables specify the denominations and dates of the coins, the reign or government under which they were struck, with their weight, fineness, and value, according to averages obtained by operations upon (in most cases) large quantities of pieces taken in fair condition out of actual circulation. The third chapter treats of gold and silver bullion, and gives much useful information on the different, and sometimes curiously fraudulent, forms in which the precious metals find their way to the Mint of the United States. Chapter 4. is devoted to the consideration of counterfeit coins, and of the various tests, sensible, mechanical, and chemical, for distinguishing them from the true. Chapter 5. explains the method of testing the fineness of the precious metals, and especially gold, by their specific gravities, and contains an elaborate table of the specific gravities of gold and silver at different grades of fineness, and variously alloyed. The last division consists of sixteen plates of coins of various countries, with ample descriptions. There is, besides, an appendix, containing a variety of useful tables on the statistics of coinage.

From this summary of the contents of the work, it will be seen that it is intended for the merchant and bullion dealer, rather than for the numismatist. The cabinets of our collectors are almost exclusively confined to coins of this country and classical coins. Few persons collect the coins of the mediæval or modern European states, and fewer still those of the Transatlantic republics; indeed, the late Provost of Eton, Dr. Goodall, was the only person whom we ever knew to make any extensive collection of specimens of the latter description; and at his death they were all consigned to the crucible, being worth, in this country, nothing beyond their intrinsic value. The poverty of the design is in general exceeded only by the greater poverty of execution; hence the coins treated of in this work, in no case extending to a date much more remote than a century ago, are little known in England, except in the character of bullion.

We have naturally turned to the notice of British coins, as being the part of the subject most familiar to us. The list of denominations, from the reign of George I., given at page 38, comprises, we presume, only such as the authors have had the opportunity of assaying, for it is far from complete. For instance, the shilling is the only coin of George I. there mentioned, whereas he also struck crowns, half-crowns, and sixpences of various dates. Neither are the crowns of George II. and George III. specified, and yet these pieces are of such common occurrence, that it is difficult to suppose that not one of them should have come under the operation of the Assay Office of the United States Mint. The note at page 39 states, that the coins called *Maunday money*, which are struck for distribution in the royal Easter alms, consist of pieces of three-pence, two-pence, three-halfpence, and one penny. This is an error. The denominations really are, four-pence, three-pence, two-pence, and one penny. The three-halfpenny piece, of similar type, was struck for colonial circulation, and a comparison of the reverses of the Maunday and common circulating groat will show the difference of the two pieces.

Trifling inaccuracies of this kind, the difficulty of avoiding which can be estimated only by those who have endeavoured to form an accurate list of every variety of coin even in their own country, will not detract from the real utility of the work. It appears to be, on the whole, ably and carefully compiled; and although it addresses itself, as we have already said, chiefly to commercial men, it contains much matter of general interest.

Songs and Ballads for the People. By the Rev. John M. Neale, B.A. of Trinity College, Cambridge. Burns.

"Until discipline be restored again, which is much to be desired, it is thought good" that songs should come to the aid of sermons, and that a wholesale denouncement of wrath against irreverent dissenters, should assume the form of a ballad. The little *brochure* before us is but a specimen of what is intended; in Mr. John M. Neale's forthcoming volume, we suppose that other sacred things will be set to the tune of Lillibullero, Sterne having introduced Uncle Toby as whistling that tune as a proper accompaniment to Ernulfus's form of excommunication, "Doctor Slop with his light division of curses moving under him like a running bass;" grave matters will be accommodated to airs "admitting of no variations;" and Gunpowder Treason will be fitted to the music of the incantation scene in 'Der Freischutz.' Such a task is well worthy of the Rev. John M. Neale, and we proceed to exhibit proofs of his competency to effect not only this but much more. The first song personifies the Church of England asserting for herself that she alone has the privilege of teaching:—

The true old Church of England!
She alone hath power to teach,
'Tis presumption in Dissenters
When they pretend to preach.
They might take away Her churches,
They might take Her lands away,
But she would be the true Church,
And base intruders they.

"Purchasers are requested to look for the Rev. John M. Neale's signature on the label, for no other is genuine." There is some little confusion in the stanza between the personified abstract Church and the edifice, but this is remedied as we get on.

God bless the Church of England!
The good, the true, the brave!
She baptis'd us in our cradle,
She shall bear us to our grave.

Admire the appropriate selection of epithets: she is a "good" old lady, she is "true," and she is "brave." In the name of common sense and the Rev. John M. Neale, what can you want more? We do not like the imperative *shall* in the last line, seeing that the said Church seems to carry as much on its back (in the Rev. M. Neale) as it can well bear already.

The second ballad is a fierce onslaught on the Teetotallers; they are compared to boys permitted to play in their father's orchard on condition of not pulling the fruit:—

Says Jack, "Oh! no, father, but don't you mistake,
We won't touch the fruit, *but it's not for your sake;*
It's because WE'VE AGREED not an apple to pick,"
D'ye think I should thank him, or give him the stick?

"Give him the stick by all means! Only think of the naughty varlet using his reason to discover how he could best obey his father's precept!" But in his haste to chastize the Teetotallers, Mr. Neale has fallen foul of the Church Catechism:—

There is but *one* vow God commands us to make
When we first are baptiz'd, which we never must break,
So may those who make new ones be left in the lurch,
There's but one Temperance Union, and that is the Church.

The third paragraph of our Catechism is, "What did your god-fathers and god-mothers then for you? A. They did promise and vow *three* things in my name," &c. The similarity between the Church and a Temperance Union is left unexplained, and we shall not presume to unravel the mystery.

We have two answers to the question, "Why don't you go to meeting?" one by a mother and one by a child; the latter is chiefly remarkable for its falsification of Scripture,—

And Saul's sad end might make us wise,
Whom God in anger slew,
Because he offered sacrifice,
Which only priests might do.

It would be well if persons, who use Scripture illustrations, previously took the trouble of verifying the facts; they too often, as in this instance, exhibit only "just enough of learning to misquote." The child is made to conclude his profession of attachment to the Church in these words,—

'Tis there I love His name to bless,
And there to hear His word:
How can I do this wickedness
And sin against the Lord?

Passing over a song on 'Beating Bounds,' which transgresses all bounds of decency and common sense, we come to an attack on the system of pews, containing the following strange piece of historical information:—

'Twas a humble old custom to kneel side by side,
But pews came at first of contention and pride,
And those wicked men who invented the thing
They pull'd down the churches and murder'd their king.

The only answer to this nonsense is, that the system of pews was introduced into the English churches before the Puritans existed as a party. Close to this historical blunder we find the following astounding declaration:—

I know that Church-rates are a debt
To God Almighty due,
And how dares any Christian man
Call them a hardship too?

We will not waste words in refuting such absurdity. Let us turn to the Village Politicians:—

They would fain do away with the corn laws, and think
It would cheapen provisions, their meat and their drink,
They forget that their wages would equally sink,
Which nobody can deny.

But let us go on:—

All the care that I take for the State is to pray
My best for the Church and the Queen every day,—
And I know nothing more, and I hope never may,
Which nobody can deny.

We readily believe the author's candid confession, that "he knows nothing more," and there is every probability of his pious wish to continue in ignorance being very amply gratified.

We can copy no more of this trash. It was not for the mere sport of "breaking a butterfly upon a wheel" that we noticed the work at all, but pains have been taken to circulate it, and to introduce it into the cottages and lodgings of the poor. It is advertised as a tract for distribution, and is brought forward under the auspices of a party; circumstances have therefore invested it with more importance than is usually possessed by pestiferous nonsense, and while we laugh at its absurdity we could almost weep at the evidence it affords of a spirit of bigotry and intolerance existing in our age and nation, which would have disgraced the most barbarous land in Europe during the night of the Middle Ages.

To remonstrate with the author would be idle; he clearly is destitute of the materials on which reason and argument could work, and therefore all human means must fail to convince him of his errors, and turn him from the perversity of

Digitized by Google

his proceedings. But he has superiors, and right reverend rulers and defenders of the Church, who we are sure would disavow the sentiments here set forth as specimens of clerical teaching: and at a moment when a claim is made for placing the direction of secular education under the hierarchy, it is the bounden duty of that body to show, that the education which they will bestow differs essentially from the teaching of the Rev. John M. Neale. They are under a moral obligation to show they will not class "Baptists, Chartists, Infidels, Wesleyans, Independents" in one category—that they will not tell the yeomanry of England "they dare not leave their Church"—that they will not identify dissent with "sedition and rebellion"—and that they do not intend to arrogate to Lambeth the exploded tyranny of the Vatican.

Letters from the Pyrenees. By T. Clifton Paris.
[Second Notice.]

WE last week spoke of these letters as full of temptation for the adventurous traveller. We shall now offer justification of the character then given, in the shape of two mountain rambles, which we will narrate as completely as time and space permit. The first is an excursion from Gavarnie to the Brèche de Roland, which is "generally considered the most difficult adventure in the Pyrenees":—

"I started, (says Mr. Paris,) by nine o'clock in the morning, full of confidence for the exploit. In an hour the arena of the Marboré was gained; and I stood in the middle of the *Oule* looking up at the black precipices that rise so grimly around, and which to the careless observer appear as perfectly inaccessible; but there is a spot on the left hand where the traveller can climb aloft with the assistance of his hands and feet and a steady head. Of this I had been informed, and on my former visit to Gavarnie I felt almost certain I had discovered its locality. I accordingly made straight for this place by crossing the torrent, which was no easy matter, and then working my way up an inclined plane of *débris* to the foot of the precipice. My conjecture proved correct—this was evidently the place I had sought, by the worn aspect of the rocks, so I applied myself to the task and ascended. This *rock-ladder* is one of the most curious features in the ascent to the Brèche de Roland: in the gigantic sweep of the Circus it is the only spot where it is possible to scale the precipice, and the traveller is enabled to invade the higher regions by grasping projections and ledges which are afforded by the crumbling strata, and following exactly in the footsteps that have been imprinted on the rock by former explorers, or by the *contrabandistas* who frequently pass by this difficult route into Spain. Although sufficiently abrupt, it presents no danger and little difficulty to a person accustomed to the mountains; but as I went aloft I rested every now and then to look down into the huge amphitheatre, or to gaze in wonder at the cascade and glaciers, and I should recommend every traveller to brave these heights, should he wish to view this bold-leaping torrent to its greatest advantage. Its columns of water are precipitated like rushing rockets or broad-headed arrows, dispersing in spray before they gain half the descent, when they again assemble on a jutting ledge and fall once more in a cloud of watery spears towards the *Oule* of the Circus."

After a scramble of two hours and a half, Mr. Paris "reached a kind of platform immediately below the glacier and summit":—

"What a stern wilderness here opened upon me,—a region of ice, torn and rent into chasms, and a series of black precipices and ranges of decomposing rocks that crumbled beneath the touch! In one place a series of slates rose in bristling ranks like so many razors, to fall upon which would have been certain mutilation, and on the right stood a jagged ridge, wonderfully fissured in the direction of its highly inclined strata, from the hollows of which I summoned innumerable echoes, and so repeatedly were my yellings bandied about, that I verily believe they would have scared a pack of wolves from the mountain; demoniacal laughter rang around me on all sides, and groans appeared to issue from the deep *crevasses* of the glacier: nor was the breathless silence that succeeded scarcely less appalling, and I was fain for mere companionship again and again to disturb it. Having reached the foot of the glacier I now turned up its side, the rock often giving way under my weight and lacerating my hands by the roughness of its surface; but however distressing this might be, it was with reluctance that I left it for a yielding mass of loose rubbish, where it was a much more difficult task to keep my legs, and where nothing lay below me but a smooth snow-field that sloped towards precipices. However, having passed this unpleasant spot, and after a climb of three hours and a half from the Circus, I reached a place where I must repose a few minutes, in order to give you a notion of the wonderful sight that there met my view,—the far-famed Brèche de Roland. Along the summit of the Marboré mountain, which forms a prominent feature in the great ridge of the Pyrenees, runs a wall of rock from 300 to 600 feet in height, dividing France from Spain, in the centre of which appears an enormous gap or *brèche* about 300 feet wide, of such regularity as to resemble a portal between the two kingdoms, though it gives ingress and egress to little else than the drifting snow and howling wind. This ice-bound gateway is the Brèche de Roland. * * As a pass it is but seldom used, except by the smugglers who care not for its difficulties, or by the few travellers who ascend Mont Perdu. The danger lies on the French side, and I had now arrived at the point where it begins; a smooth glacier that slopes to the distant circus is to be crossed. This dizzy labour is generally effected by the traveller with a guide on each side, who have their feet armed with *crampons*, and are furnished with hatchets in order to notch the slippery surface. I essayed the snow with my feet, looked at the stupendous gateway so provokingly near, and then down the huge slope of the smooth ice, which went down and down, and grew steeper and steeper, until it was lost in the hideous precipices of the Circus. The sight was too appalling: I could not summon sufficient resolution to attempt the passage, which was in distance about a quarter of a mile, and wisely, I think, abandoned it, considering that I was without *crampons* or any knowledge of the proper mode of effecting it. To understand all its terrors the place must be seen; once slip, and you are gone for ever past all human aid: the death is too frightful for contemplation. The guides tell a story of an unhappy traveller who perished a short time ago in the passage of this glacier. He was crossing it with every possible precaution, when his trousers by some unaccountable accident became entangled with his *crampons*—he lost his balance, and in vain attempted to recover it, since there was nothing at which he could grasp to save himself—in an instant he shot down the sloping ice with the rapidity of a thunderbolt; while his horrified companions watched his awful career to those fearful precipices where he must have been dashed to pieces, and where of course all search for his remains would have been fruitless. When my friend O— ascended, the whole region was covered with fresh-fallen snow, in which he had traced the course of a gigantic set of paws, which the guide declared were those of a bear: the passage of the glacier under such circumstances was of course comparatively easy. I also found the frozen mass coated with a layer of snow, with the exception of a portion in the middle, where the blue ice was laid bare and glittered in the sun: had it not been for this, I think I might have crossed to the Brèche with safety."

The "Fausse Brèche," another gap in the rocks, was, however, accessible:—

"This giddy path to it formed as it were the coping of a precipice that fell perpendicularly some thousand feet to the ice-beds of the *Taillon*, the most western limb of the Marboré, and as I walked along it I could stretch my right hand over the abyss, and touch with my left a wall of snow that constituted the crest of the great glacier I had been skirting. I was indulging in a hope of reaching the Fausse Brèche by this dizzy route, when my steps were arrested by the abrupt termination of the ledge, and I saw to my disappointment that from this quarter it was inaccessible. I therefore sat down for some time to enjoy the pleasures of so exalted a position, and to look down into the gulf at the dark blue rents and chasms in the ice, and to search the wilderness for *isards*; whilst I listened to the strange noises in the restless glacier, or to the dull sound of falling rocks or snow which alone disturbed the air. I also made a sketch of the Fausse Brèche, while an eagle soaring above me appeared to be taking considerable interest in my operations; but the cold was so intense and my hands became so benumbed that it was with great difficulty I could accomplish it. At this altitude it was Siberian winter, whilst the regions below were reeking from the heats of summer, as the hot haze that enveloped the view sufficiently testified. On retracing my steps I found a difficulty in my path that I had not anticipated: on my way hither I had crossed a chasm where the ledge had been broken down, by keeping a tight hold on the inequalities of the rock: on returning to this awkward place, I found that the surface down which I must now lower myself, with a precipice upwards of a thousand feet immediately beneath me, had very few projections that could render me assistance, and even those upon trial yielded to my weight. I think I must have been a quarter of an hour in planning different positions for my hands and attitudes for my body, before I slid down to the narrow glacis that sloped to the precipice; but the rocks held firm, and I soon regained the ledge on the opposite side in safety. This was one of the most disagreeable places I passed on that day; the gulf being so deep, and the slope to it so inexpressibly terrific. I had left my high perch near the Fausse Brèche at five o'clock, and I reached the foot of the glacier with tolerable ease, but there I was rather startled by the view that presented itself, and I felt the imprudence of having started so late. It was really fearful to look upon the long ridges of inclined strata, running down steeper and steeper towards the gulf of the Circus, with the sudden conviction of the extreme difficulty of finding the right direction to that exact spot at which I ascended, and by which alone an exit from the mountain could be accomplished; for from the puzzling formation of the strata, it is almost impossible for the stranger to retrace his steps with certainty. I accordingly found that I repeatedly went wrong, and was obliged to scramble back again over slopes ending in precipices, and as the daylight was rapidly fading, these successive failures at length began seriously to alarm me. Luckily, however, I espied at some distance a Spanish shepherd gathering together his flock, and hurrying towards him I made a signal that he should point out the right direction, which he immediately did, and I then proceeded with fresh assurance of finding my way. But I was doomed to further disappointments—the fearful labyrinth was far from being unravelled—again and again did I find myself on the brink of the gulf: but the sun was down, and I had already left the shepherd far above me; so, growing desperate at the rapid approach of night whilst I was in so dangerous a position, I clambered down perpendicular rocks at the most imminent hazard, for a yielding ledge or an incautious step would have shot me down to the regions below like an avalanche. But this rash descent was fruitless—I could not hit the track—darkness was falling rapidly upon the mountains, and I was surrounded by the most hideous precipices without knowing whether to go to the right or to the left. My situation at that moment was certainly not enviable. I looked around at the distant ridges growing momentarily more indistinct, and searched about for some projecting crag that might afford me shelter and protection for the night; but in so doing my eye suddenly recognized a riven rock as an acquaintance I had passed in the morning: no chance of escaping from these dismal heights was to be neglected—I made another attempt, and happily descended into the Circus; but down rocks with my hands and feet and in perfect darkness."

So much for one autumn day's pleasure!—We have promised our readers another adventure: the starting-point of which was the airy Baths of Panticosa:—

"After having idled away four days at this place, taking 'mine ease in mine inn,' I and my friend broke cover on the 25th, and started on an excursion that proved, as you will presently hear, no mean adventure: but before we set out on this wild journey, I must tell you that we had been informed by the

Digitized by Google

Master of the Baths there were two ways of reaching Bujarelo besides that which we had pursued; one that could be traversed by horses, although according to Michel, most execrable—a journey of eight hours by the village of Panticosa; the other, a scramble of five hours, without any track, passing across the wilderness of the highest Pyrenean range. We were very anxious to see, as well as to ascertain the existence of these two passes, as they must necessarily traverse sublime scenery, and one of them was the road we ought to have taken from Bujarelo. I must moreover tell you that the weather during our stay at Panticosa had not only changed from sunshine to hail and rain, but from extreme heat to that of cold; insomuch that the great wood fire of the kitchen was the only place where we could abide in our very light coats with any comfort; the torrents had swollen to twice their usual bulk—had carried away the little bridge of pines, and overflowed the lake so as to render the mule-path impassable; besides which, the floods of rain had inundated the valleys, and fresh-fallen snow had covered the mountains in every direction. Under such inauspicious circumstances we started on the morning of the 25th, for Bujarelo, having been instructed to follow a torrent that came down to the Baths from an amazing height and great distance in one continuous fall, until we reached a lake, and then to search for another stream flowing in the opposite direction, which, as was said, would in due time conduct us to the Valley of Bujarelo. The morning was tolerable, although clouds were sweeping in various directions and the cold was severe; yet it appeared brilliant after the turbulent sky we had seen for several days: accordingly we bade a temporary adieu to Michel, who cheeringly hinted at the impossibility of our finding the way, it being our intention to sleep that night at Bujarelo, and to return by the Panticosa road on the morrow."

"Climbing bodily upwards to a vast height by the course of the torrent," and the passage thereof, are held in little esteem as feats by Mr. Paris:—

"It was not long," he continues, "before a real difficulty occurred—the stream divided; but we fortunately determined on following the one on the left, which after another laborious ascent conducted us to the lake. The next point was to discover the stream we were to follow to Bujarelo: beyond rose a bare ridge, apparently inaccessible—the stream of course must be on the other side of it. We clambered up the mountain and reached another lake, which was of considerable size, and from this point we espied a gap in the ridge, which we determined to gain, and accordingly waded our way, slowly enough, ankle-deep, and sometimes up to our knees in snow. On nearing the summit some dangerous places had to be crossed—sloping rocks that lay concealed under the snow, smooth and highly inclined, and many narrow escapes had we from being precipitated. But clouds came now sweeping up from below and down from above, and before we could top the ridge everything beyond a limited circle was concealed from us. At length, however, we stood in the gap, shivering with the cold, that was intense, and scarcely able to withstand the force of the wind: the mist driving through the opening seemed to penetrate my very bones; whilst all in front, except a chaotic mass of rocks and a bed of snow that lay immediately beneath, was quite invisible. Such a state of things appeared sufficiently cheerless; the chance of finding our way to Bujarelo very unlikely, and we deliberated as to the prudence of a further progress. Upon consulting our watches we found there was just time enough to get back to our comfortable quarters before nightfall: we had a very faint idea of the direction to be taken to Bujarelo; the mountain wilderness was wrapped in darkness, and we were both cold and hungry."

It is only faint hearts, however, who will turn back:—

"A bright gleam of sunshine which chased away the mists, and showed us far distant on the right a green mountain, and a portion of sky more brilliantly blue than the fairest sapphire. 'Allons—en avant,' we both exclaimed, and on we went with renewed spirits. The mountain we had seen was at a very considerable distance, but we calculated upon finding some shepherd's hut under which we might pass the night should we fail in reaching Bujarelo. There was a kind of gap in the mass of rocks below in the same direction, to which my companion thought we had better descend: I differed upon this point, and gave it as my opinion that the proper route lay in front, over the ridges of snow: I yielded, however, and we forthwith began a descent more difficult than anything we had yet encountered; for although the gap was not more than two hundred feet distant from us, the passage to it occupied no less than half an hour; after which we again descended, and reached a hollow scored by the tracks of sheep, and running down towards the desired green mountain, which to our snow-blinded eyes appeared an Eden. We therefore went on in the full confidence that all our perils were over: judge then of our disappointment when we observed the slope becoming steeper and steeper, and finding it, after an hour's walking from the dangerous descent above, to end in a system of hideous precipices. What was now to be done? We gazed silently at each other, and then cast our eyes below at the torrent, which dashed more wildly along as its bed grew steeper, until it fell through a rocky cleft, breaking into a series of cascades, and was finally lost in the abyss. It was evident that we were fairly in for a night among the crags and precipices, unless we could make our way below; wolves too were in the mountains, the cold was intense, and our clothes were of the very lightest material. These were very potent reasons for deciding that the descent, however perilous, must be attempted, and we accordingly looked about for the way by which it might possibly be accomplished. There was a cleft in the ridge to the left, towards which we observed a sheep-track, and we made straightway for it: nothing, however, was gained by this,—the same hideous slopes ran down towards the valley, which now became visible far below, and we heard the busy murmur of its torrent, which looked a silver thread in the distance. We passed along the side of this infernal ridge, regarding with longing eyes the soft green mountain opposite, from which arose the tinkling of cattle bells, although the animals themselves were not distinguishable; but the night was coming on rapidly, so it behoved us to be prompt and decisive; we therefore determined at once to lower ourselves down the slope until it might terminate in a precipice, when we trusted some way would present itself of attaining the valley. Down this we went with our hands and feet, my companion first, and I close upon his head, steadying ourselves by tufts of wiry grass, and perching upon small projections in the rock; dizzy work I can assure you, requiring no little nerve and caution; the different points of rest had to be felt, and their firmness ascertained before we ventured to trust our weight upon them—a slip would have been inevitable destruction. The thought occurred to me, and I afterwards learnt that I had shared it in common with my companion, that if one had gone, how dreadful would have been the situation of the other; for no human aid could have been obtained for many mountain miles. Lower and lower we went, and more difficult at every step became the descent; the ledges grew smaller, the mountain side more smooth and perpendicular, the tufts of grass more rare; at length we reached so frightful a pitch of the precipice that I shouted out to my companion to return, for it was madness to attempt any further progress. He, however, went two or three steps lower, and then called out to me for assistance,—exclaiming that he could neither go downwards nor get back, nor could he hold on many minutes! Here was an awful moment! it was utterly impossible for me to render him the slightest aid, and his destruction appeared inevitable; a precipice of several hundred feet was below, and then a mass of sloping granite rocks, highly inclined, ran down to the torrent, upon which, unless he could recover his step, he must be hurled in a few short moments. Providence, however, ordained it otherwise; he regained the presence of mind he had for the moment lost, and by a desperate effort got back to a place of comparative safety. We now determined to ascend, although that was no easy matter, and to find, if possible, some rocks that might afford us shelter for the night. It was, however, most provoking to give up our enterprise after having achieved so much, and we had not scrambled upwards more than a few yards, when I espied a place that seemed to promise a more practicable descent, so we determined once more to attempt it. O— as before went first, and I followed close behind. There was only one part that seemed utterly impassable; but this my companion achieved by turning round in a very adroit manner, changing hands, and giving himself an indescribable twist,—most perilous it must be confessed. Upon my reaching it I felt I could not succeed, whilst it was equally impossible for my companion to return; I therefore determined at all events to attempt it, and after resting a few moments to collect all my energies, I succeeded in the manœuvre, and we were in a few moments some way below. We had now passed the worst, and were soon by the side of a stream which had been in our neighbourhood all the way, tumbling down the rock in a continuous fall; into its black and slippery bed we slided, regardless of the water that fell upon us, and were shortly on the *débris* congratulating each other upon our escape. As day faded into night we reached the valley, and the long-coveted green mountain was opposite, but still unattainable, for a raging torrent rolled at the foot of it, which it was impossible to pass. We found ourselves in a *cul-de-sac* from which we could not escape without the light of day,—one of those bare Spanish watercourses without a tree or shrub that could afford shelter. A little lower down the mountains closed in upon it, merely leaving a narrow channel for the stream, and in the other direction the valley rose steeply to distant heights covered with snow. We stood still for a few moments to contemplate our position, when observing two shepherds high up on the opposite side, we shouted valiantly at the top of our voices; but the noise of the rushing waters drowned our efforts, and they vanished in the gloom. Nothing now was to be done but to make the best arrangements we could for passing the night: we had no food with us and were literally famishing; the air was severely cold, and nothing could be more threatening than the aspect of the clouds. To build up some sort of protection was of course our first determination; and after searching about we found a rock that we thought would serve well enough for a back to our proposed dwelling: we accordingly set to work about half-past eight collecting the great stones of the torrent, and by half-past ten I had built up a wall about five feet high on my side, but that of my companion's had not yet attained so great an elevation. We were very weary, and our hands were cut and bruised by the granite, but the labour served well to pass the time and to keep us warm. The clouds, however, that had been long threatening, now broke into rain, and drove us to our wretched walls; but they yielded not the slightest shelter, there being no roof or front to the dwelling, and the rain came from a quarter the very opposite to that which we had expected. We sat gloomily down on our two stone seats with a prospect more wretched than can be well imagined. Happily the rain passed off before we were completely wet, and the moon shone forth brilliantly, though the sky becoming more clear increased the intensity of the cold."

We must refer the reader to Mr. Paris's wood-cut, showing the situation in which he and O— were fain to pass the night. By good luck they had reserved a couple of cigars to cheer them, else might they have absolutely perished of cold and hunger; and never was morning longer in coming, than after their wretched vigil:—

"At length, however, at five o'clock the stars grew dim and faded, the green mountain loomed gradually through the darkness, and we arose with delight, although in a dreadful state from cold and fasting. We looked at the precipices we had descended in astonishment and awe, as we became fully impressed with the extent of the danger we had undergone, and leaving our dwelling, the scene of so much suffering, we started up the valley in order to seek a passage over the torrent: it was not, however, to be found, and we continued our way until we came in sight of a flock of sheep and a shepherd's hut sheltered by an impending precipice. I think I never beheld a more savage-looking fellow than the Spaniard who came out to meet us, or a face rendered more hideous by matted locks and unshaven beard: but his scowling physiognomy proved the fallacious outside of a civil

Digitized by Google

interior; for he answered our questions and directed us with all proper *complaisance*, telling us we had yesterday gone wrong from the summit of the ridge, by turning down to the right instead of keeping along the snows as I had proposed, and it seemed we had descended into the road by which we had intended returning, which indeed passed along the green mountain we had been so anxious to reach. Tired as we were, we yet resolved to follow up this road towards Bujarelo as far as the crest of the ridge in order to ascertain its direction, when we intended returning by the same path to the village of Panticosa. The scenery around us was amazingly fine; we had left the granite and were now among mountains of a different character, the brilliant colours and grotesque figures of which called forth admiration, even from such weary wanderers as ourselves. On our way back there was an extraordinary sight that met our view: high above on the ridge from which we had made our frightful descent, there appeared the walls and towers of a castle of considerable size, a true *Châteaux en Espagne*, for had we not been assured of the impossibility of any human structure standing there, we should have supposed it to have been the stronghold of some Spanish chieftain:

> A vision strange such towers to see
> Sculptured and wrought so gorgeously
> Where human art could never be.

It proved a long weary way to Panticosa, and the descent seemed interminable. We halted in passing over the well-known green mountain to look down once more into the wild valley far below our feet, and upon our little hut that was plainly visible: we sat down for a short time, but such was my fatigue that I was in a few minutes asleep, and it was with difficulty my companion awoke me at the approach of a Spaniard. He was a herdsman: we pointed out to him the spot where we had descended—he shook his head and said it was impossible, for no hunter could pass down that precipice: we assured him of the fact, and showed him our wall of stones where we had passed the night, and then our bruised hands—he seemed astonished and looked after us in perfect wonder as we continued our way to Panticosa, which we reached in due time, and then bent our steps northwards to the Baths; and at two o'clock, after fasting seven and twenty hours, and walking that day for nine hours, we happily rounded the last corner of the road, and beheld the long-desired posada and its staring peasants pacing to and fro upon its terrace as we had left them."

We have not room for a word more; and our opinion of the book is best indicated by the copiousness of our extracts.

OUR LIBRARY TABLE.

The Maid of the Hallig, or the Unfortunate Islanders; a Narrative founded on Fact, by the Rev. J. C. Biernatski; from the German, by Samuel Jackson.—This last of the religious works, for which we are indebted to the translator of Jung Stilling's Memoirs, is by no means the least interesting of the series. As a narrative, it is written on the established pattern, that is to say, all the wrong done is done by "the world's people;" all the trial borne, all the self-sacrifice accomplished, is endured and wrought out by those trained according to the training approved by the author: and hence his tale, though amiably meant, is deficient as a moral lesson. Still, it is clear of the rancour which too largely embitters our indigenous literature of this class, while, as a picture of scenery and manners, its value is not small. The Halligs, it may be as well to remind the reader, are small islands on the west coast of the Duchy of Sleswick, liable to tempestuous encroachments from the sea, and whose inhabitants, therefore, may be regarded as in a perpetual state of siege. The story hinges upon a shipwreck, in the course of which the affections of a home-returning islander are seduced from his betrothed bride, and an inundation (administered somewhat too pointedly, after the repulsive fashion of *a judgment*,) in which retribution overtakes the inconstant man. The tale possesses the charm of individuality in such perfection, that we cannot let it go abroad without the caution we have intimated.

The Baroness.—This is an evangelical novel, apparently intended to counteract Mrs. Trollope's 'Vicar of Wrexhill.' As a story, it is contemptible; the plot is absurd, the characters ill-supported, and the incidents unnatural; as a religious work, it is still worse; it substitutes asceticism for piety, discards charity from the Christian creed, and inculcates a Pharisaic contempt for those who do not adhere to every tittle of the rules which it has pleased the author to set up as a standard of perfection. Report attributes the authorship to a lady, but we are inclined to doubt the fact; for there are occasional instances of coarseness and vulgarity which we should be sorry to believe could have been written by a female. The work, however, is so certain of speedy oblivion, that the authorship is a matter of very little moment.

Comic Nursery Tales—Beauty and the Beast, by Albert Smith.—That Mr. Albert Smith furnishes some of the ingredients for *Punch*, we have his own 'Wassail Bowl' in evidence. That he follows occasionally in the track of 'Boz,' the pages of *Bentley's Miscellany* bear monthly witness, Mr. Titus Ledbury being a character, which is more than we dare say of most of the fictitious personages of the year. That Mr. Albert Smith can "enchant the ear" as a comic song-writer, Mr. John Parry's audiences know. Here he takes ampler room, as one of those burlesque versifiers of the dear old faëry tales, who tempt us at once to laugh and to be angry. His task is executed in the vein of Mr. Richard Swiveller, as every page will prove, since the poorest contains its parody or snatch of song: some, we must add, *snatched* from the masquerade warehouses of other comic rhymesters, Mr. Planché among the number. There is more fun in these verses than in the illustrations to which they serve as text. The artist tries hard to be whimsical, but the poetry of the legend is too strong for him, and he has fallen into a bad medium 'twixt farce and sentiment.

Tintern, Stonehenge, &c., by Stephen Prentis, M.A.—The hoof of our author's Pegasus does, now and then, strike out a spark of the true fire—but the rider has him not well in hand. The steed, like all of its divine breed, needs no spurring; but if Mr. Prentis continue to ride without reins, he will never be carried to Parnassus. Does he expect to meet with many readers who can find breath to follow him through eight entire Spenserian stanzas (72 lines!) of a single sentence, without reaching a period, in all that space, at which they may pull up for a moment's pause? But he lets his muse play wilder pranks than even this. What think our readers of parentheses, outgrowing the dimensions of the sentences in which they are set, in the proportion of about fifty to one;—cut off from the line out of which they grew by a mere comma,—yet taking the deliberate shape of formal episodes, that involve in themselves every variety of punctuation, up to the full-stop and the sign of ejaculation—and then returning into their original theme, with a comma again, as unconcernedly as if the author had, all the time, been performing a mere common evolution of syntax! "*As though*," says Mr. Prentis, in his poem of *Stonehenge*—speaking of that one of many hypotheses as to the origin of the mysterious circle, which supposes it to be antediluvian—

> *As though*, when Earth's last thousands strove to climb
> Her last uncovered mountain—

and then proceeds through nearly one hundred lines of interpolation, actually changing his style into the narrative form, with many a full pause between, and not recovering himself from this remarkable digression, till he has gone through the entire phenomena of the deluge and swept away a world—and then, coming easily back from his excursion, by the aid of a comma—thus,

> *As though* e'en thou, I say, could'st then have kept thy station!

Really, this sort of licence betrays a want of arrangement and self-command sure to scare away readers. The loiterers along the pleasant paths of the muses will get, as well as they can, out of the way of a capricious steed like this, which may bolt out of the highway, at any moment, and fairly gallop over them. As we have said, the author has qualities which may make it worth his while to break in his Pegasus, and improve his own riding. There are some stanzas, at the close of his volume, which have much tenderness and beauty; but are injured by the same defect:—in twenty-seven verses, there are only three full periods.

Figures of Molluscous Animals, etched for the use of Students, by Maria E. Gray.—This work, which through some accident escaped our notice at the time of publication, seems an exceedingly useful and instructive one. The new feature is the introduction of the molluscous animal as well as the shell, an attempt, we believe, never before made. The Genera are arranged according to the list printed in the "Synopsis of the contents of the British Museum," and the work itself being, in the words of Mr. Gray, on his wife's behalf, "a labour of love," is published at as low a price as possible, in order to place it within the reach of Conchologists of limited means.

The British Archæological Magazine, No. I., edited by T. H. Sealy, Architect.—One of the many manifestations of the increased and increasing attention paid to Archæological inquiries; and so far as such inquiries tend to cultivate and refine the public taste, preserve the beautiful structures of former ages, and ensure their careful restoration, they are most commendable; but experience shows how easily reverence and respect degenerate into superstition; and we have of late read such an amount of childish twaddle with reference to the form and symbols of Middle Age architecture as makes us tremble lest we should ere long have another fanatical outbreak of the Martin Mar-Prelates, under an assumed necessity of putting a stop to idolatry. The work before us, like most of its class, promises to be interesting in its way, and by its local influence to do good, if only by discountenancing the whitewashings and barbarous mutilations which have disfigured so many of our fine old ecclesiastical buildings.

A Hand-Book to Hampton Court, by Felix Summerly, Esq., second edition.—The hand-books of Felix Summerly are all good and useful, pretty and cheap. This second edition however might have been cheaper and equally useful to the general reader had the historical notes and illustrations been omitted. Popular guide-books should be brief. We do not object to Felix Summerly's gossiping and suggestive style; indeed we think it a great merit; it helps people to a pleasant idea, and gives its humanizing moral to inanimate things; but mere antiquarian information is suited for a different class, and we like his guide-books so well that we desire to see them as nearly perfect as possible.

Questions for Examination on Tytler's Elements of History, and Dr. Nares's Continuation, by the Rev. C. Lenny.—Useful for tutors in examining their pupils, or those readers of history who wish to test their memories and ascertain their proficiency.

List of New Books.—Cottage Bible and Family Expositor, by T. Williams, new edit. 3 vols. 8vo. 1*l.* 10*s.* cl.—Proceedings of the London Electrical Society, Sessions 1841-2 and 1842-3, edited by Charles V. Walker, roy. 8vo. 21*s.* cl.—Benthamiana, Select Extracts from Jeremy Bentham's Works, edited by J. Hill Burton, Esq., post 8vo. 9*s.* cl.—The Act to amend the Law for the Registration of Voters, 6 Vict. c. 18, with Notes and copious Index, by M. L. Wells, Esq., 12mo. 2*s.* 6*d.* swd., 3*s.* cl.—The Universal Steam Packet Guide for 1843, 18mo. 2*s.* swd.—The Omnipotency of the Deity, and other Poems, by T. B. Brindley, 3rd edit. 12mo. 4*s.* cl.—A Few Plain Thoughts on Prophecy, by Rev. W. Marsh, D.D., 8vo. 2*s.* swd.—Arundines Cami, by H. Drury, new edit. 8vo. 12*s.* cl.—The Mechanical Euclid, containing the Elements of Mechanics and Hydrostatics, by W. Whewell, B.D. 4th edit. 12mo. 4*s.* 6*d.* swd.—Englishman's Library, Vol. XXV., 'Formby's Visit to the East,' 12mo. 7*s.* cl.—Homely Hints to Sunday School Teachers, 18mo. 1*s.* 6*d.* cl.—Kettlewell's Companion for the Penitent, 18mo. 1*s.* 6*d.* cl.—Christian Ladies' Magazine, Vol. XIX., fc. 8vo. 7*s.*—Litanies and Prayers for Sunday Schools, by J. E. Dalton, B.D., 8vo. 4*s.* cl.—Cheyne on Derangement of the Mind in Connexion with Religion, post 8vo. 7*s.* 6*d.* cl.—A Memoir of the late Dr. Hope, edited by K. Grant, Esq., post 8vo. 7*s.* cl.—A Diary of the Times of Charles the Second, by the Hon. Henry Sidney, edited, with Notes, by R. W. Blencowe, Esq., 2 vols. 8vo. 28*s.* cl.—King Eric and the Outlaws, 3 vols. post 8vo. 31*s.* 6*d.* bds.—Traits and Stories of the Irish Peasantry, by W. Carleton, with Illustrations by Phiz, &c. Vol. I., 8vo. 14*s.* cl.—King Henry the Second, an Historical Drama, by the Author of Essays written during Intervals of Business, 12mo. 6*s.* cl.—Poems, by H. H. Methuen, Esq., B.A., fc. 8vo. 4*s.* 6*d.* cl.—The True Enjoyment of Angling, by H. Phillips, Esq., royal 12mo. 10*s.* 6*d.* cl.—Shawls, Dresses, and Decorations of the Middle Ages, 2 vols. imperial 8vo. 7*l.* 7*s.* cl.; Ditto, large paper, 2 vols. imperial 4to. 18*s.* cl.—The Magazine of Domestic Economy, Vol. I., new series, 8vo. 12*s.* 6*d.* cl.—Legendary Rhymes, and other Poems, by Mary Anne E. Charnock, fc. 8vo. 6*s.* 6*d.* cl.—Rendle on the Tank System of Communicating Heat to Horticultural Structures, fc. 8vo. 5*s.* cl.—A Steam Manual for the British Navy, by W. J. Williams, R.N., 12mo. 2*s.* 6*d.* cl.—Ranke's Turkish and Spanish Empires, translated by Kelly, royal 8vo. 3*s.* swd.—Traditional Nursery Songs of England, with 8 Illustrations, tinted, square, 2*s.* 6*d.* bds.—Cheerful Cherry, or Make the Best of It, by Peter Parley, 18mo. 2*s.* 6*d.* cl.—Persevere and Prosper, or the Siberian Sable Hunter, by Peter Parley, 18mo. 2*s.* 6*d.* cl.—Registration of Voters Act, with copious Index, 12mo. 2*s.* swd.—Drake's Heroes of England, 2nd edit. 12mo. 6*s.* 6*d.* cl.—Herodotus, with English Notes, by Wheeler, 2 vols. post 8vo. 16*s.* cl.

FOREIGN CORRESPONDENCE.

Carlsbad, May.

NOTHING is more difficult than to analyze the general impression made on one by the face of a country. We say, without hesitation, that landscape is completely English, this scene is Italian, and so on—and what do we mean? I have, perhaps, suggested the two most strongly characterized of countries. But between France and Germany—between Spain and Italy—how much is there in common, yet how different the total impression! I was set a questioning myself on this subject, when a very clever, discriminating, German friend of mine said to me, while looking down on an extensive view in this neighbourhood, *Es ist nicht einmal deutsch!* (It is not even German.) Nor is it. It is Bohemian. The general impression made by the scenery of Bohemia, spite of some beautiful features, is gloomy—in parts even, as a master in the art of naming called it, "menacing." Wide sweeps of open arable country, without tree or hedge, and coloured by a pale dingy vegetation, alternate with patches of black pine forest, and, seen from a height, look like the chequers on a chessboard. The whole country is a high and somewhat bleak table-land, the soil often poor-looking, and in parts, as for example between this place and Prague, of a dark red—the most inhospitable-looking piece of earth I ever beheld.

It is almost needless to say, that there are no scattered cottages or farm-houses, since they are among the most characteristic and lovely peculiarities of England, and are rare indeed elsewhere. But the villages along the Rhine are picturesque, and often gay. And the villages in Saxony and Franconia, if neither pretty nor picturesque, are substantial, well built, well kept, durable. The Bohemian villages have more the air of the encampments of a migratory horde, than of the permanent settlements of a long line of cultivators. They are built entirely of wood, roof and all. This, after a time, turns to a cold grey colour, and, unrelieved by any other, is extremely gloomy. There are no inclosures or fences, no gardens,—here and there a few poor birches. Each cottage stands near its neighbour, cold and naked. This, combined with one's knowledge of the perishable nature of the material and the severity of the climate, produces an impression of dreariness and discomfort. There are none of those accompaniments which cluster round an English cottage, and are comprised within the delightful word *homestead*. Burn down these wooden *barraques*, and there would not be a trace left to mark where men had lived and laboured.

This does not apply to the shores of the Elbe, which are beautiful—though still sadder than the joyous Rhine. I can recollect or imagine few spots in the world more completely beautiful than Tetschen, with its lordly castle, its noble woods, its thriving little town, its ever-busy ferry across the broad river, and its charming distant views. The village of Altstadt, lying behind the pleasure-grounds, and intersected by the bounding little streams that turn its mills, is very picturesque. The cottages are built of wood—but with the broad over-hanging roofs and open galleries of a Swiss cottage. But this is no sample of a Bohemian village. Tetschen, in more respects than this, stands pre-eminent; and not only in Bohemia. But the grandeur and the beauty, which peculiarly characterize it, are not of a kind I shall ever attempt to describe: they belong to another region.

Carlsbad and Töplitz are both extremely pretty in different ways; both abound in beautiful walks; and if Carlsbad, with its mountains, its antique air, and its five centuries of unquestioned renown, is more imposing, Töplitz has advantages of its own. In both, Nature has been skilfully aided. Here the hills, which are about as high as those of South Wales, are so heaped about on all sides of the deep and small valley, and so covered with wood, that after walking miles you are often surprised at hearing the town clock strike as if close to your ear, when you imagine yourself in the depth of the wood. Or perhaps it is the *fanfaronnade*—in the more homely German, *das Blasen*, (the blowing of trumpets,)—which, from the top of the old tower of the Rathhaus announces the arrival of bath guests (*Badegäste*). Here, in the green and silent forest, you may—if you are acquainted with the nicely graduated scale on which the salute is regulated, determine whether it is a *hohe*, *höchste*, or *allerhöchste Herrschaft* that is espied descending the long hill; in other words, a humble *Lohnkutsche*, a quiet carriage, extra post, or a stately equipage, with led horses, and the other visible signs of the money of which the good citizens hope to detain a little among them. But, I must say, there is little extortion, and much civility: indeed, after having to deal with the corresponding classes in Dresden and Berlin, where this proposition must be exactly reversed, one feels in heaven. Nothing can be more perfect than the order and decorum enforced by the police, which is rather felt than seen; but this is not all. There is a universal expression of childlike candour and good nature in the faces of the people—especially of the servant-girls, which shows how easy a task their rulers have. Though every house is crowded with strangers, and changes its inmates almost every month, and though the temptations to dishonesty must be frequent and great, yet examples of it are rare. The poor things come from all the country round, to serve during the season, and for such a trifle! This is all they carry back to their poor village for the long dreary winter; yet they are gay, anxious to please, laborious and honest. I confess I stand amazed and humbled before such virtue, as I have often done at home before the virtues of the poor. What a patient, ungrudging, unenvying, temper! What kindness of heart! What constant self-denial! What conscience! The little children are charming. Indeed, all over Germany the babes are a constant subject of wonder and delight to me. One never sees them quarrel. Often and often have I watched groups of poor little children sitting in the dirt, or playing in the streets, and admired for hours the

Digitized by Google

tranquil, gentle, nature of the little things. No blows, no mischievous tricks, no snatching away things from one another, no screaming. This is so striking to anybody who has seen the violence and cruelty of French children, or the overbearing and quarrelsome propensities of English ones, that it is impossible not to recognize an original difference of blood.

Nothing is more striking in the woods and fields of this country than the absence of animal life. In England we think of a wood as peopled with birds and squirrels; we watch for lizards and field-mice in the hedges and fields; we have motion and sound all around us. The dead stillness of these forests has something awful in it. There are few deciduous trees (*Laubholz*) and no underwood, unless you call so the starved and stunted firs that are extinguished by their more aspiring and bushy neighbours. At this season they are seen to the most advantage, the tender green of the beech and birch, though small in size and quantity, is sufficient to light up the dark masses of pine and fir. The ground is covered with wood anemones (*Windblumen*) and blue hepaticas, and the lilies of the valley are encircling their long leaves. The few singing-birds there are, are vocal; the cheerful note of the cuckoo is heard, and (but rarely) the persuasive voice of the wood-pigeon, and the plaintive cry of the wood-pecker; but the blackbird and thrush are extremely rare, the nightingale unknown. The difference between these masses of needlewood (*Nadelholz*), as the Germans call all this class of trees, and the rich and varied foliage of an English forest is inconceivable. Even if you were blind you might perceive it. Instead of the soft whispering, or the deep murmur, of our woods, these send forth a sharp rushing sound; and, if the wind is high, you hear the long pendant cones swing heavily together at the tree tops. These, too, are beautiful sounds, but they are not, I think, so soothing as the thick rustling leaves of our woods: or is it the voice of the Fatherland that speaks in them?

Certain it is, that the beauty of England strikes me more and more, the longer my absence, the wider the comparison with other countries. I could make a list of beauties entirely characteristic, and resembling nothing I have seen elsewhere. Where, for instance, can one find a "green" such as is to be found in hundreds of villages in the least picturesque parts of England? the clear pond on a gravelly bottom, the group of large old elms or limes, or now and then huge arbutes, on one side of it. It is a hot day, and the cattle are standing under the trees, or knee deep in the pond—the cattle are *doing as they like*—show me that here. I see only unhappy creatures, led by a halter, or driven, and watched by boys, the necessary consequence of the want of hedges and inclosures. Then there is a weary donkey-mother reposing, and her child in the wantonness of untoiling youth, frisking away its superfluous activity. There are our neighbour's two or three pigs, another's geese, and all without the swineherd or goose-girl, indispensable ministers of this lower police. Then the cottages dotted round the green, each with its garden—the wheelright's shed and yard—the blacksmith's cheerful forge—the winding path to the church and churchyard (here are burial grounds, but no churchyards). Who does not see at once all these features, and many more, so common as hardly to attract attention? Yet how infinitely charming does the picture seem to me now! How cheerful, how satisfying to the eye and heart. How can I recall all the objects which one misses: hedges, with all their beautiful variety of vegetation and hedgerow trees—whether the trim hawthorn hedges and the primrose covered banks of the East of England, or the high stone fences, clothed with the richest variety of ferns, cistus, and creeping plants of the West—winding roads, the grand secret for multiplying all the beauties of a country—single cottages—who does not remember the cottage at a turn in the road, or at the corner of a lane, (*a lane*, for which I know no equivalent word in any language), which made one long to live there? The neat garden full of flowers of the best sorts, the bee-hives, the tame jackdaw, the snow-white cat basking in the sun, the eager happy grunt heard from the inoffensive pig-stye at the back, the one huge umbrageous sycamore, the wall, the white paling, or the clipped hedge. I shall not speak of parks and country-houses, and plantations: their celebrity is established. But where can I find a Suffolk upland meadow, golden with cowslips? or a heath fragrant with yellow furze, or purple with heath-flowers? or a tranquil river, covered in a summer's evening with boats rowed by the lads of the near town? or a common, with the village lads playing cricket? or cattle in a field, knee deep in the grass? It is not her castles and palaces, matchless though they be, but the humble and every day beauties of England which recur to the fancy, or rather to the heart, of her absent children, as objects still more of affection than of admiration. No country, of which I have any knowledge, furnishes anything like the same number of spots in which one silently exclaims, "Here I should like to live." There is nothing that I have seen approaching to the vegetation of England. It is not only the majestic masses of verdure to which no other trees can compare, but there is an universal bounteousness and abundance of animal and vegetable life, such as I have seen nowhere else. Nature, so prolific there, here seems struck with comparative barrenness. One who had beheld her only here, could never imagine the rich profusion of field flowers, the size and vigour of every plant and tree with which she adorns England. Nothing is more common throughout Germany than an avenue of horse-chesnuts, yet, even on the Rhine, it would take *at least* four full grown ones to make up one of the giants at Hampton Court, whose broad park and pyramids of blossom must now be in full beauty. Enough enough, enough. I shall seem, and be, unjust. There is plenty in Germany to like, to admire, to love, to revere. She can show to damp and dewy England her many-voiced groves, and her flowery meadows, and her awful trees. I ought to add, that I have not seen the oaks of Westphalia, nor the verdure of Styria. What Bohemia wants is a river, a river of her own. The Elbe has too many masters. It grieves an English heart to see this fine stream spoiled for want of a little good training. Wordsworth's line in his noble sonnet on the Thames—

"The river windeth at its own sweet will,"

is as false as it is beautiful. The Thames has vastly little of its own will, and, like many other people, is all the better and the handsomer for it. Even the noble Rhine, giant as he is, may say, with M. de Lamartine, that Prussia presses heavily upon him. Her banks and walls and dams contain the outbreaks even of a will like his. If you have a mind to see what a river is when he *has* his will, you must "*sit*," as the Germans placidly call it, twenty-four hours on the wide and sandy shallows, between Hamburg and Magdeburg, or, still better, lie encamped in the pestiferous swamps of Servia. A secure, cheap, and easy navigation, from Hamburg to Prague, would be productive of the greatest advantages to Germany, and, among other things, would make Dresden the little Queen her situation fits her to become.

THE EXHIBITION OF ANCIENT MASTERS, PALL MALL.

THE Exhibition of Ancient Masters, so called, is now open, and verifies our programme given several weeks since (*ante*, p. 392), there being one saloon devoted to pictures veritably antique, another to the works of Sir Joshua Reynolds, and a third to those of various painters deceased, with the addition of two works by Foreign Artists, which may well come under this latter class, according to the true poetical fiction, that

Death and Distance differ but in name!

As a general character of the present exhibition, we would pronounce it above par: the Reynolds selection is superb, the Old Masters furnish forth a respectable array, whilst a third-proportional term of praise, on the downward scale, must suffice for the miscellaneous assemblage of Modern Antiques. Although this last-named department comprises some few capital specimens, its weakness was, no doubt, felt by the Directors, who have therefore, probably, added the outlandish curiosities as makeweights, and thus, at least, increased its interest, if not much enhanced its lustre. But of these hereafter. Shall we venture to observe, that the patriotism which suggested the annual exhibition of Ancient Pictures seems, now-a-days, somewhat on the wane. We almost fear it will soon be, like changeful Cynthia,

Hid in its vacant interlunar cave,

or, perhaps, appear no more: such is the usual fate of all patriotisms after their kind; when they have set the whole land ablaze with their youthful fervour, "out goes the candle, and we are left darkling!" Or should we rather hint a suspicion that Public Taste itself is the real defalcator? Both causes may unite to produce the falling-off we deplore: proprietors may begrudge the trouble and expense which attends the transmission, to and fro, of their fine and fragile antiques; these, on the other hand, may have lost their popularity along with their novelty. We apprehend this last mentioned cause is a prime one, and regret it should be so, as nothing affords stronger evidence against Public Taste than its morbid and ravenous appetite for ever-new excitement. An irrefragable test of genuine taste is the power to review, again and again, the same master-pieces, not with undiminished, but with augmented pleasure. Archbishop Leighton concludes, justly and profoundly, that those alone are pious at heart who feel a fresh interest every time they rehearse the commonest rubric prayer: we would generalize this maxim, and exact continued worship of *all things good*, in sacred or profane literature, in divine or human production, in the humblest or the highest pursuits, in the whole world of taste spiritual, moral, mental, or material. Let any one, for instance, cast upon the *Titian* here exhibited, however familiar to him, a lack-lustre eye, we pronounce him no true lover of art, but of idle sights and gape-seed! It is the grand luminary of the middle saloon; and though it appeared not long since, much better placed, and its marvellous nature more visible, we welcome it again as star-gazers would a comet of brief periodic revolution. We consider this allegorical representation of Human Life among the most beautiful silent poems ever composed—an *Idyllium* written in colours that sets Titian on a level with Theocritus. Indeed, the modern Venetian *Doricizes* almost like an ancient Sicilian—no painter beside half so well, not even Giorgione himself. But lest an over-practical age should deem us visionaries, we cut short our panegyric, and refer to *Athenæum*, No. 449, for other details, merely remarking how rich a source of suggestion broad and general treatment becomes, where the spectator's imagination is led up to just the right point, and left. Defacement itself, by the hand of Time, may be advantageous, when it rubs out the minutiæ which peg our minds down upon the particular scene, and limit them, like carpets, to its exact dimensions. Let us, however, as a proof we are unprejudiced, notice a fault in this painting—the foreground figures seem too large for the landscape—an error, if one, that reveals, we think, Titian's middle or *Giorgionesque* period. Amongst several other pictures which Lord Francis Egerton contributes, albeit none approaches the Titian within a whole diameter of the grand style, yet some possess great merit. No. 77, a 'Female Procession,' has much old-fashioned beauty of movement and attitude, but we can by no means recognize the powerful draughtsman *Baldassare Peruzzi* in those feeble traits and contours, nor such a skilful architect in the violent perspective of the Temple. 'Portrait of Velasquez,' No. 83, we have elsewhere discussed (*ante*, p. 368), and find our opinions confirmed on a second view of it; so united a touch and honey-sweet a tone do not at all characterize Velasquez. The pair of Bridgewater 'Hay-carts,' by *Wouvermans*, are well known little pendants—one, No. 67, a pearl; its companion, No. 65, mother-of-pearl, at least we think it the less valuable. The Dulwich Wouvermans, No. 75, is also an exquisite piece of manipulation, and modulation in the key of silver-grey colour. Lord Zetland's large Wouvermans, No. 96, deserves like praise, but exhibits the prevalent Dutch taste for what comes home to men's business and bosoms, depicting a sort of Macheath attack upon baggage-waggons and soldiers' trulls by way of a 'Battle-piece!' Mr. Holford, we must admit, proves himself worthy to be a collector by his readiness to be an exhibitor; his noble *Cuyp* perhaps ranks next after the Titian in this saloon, and his *Vandervelde* would take a high station anywhere. The former production, like Pompey's statue, was sacrilegiously sawn asunder, but an adroit hand has soldered both halves together with such religious care, that St. Dionysius himself, when decapitated, did not weld his head better upon his shoulders; scarce a mark remains visible even through the microscope, none whatever to the naked eye, unless very micro-

Digitized by Google

scopic, and one magnificent 'View of Dort' results from the two previous moieties. These we noticed at Lady Stuart's sale (*Athen.* No. 708), and though they are improved by their junction, we see little need to amend our opinion then given. Vandervelde's 'Marine,' No. 102, might challenge Neptune's court-painter to surpass it; the men-of-war are first-rate, the small craft models, the wilderness of water, rising into white-crested ridges, wears, what an ancient Greek poet denominates, a face of "multitudinous laughter,"* grim withal, as becomes our northern ocean. For the 'Breeze,' which names this picture, it tells itself through all the details: up aloft it stretches the flags stiff and smooth like vanes, it shakes the streamer beneath loosely; here the heavier yards flap and fold themselves, or a large hulk takes the wind from a vessel's canvas under her lee; there every ship with her petticoats swelled out according to the quantum of air they catch, treads her ruffled path along, swift or slow, upright, oblique, or prone to "kiss her burial." Vandervelde's manipulative power by long practice reached a perfection almost as self-resemblant as stereotype; no artist paints spray so well, or foam, or the flood when it seethes round a vessel's course, except Copley Fielding, and water-colours much facilitate imitation of water. In the works of both we may find Spenser's fictitious description realized—

> Ye might have seen the frothy billows fry
> Under the ship, as through them she went—

where "wondered Argo" to Sir Guyon's astonishment cleaves her way amidst mimic surges across the enchantress's ivory palace-gate. Another *Cuyp*, which belongs to the Duke of Bedford, displays singular and superlative merit: 'Fishing under the Ice,' No. 119. It has but one fault—such a glow of sunlight would melt a glacier, and almost set the river beneath a-fire. This, however, serves to disprove a very specious doctrine now preached up, because popular taste can just relish it, viz. that "truth to Nature" constitutes the supreme excellence of Art: for many works are transcendent, though they want the said characteristic. Cuyp, one would think, must have painted in a "vehicle" of molten diamonds to produce such transparency as his glittering floods set before us: here his mirror of ice resembles the diamond-liquefaction consolidated again, with an amber tinge to vary, but not diminish, its clearness. The Dutch no poets forsooth! when Cuyp could idealize raw atmosphere and reeky canals into scenes quite Elysian—this one may be imagined a "field of yellow asphodel" laid by the River of Bliss under water. Fishermen and their wives, indeed, bring us back to hell upon earth, but the brine looks so warm and lucid, we only wonder they do not lie down amidst the delicious ooze. Assuredly they can catch nothing except gold and silver fish, and electrical rays, and mermaidens with micaceous shagreen tails? We have seldom seen a Claude that bewitched us more. His Grace of Bedford likewise contributes an admirable *Teniers*, No. 118, the 'Village Fête:' it represents a Flemish "Camacho's Wedding," with immense copper flesh-pots ranged on the turf, from which Sancho would much rather have fished up whole boiled fowls and cabbages, than rays ever so electrifying, or mermaids ever so micaceous from the Lake of Brightness aforesaid: doubtless both Cervantes and Teniers pictured the rural hospitality common in their times. This animated landscape is remarkable for its fine ordonnance, the groups, single figures, prominent objects, accessories, foreground middle and remote details, are disposed scientifically, and graded as distinctively as connectedly—a kind of perspective runs throughout their character as well as position. The colouring we think rather cold and the touch too opaque; perhaps it may have been over-scrubbed by the pictorial charr-man, and thus lost its silveriness and soft grey mellowness of effect. The Bedford *Paul Potter*, No. 114, is, contrariwise, much oilier than most works by that artist; for example, Mr. Hope's pair have a dry granular texture, which harmonizes well with the painter's sterility of subject, and helps to give it character. Sterility has its character, nay, even its half-starved beauties; the barren moor brings forth, though but furze, fern, rush-grass, and such desolate offspring. Potter's mind, if not fertile of ideas, was full of one idea, and this overflowed through one vent in one channel; hence the strong current and its steadiness. No. 89, 'Landscape with Figures,' is richer of details than Paul's usual specimens; the distant meadow and its quiet herd of cattle at graze, forms a beautiful little landscape in itself—a miniature Claude; the figures on the foreground, animal and human, are graphic as Bamboccio's, and vigorously touched as any by Velasquez, and tell a humorous tale, as well as those of a Wilkie, whose eyes would have melted into laughter at that "bit of the naked" which the clambering equestrian exposes unawares to his assistant. No. 87, 'Cattle in a Storm,' approaches the sublime: it is not every low horizontal line which gives such elevation of character: and what a hurricane has just swept over the hill-top, with what a fierce whirl the storm gathers up its dark skirts, and disappears! Potter was a poet after all in his own rigid, jejune way. No. 66, a fine wild 'Landscape,' from Sir Thomas Baring's collection, does ample credit to the name of *Rembrandt*, yet has an air both like and unlike his manner; its deep powerful impasto and clotted touch bespeak him; but a caveat might be entered on the score of certain peculiarities, if it were worth while discussing who painted a good picture. Lord Pembroke's *Rubens*, a 'Group of Children,' No. 81, has various rivals to contest with for precedence, as the only true original: one at Vienna we thought looked genuine, another at Berlin seemed a respectable pretender. The *composition* beyond all doubt is Rubens's, and the colouring is, to say the least, his inspiration. *Vandyke's* 'Lady and Child,' No. 80, lent by Lord Alford, was in the Exhibition of 1836: we shall not reiterate our praises so soon, but point attention to it again. No. 101, 'Head of an Old Man,' more pensive and pink-complexioned than *Rembrandt's* portraits commonly are; the head itself capital, the hands feeble and too ill-drawn even for this licentious draughtsman. No. 78, 'View of a Dutch Town,' by *Vanderheyden*, very rich and mellow, and not very elaborate for him: it is from Apsley House; we wish the thrice-famed *Correggio* and *Velasquez* there, were not built into the walls, and thus rendered unluckily irremovable to the British Institution. There are still three antiquated pictures, of which some little mention may be allowed us: first, one by our old favourite, *Francia*, No. 109, a 'Madonna and Child and Saints;' in this, expression and feeling triumph over all the faults of mechanism; and if alone considered, over all the mechanic beauties of the collection put together. Look at the tenderness and grave sweetness of that maternal Virgin's countenance—at the delicate pressure with which she dares to support the infant limbs of her awful Son—at the scarce perceptible light of that smile with which she betrays her love for him! Observe the childish Instructor of Man already beginning his Mission—the earnest yet calm devotion of his sainted Auditors! Tell us, ye critics and connoisseurs, ye picture-makers and picture-mongers, how much "brilliant effect"—"fine dash of pencil"—"delicious flesh-tint"—how much glaze, varnish, and scumble work, ever so adroit, would outweigh the moral and intellectual qualities we have mentioned? But we do not quote *this* as a first-rate Francia, either Old or Young: it seems one of the numerous repetitions which some excellent prototype brought into request. Its proprietor is the Right Hon. T. Frankland Lewis: Lewis of Bavaria would feel proud to be so. No. 86, 'Mary Queen of England,' by *Lucas de Heere*, a miniature portrait in oils, equal to Holbein: the green velvet background looks veritable "three-piled," and soft as a linnet's plumage; ill-favoured Mary becomes charming by force of the beautiful delineation—perhaps paint never improved a woman's face in any other way: we have here the mind of the artist superadded to that of the Royal Sitter; and both spoken out with the clearest tone, with the most expressive plainness. If this indeed resembled Mary, we cannot much wonder at the Lotharianism of Philip! It (we mean the picture) belongs to the Rev. Heneage Finch, who lends another work by *De Heere*, 'Frances Duchess of Suffolk, mother of Lady Jane Grey, and her second husband, Adrian Stoke,' No. 94, which possesses great interest, but less artistic merit. It once adorned Strawberry Hill. The remaining Saloons next week.

* We enfeeble the boldest, yet truest, metaphor extant—

Ποντιων τε κυματων
Ἀνηριθμον γελασμα. *Æschylus.*

ROYAL ACADEMY.

Architectural Drawings.

For private residences in various styles, chiefly, however, Gothic and Elizabethan, there are many designs, but not one of striking character, and some of those of most pretension, at least in point of size, display the least study and the least taste. Modern "Castles," of which we here meet with one or two, have, almost inevitably, a lack-a-daisical, bandbox sort of expression about them; and even when free from architectural faults, have generally a sneaking littleness peeping out from beneath their assumed stateliness. Castles are a class of buildings which should be left untouched by matter-of-fact people, who have no suspicion that such subjects require to be treated with grandeur of conception and manner, a sort of epic dignity, qualities totally independent of style. After which remark, it may perhaps seem somewhat inconsistent to point out for approbation No. 1334, 'Model of Wadhurst Castle, Sussex, showing the alterations now nearly completed,' E. B. Lamb,' whose title of 'Castle' sits, it must be confessed, rather awkwardly upon it. For that misnomer, however, the present architect is not responsible; and a shocking misnomer it was when applied to the original—a sample of the "castellated style" in fashion some fifty or sixty years ago. As a sketch of that *original* is affixed to the model, we can the better appreciate what has been done by Mr. Lamb; and if he has not exactly triumphed over the old proverbial impossibility, and made the silk-purse, &c. he has converted an ugly house, of nondescript physiognomy, into a pleasing specimen of domestic Gothic—well considered in its details, picturesque as a composition, compact in plan, yet varied in its masses,—and, not its least merit, having the look of a comfortable, though but moderate-sized residence. There are but two other models; for though models would perhaps be more generally interesting and instructive to the public than mere drawings, they are always scarce at the Academy. Considering the greater cost, their rarity is not to be wondered at; but it is strange that when executed they should not be exhibited. We some time ago saw a model, upon a large scale, of the portico of the Royal Exchange, as improved upon from the first design, and expected to have had an opportunity of examining it again at the following Exhibition, but were disappointed: so it has proved with regard to one of the buildings for the Assize Courts and St. George's Hall, at Liverpool. However, No. 1290 does show us the interior of St. George's Hall, and a very tasteful composition it is, combining, happily, some of the leading merits of Grecian, Roman, and Italian design—the refinement and simplicity of the first, with the grandeur of the second, and the play and picturesque effect of the third. Although it is not attractive as a drawing, wanting the flattery of colour to recommend it, it is, in our opinion, one of the redeeming points in the architectural room. No. 1322, 'Perspective View of the Central Hall in a Mansion now erecting for the Earl of Egremont, at Silverton Park, Devonshire,' J. T. Knowles, is another interior, far more showy in appearance, which deserves notice; and there is also an exterior view of the same mansion (No. 1162), but it was unfortunately placed so high as to preclude examination.

No. 1197, 'Design for an Alteration of the National Gallery, by effecting, at a small outlay, a more Imposing Elevation to this Edifice,' D. Mocatta, is, of course, a mere *project* on the part of its author, who, although he may be admitted to have here suggested improvement in regard to the centre, which he renders a bolder and loftier architectural mass, has been by no means happy in the rest of the *façade*. He would, doubtless, have succeeded better had he attended to that excellent precept in culinary philosophy, which says, "Roast your pig well at both ends, and the middle will roast itself." So far from either the style or the character being consistently kept up throughout, there is, in both respects, great inequality; so that as a composition it is strangely defective—looks finished only in parts, and merely sketched in, in others, which have been left for after-consideration. As to the "small outlay," it seems to us that it would amount to rather a large sum; but it will be time enough to inquire into its exact amount when there is a chance of the project being adopted.

Digitized by Google

Of subjects in the Italian style there are but few, nor are any of them particularly good. Two drawings, however, deserve notice as making us acquainted with two structures designed by an English architect, and now, it appears, actually in progress in the Turkish capital, viz. No. 1166, 'The Ambassador's Palace now erecting for her Majesty's government at Constantinople,' and No. 1342 'Cavalry Hospital, now erecting for his Imperial Highness the Sultan,' both from the designs of W. J. Smith. These are large masses of building, but with so little distinctive character, that the one might almost be mistaken for the other; and though fair samples of the style, they are so rather negatively than positively, since no fresh ideas of any value are brought forward in them. For one building which is to be in this style, there are two different designs, both of which are described as intended for execution: No. 1241, 'Design for the Colchester Town Hall *to be erected from the designs*, and under the superintendence of R. Brandon and J. Blore;' and No. 1249, 'Design for the new Town Hall, Colchester, *adopted by the committee for erection*,' R. Brandon. Which of these statements is to be trusted—which of the designs is the "real Simon Pure," we cannot say, and perhaps even the committee themselves may as yet be unable to tell, for after they had settled the matter once, they unsettled all; therefore such may prove the case again. Of the designs before us, we should give the preference to 1249—which, strange to say, looks very like twin brother to one we remember, by a different party, for the same building. However, there is no accounting for such curious resemblances.

No. 1259, 'Design for Street Architecture,' A. Batson, convicts us of precipitancy in the remark we made just now, it being a most singular study of the Italian style, and no less singular as an architectural drawing—an *extravaganza*, but one that affords evidence of poetic conceptions. As to Street Architecture, however, we suspect that it is neither accommodated to the new Building Act, nor at all calculated for the latitude of London. It is far too monumental and gigantic in style for us Londoners—far too heroic and energetic. The details are left to the imagination rather than defined, and there is much to excite the imagination, and for it to work upon afterwards; —which is more than can always be said of things that are even better in themselves. With this remark we will close our survey of the Architectural Room.

OUR WEEKLY GOSSIP.

AMONG the many attempts which have been recently made to give an impulse to the drama, a spirited measure has been adopted by Mr. Webster, the lessee of the Haymarket Theatre, who has offered, for the encouragement of dramatic literature, the sum of 500*l.* for the best modern comedy, illustrative, in plot and character, of British manners and customs. The prize is to be awarded by a committee of dramatic authors (not competitors), dramatic critics, and actors (male and female), to be named by Mr. Webster—Mr. Webster to have the casting vote, if necessary. The award is to be made on the 1st of January, 1844. Besides the amount of the prize, Mr. Webster offers a third of the proceeds on the 20th, 40th, and 60th nights of representation. The success of this particular speculation will, of course, depend, in a great measure, not only on the impartial character of the tribunal which may have to try the candidates for the prize, but on their impartial *attitude* before the public; and though it could scarcely be expected that the casting vote should be lodged elsewhere than with him who has to pay the money, and produce the successful play on the stage, yet that circumstance, added to the fact, that all the members of the committee are to be chosen by Mr. Webster himself, scarcely offers such guarantees for a judgment on high principles as will attract competitors of the best class, and satisfy the public. It is, of course, not pretended that Mr. Webster has not a right to attach such conditions as he pleases to a prize proposed and paid by himself, but our remarks have application to the more general bearings of this scheme on dramatic literature. The experiment is one in which the public are likely to take interest, and which, if well and successfully conducted, may have consequences, as an example, far beyond what it can have in itself. It is clear enough, that no solitary stimulant of this kind can do much for the restoration of a National Drama that needs stimulants at all; but it is a step in the right direction, so far as an individual can walk it alone. That there is no lack of candidates for success in dramatic literature, our columns furnish abundant proof; though they are, for the most part, not of the order to which it is worth while applying stimulants of any kind. But the reward which Mr. Webster offers is a liberal one, and if he can succeed in satisfying the public that his judges are likely to be "men of worship" and critical integrity, it may well be hoped that the motives which he offers, coming in aid of others more spiritual, will set some of the highest talent among us at work, and produce, for the honour of our stage and literature, and for his especial and merited profit, a good English comedy.

Meanwhile Mr. Macready is about to abandon old Drury and the Tragic Drama to the fate that has been long impending over them: he has resigned the management, after a four years' trial of both the patent theatres; having added his quota of loss to the heaps of capital which have been buried in these mausolea of the Muses. He performs on Monday "for the last time in London, for a considerable period," say the bills; and the expression is construed into an intimation of his intention to visit America; however this may be, the public will be sure to flock to Drury Lane, to give a hearty farewell greeting to the first actor of his day, and the manager who has exerted himself so zealously to encourage the modern drama, and to improve the representation of Shakspeare's plays. The experiment of upholding the legitimate drama by means of the patent monopoly and huge houses has been fairly tried, and proved an utter failure; if Mr. Macready could not succeed with all his qualifications and advantages, what hope is there that any one else will be more fortunate? Adventurous speculators may be found, but under the present state of things permanent success is impossible.

Papers throwing, it is said, much new light on the subject of Shakspeare and his family, have lately been transmitted from Warwickshire for the use of the Shakspeare Society, and been submitted by the Council to Sir F. Madden and Mr. Bruce, who have undertaken to edite and superintend the publication of them. They establish, according to report, that John Shakspeare, the poet's father, could not write his name, as several of his warrants, as Justice of the Peace and Bailiff of Stratford, are subscribed with a cross, purporting to be the mark of John Shakspeare. Malone's conjecture, that the branch of the family which settled at Stratford, came from Snitterfield, is also confirmed. There are several papers relating to the poet, with regard to the purchase of the tithes of Stratford, the quantity of land he possessed there, and other points of more or less interest.

The Cambridge papers mention that the Fitzwilliam Syndicate have reported to the Senate that—"Deeming it advisable, in conformity with the opinion of Mr. Basevi, to proceed with the execution of the remaining works, they have procured from him designs, and an estimate for completing the interior of the Museum, and preparing it for the reception of the collection. It appears that the Fitzwilliam funds, which are now, or will before the end of next year become available for this purpose, fall short of the whole amount of the estimate by a sum which may be calculated at 12,000*l.* The Syndicate, notwithstanding this deficiency, think it desirable that the interior of the Museum should be completed as an entire work rather than in detached portions. They therefore beg leave to suggest to the Senate, as the best mode of providing for such a deficiency, that a loan of 12,000*l.* be raised by bonds under the seal of the University; the interest thereon to be paid, and the bonds themselves to be redeemed, by the surplus income of the Fitzwilliam fund in subsequent years."

A discovery has been made at the Royal Library, in Paris, of the original text of the Declaration of the Clergy of France, adopted in the General Assembly of the year 1682, which is the charter of the Gallican Church. The declaration in question was drawn up by Bossuet, signed by all the bishops, and was burnt at Rome by order of the Pope. Speaking of Bibliographic rarities, we may mention a curious acquisition recently made by the Public Library of Rouen—a collection formed after thirty years labour, by a M. Leber, of all the playing cards which have been manufactured in every age and country since their invention. The origin of playing-cards has been assigned to the reign of Charles VI., but this collection carries it further back. It is curious to see the strange forms which patient inquiry will take when it has once got the upper hand.

The editor of 'The Story-Teller,' who first preferred the charges against Mrs. Sigourney (see *ante*, p. 340) has replied to the statement put forth by Mrs. Sigourney or her friends, and lately published in this journal (*ante*, p. 488). He avows that he "cannot comprehend" how Mrs. Southey could have written such a letter as that quoted by Mrs. Sigourney, and admits that "if, as such a letter would seem to imply" there was no interpolation, he will make the *amende* with frankness and promptitude"; but he repeats that the charge rests "on the authority of Mrs. Southey's own hand-writing," and he calls on Mrs. Sigourney to produce the original letter. This is not quite fair. It is obvious that Mrs. Sigourney must not part with the letter; her vindication rests on it; neither can it be necessary to send for evidence across the Atlantic. In truth we cannot but believe that our contemporary has been imposed on; that there has been double dealing somewhere—and he may think so too after reading the following paragraph, which we copy from the *Scotsman*.—"We have had submitted to us a correspondence between Mrs. Southey and a party resident in Edinburgh, in which Mrs. Southey distinctly disclaims any participation in the authorship of the article in question, or knowledge of the source whence it originated. It is satisfactory to the friends of Mrs. Sigourney to know that the paragraph '*annoyed as much as it surprised*' *Mrs. Southey*, and that *the opinion expressed by that estimable lady—who*, we presume, *is best qualified to form a judgment in the case—is as favourable as could be desired, and directly opposed to the misrepresentations recently circulated.*" Our objection of course holds against the publication of such a letter under any circumstances, and we hinted as much from the first; but it was only when we were informed of the manner in which the letter had been obtained—that it had been interpolated—and of Mrs. Southey's objection to the publication, or as it is called her "unmitigated pain and astonishment," that we offered a word of censure.

The Conservators of the Royal Library at Munich—a vast collection, as many of our readers know, which consists of upwards of 500,000 printed volumes (pamphlets, it is said, not included) and 10,000 manuscripts—have been, since the 1st of May, engaged in its removal to the palace lately built for its reception. This operation, which many looked upon as necessarily a work of years, has been so simplified by the arrangements of the Conservators, that it is now hoped it may be completed by the end of July, and the public, it is expected, will be admitted to the new building early in August.

The weight of metal given by Government, from the cannon captured by the Hero of Waterloo, to the Committee for directing the execution of the city monument to that chief, amounts, it appears, to about nineteen tons; and about five tons only being required for the special purpose for which the grant was made, two bodies have made application to the City Committee for the surplus, to be applied in the completion of kindred works. The Duke of Rutland has addressed them to that effect, on behalf of the Committee for the erection of the equestrian statue to the Duke, which is to be placed over the triumphal arch in Piccadilly; urging with some plausibility, that the metal, which is the produce of his Grace's own victories, has an especially appropriate application to the Monuments which are intended to commemorate them: and Sir George Cockburn has advanced the claims of the Committee for the erection of the Nelson Monument, which it is still insinuated will be one day completed, in Trafalgar Square. A meeting was held on Saturday last, at the Mansion House, of the noblemen and gentlemen connected with the management of the City statue, for the purpose of hearing the arguments of the respective applicants; but no decision was then come to, the meeting having been adjourned till that day fortnight, when it is promised that an answer shall be returned.

Complaisance, and our critical devoir, led us to visit what the Catalogue describes as "an Interesting

Digitized by Google

Collection of Marble Groups, Statues, and Busts, formerly part of the Gallery at Dresden." Very interesting we did not find it, but curious beyond all imagination: such a collection of "curiosities" has seldom met our eyes, which have had some experience in like matters. The most curious point about it, however, is, that it stood *bonâ fide* for sale last Wednesday, at No. 11, Davies Street, Grosvenor Square!

> The thing we know is neither rich nor rare,
> But wonder how the devil it *got there!*

Of a truth we are lost in amazement at the simplicity which could ship so much limestone lumber (except as ballast), to be carried all the way from Dresden across half the continent and the whole German Ocean, to London! Was it thought we had not "curiosities" enough of our own—did the proprietor never hear of a certain collection, meriting that denomination, with a certain venerable Abbey? We give an adequate idea of the Davies-Street Marbles, when we say they are exact pendants for those gems of precious sculpture—the Westminster Monuments. Who may have purchased them, is to us unknown and unconjecturable—we hope not the Dean and Chapter for additional grotesques wherewith to adorn their most Gothic surbases! They once decorated, we are told, the *Grosse Garten* Palace of Friedrich August, and truly they do exhibit the taste which distinguishes garden-statuary and the palatial barbaro-magnificence of that time. Yucatan sculpture is Attic in comparison. As this collection has doubtless been disposed of—to the lime-burner if no one else—our critique will not injure the quondam proprietor, but even though it should, we are bound by our office to put the "Isle of Gulls" on its guard against other decoys like the above-mentioned. To conclude, however, *con bocca dolce*, there were three small articles—Boy Figures—which have merit, being apparent copies after Algardi. A bust called "Diomedes" also exhibits some character, but not the right one, being modern German instead of ancient Greek.

The monument erected at Inspruck to the memory of the Tyrolese who perished in defence of their country, from 1796 to the end of the war, was inaugurated on the 7th ult., in the presence of the Archduke John. It consists of a white marble sarcophagus, against which are piled arquebusses and swords, entwined with laurels. It is supported on each side by winged figures, representing the guardian angels of Austria and the Tyrol, indicated by shields, with the armorial bearings of the two countries. In front is the Angel of Death, with a tablet, on which is engraved, "Absorpta est mors in victoria," (Death is swallowed up in victory). The whole is surmounted by a cross of white marble.

A monument is about to be erected at Würzburg, to the memory of the celebrated Minnesinger, of that city, Walter Van der Vogelweide. Its execution is intrusted to the sculptor Halbig. The monument will represent birds feeding from a vessel, having reference to Walter's strange will, that four holes might be made in his grave-stone, that the birds might drink daily from them: hence his name, Van der Vogelweide, "he of the bird pasture."

The following are the subjects for prizes announced last week by the *Académie des Sciences Morales et Politiques*. For 1844—"What are the modes of paying rent at present employed in France? and what is the influence of each of these modes of payment on agricultural prosperity?" For 1845—"What influence do civilization and a taste for material comforts exercise on the morality of a people?" also, "To determine the general facts which regulate the connexion between profits and salaries," and "to trace the history of the States-General of France from 1380 to 1614; to point out the motives of their convocation, the manner of their deliberations, and the extent of their power; to determine the differences which have existed in this respect between them and the Parliaments of England, and to show the causes which prevented them from becoming, like the latter, a regular institution of the ancient monarchy." For 1846—"To draw a comparison between the morality of agricultural labourers and the manufacturing classes." A prize is also to be given for the following subject—"A description of the formation of the monarchical administration from Philip-Augustus to Louis XIV. inclusively." The Academy proposes for the quinquennial prize of 5,000 fr., founded by Baron Felix de Beaujour—"To state what are the most useful applications that can be made of the principle of voluntary and private association for the alleviation of distress."

The papers announce the death of Mr. W. H. Pine, which took place on the 29th of May, in the 74th year of his age. Mr. Pine was a contributor to several literary periodicals, and the author of 'Wine and Walnuts,' a gossiping anecdotic book of some repute in its day, 'The Costume of Great Britain,' 'The Microcosm,' and other works.

Letters from Cairo, of the 10th ult., mention that Dr. Lepsius was quite recovered, that he and his party had removed to the Fayoum, and would proceed to Thebes in about a month or six weeks.

ROYAL ACADEMY OF ARTS, TRAFALGAR SQUARE.
The EXHIBITION of the ROYAL ACADEMY is NOW OPEN. Admission (from 8 o'Clock till 7), 1s. Catalogue, 1s.
HENRY HOWARD, R.A., Sec.

BRITISH INSTITUTION, PALL MALL.
The Gallery for the EXHIBITION and SALE of the Works of BRITISH ARTISTS is OPEN DAILY, from Ten in the Morning till Five in the Evening. Admission, 1s.; Catalogue, 1s.
WILLIAM BARNARD, Keeper.

The NEW SOCIETY of PAINTERS in WATER COLOURS.—The NINTH ANNUAL EXHIBITION of this Society is NOW OPEN, at their GALLERY, 53, PALL MALL, next the British Institution, from 9 till Dusk, daily. Admittance, 1s. Catalogue, 6d.
JAMES FAHEY, Secretary.

EXHIBITION of Sir GEORGE HAYTER'S GREAT PICTURE of the HOUSE of COMMONS, painted on 170 square feet of canvas, and containing portraits of all the Members of Parliament, also a portrait of Her Majesty Queen Victoria, and various other works, forming a collection of more than 800 portraits of eminent personages of the present day. Open from 10 till dusk.—At the Egyptian-hall, Piccadilly. Admission, 1s.

DIORAMA, REGENT'S PARK.
JUST OPENED, with a NEW EXHIBITION, representing the CATHEDRAL of NOTRE DAME at Paris, with effects of Sunset and Moonlight, painted by M. REMOUX, and the BASILICA of ST. PAUL, near Rome, before and after its destruction by Fire, painted by M. BOUTON. Open from Ten till Five.

Cabul will shortly be Closed.

PANORAMA, LEICESTER SQUARE.
The VIEW of CABUL, and the surrounding country, embracing the Hindoo Koosh, the Khurd Cabul Pass, Bala Hissar, British Cantonments, Tomb of Timour Shah, with Portraits of Dost Mahomed, Mahomed Akbar Khan, and the splendid costume of the Natives, will be closed in a few weeks. EDINBURGH and BADEN BADEN still continue open.

AERIAL NAVIGATION.—ROYAL POLYTECHNIC INSTITUTION.—A LECTURE on this subject, illustrated by MODELS of several kinds, which elevate themselves by MECHANICAL FORCE alone, is delivered at Two o'Clock daily, and on Monday, Wednesday, and Friday Evenings, at Eight o'Clock. The Exhibition of the COLOSSAL ELECTRICAL MACHINE, the DIVER, DIVING BELL, NEW DISSOLVING VIEWS, and the other varied and instructive Objects of the Institution continue as usual. The original CRAYON DRAWINGS, from the CARTOONS at HAMPTON COURT, by the late Mr. Holloway, with numerous other WORKS of ART, have recently been placed in the Gallery.—Admission, One Shilling. Schools, Half-price. Open Mornings and Evenings, except Saturday Evening.

SCIENTIFIC AND LITERARY

ROYAL SOCIETY.—Since our last report, J. Miller, Esq., H. W. Blake, Esq., J. Heygate, M.D., have been elected Fellows, and the following papers read, viz.—

'Researches into the Structure and Developement of a newly discovered parasitic Animalcule of the Human Skin, the *Entozoon folliculorum*.' By E. Wilson, Esq.

'On Factorial Expressions, and the Summation of Algebraic Series.' By W. Tate, Esq.—This paper, which is wholly analytical, contains an investigation of certain general methods for the summation of algebraic series, which have led the author to the discovery of some curious and elegant propositions relative to factorials and the decomposition of fractions; and also to a new demonstration of Taylor's theorem.

'Notice of the Comet;' in a Letter from Captain J. Grover, dated from Pisa, March 21st, 1843.

'Variation de la Déclinaison et Intensité Horizontales Magnétiques observées à Milan pendant vingt-quatre heures consécutives le 18 et 19 Janvier, et le 20 et 25 Fevrier, 1843.' Par C. Carlini.

'On the general and minute Structure of the Spleen in Man and other Animals.' By W. J. Evans, M.D.

'On the Structure and Developement of the Nervous and Circulatory Systems, and on the existence of a complete Circulation of the Blood in Vessels in the Myriapoda and the Macrourous Arachnida.' By G. Newport, Esq.

GEOLOGICAL SOCIETY.—*May* 10.—The President, Mr. Warburton, in the chair.

1. 'On some new Ganoid Fishes,' by Sir Philip Grey Egerton.—In this communication the author made known, and fully described, seven new species of fossil fishes, three of which belong to the genus *Semionotus*, one to *Lepidotus*, and three to *Pholidophorus*. The species of the first-named genus had been found by Mr. Pentland in a black bituminous schist, a member of the lias formation, at Giffoni, near Castel-a-Mare. The others are from the lias of Ohmden, in Wurtemberg, and Whitby, in Yorkshire. The original specimens are in the cabinets of the Earl of Enniskillen and Sir Philip Egerton.

2. 'On the Geology of Nova Scotia,' with a Map, by Dr. Gesner.—After describing the geographical features of the country, the author proceeds to give an account of the several formations, represented on his geological map, which has been compiled from observations made by himself during the last eighteen years, in a country which has as yet been but imperfectly explored. There are three bands of granitic rocks, on which rest stratified non-fossiliferous rocks in certain districts, succeeded by rocks of the Silurian group. Above the Silurian beds occur, in several parts of the province, sandstones and shales, without organic remains, referred to the Devonian system. Coal measures are next in order, containing, in places, upright fossil trees. These are overlaid by a red sandstone, associated with gypsum and limestone, referred by the author to the new red formation. The north-western coast of the peninsula is one continuous narrow belt of trap, greenstone, and amygdaloid.

3. 'On the Coal Formation of Nova Scotia, and on the age and relative position of the Gypsum and accompanying Marine Limestones,' by Mr. Lyell.—The stratified rocks of Nova Scotia, more ancient than the carboniferous, consist chiefly of metamorphic clay-slate and quartzite, their strike being nearly east and west. Towards their northern limits these strata become less crystalline, and contain fossils, some of which Mr. Lyell identifies with species of the upper Silurian group, or with the Hamilton group of the New York geologists. The remaining fossiliferous rocks, as far as yet known, belong to the carboniferous group, and occupy extensive tracts in the northern part of the peninsula, resting unconformably on the preceding series. They may be divided into two principal formations, one of which comprises the productive coal measures, agreeing precisely with those of Europe in lithological and paleontological character; the other consists chiefly of red sandstone and red marl, with subordinate beds of gypsum and marine limestone; but this series is also occasionally associated with coal grits, shales, and thin seams of coal. A variety of opinions have been entertained respecting the true age of the last-mentioned or gypsiferous formation: and the author endeavours to show, first, that it belongs to the carboniferous group; and secondly, that it occupies a lower portion than the productive coal measures. These last are of vast thickness in Nova Scotia, being largely developed in Cumberland County and near Pictou, occurring again at Sydney, in Cape Breton. They contain shales, probably deposited in a fresh-water estuary, in which Cypris and Modiola abound. Above fifty species of plants have been found in them, more than two-thirds of which are not distinguishable from European species, while the rest agree generically with fossils of the coal formation in Europe. Mr. Lyell next describes the gypsiferous formation, especially the marine limestone, of Windsor, Horton, the cliffs bounding the estuary of the Shubenacadie River, the district of Brookfield, and the Bridge crossing the Debert River, near Truro. Several species of corals and shells are common to all these localities, and recur in similar limestones in Cape Breton. Among these we find, associated with several peculiar fossils, others which are characteristic of the carboniferous limestone in Europe. The associated plants are also carboniferous forms. With these Mr. Lyell found in Horton Bluff scales of a ganoid fish; and in the ripple-marked sandstones of the same place, Mr. Logan discovered footsteps which appeared to Mr. Owen to belong to some unknown species of reptile. Several of the shells and corals of this group have been recognized by Mr. Murchison and M. de Verneuil as identical with fossils of the gypsiferous deposits of Perm, in Russia, and it had been proposed to refer these gypsiferous beds of Nova Scotia successively to the trias and to the period of the magnesian limestone. That they are more ancient than both these formations, Mr. Lyell infers not only from their fossils, but also from their occupying a

Digitized by Google

lower position than the productive coal measures of Nova Scotia and Cape Breton. In proof of this inferiority of position, three sections are referred to:—First, that of the coast of Cumberland, near Minudie, where beds of red sandstone, gypsum, and limestone are seen dipping southwards, or in a direction which would carry them under the productive coal measures of the South Joggins, which attain a thickness of two or more miles, and yet include no masses of gypsum or marine limestone. Secondly, the section of the East River of Pictou, where the productive coal measures of the Albion Mines repose on a formation of red sandstone, including beds of limestone, in which Mr. Dawson and the author found Productus Martini, and other fossils common to the gypsiferous rocks of Windsor. Some of these limestones are oolitic, like those of Windsor, and gypsum occurs near the East River, fourteen miles south of Pictou, so situated as to lead to the presumption that it is an integral part of the inferior red sandstone. Thirdly, in Cape Breton, according to information received from Mr. Richard Brown, the gypsiferous formation occupies a considerable tract, consisting of red marl, with gypsum and limestone. In specimens of the latter, Mr. Lyell found the same fossils as those of Windsor, &c., before mentioned. Near Sydney these gypsiferous strata pass *beneath* a formation of sandstone more than 2,000 feet thick, upon which rest conformably the coal measures of Sydney, dipping to the north-east, or sea-ward, and having a thickness of 2,000 feet. To illustrate the gypsiferous formation, the author gives a particular description of the cliffs bordering the Shubenacadie River, for a distance of fourteen miles, from its mouth to Fort Ellis, which he examined, in company with Mr. J. W. Dawson and Mr. Duncan. The rocks here consist, in great part, of soft red marls, with subordinate masses of crystalline gypsum, and marine limestones; also three large masses of red sandstone, coal-grits, and shales. The strike of the beds, like that of Windsor, is nearly east and west, and there are numerous faults and flexures. The principal masses of gypsum do not appear to fill rents, but form regular parts of the stratified series, sometimes alternating with limestone and shale. The author concludes by describing a newer and unconformable red sandstone, without fossils, which is seen to rest on the edges of the carboniferous strata on the Salmon River, six miles above Truro.

Astronomical Society.—*May* 12.—J Bateman, Esq. L.L.D. was elected a Fellow. The following communications were read:—

'A Memoir on Astronomical Drawing,' by Piazzi Smyth, Esq.

'On a Revision of the Boundaries of the Constellations, as usually drawn on Celestial Maps and Globes,' by F. Baily, Esq. [We adverted, not long since, to the confusion which prevails in the boundaries of the Northern constellations. Mr. Baily now submitted the following plan for revision to the consideration of the Society]—1. Ptolemy's constellations to be preserved, and to form the basis of the construction and arrangement of the constellations in the northern hemisphere. 2. Nine of the constellations adopted by Hevelius, to be retained; but no others to be introduced in the northern hemisphere. These nine constellations are *Camelopardus*, *Canes Venatici*, *Coma Berenices*, *Lacerta*, *Leo Minor*, *Lynx*, *Monoceros*, *Sextans*, and *Vulpecula*. 3. Ptolemy's figures to be attended to, so that the drawings (if any) should embrace all the stars mentioned by him, and in their true places. *Libra*, perhaps, may be an exception to this rule, as that constellation has been introduced instead of the Claws of *Scorpio* adopted by Ptolemy. There are also four stars in Ptolemy's catalogue that are common to two adjoining constellations: namely Flamsteed's 52 *Bootis*, which is common to *Hercules*; 112 *Tauri*, which is common to *Auriga*; 79 *Aquarii*, which is common to *Piscis Australis*; and 21 *Andromedæ*, which is common to *Pegasus*. 4. If Bayer or Flamsteed has introduced any star from another constellation that would distort the correct drawing, it must be named, in the catalogue, after the constellation into which it is correctly inserted, and its pseudonym must be discontinued. In other words, the catalogue must be corrected, but not the boundaries of the constellations distorted. 5. Bayer's and Flamsteed's errors being thus rectified, and the figures of the constellations introduced by Hevelius being properly drawn (if requisite) within the intermediate spaces, the boundaries of the constellations, thus decided on, should be carefully drawn and laid down agreeably to some systematic plan, which may thus serve as the perpetual limits of the constellations: and no distortion of the outlines or boundaries of any of these constellations, in the northern hemisphere, should be permitted in consequence of the mistakes of any subsequent astronomers in arranging their stars under improper divisions of the heavens. 6. As all Flamsteed's stars are designated by the numerical order in which they stand in the constellation, and as these numbers are in most cases well known and recognized, it is desirable to preserve his stars within the boundaries of their respective constellations, wherever it can be conveniently done. But in the case of synonymous stars (amounting to 22) this is evidently impossible; and there are also several other cases, which have been already alluded to (amounting to about 70), where it is impracticable, consistently with the rules here proposed. These anomalous stars must be corrected in the catalogue, and there located in their proper constellations. 7. As all the stars in the catalogue of Piazzi are designated and always quoted by their *number* in the *hour* of right ascension, and those of Taylor and others, by their *ordinal number*, it is not so requisite to pay *special* attention to inscribing such stars within the boundaries of the constellations to which they are assumed to belong; and which will frequently be found to be discordant. Still, if any of these stars lie near to the boundaries so assumed, a slight detour may be allowed in the drawing.

'Account of an Observation of the Solar Eclipse of the 7th July, 1842, made at Starfield Observatory, together with an Account of some Chronometrical Experiments made to determine the Longitude of that Observatory,' by W. Lassell, Esq.

Professor Schumacher's third, fourth, and fifth Circulars on the great Comet of 1843.

Institution of Civil Engineers.—*May* 30.—The President in the chair.

A paper, by Mr. Mallet, 'On the Corrosion of cast and wrought Iron and Steel exposed to the action of the air and of salt and fresh water under various circumstances,' was concluded. It contained not only the theory of the corrosion of iron, but also its character; and reviewed the practical efficiency of almost all the methods hitherto attempted for preventing its usual injurious effects. The paper shortly recapitulated the results of the two communications on the subject read at the previous meetings, which had for object to determine the actual loss of metal by corrosion in given conditions. The first period of exposure of the specimens was 387 days; but as it was obvious that the original surface of the metal influenced greatly the rate of corrosion, they were again subjected to the action of air and water for 732 days, and the results are given in the paper and in a voluminous series of tables. Some experiments are also given upon wrought iron coated with zinc, by the process called "galvanizing," and also on cast iron protected by paint of powdered zinc. The relative average quantities of rain falling annually, are in Dublin 25.874 inches, and in London 21.714 inches. The rate of corrosion of iron exposed to the ordinary atmospheric influences at Dublin is *directly* as the volume of rain or dew falling on it in a given time, as the elevation of temperature with equal moisture, and as the barometric pressure. Exposure over a crowded city or near the sea would increase the rates of corrosion. The results of the second immersion seemed to show, that with cast iron the rate of corrosion was a decreasing one when the coating of plumbago and rust had been removed. Specimens cast half-inch were affected more than those of one inch in thickness, owing to the difference of homogeneity in the two surfaces. The rapidity of corrosion does not depend so much on the chemical constitution of the metal as on its molecular arrangement and the condition of its constituent carbon. The same kind of iron corrodes more rapidly when cooled fast and irregularly, than it does when carefully treated; the difference of corrodibility between hot and cold blast iron is very small, and arises chiefly from their relative specific gravities. An account of the condition of carbon in them.—Nos. 1 and 2, bright grey iron (of commerce),—while they are the most valuable for construction, are also the most desirable: slow cooling and annealing increase the durability. Six equal parallelopipeds of cast iron were immersed, for 180 days, in sea water slightly acidulated with muriatic acid, and frequently renewed; they were removed, and the coat of plumbago rubbed off at intervals of 30 days. The original weight of each piece was 1060 grains; the weight of each specimen after 180 days' immersion was 1041.4 grains, showing an absolute loss by corrosion of 18.6 grains. It is noticed that the kyanized oak boxes, in which the specimens were sunk in the harbour of Kingstown, were all perforated (two inches through) by the *Symmoria terebrans*, whose ravages are thus proved not to be arrested by kyanizing. Chilled cast iron is stated to corrode more slowly, when exposed to the air only, than that cast in green sand: this is the reverse of corrosion in water. The action upon wrought iron removes alternate portions of the metal, so as, with Damascus iron for gun-barrels, to destroy the electro-positive parts, leaving a grating of minute parallel rays, that could be looked through. The finer and more uniform the quality and texture of the iron, the slower is the rate of corrosion. Fagotted bars and Low Moor boiler plate are those kinds which corrode slowest. Hardened cast steel, after "telting," corrodes least; and low shear steel is destroyed most easily. The author then proceeds to examine the modes of protecting iron by zincing, and says that no mode of coating with zinc appears capable of preserving iron from the action of boiling salt water; but that, on the contrary, the zinc oxidates with unusual rapidity, and the iron is destroyed. He then reviews the causes of destruction of boilers of steam vessels, the results of corrosion of wrought iron in voltaic contact with alloys of copper and tin; and as to the process of Messrs. Elkington, for coating iron with zinc, &c. by electro-deposit, although he thinks it incapable of resisting any abrasion, or even exposure in water for any great length of time, it would be practically useful when exposed freely to the weather; and for architectural purposes it would be valuable. He then goes to the subject of the durability of iron ships, and after arguing carefully all the causes of their probable decay, and explaining a multitude of interesting facts relative to them, he arrives at the conclusion, that if the proper means be adopted for guarding against or reducing the rate of corrosion and the amount of fouling by adherent marine plants and animals, our future iron vessels may be rendered safer and more enduring than those of timber. The full details are given of all the principal modes of preserving iron, and particularly those invented by the author, which consist, first, in coating with zinc, then a varnish, of which the basis is asphaltum, and then a poisonous paint, to prevent the adherence of marine plants and animals.

In the discussion which ensued, and in support of the durability of iron vessels, it was stated that iron canal boats, which had been made full forty years since, were now in use in Staffordshire; and that the *Aaron Manby*, which was built in 1821, and was the first iron steamer ever sent to sea, had been constantly in use up to the present time, without requiring any material repair.

A pair of Electro-magnetic signal Telegraphs, constructed for the Aix-la-Chapelle railway, from the plans of Prof. Wheatstone, were exhibited. Professor Wheatstone explained, that the principle of this signal telegraph, which he considered to be the most efficient arrangement for practical purposes, was the same as his last electro-magnetic telegraph, in which a dial, or hand, was caused to advance, by the alternate attractions and cessations of attraction of an electro-magnet, occasioned by corresponding alternate completions and interruptions of the circuit, by means of a peculiarly constructed apparatus placed at the opposite end of the telegraphic line. The present signal telegraph was intended for the use of the inclined plane on the railway at Aix-la-Chapelle, where only a limited number of signals were required; the entire alphabet of the complete telegraph was therefore dispensed with, and the instrument was limited to six elementary signals. The letters M, S, C, T, B, &c. on the face of the dials, were the initials of the German words for engine, rope, train, telegraph, &c. The dial was eight inches in diameter, and the characters were conspicuous, so that they

Digitized by Google

might be readily seen at a distance; the hand, which was required to be made very light and to keep its form, was of blackened mica. The cross being reserved to indicate the quiescent condition of the apparatus, there remained five available characters, which combined two and two, gave twenty-five signals, a number amply sufficient for the purposes of the railway. It being established as an invariable rule, that each signal should consist of two characters, followed by the cross, were the telegraph to act in any way irregularly, the index would at the end point to some other character instead of the cross, and this would indicate that the preceding signals were wrong, so that if the signals received should not correspond with those sent, which, however, could not be the case if ordinary care was taken, no mistake could possibly arise, because they carried with them the evidence of their error. The instruments were furnished with a simple means of bringing the hand immediately to the resting joint, without interfering with the circuit. As it might be occasionally required to transmit a permanent signal, which should remain until a person arrived to inspect it, the five simple characters could be employed for this purpose. The instruments at each station consisted of a telegraph, an alarm, and a communicator; they would be arranged in the circuit several ways, to suit particular purposes, but no other alteration was requisite to effect this than a change in the disposition of the terminal wires and of their connexions with the communicators. The telegraphs might be so placed that they would act simultaneously when either of the communicators was worked, or they might be so arranged that the instrument at one station should only be acted upon by the communicator at the other, which in many cases was preferable, as a great resistance was thereby taken out of the circuit. Other arrangements, useful under particular circumstances, were also practicable.

This telegraph, even when all the letters of the alphabet were employed, required only a single circuit of communication between the two stations. Professor Wheatstone's former permutating magnetic needle telegraph, though possessing a power of combination far exceeding that of any preceding telegraph in which magnetic needles were proposed to be employed, required a number of wires proportionate to the number of signals. By employing the earth or an extent of water to return the current, or complete the circuit, which might be done by connecting the two extremities of one of the communicating wires with plates of metal, and plunging them in the earth or the water, one of the communicating wires might be entirely dispensed with. This plan would be adopted at Aix-la-Chapelle. That a large extent of earth, or the portion of a river, could be made to complete an electric circuit, was long since established with respect to electricity of high tension, by the extensive experiments of Dr. Watson, in 1748, and others; and the same thing was proved with regard to voltaic electricity, by the independent experiments of Erman, Basse and Aldini, made in 1803. Erman's experiments were performed in the river Havel, near Potsdam, those of Basse in the river Wener, and the environs of Hamel, and Aldini's researches were prosecuted on the shore near Calais. Professor Steinheil also employed the earth as a means of completing the circuit in the electro-magnetic telegraph which he established at Munich in 1838. A pair of Professor Wheatstone's telegraphs were established at Berlin in the beginning of 1842; the line of communication was a single wire carried through the air upon wooden posts, and plates of metal attached to the ends of the wire were buried in the ground. In the same year he formed a communication between King's College and the Shot Tower on the opposite side of the Thames; the communicating wire was laid along the parapets of Somerset House and Waterloo Bridge, and thence to the top of the tower, where one of the telegraphs was placed; the wire then descended, and a plate of zinc, attached to its extremity, was plunged into the mud of the river; a similar plate was attached to the extremity at the north side, and was immersed in the water. The circuit was thus completed by the entire breadth of the Thames, and the telegraphs acted as well as if the circuit were entirely metallic. The peculiar construction of the present signal telegraph enabled a magneto-electric machine to be substituted for a voltaic battery. This source of electric action not being subject to cessation, or diminution, the attention for keeping a voltaic battery in order was dispensed with, and the instruments were always ready for action without any previous preparation.

Medico-Botanical Society.—*May 25.*—Dr. Cooke in the chair.—A paper 'On the Lactucarium, the inspissated juice of the lettuce,' was read. Obtained when the plant is in flower, it has been acknowledged to possess the sedative properties of opium, without any of its inconveniences, that is to say, it neither affects the brain nor the alimentary canal. Dr. Duncan says, it is adapted for the relief of nervous diseases and hypochondriacs. It is procured, unfortunately, in very small quantity, and is exceedingly rare; the extract of the entire plant, which has been prepared as a substitute for it, is very inefficient and inert. Lactucarium is of a brown colour, friable, and dry; the extract is black, soft, and deliquescent. Aqueous preparations of lactucarium are nearly inert. The dose of it in substance has never been more than six grains.—Dr. Houlton afterwards made some remarks on some fine specimens of recent medical plants, which were placed on the table by Mr. Barham. A special meeting was then held, at which it was decided, on the proposition of Dr. Cooke, to admit members resident beyond five miles from the General Post Office, on paying a composition fee of five guineas.

Society of Arts.—*May 31.*—W. Pole, Esq. V.P. in the chair.—The Secretary read a description of Mr. Stephens's Life Preserver, or Portable Life Ball. It consists of a hollow metal ball, about five inches in diameter, to which are brazed or rivetted three eyes. In order to prevent its being damaged, it is quilted over, similar to a child's ball, being, however, first cased with cork to render it more buoyant. Through one of the eyes is rove a line which passes round the ball, and is again brought through the eye in the opposite direction; both parts are then seized together outside the eye, leaving sufficient line with a thimble in the end to form a bight. The standing part of the line is then passed through the thimble, and a noose formed sufficiently large to admit of it passing over a person's shoulders to fasten round his waist. The other two eyes are placed opposite to each other through which a piece of line is rove round, the ball and seized in four places, so as to form grummets or handles to the "Life Ball," in order that it may be the more readily held, or caught hold of. The line may be of about twenty fathoms or upwards of half-inch Hambro' layed rope, having the sliding thimble to form the noose.

Mr. Defries described, and, by aid of a model made almost entirely of glass, illustrated, his 'Dry Gas Meter'—the form of which is that of a hexagonal prism divided into three inferior rhomboidal compartments, and one superior hexagonal chamber—each of the lower compartments is subdivided into two angular compartments by a perpendicular partition formed of four triangular metallic plates united at their edges and also at their central point of meeting, by a skin of calf leather properly prepared—the six lower compartments communicate by means of valves with the chamber at top of the apparatus. Gas being admitted from the supply pipe into the lower chambers, the partitions are moved forwards and backwards alternately, the central meeting of the plates being more in advance than any other part of the partition, both in advancing and retrograding movement. Attached to the centre of each partition is a parallel motion connected with a perpendicular shaft which passes through a proper stuffing-box into the superior chamber, where it communicates by two rods with delicate machinery, by which alternate motion of its own partition produces a rotary motion to an upright spindle and crank shaft. In the upper chamber is fixed a segmental annular passage connected with the inlet for the supply of gas, having three D slide valves connected by horizontal rods with the throw of the crank. The use of the valves is to regulate the supply of gas to be measured, and also the exit of the measured gas, and they are so placed over the three pairs of measuring compartments that the ingress part of each valve is alternately connected with the port on either side of each partition. The pressure of gas, on one side of the partition causes the contents of its fellow compartment to be discharged into the common chamber above—from which the measured gas passes direct to the burner. Below the crank of the spindle, and connected with it, is fixed an endless screw, working in a vertical cog-wheel communicating by a horizontal spindle with the index train of wheels, by which the number of cubic feet of gas consumed in a given time are registered on a dial fixed outside.

June 7.—G. Moore, Esq. V.P. in the chair.—J. Faraday, H. Flower, and J. Chanter, Esqs. were elected members.—Mr. Austin's Apparatus for preserving Life in cases of Shipwreck.—Mr. Austin recommends that every boat should be fitted as a life boat before she is launched over the side, with canvas cases on each side of the whole length of the boat, having a round head at either end, marled on to a good hawser or small chain, and secured round her at light water mark, tautened up by nettles to the gunwale; the cases may be cut out of good topsails or courses from two to three feet in diameter—another case of lighter cloth, of duck, or even of calico, should be made, rather larger in dimensions, and placed within the stout canvas case, each case having three flexible tubes or pipes inserted at the bottom part, one near to each head and one in midships, made of raw hide, India rubber cloth, or several thicknesses of canvas, about a fathom in length, and half an inch in diameter, with a mouth-piece or pipe to be blown into, and stopped or corked. The long boat and skiff should be placed on two spars pointed over the side, the cases well saturated with water, filled with air, stopped, and the boat launched, with plenty of warp slack under foot, and not brought up with less than half a cable, each boat having only two hands in her when launched, with a line passed round them and stopped to the thwart, to bale her out and to receive the passengers and crew, who should have a smaller similar case placed round each of them when descending into the boat, and veered thereto with a traveller round the boat's moorings. The boats so fitted would contain, with safety, double the number of persons they would contain under ordinary circumstances, and could not be upset in a heavy sea, and on going on a lee shore, would hold together and drive well up. If the weather and sea should admit of the boats being brought alongside the wreck, the cases, being filled with air, would serve as flexible fenders, and allow her taking in a number of persons, to be afterwards removed to the other boats.

Mr. Austin's Plan of raising sunken Vessels.—It being ascertained that a vessel has gone down, the first operation is to ascertain her position as nearly as possible, by sweeping with a rope of sufficient length, having two leads fixed thereto, at about sixty fathoms apart, the object of which is to draw the rope along the bottom till it meets with an obstruction. It is easily ascertained by sounding whether the obstruction to the sweeping rope is caused by the vessel or by an anchor or other object: if it be the vessel, it is necessary to ascertain the position in which she lies; this is done by again sweeping the vessel with a small working chain, properly buoyed at equal distances, which will show her length and beam. To ascertain if the bowsprit is still standing, it is necessary to sound again at each end of the vessel. The purchase-chain is next passed round the vessel, having a sufficient number of collapsed air-cases shackled on to it, and when tautened round her by means of other cases or purchase lighters, the chain is effectually secured round the vessel by stoppers; the operation of filling the air-cases is next proceeded with, which is effected by powerful air-pumps on board a steam-vessel taken out for the purpose; and as the displacement of the water is going on, the vessel is gradually being raised from her bed, and by the time they are filled she will be above the surface of the water, and ready to be towed to shore by the steamer.

Mr. John Bethell read a paper 'On the Bude Light,' by which the Society's large room was illuminated for the occasion.

MEETINGS FOR THE ENSUING WEEK.

Sat. Asiatic Society, 2, P.M.
— Botanic Society.—Anniversary.—Election of a President.
Mon. Geographical Society, half-past 8.
— Institute of British Architects, 8.—'Some observations on the Baths of Ancient Rome,' by J. Severn.—'On the Design and peculiar Architectural Characteristics of the South Porch of Malmesbury Abbey Church, and the Porches of the Middle Ages,' by J. Britton.
Tues. Institution of Civil Engineers, 8.—'Description of a plan adopted for carrying off an accumulation of Water from the Warehouses, Cellars, &c. caused by the pending up of the Water in the Wet Docks at the Port of Ipswich,' by G. Hur-

MUSIC AND THE DRAMA

MR. WILLY'S GRAND CONCERT WILL TAKE PLACE at the QUEEN'S CONCERT ROOMS on MONDAY EVENING NEXT, June 12th. Tickets and Programmes to be had at the Music Shops, and of Mr. Willy, 13, Aldenham Terrace, St. Pancras Road.

Choruses of the Antigone of Sophocles. The Words written and adapted by W. Bartholomew, the Music by Felix Mendelssohn-Bartholdy. Ewer.

AN analysis of this work is demanded by the interest which recent private performances have excited; and by rumours of its possible production in "the highest places." Any hope of our hearing the music of 'Antigone' in its original form is visionary. The music is not altogether fitted for concert performance; nor does Windsor Castle contain, like Sans Souci, a theatre among its dependencies; and court influence was found, even in Germany, essential to the favourable production of a work so original and experimental. The reader has been already told, by a correspondent as eloquent as enthusiastic, (*ante*, p. 190,) of the manner in which the 'Antigone' is now performed and received at Berlin.

The music consists of seven accompanied choral movements, with an instrumental prelude. It is carried on by male voices alone, the forms of strophe and antistrophe permitting the employment of two separate choruses, which are occasionally wrought in combination. A large portion of these are unisonal: in one, the leader of the chorus is used as a *solo* voice:—certain of the movements are linked together by choral recitatives, while in other situations the speakers are accompanied, as in melodrama, by the orchestra. These arrangements comprise all the licences permissible to the composer. His task was made additionally arduous, by its requiring from him simplicity as well as dignity. The mysticism which is defensible in sacred composition would have been here fatal. The choruses were to be clear as a *tune*, and, though solemn as a hymn, their solemnity was to be free from all Christian associations. To strong minds, however, difficulties are inspirations. A creative spirit of the highest order, must be able dramatically to assume all sentiments, and imagine all situations, and throw itself back upon any given epoch; and thus a Church tone would be as impossible to him, before whose mind's eye the thymele was arranged, as a stage cadence will ever be to a truly devotional composer. Reasoning from the result, these 'Antigone' choruses have been a labour of love: no commissioned exercise, imperfectly conceived and painfully executed, but the spontaneous utterance of a mind too closely in harmony with its subject to be led away, by any passing caprice of the fancy, from the colours and forms of antique beauty and power. With any other text than that to which they are affixed, these choruses would be unmeaning.

The introductory portion, or overture, is perhaps the weakest part of the work. The opening *andante maestoso*, it is true, is large and pompous, but the *allegro* into which it melts, though impassioned, is more sickly than Mendelssohn's wont. The first chorus, however, is a strain of narration as manly and noble as a passage of Homer. We must point, in proof, to the first *piano* phrase, leading upwards by a simple but unworn progression to as grand an outburst as ever told of Valour and Victory. Nor can we refrain from instancing the second antistrophe (p. 13), where the two choirs are interlaced, with a mastery and a spirit not surpassed by Handel's self in the eight-part choruses of 'Israel.' The range of Mendelssohn's invention in the work before us, will be seen by comparing this with a second narrative chorus, No. 5, one of our favourite portions of the work. In this, the melody moves with the grave and artless sadness of an old national tune; its interest depending wholly upon the notes, the tales of Danaë and of the son of Dryas being told in unison, since harmony might have interfered with the distinct enunciation of the story. It would be difficult to cite anything at once more original and more haunting in modern music: the intervals are unusual—the rhythm unfamiliar—yet the song possesses itself of the ear as forcibly as the most bewitching eight-bar *cabaletta* ever thrown off by Rossini in the *maestro's* freshest time. The *piu allegro* of this ballad, for such it is, is less to our taste; one of the few portions of the 'Antigone' where the composer seems to have forced his invention. The didactic choruses must have offered still greater difficulties than the above, since moral reflections suggest but little in the way of musical idea. From these, however, the sympathy with his task, to which we have adverted, has extricated the composer most happily. No. 2, for instance, is a beautiful pastoral melody in unison, relieved by a minor strain, in which, the resources of harmony being called in, the idea deepens, and the structure becomes complicated in admirable accordance with words; yet the movement comes as naturally and symmetrically to a close, as if nothing more than common couplet-writing to a stanza with a burden had been the object. A large part of the subsequent chorus (No. 3), is didactic; as are also the series of short movements closing the tragedy, which are especially remarkable as succeeding one of the most exciting choruses ever written. In these, a positive originality of musical effect is gained, by conforming to the requisitions of the ancient drama. To have heightened the close, after the hymn to Bacchus, would have been impossible; but to have allowed it to subside into tranquillity, without feebleness or faltering, is a proof of power of the highest order.

Having adverted to its narrative and didactic portions, we have now to speak of the two hymns. The first, No. 4, to Eros, is for four solo voices, a strain of great delicacy and sweetness. In the earlier portion, the harmonies are drier than may be advisable in unaccompanied music. But from the words (English version) "*Thy sway extends*," the movement rises—and its simplicity is coloured by a certain caressing voluptuousness (as in the imitations on the words "*Thine eye-piercing dart*") which, though anything but secular, is anything but sacred, in our acceptation of the term. The hymn to Bacchus (No. 6) is of a higher order. In this all the vocal and orchestral resources of composition were legitimately admissible: and accordingly, after a triumphant and stately eight-bar melody is given out by the orchestra, the voices start alone, in a strain, which, as a piece of simple vocal writing, is almost unrivalled in brilliancy—we say this, not forgetting the incomparable burst of male voices in the opening chorus of Weber's 'Euryanthe.' Nothing could be at once more pompous and picturesque than the employment of the instruments throughout the two strophes thus begun. There is the courage of inspiration in the sudden silencing of harp, cymbal and viol, towards the close of the verse, which is brought to an end by a choral shout of adoration. The *stretto* of this hymn is yet more striking as a specimen of antiphonal writing. The perpetually moving invocation given to one choir, while the other bursts in ever and anon with its louder and longer cries of "*Hear us!*"—the manner in which, as the climax proceeds, the orchestra is led onwards from brilliancy to brilliancy, till the rite closes in an enthusiastic frenzy of voices and instruments, is a musical triumph to be partaken with no measured emotions, and hardly to be described in language. We conceive Mendelssohn to have surpassed in this hymn all his previous vocal efforts, as far as he has distanced his contemporaries—the fourth act of 'Les Huguenots' being distinctly present to our recollections at the moment of recording such a judgment.

We have now pointed out, though briefly, the leading divisions of this music. Every one should make its acquaintance, if only to convince himself how nobly modern Art can illustrate antique tradition, when employed by one who, like Mendelssohn, brings to his task poetry and scholarship as well as technical resource.

PHILHARMONIC SOCIETY.—*Sixth Concert.*—It is pleasant to see the efforts made by the Directors to retrieve the credit of their Society. Though none of these touch the organic defects of its constitution, let us still give the Directors credit, and express our thanks for the interesting concert of Monday evening. The Sinfonia of Haydn (No. 2. of Saloman's 12) will be always welcome, and, for the sake of its cheerful and original slow movement, we will pass the Corelli duet with only a passing "*Oh!*" at Lindley's cadence, which was more extravagant and misplaced than ever. The first act closed with a new concerto by Mr. W. S. Bennett. This we did not relish so heartily as either of his two last. The opening *allegro* seems, to us, wanting in design,—the pleasing serenade, or middle movement, so entirely a "*Lied ohne Worte*" in its form and absence of relief, that the orchestral accompaniment did it little good or harm, while the opening of the *finale* gave better promise than its close fulfilled. Then there was no shutting ears to the fact, that there was hardly a peculiarity of form or treatment in the work, which was not referable to Mendelssohn: the constancy to *arpeggio* in the passages, the enunciation of the second subject in the *finale*, where the simplicity of the master becomes, in the pupil, meagreness: the manner of the second movement recalled to us examples, originals, and characteristics, which it is vexatious to encounter second-hand in one who has shaped his career so meritoriously, and studied so honourably, as Mr. W. S. Bennett. Let him estimate our respect for his talent by the urgency of our remonstrance. The second act of the concert began with Beethoven's c minor symphony, the first movement of which the band *would* play in the true *tempo*, in spite of its conductor, Sir Henry R. Bishop. After this, Sig. Camillo Sivori, released from his ill-considered compact with the Opera management, played the *allegro* of a grand concerto. Nothing has been heard on his instrument purer or more admirable than the opening of his *solo*, which fully justified our trust in the soundness of his acquirements. As the composition proceeded, we had the devices of his school in ample measure, wound up with a cadence to which we only object because it was written on the identical pattern of the cadence to the concerto he performed in the Haymarket. Everything, however, that the Signor attempted he executed with mastery, and he well deserved the brilliant reception he met with. The singers were, Miss Dolby, Mdlle. Pacini, and Herr Staudigl. Our countrywoman had largely the advantage of the Parisian *mezzo soprano:* the Herr should never sing Rossini. Strange to say, too, that in *Mephistopheles'* song from 'Faust' he is surpassed by Lablache, whose voice tells better in the midst of the mazy cunning of Spohr's accompaniments, and whose reading is subtler and more *malicious*. A sacred song, by Nicolai, was a novelty as welcome as its execution was fine. This, if we mistake not, is the composer of 'Il Templaio,' an opera which has been described, to us, as superior in contruction to most modern Italian works. In the air sung by Herr Staudigl on Monday, the idea was good, and the orchestral treatment excellent and original. By the way, it is Nicolai to whom we are indebted for the excellent scoring of Schubert's 'Der Wanderer,' which was so much admired at a former concert.

CONCERTS OF THE WEEK.—To state that *Mr. John Parry's Concert* was held yesterday week, implies, of course, a crowded room, and an audience enjoying itself on "the greatest-laughter principle." Those who are curious in merriment, may find food for speculation in comparing our comic singer with the Parry of the Parisians—M. Levassor, who is here also. The English artist is the most of a musician—M. Levassor the best *mime*. "Blue Beard," and "The Sleeping Beauty," and "The Accomplished Young Lady," are helped to half of their fun by tricks of accompaniment, happily-parodied vocal reminiscences, and nicely-disposed melodies; while "Le Curé Patience," and "Le Chanteur Choriste" owe a large share of their drollery to the inimitable personation, by face, voice, and manner, of the French actor. In one respect the balance is on our side. Mr. John Parry is never vulgar—never indulges in the most homœopathic exhibition of *double entendre*. This is more than could be asserted of M. Levassor; but the fault lies in his home audiences, rather than in his own taste, which, on the stage, is excellent. We must not let this parallel make us forget that Mr. John Parry was ably supported, at his concert, by the best artists attainable.

Madame Dulcken's benefit was one of those luxurious entertainments in which every dish is a delicacy. Where are we to begin, in enumerating the several items of the treat? With the lady herself, who played thrice; first the *andante* and *rondo* from Chopin's concerto in F minor, which had only one fault, namely, that it was delivered with too musician-like a steadiness, in place of that fantastic waywardness in which the delicate and dreamy player himself indulges; secondly, in an amorphous sort of composition, by Czerny, for two pianos (M. Dreyschock being her playfellow,) and a chorus of voices, based on the well-worn "O Pescator"; lastly, in a duet for two pianos, by M. Dreyschock. The last is brilliant and effective, the expressive passages being chiefly allotted to the lady, while the wonders of octave accompaniment were reserved by the composer for his own use: and assuredly no contemporary could deal with them so triumphantly. Though the composition is not eminent for stamen or originality, we are obliged to M. Dreyschock for his obvious resolution to spare us the *fantasia* on operatic airs, so cruelly worn threadbare by other show-pianists. The vocal attractions of Madame Dulcken's concert seemed interminable. The chief novelty, perhaps, was a pretty *buffo* duet from 'Don Pasquale,' inimitably sung by Grisi and Lablache. Mdlle. Nissen, a sound and well-qualified *soprano* singer, whom we have not heard in public before, executed a *bravura* from 'Betly' with meritorious finish; Madame Albertazzi, too, was heard to great advantage in De Beriot and Benedict's well-known *rondo*. The compass of her voice is superb, and its several tones sweet; her execution certain, and her intonation rarely faulty: it is the utter absence of animation which throws so vexatious a spell over her powers of pleasing. To descant upon the performances of Mdlle. Molteni, Mdlle. Pacini, Mrs. Shaw, Miss Birch, Signors Mario, Fornasari, Brizzi, F. Lablache, and Herr Staudigl, who all lent their aid to this concert, would be superfluous.

HER MAJESTY'S THEATRE.—The story of 'Linda di Chamouni' is one of those simple and pathetic tales of domestic interest, which, though it may slide easily into maudlin by spoken dialogue, is the very thing for music. With the plot and incidents we shall not concern ourselves; but, musically speaking, it includes a Swiss maiden (Persiani), honourably beloved by a young nobleman in disguise (Mario), and persecuted by a licentious suitor (Frederic Lablache), her faithful friend and playmate a boy (Brambilla), who unconsciously interposes for good in every crisis of her fate, her venerable father (Fornasari), and the upright and plain-dealing magistrate of the village (Lablache). This mere enmueration will sufficiently display the strength of the cast, and the fitness of the occupation found for each artist. The getting up of the opera, too, is almost unprecedentedly complete for London: the departure of the mountaineers for Paris, which closes the first act, being a picture as simply affecting from its truth, as any we recollect. We may return more in detail to the performances of the several singers, but must now speak of the music, which was written by Donnizetti for Vienna. The Italian composer, taking the measure of his audience, wisely conciliated them by a more recondite care in construction and orchestral filling-up than is usual with him. The melodies of the opera are few, and not new; here, we have a scrap of Weber's Mermaid's Song, there, a transcript of the theme of one of Mayseder's *polaccas*, in a third place, a very strong reminiscence of *Cenerentola's* fire-side ballad. The popular duet in the first act, too—one of the most salient pieces—is but a favourite air from the composer's own 'Anna Bolena' recast. Thus we cannot agree with those who promise Donnizetti an immortality for Linda. The opera has enjoyed a *succes d'estime* in Paris, owing to the want of individualities above indicated. Here, we think, it may be longer accepted,—thanks to the nature of the story—thanks to the careful instrumentation, to which our orchestra does far greater justice than the meagre and feeble band of the *Salle Ventadour*—and thanks to the perfect manner in which it has been put on the stage.

The HAYMARKET bill of fare for the last week has consisted entirely of French dishes, *réchauffés* by English dramatic cooks, who season them to suit the palate of John Bull. After the 'Little Devil,' the standing dish at these theatrical *soupers*, came 'Louison,' the 'Double-bedded Room' forming an appropriate *finale*. 'Louison' is another and a better version of the 'Angel of the Attic,' at the Princess's Theatre; and the 'Double-bedded Room,' is a coarse and inferior version of a farce that was played at the Strand Theatre, in which Mr. and Mrs. Keeley personated a lady and gentleman in a perplexing predicament. Farren and Mrs. Glover are, it must be confessed, less entertaining than Mr. and Mrs. Keeley, but only because the perplexities of their dilemma are less ingeniously and delicately set forth; indeed, an English cathedral town does not afford the same excuse for their predicament as the auberge of a French village. In 'Louison,' Mr. Webster and Madame Celeste are a pair of lovers, *au quatrième*, whose happiness is threatened by a profligate young officer, and their marriage delayed by an *émeute*: their acting is effective in its way.

MISCELLANEA

Copyright.—The following is from the *Boston (U.S.) Advertiser*:—"In 1834, there appeared, in the second volume of Sparks's 'American Biography,' a life of Captain John Smith, written by G. S. Hillard. It was written carefully, and with great beauty of style," &c. * * "So perhaps thought the editor of the *Evening Star*, a periodical of 32 pages in quarto, double columns, neatly printed in London, and published by George F. Pardon, 252, Strand. At any rate, on the 21st of January, 1843, he published the whole of this Life of Smith, 230 pages, 18mo., *verbatim et literatim*, in what he calls the Library Edition of his paper, filling nearly the whole of it, but suppressing the name of its author, and giving no intimation that it was not a wholly new work. But this is not all. An American gentleman, passing by No. 252 in the Strand, at about that date, went in, and seeing a formidable-looking person, with a pen over his ear, who had some air of responsibility about him, made inquiries concerning the author of the Life of Smith. He was assured, in reply, that it had been written for the '*Evening Star*.' The gentleman hesitated; and hinted that a friend of his thought he had seen it in an American book. 'Impossible! impossible! Sir,' said the responsible looking man behind the counter, 'we have a *historian* attached to the establishment, expressly for these things.'"

Little-goes.—I send the enclosed, cut from the Cork *Examiner*, just, as you say, to record progress, and the neglect of the law officers, who are bound, by the act of parliament against lotteries, to enforce its penalties:—"*Stuffed Birds of Paradise, &c.*—Sixty-two rich prizes of oval glass shades of stuffed birds of paradise, a superb rose-wood musical table, speaking parrot, a live monkey, &c. &c., will positively be drawn upon the same plan as the Royal Irish Art-Union, on Friday, the — May, at two o'clock, in the Imperial Clarence Room. Tickets only 2*s.* 6*d.* each, having a chance of drawing two rich prizes, value 30*l.* 18*s.*"

Meanee.—Our military friends may be glad to know that Mr. Wyld has published a Plan of the Battle of Meanee, from a survey by Captain J. Jacob, B.A.

Moser's Discovery.—I do assure you that it afforded me much pleasure to find a portion of your 812th No. occupied by a paper on Moser's discovery, by Mr. Horatio Prater. I am not, however, satisfied that Mr. Prater has succeeded in *proving that the effect is due neither to light nor heat*, and I must most decidedly object to his conclusion, that the effect is due "to a mechanico-chemical action, or a *catalytic* action; meaning thereby an action so slightly chemical, as, in the present state of the science, to be scarcely appreciable." I have shown, in a paper published in the 'Philosophical Magazine,' for April, that *chemical decomposition* could be brought about, in some metallic salts, by the juxtaposition of metallic plates: that the iodides of copper and of gold were reduced to the metallic state by being allowed to remain for a few weeks under a copper plate with a well amalgamated surface, the salts and the plate being nearly a quarter of an inch apart. I have, since that time, succeeded in decomposing many other salts in a similar manner. These facts may appear to confirm Mr. Prater's idea. We must, of course, consider the decomposition as a chemical phenomenon: but this change is effected by the influence of an agent which bears a strong analogy to *light*, but which is separated from it by many broad distinctions. I am by no means wedded to the opinion, that *heat* is the active principle. That the phenomena described by Moser and myself are accelerated by the application of heat, all my experiments render certain, and this is, indeed, admitted by Mr. Prater. This gentleman has erred, as it appears to me, in exposing his plates so long to the influence of a high temperature, during which both the coins and the plates were heated in an equal degree. I have shown, in the paper above alluded to, that all that is necessary to prepare a metal plate for the reception of vapours on defined spaces, is to *disturb the equilibrium of the caloric latent in the plate*. Another point, of great importance in these investigations, is entirely overlooked by Mr. Prater. In my paper on Thermography, I have stated *that the vapours of mercury and iodine attack the plate differently*. I find that many impressions which we cannot render visible by breathing on the plates, or by exposing them to the vapour of water, are developed with beautiful distinctness by the vapour of mercury: again, that others, which remain invisible under the influences of the vapours of water or of mercury, are readily evoked by the vapours of iodine, bromine, or by sulphuretted hydrogen gas. It appears to me, that some very curious relations are yet to be traced out between the vapours of bodies and solids on which they may be condensed. I regret the less, that for some time to come I shall not be enabled to follow up this inquiry, seeing that it is in the hands of a gentleman of Mr. Prater's talents, whose leisure is, I hope, equal to his ability. I have refrained from making any remark on several other points of Mr. Prater's paper, being unwilling to burthen your valuable pages with any discussion on matters about which there is an uncertainty in my experimental evidence. I am, &c.,

Falmouth, June 3, 1843. ROBERT HUNT.

I perceive, in your notice of the sitting of the Paris Academy of Sciences, that a report was read, on May 8, on a paper by M. Payer, on the tendency of stalks and stems towards the light, in which it is stated that M. Payer has resolved the question as to which of the solar rays cause this tendency. May I request the favour of your referring to your own report (No. 767) of the last meeting of the British Association, in which you will find that I made a report to the meeting of my own experiments on this subject, which report is published in the Transactions of the Association. It will be found that M. Payer has done nothing more than corroborate the results to which I had long previously arrived. R. H.

Life-Preserver.—A member of the Edinburgh Skating Club has lately invented, under the above title, a contrivance which, without disfiguring the dress, is sufficient to keep above water any person wearing it. It consists of a Mackintosh cape, which, when filled with air, is swelled about the thickness of an inch and a half. Several experiments have been made with it, and the result is said to be satisfactory.

TO CORRESPONDENTS.—J. D.—A Constant Reader—C. O.—W. B.—I. P. H.—β.—A Regular Reader—received.

No doubt the work referred to by "A Subscriber" was, at or about the time, advertised in this Journal, and we can only recommend him to hunt for the advertisement or order the book of his bookseller.

This day is published, price 1*s.*

AGNES DE TRACY; a Tale of the Times of S. Thomas of Canterbury. By the Rev. J. M. NEALE, B.A., late Scholar of Trinity College, Cambridge; Author of 'Herbert Tresham.'

Cambridge: Thos. Stevenson. London: J. G. F. & J. Rivington.

In 8vo. price only 1*s.* (or Postage Free, 1*s.* 6*d.*)

THE REGISTRATION of VOTERS ACT (passed May 31, 1843), to amend the Laws for the Registration of Persons entitled to Vote, and to define certain rights of voting and regulate certain proceedings in the election of Members to serve in Parliament; with the Schedules of Forms; and a copious Consulting Index. By A BARRISTER.

This important Act comes into immediate operation, and it is essential for every voter to possess himself of it without delay.

London: James Gilbert, 49, Paternoster-row.

L'ILLUSTRATION—PARIS ILLUSTRATED NEWS.—Those who read French will find in this Journal a PICTORIAL HISTORY OF FRANCE in Politics, Literature, Science, and Art. Every number contains from Twenty to Thirty superb Engravings, and Articles on all subjects of interest by the first Writers of France.—Subscriptions, 8*s.* per Quarter, are received in London by Joseph Thomas, 1, Finch-lane. Single numbers, not transmissible by post, price 6*d.*

Just published, in 1 vol. 8vo. 15*s.* cloth,

A LEXICON to ÆSCHYLUS, containing a CRITICAL EXPLANATION of the MORE DIFFICULT PASSAGES in the SEVEN TRAGEDIES. By the Rev. W. LINWOOD, M.A., Student of Christ Church, Oxford.

Printed for Taylor & Walton, 28, Upper Gower-street.

DR. LARDNER ON THE STEAM-ENGINE, STEAM NAVIGATION, AND RAILWAYS.

Illustrated by 167 Engravings on Wood.

THE STEAM-ENGINE EXPLAINED and ILLUSTRATED; with an Account of its Invention and Progressive Improvement (including a Life of Watt), and its Application to Navigation and Railways. By DIONYSIUS LARDNER, D.C.L. Seventh edition, almost rewritten. 1 vol. 8vo. 12*s.* cloth.

Printed for Taylor & Walton, 28, Upper Gower-street.

2nd edition, in 8vo. cloth lettered, price 8*s.*

CHRONICLES OF ENGLAND.

A NEW METRICAL HISTORY.

By GEORGE RAYMOND.

Being a clear and comprehensive view of the English Annals, from the Conquest to the Accession of William IV.—in the form of verse—with copious notes.

London: William Smith, 113, Fleet-street; and Cunningham & Mortimer, Adelaide-street, Trafalgar-square.

"The volume is altogether one of the most genial pleasure-books for the young we have ever seen."—*Atlas.*

"This book combines the charm of novelty with the familiar worth of the oldest truths. It is an excellent versification of our English Annals, from Norman William to the Fourth of that name."—*Examiner.*

JUST PUBLISHED, SECOND EDITION,

In post 8vo. price 1*s.* 6*d.* sewed and gilt.

A PAPER LANTERN FOR PUSEYITES.

Illustrated with numerous Woodcuts.

"We now leave this humorous and entertaining publication, at which Dr. Pusey and Professor Sewell themselves will smile, to the taste of the general reader."—*Literary Gazette.*

"Its sparkling verses are written with the ease of a scholar and the erudition of a churchman, who wishes to preserve the rights of Protestantism, uncontaminated by the doctrines of Puseyites. We know not which to admire most, the happy and pungent wit, and playful fancy pervading each of the seven poetical epistles of which this little brochure consists, or the very amusing and laughable illustrations which accompany each of the epistles."—*Atlas.*

London: Smith, Elder & Co. 65, Cornhill.

ANNUITIES.—In the AUSTRALASIAN COLONIAL AND GENERAL LIFE ASSURANCE AND ANNUITY COMPANY, Annuitants *participate in the profits of the Company*, and receive a rate of ANNUITY much more favourable than can be granted by any Company making its investments wholly in England. The Company is enabled securely to grant these favourable terms from the advantage it possesses of investing a portion of its funds at a high rate of interest.

Directors.

Edward Bernard, Esq. F.R.S.	C. E. Mangles, Esq.
Henry Buckle, Esq.	J. B. Montefiore, Esq.
John Henry Capper, Esq.	J. H. Ravenshaw, Esq.
Gideon Colquhoun, jun. Esq.	William Walker, Esq.

Solicitors—Messrs. Swain, Stevens & Co.
Bankers—The Union Bank of London.
Colonial Bankers—The Bank of Australasia, (incorporated by Royal Charter, 1835.) No. 2, Moorgate-street.
Secretary—Edward Ityley, Esq.

Prospectuses, with Tables, Forms of Proposal for the purchase of an Annuity or for making an Assurance, and every information, may be obtained by application at the Office of the Company, No. 126, Bishopsgate-street, City.

BRITISH EMPIRE LIFE ASSURANCE, ANNUITY, and ENDOWMENT COMPANY, 5, Whitehall, and 36, Old Jewry, London.

Directors—Sir George Staunton, Bart. M.P. *President.*
Sir Herbert Compton, *Vice-President.*

Charles Forbes, Esq.	Arthur Helps, Esq.
James Mackillop, Esq.	Thomas E. Headlam, Esq.
J. Phillimore, Esq. D.C.L.	Robert J. Grigg, Esq.
W. Wilkinson, Esq.	G. Bicknell, Esq. (Resident).

Bankers—Messrs. Coutts & Co.
Solicitor—Messrs. Ogle & Younghusband.

The peculiar advantages offered by this Company are:—
1st. That where the assurance is for life, one-half of the premiums may remain unpaid for seven years.
2nd. A Table peculiarly fitted for policies for loans, the premiums commencing very low, and varying every three years.

Age.	1st period of 3 years.	2d period of 3 years.	3d period of 3 years.	4th period of 3 years.	Remainder of Life.
27	1 3 7	1 8 7	1 15 9	2 4 6	2 14 10

3rd. For Survivorship Annuities, on a principle peculiar to this Office, avoiding the loss of the premium paid, if the party does not survive to take the annuity.
Every information may be obtained at the Offices, at Whitehall, and 36, Old Jewry.
The usual Commission to Solicitors and Agents.
GEO. BICKNELL, Resident Director.

UNIVERSAL LIFE ASSURANCE SOCIETY, 1, KING WILLIAM-STREET, LONDON.

Directors—Sir Henry Willock, K.L.S. *Chairman.*
John Stewart, Esq. M.P. *Deputy Chairman.*

Major-Gen. Sir Rd. Armstrong, C.B. K.C.T. & S.	William Kilburn, Esq.
John Bagshaw, Esq.	Francis Macnaghten, Esq.
Augustus Bosanquet, Esq.	Charles Otway Mayne, Esq.
Charles Dashwood Bruce, Esq.	Robert Saunders, Esq.
Ellis Watkin Cunliffe, Esq.	James Duncan Thomson, Esq.
Rathes Currie, Esq. M.P.	Capt. Samuel Thornton, R.N.

The principle adopted by the Universal Life Assurance Society of an annual valuation of assets and liabilities, and a division of *three-fourths of the profits* among the assured, is admitted to offer great advantages; especially to those parties who may wish to appropriate their proportion of profit to the reduction of future premiums.
The following table will show the result of the last division of profits, as declared on the 10th of May, 1843, to all persons who had on that day paid six annual premiums:—

Age when Policy was issued.	Date of Policy.	Sum Assured.	Original Premium.	Reduced Annual Premium.
20	On or before 10th of May, 1838.	£1,000	£19 6 8	£9 13 4
30		1,000	26 8 4	12 4 2
40		1,000	31 10 0	15 15 0
50		1,000	42 15 0	21 7 6
60		1,000	66 11 8	33 5 10

(By order of the Board)
DAVID JONES, Actuary.

CORPORATION of the LONDON ASSURANCE. Established by Royal Charter, A.D. 1720.
FOR FIRE, LIFE, AND MARINE ASSURANCES.
Offices, 19, Birchin-lane, Cornhill, and 10, Regent-street.
John Clark Powell, Esq., *Governor.*
Abel Chapman, Esq., *Sub-Governor.*
Lestock Peach Wilson, Esq., *Deputy Governor.*

Directors.

Robert Allen, Esq.	Richard Drew, Esq.
John Arbuthnot, Esq.	John Furze, Esq.
George Barnes, Esq.	Edwin Gower, Esq.
Henry Blanshard, Esq.	Samuel Gregson, Esq.
John Watson Borradaile, Esq.	Edward Harnage, Esq.
Edward Burmester, Esq.	Robert King, Esq.
Henry Cayley, Esq.	William King, Esq.
Aaron Chapman, Esq. M.P.	John Ord, Esq.
Robert Cotesworth, Esq.	George Probyn, Esq.
Charles Crawley, Esq.	John Rees, Esq.
John Deffell, Esq.	Daniel Stephenson, Esq.
James Dowie, Esq.	Thomas Weeding, Esq.

Persons effecting Life Assurances with this Corporation have the choice of two plans:
The one entitling them to an annual abatement of premium after five years' payment;
The other at a lower fixed rate without abatement.
The leading features which distinguish the first of these plans from those of other Life Assurance offices are—
The guarantee of the Corporation for the full payment of the sums assured:
Annual abatements of premium, commencing after five full years' payments:
Total absence of partnership of any kind whatever:
Absolute exemption from the possibility of being called upon to contribute towards making good any losses:
And freedom from all charges of management.
The abatement of premium for the year 1843 on policies of five years' standing, under the first of the above plans, was 31*l.* 10*s.* 2*d.* per cent.
It may be here sufficient to state, as an example, that under the above system a person having effected a policy on or before the 1st of January, 1838, at an annual premium of 100*l.*, had, on the 1st of January, 1843, only the sum of 68*l.* 9*s.* 10*d.* to pay as that year's premium.
The future annual abatement must vary according to the success of this branch of the Corporation's business.
In the Fire Department assurances are effected at the lowest rates.
Attendance daily, from Ten till Four, at both Offices, where prospectuses and every information may be obtained.
ABEL PEYTON PHELPS, Esq.,
Superintendent of the Office in Regent-street.
JOHN LAURENCE, Secretary.
The Corporation having determined to increase the number of their agents, are desirous of receiving applications for appointments from parties of respectability and influence residing in the several towns and districts of England and Wales.

ARGUS LIFE ASSURANCE COMPANY, 39, Throgmorton-street, Bank.
Empowered by special Act of Parliament, 5 & 6 Will. IV. c. 76.
Thomas Farncomb, Esq. Alderman, *Chairman.*
William Leaf, Esq. *Deputy-Chairman.*

William Banbury, Esq.	Rupert Ingleby, Esq.
Edward Bates, Esq.	Thomas Kelly, Esq. Ald.
Thomas Camplin, Esq.	Jeremiah Pilcher, Esq. Sheriff of London and Middlesex
James Clift, Esq.	Lewis Pocock, Esq.
Rt. Hon. J. Humphery, M.P. Lord Mayor of London	

Physician—Dr. Jeaffreson, 2, Finsbury-square.
Surgeon—W. Coulson, Esq. 3, Frederick's-place, Old Jewry.
Consulting Actuary—Professor Hall, of King's College.
Advantages of the Argus Life Assurance Company.
Low Rates of Premiums.
In addition to the subscribed Capital of 300,000*l.* the assured have the security of the Company's Income of nearly 60,000*l.* per annum, yearly increasing, and an accumulating Assurance Fund invested in Government and other available Securities, of considerably larger amount than the estimated liabilities of the Company.
The Rates of Premium are reduced to the lowest scale compatible with the safety of the Assured and the stability of the Company, thereby, in effect, giving to every policy-holder an immediate and certain bonus without risk, in lieu of the deferred and frequently delusive prospect of a periodical division of profits.
Annual Premium to Assure £100.

Age.	For One Year.	For Seven Years.	Whole Term.
20	£0 17 8	£0 19 1	£1 11 10
30	1 1 8	1 2 7	2 0 7
40	1 5 0	1 6 9	2 14 10
50	1 14 1	1 19 10	4 0 11
60	3 2 4	3 17 0	6 0 10

One-third of whole-term Premiums may remain unpaid at 5 per cent. comp. int. as a debt upon the Policy for life, or may be paid off at any time without notice.
In Assurances for advances of money, as security for debts, or as a provision for a family, when the least present outlay is desirable, the varied and comprehensive Tables of the Argus Office will be found to be particularly favourable to the assured.
A Board of Directors, with the Medical Officers, attend daily, at a quarter before 2 o'clock.
EDWARD BATES, Resident Director.
A Liberal Commission to Solicitors and Agents.

ROYAL BANK of AUSTRALIA, 2, Moorgate, street, London. *Directors.*
B. Boyd, Esq., *Chairman.*
J. W. Sutherland, Esq., *Vice-Chairman.*

George Webster, Esq.	J. P. Robinson, Esq.
Mark Boyd, Esq.	Adam Duff, Esq.
John Connell, Esq.	

Bankers—Union Bank of London, 8, Moorgate-street, Argyle-place, Regent-street, and Pall Mall East.
Standing Counsel—P. Laurie, Esq.
Solicitors—Messrs. Parken and Webster, and Messrs. Johnstone and Farquhar.
The Directors grant Letters of Credit and Bills at 30 days' sight, on Sydney, Port Philip, Hobart Town, and Launceston, free of charge. Bills transmitted for collection.
By order of the Board, G. H. WRAY, *Manager.*
Agents: R. Allen, Esq., 8, St. Andrew-square, Edinburgh; Messrs. H. Thompson & Co., Dublin; and John Harrison, Esq., Belfast.

STONE-COLOURED CEMENT.
FELIX AUSTIN, of the New Road, Regent's Park, begs to inform Architects, Builders, Plasterers, &c. that during the process of manufacturing a very superior composition which has greatly improved his well-known Artificial Stone Ornaments, he has succeeded in making an excellent STONE-COLOURED CEMENT, adapted to building, more especially for facing brick walls and repairing decayed stone work, which he can supply at 2*s.* 6*d.* per bushel, at his Manufactory, near the Thames Tunnel, Rotherhithe.

IMPORTANT PATENT IMPROVEMENTS in CHRONOMETERS, WATCHES, and CLOCKS.—E. J. DENT, sole patentee, has OPENED his West-end PREMISES, 33, Cockspur-street, Charing-cross, in addition to 82, Strand, with an entirely new stock of Watches and Clocks, Ladies' Gold Watches, 8 guineas each; Gentlemen's ditto, 10 guineas; and Silver Levers at 6 guineas each.—A new edition of Dent's Lectures, price 1*s.*, but to customers gratis.

MOULD CANDLES to BURN WITHOUT SNUFFING.—KEMPTON'S PATENT.—These candles do not require snuffing; they burn longer and are cheaper than any other candle; the flame is steady and brilliant. No metallic or deleterious matter is used in the manufacture. Price 8*d.* per lb. Sold by G. E. Parish, agent for exportation, 91½, Bread-street, City, and by Slodden & Stocking, 42, High-street, Marylebone; W. Gethen, Broadley-terrace, Blandford-square; W. Evans, Italian warehouse, Greenwich; John Hawkins, grocer, High-street, Whitechapel; George Hawley, grocer, Pitfield-street, Hoxton; S. Game, Fish-street-hill; J. Pain, grocer, Bethnal-green-road; G. H. Hudson, 229, Blackfriars-road; C. H. Nicholas, 19, Bolingbroke-row, Walworth; and at the manufactory, Old Bargehouse, Christchurch, Surrey.

PATENT PERRYIAN PENS. Prices rendered accessible to all Writers.—JAMES PERRY & CO., Manufacturers to Her Majesty and H.R.H. Prince Albert, have just introduced a new variety of their excellent Metallic Pens, in boxes containing one gross, &c., in cases containing a quarter of a hundred, and on cards; all of which are manufactured under the protection of their Patents, suitable for every description of writing, and superior to all the ordinary Steel Pens in general use. J. P. & Co. strongly recommend Bankers, Merchants, Exporters of Metallic Pens, and all large buyers, to make trial of these articles, in the full confidence they will be found to possess more of the necessary elasticity for the production of good writing than any other Pens at a similar price.—Sold by all Stationers and Dealers in Metallic Pens throughout the Empire. Manufactory, 37, Red Lion-square, London.

TWENTY YEARS' LOSS of HAIR, and WONDERFUL RESTORATION. Church-street, Whitby, Oct. 19, 1841.—Gentlemen—Of the last supply of Oldridge's Balm of Columbia every bottle was sold immediately on receipt, and I have many more bespoke, only waiting for a further supply, which I hope you will send without the least delay. Orders have poured in more than ever since the powerful effects of the Balm have been so decisively demonstrated in the cases of several credible and respectable inhabitants of the town. One instance, among others which have attracted particular attention, is the case of a gentleman who had had little or no hair for twenty years; he had tried numerous preparations in vain, and ultimately had his head shaved and wore a wig. At my recommendation he tried the Balm; and after using it according to the directions for a short time, the young hair appeared, and he has now as fine a head of hair as any person in Whitby.
Yours, &c. JOHN KILVINGTON.
To Messrs. Kennaby, Brothers, 10, Westmoreland-buildings, Aldersgate-street, London.
OLDRIDGE'S BALM prevents the hair turning grey, produces a beautiful curl, frees it from scurf, and stops it from falling off; a few Bottles generally restore it again. Price 3*s.* 6*d.*, 6*s.* and 11*s.* per Bottle. *No other prices are genuine.* Ask for OLDRIDGE'S BALM of COLUMBIA, 1, Wellington-street, Strand.

METCALFE'S NEW PATTERN TOOTH-BRUSH and SMYRNA SPONGES.—The Tooth-Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose—1*s.* An improved Clothes-Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-Brushes, with the durable unbleached Russian Bristles, which do not soften like common hair. Flesh-Brushes of improved graduated and powerful friction. Velvet-Brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment, Oxford street, two doors from Holles-street.
CAUTION—Beware of the words "From Metcalfe's" adopted by some houses.

WATCHES by WEBSTER & SON, Chronometer Makers to the Lords of the Admiralty (Established 122 years), 3, BIRCHIN-LANE. The largest assortment of fine Second-hand Watches of any house in London, by the most eminent makers—many nearly equal to new, and at little above half their original cost, all of which W. & Son warrant. They consist of fine Repeaters, Duplex, Lever, and Horizontal Escapements, all of superior manufacture. New Watches of the most elegant patterns upon the principle of their Chronometers, to which the Government awarded the prizes three years in succession, with compensation balances to counteract the variations of temperature. Also a large assortment of Lever and elegant Horizontal Watches, for Ladies and Gentlemen, at considerably reduced prices. Old Watches taken in exchange. The most experienced workmen are employed on the premises in the repairing department.
Webster & Son, 3, Birchin-lane, Cornhill.

LEA & PERRIN'S 'WORCESTERSHIRE SAUCE.' Prepared from the Recipe of a Nobleman in the County.—The above celebrated Sauce has, from the time of its introduction, been steadily progressing in public favour. Its peculiar piquancy, combined with exquisite flavour, establish it of a character unequalled in sauces. Noblemen and others, of acknowledged goût, pronounce it to be 'the only good sauce;' and for enriching gravies, or as a zest for fish, curries, steaks, game, cold meat, &c., especially unrivalled. As a rapidly-increasing inquiry is now made for it in all parts of the kingdom, the Proprietors beg to state that druggists, grocers, and others may be supplied by their agents—Messrs. Barclay & Sons, Farringdon-street; Mr. J. Harding, 59, King-street, Stepney; Messrs. Metcalfe & Co. 16, Southampton-row; and by the Wholesale Oil and Italian Warehousemen in London, upon the same terms as at their Warehouse at Worcester.—Sold retail, in half-pint bottles, at 1*s.* 6*d.*; pints, 2*s.* 6*d.*; and quarts, 5*s.* each, with the Proprietors' stamp over the cork of every bottle.

COMPOSITION FOR WRITING WITH STEEL PENS.
STEPHENS' WRITING FLUID.
THESE COMPOSITIONS, which have so remarkably extended the use of the STEEL PEN, are brought to very great perfection, being more easy to write with, more durable, and in every respect preferable to the ordinary Ink. In warm climates they have become essential. They consist of—An INSTANTANEOUS BLACK INK—A BLUE FLUID, changing to an intense Black colour—PATENT UNCHANGEABLE BLUE FLUIDS, remaining a deep Blue colour—A SUPERIOR BLACK INK, of the common character, but more fluid—A SUPERIOR CARMINE RED for Contrast Writing—A CARBONACEOUS RECORD INK, unchangeable by any Chemical Agent—Also, a new kind of MARKING INK for Linen; and Inkholders adapted for preserving Ink from Evaporation and Dust. Bottles at 3*d.* each, convenient for writing from, are prepared, which will enable those who may wish to try either of these articles to do so at a small expense. Prepared by HENRY STEPHENS, the Inventor, 54, Stamford-street, Blackfriars-road, London; and sold by Stationers and Booksellers.—N.B. These unchangeable Blue Fluids are Patent Articles; the public are therefore cautioned against imitations, which are infringements; to sell or use which is illegal.
STEPHENS' SELECT STEEL PENS.—The utmost possible care having been bestowed upon the manufacture of these articles so as to procure the highest finish, they can be confidently recommended both for flexibility and durability.

Exposé of the folly of ascribing Nervousness to Stomach, Liver, and Bowel Complaints.—Just published, 3rd edition, by Dr. Moseley, price 5*s.* ("This is the best book on nervousness we have.")—*Prof. S——, Surgeon.*)
ELEVEN CHAPTERS on NERVOUS or MENTAL COMPLAINTS. Simpkin & Marshall, and all Booksellers. A clergyman of Cambridge University, having cured himself of a nervous complaint of fourteen years' duration, and in eight years, out of 9,000 patients, knows not 20 uncured, offers, from benevolence rather than gain, to cure others. Low spirits, sleeplessness, mental debility, exhaustion, determination of blood to the head, vertigo, groundless fear, failure of memory, incapacity for study and business, restlessness, irresolution, wretchedness, indecision, delusion, melancholy, thoughts of self-destruction, insanity, &c., are curable by this discovery. Most recover in six weeks. Means of cure sent to all parts at the cost or half the cost prices, and no fee for advice demanded. Apply to, or address, post paid, Rev. Dr. Willis Moseley, 9, Charlotte-street, Bloomsbury. At home from 11 till 3.

FOR BEAUTIFYING THE SKIN.—GODFREY'S EXTRACT of ELDER FLOWERS, a most fragrant perfume, and delightful cosmetic. It speedily and completely removes tan, pimples, redness, &c., and by its cooling, balsamic, and healing qualities, renders the skin soft, pliable, and free from dryness, scurf, &c., and clears it from every humour, pimple, or eruption. By its use the skin becomes, and continues, delicately clear and soft, and the complexion fair and beautiful. In shaving, it is invaluable, rendering the skin smooth and firm, and protects it from the effects of sun and dust. It is beyond all praise as a general family lotion. Sold in bottles, price 2*s.* 9*d.*, by all respectable Medicine Venders and Perfumers.

TO LADIES.
ROWLAND'S KALYDOR, under the *special patronage of Her Most Gracious Majesty* and the *Royal Family.*—A creamy, odoriferous preparation from *Oriental Exotics*, is now universally known as the *only* safe and efficient *protector* and *beautifier* of the Skin and Complexion. Its virtues are commonly displayed in thoroughly eradicating all *pimples, spots, redness, tan, freckles*, and other unsightly *cutaneous defects*, in healing chilblains, chaps, and in rendering the most rough and uneven skin pleasantly soft and smooth. To the *complexion* it imparts a juvenile roseate hue, and to the *neck, hand*, and *arm*, a delicacy and fairness unrivalled. To Gentlemen, it allays the irritation of the skin after shaving. Price 4*s.* 6*d.* and 8*s.* 6*d.* per bottle, duty included.
CAUTION.—Ask for 'ROWLAND'S KALYDOR,' and see that these words are on the envelope, as much *pernicious* trash is now offered to the public as 'KALYDOR' by Perfumers of *apparent* respectability.
*** To protect the public from fraud, the Hon. Commissioners of Stamps have authorized the Proprietors' signature to be engraven on the Government Stamp thus—A. ROWLAND & SON, 20 Hatton-garden; sold by them, and by Chemists and Perfumers,

FELIX SUMMERLY'S WORKS.

RECREATION HAND-BOOK GUIDES,

Corrected for the Season of 1843.

"Recreation is a second creation, when weariness hath almost annihilated one's spirits. It is the breathing of the soul, which otherwise would be stifled with continual business.... As for those that will not take lawful pleasure, I am afraid they will take unlawful pleasure, and by lacing themselves too hard grow awry on one side."
FULLER'S HOLY AND PROFANE STATE.

"All work and no play makes Jack a dull boy."
OLD ENGLISH PROVERB.

HAMPTON COURT PALACE.

(OPEN DAILY, EXCEPT FRIDAYS.)

Being a Guide to the Architecture, Tapestries, Paintings, Gardens and Grounds of Hampton Court: with numerous Embellishments on Wood, engraved by Ladies; and Plans of the Palace and Grounds from Official Surveys. The Illuminated Cover is taken from a design for a book-cover produced by Hans Holbein for Cardinal Wolsey. Second edition, price 5s. in cloth, and Holbein's cover in gold, with Maps and Plans; and 2s. 6d. not gilt and with plan only.

"Decidedly the best popular guide to the picturesque beauties of Hampton Court of any extant."—*Spectator*.

"A charming specimen of a Hand-book, literally crammed with information."—*Atlas*.

FREE PICTURE GALLERIES;

Being a GUIDE to all the PICTURES in the NATIONAL GALLERY, the DULWICH GALLERY, the SOANE MUSEUM, the SOCIETY of ARTS, and the BRITISH MUSEUM. Price 1s. 6d. Each Gallery published separately at proportionate prices.

"These Catalogues are more raisonnés and correct than the correspondent official ones; are more portable, and to their limits every way commodious, whilst they cost together much less than several of the latter cost separate."—*Athenæum*.

HOLIDAYS;

Being a Guide to London Sights.

Giving details of the Locality—Means of Access—Nature of Admission—Time when Open—Principal Objects, and Descriptive Catalogues of all the Permanent Sights. Notes for Days' Excursions out of the Metropolis. Price 6d.

WESTMINSTER ABBEY.

(The Abbey opens at 9 A.M., and closes, in the Summer, at 6 P.M. The Tombs are shown until half-an-hour before, and about an hour after, Divine Service, which commences at 10 A.M. and 3 P.M. Entrance to Poets' Corner, free; to the Nave, alone, 3d.; with the Chapels, 6d.)

A Guide to the Architecture, Sculptures, Tombs, and Decorations, with 56 Embellishments on Wood, engraved by Ladies. 4 Etchings, a Specimen of Encaustic Tiles in the Chapter House, and an Illumination. Price 7s. A Cheaper Edition, 3s.

"Its pages are not disfigured by the usual Guide-book sentimentality, rambling on without method, and mixing inaccurate if not false information with indiscriminate and nauseating praise, but it gives a well arranged and correct description, neither too popular nor too pedantic, of the Sacred Edifice."—*Ecclesiologist*, published by the Cambridge Camden Society.

"A volume got up in excellent taste, and written in a right spirit; critical so far as criticism could be allowed, but always suggestive, and testing opinions by reference to principles. As if to perfect the interest of the work, its fifty-six illustrative engravings have all been executed by women; and some amateurs, Lady Callcott and Lady Palgrave, amongst others, have gracefully contributed drawings, and thus associated their names with their sister artists."—*Athenæum*.

ABRIDGED EDITIONS, with 4 Etchings, price 1s.; with Plan of the Abbey, 6d.

Also, for Foreigners, GUIDE A L'ABBAYE DE WESTMINSTER. Par Félix Summerly. Prix 1sh.

TEMPLE CHURCH.

With Eight Illustrations. Printed in three colours, in novel combinations of lithography and type, with Ornamental Cover of the pattern of the Encaustic Tiles. Second Edition. Price 1s.

"It is a very unique combination of red and black letter printing with lithography. The description of the church is very able and complete."—*Church Magazine*.

THE NATIONAL GALLERY.

(Open daily, from Ten to Four, except Friday and Saturday.) Price 6d., 3d., and 1d.

Also, for Foreigners, 'Catalogue des Tableaux qui se trouvent dans la GALERIE NATIONALE, suivi par la Chronologie des Peintres.' Prix 6d.

Now ready,

A HAND-BOOK for CANTERBURY; with 35 Illustrations and a Map, bound in an Illuminated Cover, price 3s.

Will be ready in a few days,

DAYS' EXCURSIONS OUT OF LONDON; with Engravings on Wood, by Charlotte and Laura Bond.

GEORGE BELL, 186, Fleet-street.

Will be ready on the 17th instant,

Price 3s. 6d.

In an Ornamental Cover of the Sixteenth Century,

FELIX SUMMERLY'S HAND-BOOK FOR THE NATIONAL GALLERY,

WITH FIFTY REMINISCENCES OF THE MOST CELEBRATED PICTURES DRAWN EXPRESSLY FROM THE ORIGINALS, BY MESSRS. JOHN JAMES AND WILLIAM LINNELL.

G. BELL.
1843.

Editions Coloured after the Originals, and Printed in Umber, for colouring, are in preparation; a very limited number of both will be published, and Subscribers' names will be received by Mr. Bell, 186, Fleet-street, and Mr. Cundall, 12, Old Bond-street, who will exhibit specimens.

THE

HOME TREASURY

OF

Books, Pictures, Toys, &c.

THE character of most Children's Books published during the last quarter of a century, is fairly typified in the name of Peter Parley, which the writers of some hundreds of them have assumed. The books themselves have been addressed after a narrow fashion almost entirely to the cultivation of the understanding of children. The many tales sung or said from time immemorial, which appealed to the other, and certainly not less important elements of a child's mind, its fancy, imagination, sympathies, affections, are almost all gone out of memory, and are scarcely to be obtained. The difficulty of procuring them is very great. Of our national nursery songs, some of them as old as our language, only a very common and inferior edition for children can be procured. Little Red Riding Hood and other fairy tales hallowed to children's use, are now turned into ribaldry as satires for men. As for the creation of a new fairy tale or touching ballad, such a thing is unheard of. That the influence of all this is hurtful to children, the conductor of the proposed series firmly believes. He has practical experience of it every day in his own family, and he doubts not that there are many others who entertain the same opinions as himself. He purposes at least to give some evidence of his belief, and to produce a series of Works for children, the character of which may be briefly described as anti-Peter Parleyism.

Some will be New Works, some new combinations of old materials, and some reprints carefully cleared of impurities, without deterioration to the points of the story. All will be illustrated, but not after the usual fashion of children's books, in which it seems to be assumed that the lowest kind of art is good enough to give the first impressions to a child. In the present series, though the statement may perhaps excite a smile, the illustrations will be selected from the works of Raffaelle, Titian, Hans Holbein, and other old masters. Some of the best modern Artists have kindly promised their aid in creating a taste for beauty in little children. All the illustrations will be coloured.

In addition to the printed Works, some few Toys of a novel sort, calculated to promote the same object, will from time to time be published.

The following are now ready:

1. BIBLE EVENTS, First Series, with 8 illustrations by Hans Holbein, coloured, price 4s. 6d.; uncoloured, 2s. 6d.
2. TRADITIONAL NURSERY SONGS, with 8 entirely new Pictures by eminent Modern Artists, coloured 4s. 6d.; tinted 2s. 6d.
3. SIR HORNBOOK, a Grammatico-Allegorical Ballad, reprinted by permission, with 8 Designs, coloured 4s. 6d.; tinted 2s. 6d.
4. LITTLE RED RIDING HOOD, with 4 coloured Illustrations by an eminent Artist, coloured 3s. 6d.; tinted 2s.

The following may also be specified as among the earliest productions which it is proposed to include in this series:—

5. Several ALPHABETS, beginning with one of Animals selected from the Old Masters, Paul Potter, Snyders, Cuyp, Berghem, &c.
6. A Series of Popular OLD FAIRY TALES, each Tale illustrated by four Pictures.
7. A Series of NEW FAIRY TALES, written expressly.
8. OLD ENGLISH BALLADS, each Ballad illustrated with four Pictures.
9. THE HISTORY of REYNARD the FOX, with John Van Everdingen's celebrated Etchings.
10. BIBLE EVENTS, Second Series, with Illustrations by Raffaelle.
11. A Toy to be called TESSELATED PASTIME, for Children and others, formed out of the Mosaics published by Mr. Blashfield, purposed to cultivate correct taste in ornament.
12. A Box of TERRA COTTA BRICKS geometrically proportioned, each Brick being one-eighth of the size of the Common Brick in its several measurements, and manufactured under Mr. Prosser's Patent, by Messrs. Minton, of Stoke upon Trent.

JOSEPH CUNDALL, 12, Old Bond-street.

London: JAMES HOLMES, 4, Took's Court, Chancery Lane. Published every Saturday, at the ATHENÆUM OFFICE, 14, Wellington-street North, Strand, by JOHN FRANCIS; and sold by all Booksellers and Newsvenders.—Agents: for SCOTLAND, Messrs. Bell & Bradfute, Edinburgh;—for IRELAND, J. Cumming, Dublin.

GROCERS' SOCIETY ATHENÆUM

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 816. LONDON, SATURDAY, JUNE 17, 1843. PRICE FOURPENCE (Stamped Edition, 5d.)

For the convenience of Subscribers residing in remote places, the weekly numbers are reissued in Monthly Parts, stitched in a wrapper, and forwarded with the Magazines.—Subscriptions for the Stamped Edition for the Continent, for not less than Three Months, and in advance, are received by M. BAUDRY, 3, Quai Malaquais, Paris, or at the Athenæum Office, London. For France, and other Countries not requiring the postage to be paid in London, 28 fr. or 1l. 2s. the year. To other Countries, the postage in addition.

[JAMES HOLMES, TOOK'S COURT, CHANCERY LANE.]

EMPLOYMENT.—A GENTLEMAN of highly-respectable connexions, provided with security to any amount, and who has taken an active part as an EDITOR, &c. of the PUBLIC PRESS, is desirous of a similar ENGAGEMENT in Town or Country—the latter preferred; or as OVERSEER of any Establishment or Works; or otherwise where he may make himself useful. *Employment more his object than pecuniary remuneration.*—Address, T. Z. A., 6, Thanet-place, Temple-bar.

INVERARY FOR THE LONG VACATION.

A WRANGLER, a Member of St. John's, being about to spend the Long Vacation with a small party at Inverary, will be happy to RECEIVE ANOTHER PUPIL; either a Cambridge Man, or one who intends to come up next October.—Address, S. I. C., care of Mr. Waller, Stationer, 49, Fleet-street.

GOVERNESSES AND TEACHERS.—MONS. DE PORQUET respectfully informs the Nobility, Gentry, and Principals of Schools, that he is prepared to supply English and Foreign Governesses and Teachers, with excellent references, and duly qualified for every branch of education.—School Property transferred.

Apply at 11, Tavistock-street, Covent-garden. Office hours 11 to 4.

SCHOOL, FAMILY, and CLERICAL AGENCY, 30, SOHO-SQUARE.—Mr. HINTON, late of Trinity Hall, Cambridge, Author of 'Stenography for Schools,' &c., respectfully states that he forwards the views of Principals of Schools, Families, Clergymen, Tutors, and Assistants, in any changes they may contemplate; also in the transfer of Scholastic and Clerical Property.—Mrs. Hinton, who has resided many years on the Continent, can introduce superior English and Foreign Governesses, with good references. Letters must be free.

A MOTHER, experienced in the Management of Children, wishes to RECEIVE into her Family FOUR LITTLE BOYS, under eight years of age, to EDUCATE with her own. Her personal attention will be given to the health, comfort, and happiness of her young charge, who will be treated with maternal kindness, and their moral as well as intellectual improvement will be studiously regarded. The instruction will be suited to their tender years, by being made pleasurable instead of irksome; and it will be of a kind tending to develope the mental faculties through the exercise of the senses: in accordance with this plan, Drawing, Music, and Dancing will be taught, amongst other branches of elementary knowledge; and activity and cheerfulness will be encouraged. The situation is airy and healthful, and in the neighbourhood of Kensington Gardens. Terms, Six Guineas per Quarter. No extra charges. Address, M. S. W., 3, Campden Hill-terrace, Kensington.

THE SHAKESPEARE SOCIETY, established 1840, to afford illustration to the Plays of Shakespeare and his Contemporaries by the Publication or Reprinting of Works connected with the Origin and Progress of English Dramatic Poetry.

President—The Most Noble the Marquis of CONYNGHAM.
Director—J. PAYNE COLLIER, Esq.

Subscription 1l. per annum, entitling the subscriber to all the books issued by the Society in the year subscribed for.

Information as to admission and the last Annual Report may be had of Mr. Rodd (Agent to the Society), No. 9, Great Newport-street, Long-acre.

THE SECOND CHORAL MEETING of the UPPER SINGING SCHOOLS assembling at Exeter Hall, under the sanction and approval of the Committee of Council on Education, and instructed by Mr. JOHN HULLAH and his Assistants on the Method of WILHEM, will be held on WEDNESDAY EVENING, June 21, at EXETER HALL, at EIGHT o'clock precisely.

The CHORUS will consist of 1,500 Members of Upper Schools.

Tickets, for the Platform, price 10s. 6d.; for the Upper Platform, price 7s.; for the Western Gallery, price 5s.; and under the Western Gallery, price 2s. 6d., may be obtained from Mr. Parker, Publisher, 445, West Strand, between the hours of 12 and 5 daily.

PEACE CONVENTION.—A PUBLIC MEETING will be held at EXETER HALL, Strand, on MONDAY, June 26, 1843.

CHARLES HINDLEY, Esq. M.P., President of the Convention, will take the Chair at 11 o'clock precisely.

Admission by Tickets only, which may be had at the Society's Office, 19, New Broad-street; Thomas Ward & Co. 27, Paternoster-row; Harvey & Darton, Gracechurch-street; C. Gilpin, 5, Bishopsgate-street Without; James Nisbet & Co. Berners-street; Joseph Sterry & Sons, 156, High-street, Borough; Jacob Post, Lower Road, Islington; and at the Office of the Court Guide, Regent-street.

MAGNIFICENT NEW FUCHSIA,
'FUCHSIA EXONIENSIS.'

LUCOMBE, PINCE & CO. beg leave to call the attention of the public to a very superb New Fuchsia, which has been raised from seed in the Exeter Nursery, and which they have no hesitation in saying is decidedly the finest variety ever produced; indeed, it is at once admitted to be so by all who see it, who are struck with admiration at its noble appearance. The flowers are exceedingly large, being longer as well as broader than those of any other Fuchsia, and are of very firm, thick, waxy substance. The tube and sepals are of a rich scarlet-crimson colour, opening freely and well displaying the corolla, which is widely expanded and of a fine violet-blue colour, differing greatly from all other hybrid Fuchsias. The whole habit of the plant is exceedingly good; the leaves are thick, glossy, and of a laurel-like texture; it blooms abundantly, and the flowers, hanging gracefully upon long pedunculæ, clear and distinct from the foliage, appear to great advantage; it flowers well in the open border, and is quite hardy. The original Seedling Plant is now flowering in the Exeter Nursery, and may be seen by any person who calls there, and will also be shown at the next great Exhibition of the London Horticultural Society, on the 17th instant.—Strong, healthy plants will be ready for delivery on the 10th of August next, at 10s. 6d. each, and will be sent by post, carefully packed in tin cases. Orders will be executed strictly according to the priority of their reception. The usual discount to the Trade if six plants are ordered.

N.B. This seedling Fuchsia was raised last summer, has been fully proved, and will give satisfaction to all who purchase it.

Exeter Nursery, June 1, 1843.

MR. CHARLES ROGERS, Dentist, begs to inform his friends, that he has REMOVED to No. 53, SOUTHAMPTON-ROW, RUSSELL-SQUARE, where he may be consulted in the various departments of his Profession, from 10 till 5 o'clock daily. Mr. C. Rogers was for several years sole assistant to Mr. Imrie, Saville-row, and subsequently with Messrs. Clark & Rogers, of Sackville-street.

TO SCIENTIFIC AND LITERARY INSTITUTIONS, LECTURERS, &c.

A large and powerful OXY-HYDROGEN MICROSCOPE, with an ample Collection of Objects, and every appendage fully adapting it for exhibition, either in the Drawing-room, Lecture-room, or Theatre. The whole prepared at three hours' notice, to be let for the evening. Apply to Mr. F. J. Gould, 151, Strand, next door to Somerset House, or 9, Russell-court, Catharine-street.

UNION ASSURANCE OFFICE, Cornhill and Baker-street, (Fire Department): instituted A.D. 1714.

TO THE SHAREHOLDERS.

I AM desired to inform you that a Bonus of 2l. per share will be paid with the usual half-yearly dividend on the 1st of JULY next.

May 26, 1843. I am your most obedient servant,
THOMAS LEWIS, Sec.

CHISWICK MEETING.—The GARDENERS' CHRONICLE of SATURDAY NEXT, JUNE 24, will contain a FULL REPORT of the MEETING of the 17th of the HORTICULTURAL SOCIETY, with the award of the Prizes. The Gardeners' Chronicle, edited by Professor Lindley, is published every Saturday, price 6d. stamped, to go free by post, and may be ordered of all Newsmen.

This day,

A CATALOGUE of WORKS just published, or in immediate preparation, comprising Theology, History, and General Literature—Illustrated Works—Books for the Young, and for School Use—Works of Imagination—Smaller Publications for Parochial Libraries and Prizes—Church Music, &c. &c., may be had gratis on application.
James Burns, 17, Portman-street.

FELIX SUMMERLY'S

RECREATION HAND-BOOK GUIDES,

Corrected for the Season of 1843.

"Recreation is a second creation, when weariness hath almost annihilated one's spirits. It is the breathing of the soul, which otherwise would be stifled with continual business.... As for those that will not take lawful pleasure, I am afraid they will take unlawful pleasure, and by lacing themselves too hard grow awry on one side."
FULLER'S HOLY AND PROFANE STATE.

"All work and no play makes Jack a dull boy."
OLD ENGLISH PROVERB.

New ready, price 2s. 6d.
In an Ornamental Cover of the 16th Century,

HAND-BOOK FOR THE NATIONAL GALLERY,

WITH FIFTY REMINISCENCES OF THE MOST CELEBRATED PICTURES, DRAWN EXPRESSLY FROM THE ORIGINALS, BY MESSRS. JOHN JAMES AND WILLIAM LINNELL.

(Open daily, from Ten to Four, except Friday and Saturday.) Other Editions, price 6d., 2d., and 1d. Also,

'Catalogue des Tableaux qui se trouvent dans la GALERIE NATIONALE, suivi par la Chronologie des Peintres.' Prix 6d.

HAMPTON COURT PALACE.

(OPEN DAILY, EXCEPT FRIDAYS.)

Being a Guide to the Architecture, Tapestries, Paintings, Gardens and Grounds of Hampton Court: with numerous Embellishments on Wood, engraved by Ladies; and Plans of the Palace and Grounds from Official Surveys. The Illuminated Cover is taken from a design for a book-cover produced by Hans Holbein for Cardinal Wolsey. Second edition, Price 2s. in cloth, and Holbein's cover in gold, with Maps and Plans; and 2s. 6d. not gilt, and with plan only.

"Decidedly the best popular guide to the picturesque beauties of Hampton Court of any extant."—*Spectator.*

"A charming specimen of a Hand-book, literally crammed with information."—*Atlas.*

FREE PICTURE GALLERIES;

Being a GUIDE to all the PICTURES in the NATIONAL GALLERY, the DULWICH GALLERY, the SOANE MUSEUM, the SOCIETY of ARTS, and the BRITISH MUSEUM. Price 1s. 6d.

"These Catalogues are more raisonnés and correct than the correspondent official ones; are more portable, and to their limits every way commodious, whilst they cost together much less than several of the latter cost separate."—*Athenæum.*

HOLIDAYS; or, a Guide to London Sights.

Giving details of the Locality—Means of Access—Nature of Admission—Time when Open—Principal Objects, and Descriptive Catalogues of all the Permanent Sights. Notes for Days' Excursions out of the Metropolis. Price 6d.

WESTMINSTER ABBEY.

(The Abbey opens at 9 A.M., and closes, in the Summer, at 6 P.M. The Tombs are shown until half-an-hour before, and about an hour after, Divine Service, which commences at 10 A.M. and 3 P.M. Entrance to Poets' Corner, free; to the Nave, alone, 2d.; with the Chapels, 6d.)

A Guide to the Architecture, Sculptures, Tombs, and Decorations, with 56 Embellishments on Wood, engraved by Ladies, 4 Etchings, a Specimen of Encaustic Tiles in the Chapter House, and an Illumination. Price 7s. Cheaper Editions, 3s., 1s. 6d.

"Its pages are not disfigured by the usual Guide-book sentimentality, rambling on without method, and mixing inaccurate if not false information with indiscriminate and nauseating praise, but it gives a well arranged and correct description, neither too popular nor too pedantic, of the Sacred Edifice."—*Ecclesiologist*, published by the Cambridge Camden Society.

"A volume got up in excellent taste, and written in a right spirit; critical so far as criticism could be allowed, but always suggestive, and testing opinions by reference to principles. As if to perfect the interest of the work, its fifty-six illustrative engravings have all been executed by women; and some amateurs, Lady Callcott and Lady Palgrave, amongst others, have gracefully contributed drawings, and thus associated their names with their sister artists."—*Athenæum.*

Also, for Foreigners, GUIDE A L'ABBAYE DE WESTMINSTER. Par Félix Summerly. Prix 1sh.

TEMPLE CHURCH.

With Eight Illustrations. Printed in three colours, in novel combinations of lithography and type, with Ornamental Cover of the pattern of the Encaustic Tiles. Second Edition. Price 1s.

A HAND-BOOK for CANTERBURY; with 35 Illustrations and a Map, bound in an Illuminated Cover, price 2s.

Will be ready in a few days,
DAYS' EXCURSIONS OUT OF LONDON; with Engravings on Wood, by Charlotte and Laura Bond.

GEORGE BELL, 186, Fleet-street.

3 vols. post 8vo. 31s. 6d. boards.

II.

The Cartoons at Westminster Hall.

THE HAND-BOOK OF TASTE;

Or, HOW TO OBSERVE WORKS OF ART; especially Cartoons, Pictures, and Statues.
By FABIUS PICTOR. Fcap. 8vo. 3s. bds.

III.

A TREATISE ON FOOD AND DIET:

With Observations on the DIETETICAL REGIMEN suited for Disordered States of the Digestive Organs;
And an Account of the Dietaries of some of the principal Metropolitan and other Establishments, for Paupers, Lunatics, Criminals, Children, the Sick, &c.
By J. PEREIRA, M.D. F.R.S. & L.S. &c. 8vo.
[*On Thursday, the 22nd.*

BY THE SAME AUTHOR,

ELEMENTS OF MATERIA MEDICA AND THERAPEUTICS.

Second Edition, 2 vols. 8vo. 2l. 10s. cloth.

IV.

THE MEMOIRS OF THE MARQUIS OF POMBAL.

Drawn up from Private Sources, from Official Documents in the State Paper Office, &c.
By JOHN SMITH,
Private Secretary to the Marquis of Saldanha.
2 vols. post 8vo. with Portrait and Autograph.
[*Nearly ready.*

This work comprises an Account of the Earthquake at Lisbon in 1755—the energy of Pombal in restoring order, and rebuilding the city—the establishment of the Oporto Wine Company—the suppression of the order of Jesuits—Aveiro's conspiracy—the rupture between Portugal and the Court of Rome—the Jesuit Malagrida, his extraordinary hallucinations, trial, and execution—the disputes with Spain—Pombal's university and educational reforms—his resignation after the death of Joseph—his examination—the sentence passed upon him—his illness and death.

V.

THE HOME;

Or, FAMILY CARES AND FAMILY JOYS.
By FREDERIKA BREMER. Author of 'The Neighbours.'
Translated by MARY HOWITT.
2 vols. post 8vo. 21s. boards.

"The great charm of this agreeable book is the fresh and life-like picture it furnishes of the domestic economy of Sweden. The scenes it unfolds, the characters it paints, the manners and habits it describes, are both original and obviously true to nature; while the sentiments expressed throughout the narrative are at once amiable and pure, adapted to chasten the heart by rectifying the affections."
Eclectic Review.

VI.

THE NEIGHBOURS:

A STORY OF EVERY-DAY LIFE.
By FREDERIKA BREMER.
Translated by MARY HOWITT. *Second Edition*, revised and corrected.
2 vols. post 8vo. 18s. boards.

"Frederika Bremer has been designated the 'Miss Austin of Sweden;' and in the portrayal of family events, which come home to every one's heart and experience, she fully equals her forerunner; but in her simple relation of domestic duties, mingled with the highest tone of morality, and the purest religious spirit, she presents a beautiful and original combination rarely found in English novels; and in her philosophical views and strong moral purposes, she greatly surpasses our gifted countrywoman."—*Inquirer.*

EDINBURGH REVIEW, No. 157.

ADVERTISEMENTS intended for insertion in No. 157 of *The Edinburgh Review*, must be sent to the Publishers' by Friday, the 30th Instant; and BILLS on or before Wednesday, the 5th of July.

39, Paternoster-row, June 17, 1843.

REVIEWS

Austria: its Literary, Scientific, and Medical Institutions, &c. By W. R. Wilde, M.R.I.A. Dublin, Curry.

THIS work, although the production of a medical man, and treating most especially on subjects connected with the profession, is by no means divested of higher and more extended information. It is the result of good opportunities, industriously improved, and it is a valuable addition to the Englishman's knowledge of the statistics and policy of Austria.

Of late years, a peculiar and factitious interest has been conferred upon the subject of the Austrian government, by the frequent contrasts drawn between its able administration, and the slovenly mismanagement of countries calling themselves free—between the happiness enjoyed by the subjects of the most arbitrary and self-willed government of Europe, and the wide-spread misery of represented England. This has drawn the attention of our publishing travellers beyond the ordinary limits of British curiosity; and the statistics of Austrian administration have received a larger share than usual of their attention. Still Mr. Wilde, by concentrating his attention within narrower bounds, has been enabled to afford a variety of new details, and to appreciate with more minuteness and accuracy the particular department to which he has applied himself.

Our opinion respecting the value of Austrian order, or discipline, or despotism—call it what you please—is already on record; and we find much in Mr. Wilde's statements to strengthen our conviction: for although this gentleman betrays occasional indications of a leaning towards government *for* the people, in preference to that *through* the people,—and though he is manifestly smitten with many of the results of centralization, as exhibited in the medical establishments of Vienna, still he is far too sagacious not to perceive that a system which places the citizen in a perpetual *status pupillaris*, must effectually deprive him of the higher intellectual and voluntary energies, which constitute the man. The conviction is indeed forced upon this close observer at every turn; and it is worthy of remark that his observations have principal reference to a series of sciences, the bearings of which on public and political life are the least immediate; and in which, therefore, the least scope is open to ministerial jealousy and Machiavellian double dealing.

To understand the force of the quotation we are about to extract, in proof of this statement, it is necessary to premise that the hospital establishments of Vienna have been made an object of the whole organizing dexterity of the Imperial administration; and have concentrated upon them the Imperial bounty in no trifling degree. The result is a combined system, on the largest scale, for the relief of the sick, and for the instruction of the medical student, which receives, and to a great degree merits, the eulogium that pervades the entire volume before us. Now, then, hear Mr. Wilde:—

"While no capital in Europe can boast of finer collections or more extensive museums in both science and the arts than that of Austria, it is a fact equally certain and admitted, that there is less done to advance the cause of general science, or any of its higher branches, or to uphold the true philosopher in Vienna, than in any other city of the same extent and resources of the present day. This is no new theme of wonder, no hap-hazard conclusion formed in an hour or a day; it is the result of minute and anxious inquiry for several months. * * How is this? Is there not material for such? Will the mere want of patronage thus completely crush the growth of so noble and fast-flowering a plant? No—I fear we must seek in some deeper source for the stubborn rock that thus blights the roots of the tree of knowledge. Even the casual foreigner, or the amusement-hunting visitor, who in his short sojourn in the imperial city is led about by his *valet-de-place* from institution to museum, from academy to university— * * is powerfully impressed with the paternal government which has erected and endowed such noble hospitals and sanatory institutions—and looking at these things through the purple veil that well-ordered diplomacy has encompassed them with, says to himself, surely with such encouragements, art and science must flourish here—the savans of Vienna must be numerous and celebrated. But the higher branches of science are at a very low ebb in Vienna. * * Chemistry has never had existence there; astronomy is buried in the grave of its late professor; mineralogy is locked up within the glass-cases of the K.K. cabinet of the emperor (unless it may again flourish in the person of Mr. Haidinger); physiology is but a name; and geology and comparative anatomy are still unborn in the Austrian capital—the former because it is, or was, *forbidden* to be taught, lest it should injure the morality of the religious Viennese!—and the latter because it has not yet been specified in the curriculum of education prescribed by the state. One is hardly credited when he states that there is not one comparative anatomist of note in Vienna, or that this branch of science forms no part of such extensive practical medical study as that prescribed in this university."

In this passage, the author, while complaining of the government for withholding its patronage from science, hints at something deeper; and what that something is, appears again and again. It is not a negative neglect, but a positive interference, which controls and regulates not only what men shall think, but what they shall not think. Physiology, he says, does not thrive, "because it has not been included within the curriculum by the State." Why this is so appears in another place:—

"As the subject of physiology naturally admits of a greater scope to the imagination, and a greater exercise of mental powers than is quite compatible with the present system of Austrian *régime*, I may mention that the work of Professor Lenhossik, which previously served as a text-book in several of the universities, having attracted the attention of the authorities by some equivocal passages and expressions which it is said to-contain, produced an imperial edict in the year 1835."

In this edict, after censuring the objectionable character of hypotheses contained in the work, which it pronounces "untenable" and "dangerous," it forbids the professors to illustrate anything which is not absolutely useful to their immediate business, and commands them to explain all equivocal expressions, so as to prevent an improper interpretation; adding, "where this work has not served as a text to the lectures on physiology, it must not now be introduced." With such censures impending over the teacher, it is no wonder that the science is neglected. On this head the author expresses himself still more fully:—

"The science of physiology has never yet had more than a name in Austria, and I know not of any work upon that subject which has emanated from any of its universities. How far this defect is to be explained by the religion of that country, by the peculiar character of the censorship, or by enactments such as those I have just quoted, I shall not take upon myself to say. With respect to the present condition of this science in the Austrian capital, all I have to offer is, that there is a lecturer upon that subject who has published a tract of a few pages upon the spermatozoa of the salamander."

The same spirit of supervision and restraint pervades the whole system of instruction; for the government discountenances all individual efforts at improvement on the part of the professors; prohibiting them from delivering any lectures save those which it has enjoined as their specific duty to deliver. This is indeed the key to the entire system: thus it is stated that—

"Gall, the distinguished phrenologist, was driven from Vienna for daring to step beyond the beaten path marked out for him by the state, or venture, even upon a pure physiological subject, to think for himself, and attempt to lift the veil that hangs over one of the most interesting portions of science. * * Some years ago, Mohs, the greatest mineralogist of Europe in his day, requested permission from the government to deliver a course of popular lectures on mineralogy in the splendid imperial cabinet. After a considerable delay, and when the police became convinced that nothing political was intended, the proposal was acceded to. Attracted by the knowledge and eloquence of the professor, as well as the novelty of the subject, crowds of the first people of Vienna attended his course. After a few lectures, the number of his hearers amounted to some hundreds: great interest was evinced in society on the matter, and it became the general topic of conversation. One would naturally have supposed that so harmless and unexciting a subject as mineralogy could in nowise affect the political condition of the community, but the government thought otherwise, and at the end of the first six months these lectures were ordered to be discontinued! Mohs soon afterwards resigned his care of the mineralogical cabinet."

But this minute and punctilious interference is not confined to the intellectual parts of science; it extends to material details:—

"The Austrian pharmacopœia shows but little advance in the science of the materia medica for the last twenty years. It is so seldom revised, that the most valuable and approved medicines do not find their way into it, and consequently, are not to be found in the shops, till years after they are in common use in the rest of Europe; and when a new edition of the pharmacopœia does appear, though edited by the president of the medical department, the professor of materia medica, and the director of the pharmacy department, it has to go through the ordeal of a strict censorship!"

It is but a small compensation for such evils, that they are connected with some incidental good, though that good, perhaps, be not inconsiderable:—

"In Austria, both the public on the one hand, and the prescriber and legitimate compounder of medicine on the other, are protected against quacks, mountebanks, patent medicines, wonder-working nostrums, poisonous pills, mineral cosmetics, and the thousand deleterious substances advertised, puffed, and vended, under the name of specifics and panaceas, not only with the permission, but frequently with the *authority of the state*, in Great Britain. The public prints are not hired to entrap the ignorant or credulous, by lauding empirics and impostors; the public eye is not disgusted by unseemly and disgraceful placards; nor modest females insulted, by having indecent handbills thrust upon them in the open streets, as occurs daily in this country. Moreover, no one is allowed to sell medicine of any description without a proper education and a satisfactory licence; and the trade of a druggist is, as it should be, confined to the wholesale vending of medicines to apothecaries. England might and ought to take a wholesome lesson from this well-ordered condition of the present state of pharmacy in the Austrian states."

That there is much existing mischief done by irregular practitioners in England which might be suppressed, many offences against good morals which might be punished, is admitted; but it is no less clear that the suppression of physiology, and a censorship on the materia medica, are heavy prices to pay for such protection. Besides, it is by no means so certain that it *is* good to deprive the subject of the right, under any circumstances, to select the adviser he is to pay, or to shut the door absolutely against all unlicensed innovation; and it is equally open to doubt whether educated skill can, by the best regulations of practice, be brought home to the humblest classes; and whether, without a system of gratuitous relief

Digitized by Google

to all applicants, the poorer sick can be prevented from seeking the cheaper, though the less competent practitioner.

These observations on the medical education of Austria, apply equally to the general State education for the people. The organization of the system, its success in bringing instruction home to all the population, may be, and perhaps is, perfect; but the sort of instruction given is not honest. It is no attempt to develope the intellectual powers, or to train the child to a wholesome command over a will otherwise free, but a designed effort to form in him habits of implicit obedience, and to incapacitate him from going alone in his future walk through life. This common fault of all State educations, assumes a singular shape in Austria; for while religious instruction occupies a most disproportionate share of the whole time given to study, the clergy are excluded from all direction, and reduced to be mere instruments in the hands of the State. In Austria the monarch is lord alike of layman and cleric, and he suffers no will to act but his own. The result, we admit, is for the present satisfactory to the State, because the teaching harmonizes with the condition of the people; but while it makes obedient children, not energetic and serviceable men, it can only be continued as long as the physical condition of the people remains unchanged.

Amidst the abundant care thus taken by the Government to provide for the piety and orthodoxy of the subject, there is found a strange laxity on the point of morals. On this point there is ample matter for reflection to be found in the author's account of the lying-in hospital for married and single:—

"Pregnant women of all grades and of every religious persuasion can avail themselves of the advantages of this asylum: the poor and destitute are admitted gratis; and the rich by paying a certain stated sum; thus it is well adapted to the circumstances of all classes, where poverty and necessity, or where fear and a desire of secrecy induce such to apply for refuge therein, during their hour of trial. Here every comfort is supplied—no visitor can intrude—no law affect, and no authority reach its inmates—nay more, the very fact of their having been delivered there is inadmissible either as documentary or personal evidence in a court of justice. * * To the first or highest class, are allotted five neat, well-furnished, and secluded chambers, perfectly distinct and separate from each other and from the rest of the establishment; they are guarded with the greatest strictness, and are inaccessible to all but the attendant physician, and if necessary the nurse. Each of these is occupied by one person alone, who pays one florin twenty kreutzers, or about two shillings and eightpence daily for its use. These are said to be for the young ladies of the imperial city, and are, I have been creditably informed, sometimes the resort of females from among the highest circles of society. * * Not only in the first, but in all the three paying classes, no admission [of strangers] is permitted; none are allowed on any pretext whatever to enter therein, except the immediate attendants; and besides this, the localities of this part are so arranged as to secure those residing therein from the gaze of the curious. The principle of secrecy is imposed as one of the strictest duties on all those in any way engaged in the institution. Should a female desert her family and take shelter here, the vigilance of the police, or the inquiries of her friends may trace her to the door of the *Gebäranstalt*, but no farther. Here the executive enters not; such is the law, that not only is a father or a husband denied an entrance, but he cannot, as has been already observed, receive from the records of the hospital, or any one connected therewith, any testimony of her reception or delivery. Indeed in many instances, and in almost all the cases occurring among the first or highest class, such evidence could not possibly be obtained, as a female may enter, accomplish her delivery, and depart from the hospital without her name being known, or even her face seen by the physician, or any of the attendants! The entrance into these paying wards is not the same as that leading into the general hospital, but by a private way, ending in a small *cul-de-sac*; and as it is forbidden to have any windows looking into this lane, persons approaching that way are perfectly secure from observation. At the end of this *cul-de-sac* there is one small door, with a bell attached to it; a porter remains at the entrance day and night, and conducts the persons requiring admission to whatever apartment or division they require, or their means afford. Persons are allowed to appear masked, veiled, or otherwise disguised; they may enter at any time previous to their delivery, and remain as long as they wish; they may carry their infants away with them or send them to the foundling-hospital through the medical attendant. The name and address of persons admitted into this division are not required, but each female must write her name and residence upon a billet which she seals, and on the back of which the physician inscribes the number of the room and bed she occupies. This ticket is then placed in a small locked-up cabinet beside her bed, and at her departure it is returned to her unopened; its object being, that in case of her death, the institution may inform her friends, or be able to produce this testimony of her decease on the demand of her relations or the police."

This is a part only of the premium held out to illicit indulgence in this institution; and the result may be summed up in one line. "The illegitimate births in Vienna in the years 1828-29, were to the whole in the proportion of 1 in 2.24."

The whole system of Austrian policy, as it tends to cripple the energies of the population, and to prevent forward movements, so it rests on the possibility of maintaining all things stationary — population, commerce, knowledge, morals, and habits. In its application it has accordingly been confined to Austria proper; the institutions of Hungary and the antecedents of Austrian Italy being alike unfitted for upholding such a condition. It is clear that any rapid increase of population would alone overthrow that material ease enjoyed by the peasantry, on which their contented ignorance and submission depend. The government has credit for causing this superior ease; but this arises in a confounding of cause and effect: it is the ease which renders Austrian despotism possible, and was antecedent to it. So far only is the government a cause, as it takes pains to preserve the sources of its own supremacy, protecting the people against the aristocracy, and depressing the aristocracy to protect its own supremacy. But to create such a state of things, was clearly beyond the attributes of government; and it is equally beyond its power to maintain it, when circumstances change. Since the peace of 1815, circumstances have changed; the momentum given by the revolution has reached Austria; and already improvements in the commercial and financial regulations of the country have been effected, which must, at no very distant day, break down the subsisting distribution of wealth, alter the value of land, and the proportions of rent and labour, creating a population enterprising, energetic, and discontented; and when once the Austrian is thus made to feel that he is a man, he will cease willingly to be treated like a child. The Austrian system is, therefore, an accident, a transient episode in the history of the people; while in all its particulars it is totally unfitted for being grafted upon the institutions and habits of Englishmen.

Memoir of the Life and Correspondence of John Lord Teignmouth. By his Son, Lord Teignmouth. 2 vols. Hatchard.

Lord Teignmouth's account of his government in India is a very fair estimate of his whole public career: "My administration," he says, in a letter to the Marquis Wellesley, "will furnish an instance of what may be done by zeal, assiduity and moderate talents." Left fatherless at an early age, he was educated by a judicious and affectionate mother, whose lessons of prudence and morality influenced favourably the whole of his career.

Early in his Indian career his Lordship—then plain Mr. Shore—received a simple piece of advice which became the foundation of his subsequent fortunes; it was contained in three words, "make yourself useful." Having received his first promotion from the party opposed to Warren Hastings, it is a little singular to find him nominated by that gentleman to the second place at the Board, created to supersede the Provincial Councils. The causes of this unexpected change are thus detailed:—

"To the first post was appointed Mr. David Anderson, a servant of the Company, distinguished for his integrity and abilities. But, anticipating the need of this gentleman's services on special missions, Mr. Hastings consulted him on filling the second place at the Board, which would require qualifications not inferior to his own. Mr. Anderson at once recommended Mr. Shore, as, in his opinion, better fitted for the post than any other member of the Service. The Governor-General expressed astonishment at the mention of an individual whom he regarded as one of his most zealous opponents; for Mr. Shore's financial reputation had induced Mr. Hastings to attribute to him a large share in the preparation of Mr. Francis's Minutes. Mr. Anderson, intimately acquainted with the character of Mr. Hastings as well as of Mr. Shore, replied in the following terms: 'Appoint Mr. Shore; and in six weeks you and he will have formed a friendship.'—The proposal was assented to, and the prediction fulfilled."

Mr. Shore was a strenuous advocate for economy in the Indian finances; he deplored the lavish profusion in which Mr. Hastings too often indulged, and which so often led him to adopt very questionable means for recruiting the public treasury; it is creditable to Mr. Shore that he zealously advocated economic reform, but unfortunately he communicated his strictures to Mr. Macpherson, who, instead of privately imparting them to Mr. Hastings, made them the subject of a minute on the records of the Supreme Council. In consequence of this breach of confidence, Mr. Shore resigned his seat at the Board, and soon after returned for a short time to England. A letter which Mr. Shore wrote to Dr. Ford respecting the state and progress of Hindú studies, gives a mortifying picture of the low condition of Oriental Literature in Calcutta previous to the arrival of Sir W. Jones; it is incorrect in all its statements, and ludicrously so in everything relating to Sanscrit. Who could believe that a future president of the Asiatic Society would speak in the following terms of Wilkins's Translation of the Bhagavat Ghíta?—

"Mr. Wilkins, whose name is mentioned in the Preface to Halhed's Bengal Grammar, is the only European acquainted with the Sanscrit; and he has made some progress in translating a Hindoo book, called the Mhabharit. It contains history, fable, and religious and moral instructions. He might, in my opinion, have made a better choice."

During his brief residence in England, from which he had been sixteen years absent, Mr. Shore so favourably impressed the East India Directors and the British Government with his knowledge of financial affairs, that he was pressed to accompany the Marquis of Cornwallis to India, and take the management of the Revenue department. His recent marriage made him unwilling to accept the situation, but he finally consented, and soon resumed his duties in Calcutta. The following is his account of the state in which public affairs were left by Messrs. Hastings and Macpherson:—

"Our arrival was fortunate for the country. You may believe me, when I assure you, without exag-

Digitized by Google

geration, that the late Government had incurred universal contempt, the natural consequence of feeble, indecisive measures. The public voice pronounces them to have been concerned in endless jobs. If I were to write my own opinion about them, you would deem plain truth downright prejudice.—Peace to their manes!—I will, however, frankly own to you, that the embarrassments of the Company in India are greater than you can conceive. I dare not expatiate upon them; and look with apprehension to the period when I am to become a Member of the Administration. They require the abilities and unremitted application of the ablest men. Judge what must have been the confusion attending the Councils of ....."

Mr. Shore had a principal share in effecting the permanent settlement of the revenues of Bengal, Bahar, and Orissa, a subject which has been and still is the source of much controversy. The real question at issue was, whether the proprietorship of the lands to be assessed was vested in the Sovereign, in the Zemindars, who had enjoyed the hereditary management of land from the time of the emperor Akbar, or in the Ryots, who were the actual cultivators of the soil. Lord Cornwallis, guided principally by Mr. Shore, decided in favour of the Zemindars; but some of the most enlightened men that ever held a share in the government of India, particularly Sir Thomas Munro, strenuously advocated the claims of the Ryots. It would be impossible to give an outline of the controversy within reasonable limits, but it may be stated that the Zemindary arrangement created a class of middle-men between the government and the cultivators of the soil, which necessarily produced some of those evil results which attended the farming of taxes in France previous to the Revolution. Mr. Shore's plan was however approved by the Court of Directors: it afforded great facilities for the collection of the revenue, at the expense indeed of the Ryots and their rights, but it was not the fashion of the day to devote much attention to mere peasants.

Having completed the revenue arrangements, Mr. Shore returned again to England, and was examined as a witness on the trial of Mr. Hastings. His evidence was deemed unsatisfactory by the managers, and Mr. Burke threatened to include him in the impeachment; great therefore was Mr. Burke's indignation to learn that the reluctant witness had been appointed to succeed the Marquis Cornwallis as Governor-General of India. Burke wrote a strong letter of remonstrance to the Chairman of the Court of Directors, part of which deserves to be placed on record:—

"Having been appointed by the House of Commons a Member of Committee to impeach one of your late Governor-Generals, Mr. Hastings, I think it my duty to inform you, that, in the exercise of the function imposed on that Committee by the House, we have found Mr. Shore materially concerned as a principal actor and party in certain of the offences charged upon Mr. Hastings; that is to say, in the mal-administration of the Revenue Board, of which, under Mr. Hastings, he was, for some considerable time, the acting Chief. I think it necessary to inform you, that some of the matters charged as misdemeanours, in which it appears that Mr. Shore was concerned, are actually on evidence before the Lords. Other facts, of a very strong nature, which the Managers for the Commons have opened as offences, are upon your Records; copies of which are in our possession. They go seriously to affect Mr. Shore's Administration, as acting Chief in the Revenue Board."

But in fact the trial of Warren Hastings after the second year was a mere farce; Mr. Shore justly said, "The community attend the court as they would an opera, and with an equal degree of feeling;" still Shore's appointment, when his complicity in the matters charged against Hastings was notorious, and when no decision had been given on the guilt or innocence of the overt acts, was to some extent an ostentatious defiance of the House of Commons, and a mockery of the parliamentary privilege of impeachment. The government, by creating him a baronet, sanctioned the proceedings of the Court of Directors, and thus virtually pronounced an opinion on the pending trial of Hastings, a course not very consistent with the pure administration of justice.

Sir John Shore's government was principally remarkable for useful reforms in the minor details of administration; his long experience in subordinate situations and his methodical habits of business rendered him most efficient in improving the cumbrous arrangements which impeded the action of the Indian government, but he was obviously inadequate to any crisis which required large political views, or the higher qualities of statesmanship. It would not interest general readers to point out his errors in the affairs of the Rohillas, or in the disputed succession of Oude; but a letter of remonstrance, addressed to him by Colonel Wesley (afterwards Wellesley, and now Duke of Wellington), against the gross blunder of placing the royal troops under the command of the captains of the Company's merchantmen, is sure to engage attention:—

"Heroine, Aug. 6, 1797.

"Sir.—I have just received an Order from Major-General St. Leger, stating, that, 'in case of coming to action, the troops will be under the command of the captains of the ships.' In the different conversations you did me the honour to hold with me upon this subject, I uniformly stated it to be my determination that every assistance should be given to work and fight the ships. I told you that the directions of the captains of the Indiamen, upon those occasions, would of course be obeyed: and I communicated to you an extract of my instructions to the officers commanding the troops on board the different ships upon this subject, which you thought fully sufficient. Confiding, then, that there would be no order from Superior Authority to put me, or the regiment I have the honour to command, in any situation under the command of the captains of the Indiamen (however I or every other officer might think it necessary that we and the men should obey their orders upon certain occasions), I embarked with the regiment;—a step which, however attached I may be to the King's Service, I would sooner have quitted it than have taken, had I known that matter was to be arranged as I find it is. In addition to the objections I have to be under the command of persons who have thrown so many difficulties in the way of the Service; and who are now throwing so many, that I shall probably be obliged to write an official complaint of some of them before the fleet sails—and in addition to the difficulties of *obliging* officers (particularly field-officers) to put themselves under the command of captains of Indiamen, or of taking the soldiers from under the orders of their own officers—there is this legal objection to the measure; viz. that the captains of the Indiamen have no legal method of enforcing obedience to their orders from their own seamen, much less will they have it of enforcing obedience from soldiers; and therefore if it does not suit the pleasure of the men, they will not obey them. In my opinion, it would have been better to have left the matter where I placed it; and have trusted to the good sense and honour of the officers, and to the spirit of the soldiers, that every assistance would be given when the occasion might require it: and in that case, as they would not have felt themselves or their Service disgraced, their exertions would have been greater, and their assistance more cordial than it can be expected to be under the existing circumstances. However, Sir, uncomfortable as I feel it embarking under such circumstances, I shall do every thing in my power, and shall make those under me do every thing in their power, to forward the Service: and I hope that you will find that those whose ambitious claims have been complied with will do the same.

"I have the honour to be, Sir,

"Your most obedient humble servant,

"A. Wesley."

Sir John Shore apologized for the oversight of which he had been guilty, and recalled the order. Lord Mornington (afterwards Marquis Wellesley) was about the same time appointed Governor-General of India, and Shore, having been elevated to the peerage by the title of Lord Teignmouth, finally returned to England. His Indian administration was respectable; it was distinguished by justice, moderation, integrity, and economy; but it also displayed an excess of caution almost amounting to timidity, and a disposition to compromise difficulties by having recourse to temporary expedients.

On his return to England Lord Teignmouth appeared before the world as an author, by publishing the Life of Sir William Jones; it had the rare merit of gratifying all parties. His Lordship became a member of the little community at Claphan formed by Grant, Wilberforce, Henry Thornton and others, who were the leaders of the religious movement which characterized the early part of the present century. On the formation of the Bible Society he was chosen its President, and held the office to the end of his life, taking an active part in the various controversies to which that institution gave rise. None of these excited so much attention as that connected with the publication of the Apocrypha. The Apocryphal books are received as canonical by the Greek and Latin churches, and as semi-canonical by large bodies of the Continental protestants; the Church of England allows them to be read for "example of life and instruction of manners," and has taken from them the whole of the first lessons for the month of October, besides sanctioning the introduction of "the Song of the Three Children" into the Morning Service, and the Apocrypha is inserted in several editions of the Bible published by the Society for Promoting Christian Knowledge. On the other hand the Presbyterian Church of Scotland, and all those in the English Church who maintain in a greater or less degree the principles of the old Puritans, condemn the Apocryphal books. When this question was mooted, it was felt by all parties that the Bible Society was called upon to arrogate to itself the functions of an Œcumenical Council, and pronounce authoritatively what was the Christian canon of Scripture. It was at first believed possible to adopt the moderate course pursued by the Church of England, by publishing the received books of Scripture as undoubtedly canonical, and allowing the others to be placed in the holy volume without pronouncing any sentence for or against their canonical character. The violence of parties rendered compromise impossible, and the exclusion of the Apocryphal Books from all editions of the Bible issued by the Society was affirmed by the committee in a resolution worded with unnecessary strength.

A resolution directly condemning the Georgian, Armenian, Greek, and Latin Churches, and not very indirectly censuring the Anglican and Lutheran Churches, could not be adopted without giving the Bible Society something of a sectarian character. It was, accordingly, soon followed by a proposal for the adoption of a Trinitarian test, the rejection of which led to an unfortunate schism. We have noticed the Apocryphal controversy because we see that it is again revived, forming one of the thousand moot-points raised by the Oxford Divines.

Except for his connexion with this controversy Lord Teignmouth's quiet and unostentatious life in England offers little that requires remark; he was always zealously attached to what is called the Evangelical section of the Church, and in his general politics agreed with Wilberforce, differing from him chiefly on the question

Digitized by Google

of Catholic Emancipation. The volumes before us, though possessing no deep or exciting interest, are valuable as the record of a life of one who for thirty years was the president of an institution, and the leader of a party which must always hold a prominent part in the religious history of the country; they are written in a tone of affectionate simplicity, and are not less creditable to the literary skill than to the filial piety of the author.

The Rhone, the Darro, and the Guadalquivir; a Summer Ramble in 1842. By Mrs. Romer. 2 vols. Bentley.

WHILE her horses were "putting to," a lady starting from Paris, she knew not whither, in quest of health, was persuaded by a pedlar on the Boulevards to buy a dozen of his pencils: to this accident, she tells us, we owe the journals before us. Our faith, alas! is less comprehensive than that of Mrs. Romer, who is all for mystery and Mesmerism;—believes that Petrarch magnetized Laura (!), and that Montes, the famous Spanish *taureador*, "comes over" the bulls set before him as if they were so many Okeys. She must forgive us, therefore, for saying that her book betrays no traces of accident and the Boulevard crayon. On the contrary, it is the shrewd, lively, conceited performance of one used to the Bramah pen and the magazine article, who went forth predetermined to set down whatever she saw, and to favour the public with two or more goodly octavos.

Mrs. Romer belongs to the school of travellers who think much of bad beds and good dinners: she esteems herself a martyr to her enthusiasm and her resolution to visit Granada, because the half-way house, betwixt Malaga and the Moorish city, was something short of Mivart's, and the diligence less downy than "our carriage." When will English ladies cease to wear the finery of their Mrs. Petitos? Mrs. Romer's pomp and pathos on the occasion recalled to us, by contrast, the simple descriptions of Lady Grosvenor, who travelled the same route, in the same manner, omitting the Jeremiade. We beg to recommend the example of the Peeress.

But the airs of pretension which pervade these volumes must not blind us to their cleverness. Those who are less given to crying "*Fudge!*" than honest critics are bound to be, will find them amusing, and not uninstructive travelling companions. The first volume leads us over very beaten ground, it is true, and is encumbered (betwixt Arles and Marseilles) by the romantic story of Madeleine Latour, which, however agreeably told, is superfluous. At Marseilles, too, Mrs. Romer stops too long in the *restaurant* of M. Courty, to describe how she and Mons. Alexandre Dumas patronize his dinners as the best to be had in that badly-cooked-for town. But at the two hundred and seventeenth page of volume first, we are fairly at sea, and bound for Barcelona; and, after twenty pages devoted to the horrors of the voyage, our spirits begin to rise under the influence of Mrs. Romer's descriptive powers:—

"The appearance of the city, with its suburb of Barcelonetta, which is of an oblong form, and occupies a plain upon the immediate shore of the Mediterranean, is seen to great advantage thus approached. The houses, with their shallow roofs and ranges of balconies,—many of the façades being painted, like those of Genoa, in *fresco*,—impart a certain air of elegance and regularity to the town, which recalls to mind some of the great maritime cities of Italy. To the left rises an abrupt and rocky eminence, of a reddish colour, called Mont Juich, crowned with a formidable fortress, which doubtless did good service during the war of succession, when the celebrated Lord Peterborough laid siege to, and got possession of, Barcelona, by one of the most surprising *coups de main* in the annals of warfare: and in the background a tract of woody and cultivated hills stretches far away, dotted here and there with white buildings, and forming a most smiling *fond de tableau*."

We are at last on shore:—

"With our heads out of the windows, we were driven along several esplanades, and silent streets, and open spaces, wondering to see so few people in circulation in so considerable a looking city, when a sudden turn brought us upon a fine public walk, bordered on either side with handsome edifices, and shaded by rows of beautiful trees, beneath whose spreading branches throngs of loungers paraded backwards and forwards with that leisurely pace which evinced that to see and be seen was the only business that had drawn together such a numerous assemblage. Here were to be remarked groups of officers exhibiting a variety of uniforms and military decorations; there, clusters of priests wearing the identical costume, the black cassock and grotesquely shaped hat, with which the personage of Don Basilio in the Barbiere di Siviglia has rendered every one familiar; —dandies, of a description similar to *les flaneurs des Boulevards de Paris*, with *moyen age* beards, renaissance flowing locks, moustachios, and *royales*, (absurd accompaniments to the unbecoming male costume of the present day,) lighted their cigarillos from small earthen pans of live embers that were hawked about for that purpose by ragged little urchins. But the striking feature of the scene—that which stamped upon it such a character of nationality, and rendered it unlike every other gathering together I had ever before seen, was the sprinkling of women scattered throughout. Clad in the graceful garb of Spain, which is at once the most dignified and the most *agaçante*, the most simple and the most elegant female costume that ever was devised, black from head to foot, yet the very reverse of mournful, the Señoras glided along, the folds of their mantillas coquettishly gathered together under the chin with one hand, while with the other the large outspread glittering fan was held above their flashing eyes, to protect them from the rays of the sun, which had just burst forth with unwonted effulgence, as though to colour for us in the most appropriately glowing tints this first *coup d'œil* of a scene so truly Spanish, and which was rendered doubly striking from the contrast it afforded to the silent streets through which we had previously passed."

The theatre, churches, &c. of the city are described in a like strain to the above. So, too, are the sights of Valencia and Malaga,—from the Alameda of which latter town we shall transfer a costume-group to our pages:—

"There were to be seen, all equally bent upon displaying themselves, the dark-browed *Dama*, with her Moorish eyes and complexion set off by a damask-rose or deep-tinted carnation placed over one ear beneath her lace mantilla; and the gay *Muchacha*, screening her mahogany-coloured visage under a bright yellow or crimson *pañuelo*, or shawl; the elegant *Caballero*, clad in his jacket and trowsers of snowy-white linen, with a large grey felt *sombrero* lined with green; and the dashing *Majo*, half buck, half bully, the true type of the Andalusian swaggerer, with his close-fitting jacket and short *unutterables* garnished down the seams with silver buttons, embroidered *bottines* of untanned leather open at the sides like long gaiters, crimson sash, and conical black hat lined with velvet and adorned at one side with two large tufts of black silk."

Opera-going at Malaga seems carried on in a primitive fashion, rather at variance with the generally received notions of that sophisticated entertainment. Mrs. Romer's counsellor, the head waiter of the Ladanza Hotel, sanctioned her desire to witness Ricci's 'Prigione d'Edimbourgo,' on grounds new to us:—

"'Very well,' said he, 'I shall get you a box; as there will be moonlight, you can very well go to the Opera to-night.' We could not conceive what the moon had to do with our going, or not going, to the theatre; but, when the time arrived for us to repair thither, his remark became half intelligible to us, as we found that we must go on foot: and when the performance was over, and we set forth to return to the hotel, we completely comprehended the good-sense of his observation, for there is not a single lamp in the city of Malaga; and the narrow, tortuous description of its streets (not to mention the crooked pavements, which threaten to sprain one's ankles at every second step,) is such as to render it difficult for persons even who are familiar with the localities to find their way through them without the assistance of the moon. Even brightly as that beautiful luminary shone, we found that our French *laquais-de-place*, who was in waiting for us, had provided himself with a lantern, which was absolutely necessary to guide our footsteps through some of the narrowest streets, where the height of the houses shut out the moonbeams. Besides, he assured us that it is highly dangerous to be out late at night without a light in the streets of Malaga, from the lawless and violent character of the lower orders, which renders the recurrence of midnight outrages very frequent; and the impunity with which the perpetrators of them escape is such as to render the evil an increasing one, and in the month of March alone no less than thirty-six assassinations were committed within the town of Malaga, and not one of the murderers suffered for his crime!"

After this comes the ride in the diligence to Granada, to the tragical nature of which we have already adverted. When the City of the Moors was reached, it was found almost uninhabitable,—a half-furnished *posada* affording the only attainable accommodation. But the charm of the Alhambra was too strong for the affectations of our authoress; and after a brief *résumé* of the principal events marking the sojourn of the Arabs in Spain, she forgets herself, in a hearty fit of enthusiasm, over the romance of the building. She was lucky enough, too, to witness an expiatory service in the cathedral, on the anniversary of the execution of Maria Piñeda, a heroine who took part in the troubles of 1830, and is now held to have been cruelly murdered. Among the pictures of the cathedral Mrs. Romer is a little at fault, when she speaks of Alonzo Cano as a master "whose celebrity has not extended beyond the Peninsula." She is more at home when describing the gambols of Mr. Borrow's favourite playmates; and having bespoken a Gipsy *ballet*, writes of it, as follows, with due animation:—

"Among the thirty selected by Mateo to perform their characteristic dances for us, although the women were young and set off to the utmost advantage in their holiday finery, not one among them was absolutely pretty, nor could we detect a delicate foot and ankle in the whole *corps de ballet*. They were dressed in bright-coloured cotton gowns (either of pink, jonquil, blue, or geranium) with deep flounces and *pañuelos*, or handkerchiefs, of some other gaudy hue, arranged with great modesty over their bosoms. Their black hair was universally worn parted on the forehead, and fastened in a knot at the back of the head with a profusion of pink or cherry-coloured ribbons, and clusters of roses and pomegranate blossoms: but I looked in vain for the *parchite*, or round black patch upon each temple, which I had understood to have been invariably worn by the Andalusian Gitanas; and, as not one of these women exhibited that distinguishing mark, I conclude that it must be peculiar only to the female Gipsies of Seville. To describe this extraordinary ball, or *funcion* as it is here termed, so as to do justice to the originality of its arrangements, or to the variety of dances exhibited by the performers in it, would be impossible. At eight in the evening we were summoned down stairs to a long room on the ground-floor, which had been prepared for the occasion, where we found the whole Gipsy party assembled, and seated upon benches along the two sides of it: chairs had been placed at the upper end for the travelling guests of the posada, in all amounting to eight persons; at the bottom of the room, near the door, seats were arranged for our servants and the inmates of the house; and the open windows were crowded with tiers of dark eager faces, peeping in from the outside, and apparently taking as much delight at what was passing within, as though they themselves had been active participators in the scene. As soon as we had taken our places, the whole assembly arose, and headed by an old man thrumming a guitar, and a middle-aged one, dressed in a

Digitized by Google

pink jacket, black breeches, white stockings, and Majo hat, who flourished a tambourine, and whom I soon discovered to be the Vestris of the party, they advanced in procession to the spot where we were seated, saluted us with a graceful gesture of the hands, and then, defiling in two divisions, one of them resumed their seats, and the other stood up in the centre of the room, where they commenced the *funcion* by dancing the Romalis, that famous Gipsy dance, the figures of which are so intricate and so complicated from the number of persons engaged in it, that it would be impossible to convey any adequate idea of it by a written description. The orchestra was composed of the above-mentioned guitar and the voices of all the Gipsies who were not engaged in the dance, led on by a young man, whose singing might be termed a prolonged howl, and who regulated the time by stamping with his feet and clapping with his hands, while the castanets of the dancers chimed in to his directing movements. Pink-jacket, who headed the male dancers, made himself very remarkable by his performance in this part of the entertainment, striking his tambourine with every part of his body, and occasionally breaking into a *pas de deux* with the *Prima Baylarina*, in which a freedom of gesticulation (to use the mildest term) was indulged in by both that contrasted curiously with the stolidity and imperturbable gravity of his countenance."

Mrs. Romer so *timed* her return to Malaga as to be present at a bull-fight. This, however, she could not be prevailed upon to sit through, and after elaborately delineating the whole scene, indulges herself in recording the shrinkings which compelled her to quit the arena. Somehow or other, we think there is more nature in Madame Calderon's honest avowal, that any woman who has once permitted herself to be brought to such an exhibition, can prevail on herself, after a few moments' repugnance, to become a participator in the universal interest.

After Malaga, we are conducted to Cadiz, Seville, and Gibraltar; crossing from the latter strong-hold to Africa, which gives occasion for the last description we shall extract on the present occasion:—

"Seen from afar, Tetuan really looks beautiful, from its advantageous position and the dazzling whiteness of the whole mass of buildings, which is rendered still more conspicuous by the deep verdure of the mountains that form its background; but, on reaching the town, all the *prestige* of its beauty vanishes! The houses have the most gloomy appearance; nothing but whitewashed walls are to be seen, with no windows looking outwards, their place being supplied by little apertures like holes to peep through. The streets are exceedingly narrow; and the houses are only two stories high, with flat-terraced roofs, upon which the inhabitants take the air in the evening. After passing through innumerable dark and winding lanes abominably paved, and too narrow for two horses to proceed a-breast, we arrived at the Jewish quarter, which is quite distinct from the Moorish part of the town, and where the greatest industry and bustle appeared to prevail; for in the Barbary states, as throughout the Levant, commerce and business are in a great measure monopolized by the thrifty sons of Israel. The shops of these merchants and artizans are miserable little *échoppes* open to the street, but having neither windows nor doors, and not large enough to contain the vendor and his customers; the latter therefore remain standing in the street, bargaining over the shopboard with the crafty dealer. The merchandise is never exposed to view in these shops, and we could only guess at the various trades of their owners by seeing them employed in the manufacture of their goods in these miserable little holes, which serve them for workshop and warehouse. At last our leader made a halt at a little door in a long white wall, which formed one side of a particularly crooked lane; and we descended from our horses on being informed that this was the entrance to the habitation of Solomon Nahon, the Jew, to whose house all European travellers visiting Tetuan repair. The outward appearance boded nothing very favourable to the dwelling; but, the moment we passed through the narrow inhospitable-looking gate, all our misgivings were converted into the most agreeable surprise, for we found ourselves in one of those pretty and exquisitely clean Moorish habitations of which the Mahometan remains at Granada had given us so correct an idea. A patio, or court paved with different coloured glazed tiles, is surrounded with two tiers of galleries, within which are cool-looking chambers, receiving their light through the horse-shoe arches that look into the court; and every part of the building is as clean and fresh as though it had just been newly painted and whitewashed. In the centre of the court stood a group of very pretty young women, (the wife and sisters of Solomon Nahon,) who, in the manner of the Jewesses of the East, stepped forward and kissed me as I crossed the threshold. As I had been told that the costume of the women of Tetuan is a remnant of the fashions bequeathed to them by the luxurious Moors of Spain when they took refuge upon these shores, I was very curious in examining the toilette of my pretty hostesses, some parts of which struck me as being very elegant. The mistress of the house wore a kaftan of green cloth lined with crimson and edged with gold twist, so fashioned as to display the sleeves and bosom of her chemise, which were tastefully embroidered in coloured silk and gold; the body was also enriched with a sort of stomacher of velvet, worked with gold thread and coloured foil, which produced a very rich effect. A striped silk scarf was tied round her waist: neither drawers nor stockings were worn by her; and her pretty little bare feet were slipped into scarlet morocco slippers edged with gold twist, and having heels as high as those which rendered our great-grandmothers *si grandement ridicules*. Her coiffure was the most complicated part of her dress, being composed of two handkerchiefs, one crimson, the other yellow, put on not exactly like a turban, nor even like a fillet, but something between the two; and descending so low upon the forehead as merely to show a little of the parted hair, which was disposed in shining braids close to the eyebrows. This headdress was enriched with velvet ornaments, embroidered in foil and gold, like those affixed to her corsage. The dresses of the other women of the family only differed in colour from the one I have described, with the exception of the younger sister of our hostess; who, being unmarried, wore her head uncovered, and her hair parted down the middle and hanging over her shoulders, braided into twenty or thirty small tresses. But the personal beauty of these fair Jewesses appeared to us much more admirable than their costume; and, strange to say, it is a description of beauty quite distinct from the Jewish type. Nahon's wife has fine dark hazel eyes, with a complexion of the clearest red and white, and neither the full lips nor peculiar nostrils of her people, but something of what the Italians so expressively term *simpatia* in her blooming face; but her less brilliant-looking sister, with her fairer cheeks, soft blue eyes, dark eyelashes, and light brown hair, attracted the gentlemen's admiration in a superior degree."

We must here make our bow to Mrs. Romer, in all good humour and courtesy, only observing that she has talent and power enough to enable her to write a far superior work to the one we have just closed. She will do so, if when she next puts the horses to her travelling carriage she will say less of herself, and of her up-risings and down-lyings; and remember, that let the Boulevard pencil-mongers assert what they will, fine writing is not always synonymous with lively description.

On the Laying out, Planting, and Managing of Cemeteries; and on the Improvement of Church-yards. By J. C. Loudon, F.L.S. Longman & Co.

WITHIN the last few years attention has been very painfully directed to the injurious effect produced by the decomposition of bodies in crowded church-yards, situated in the midst of the dense population of our cities and large towns (see *Athen.* No. 630). Some efforts have been made to alleviate rather than remedy the evil, but nothing like a resolution has been shown to grapple with all the difficulties of the question; and the volume before us, while it suggests many improvements, can scarcely be said to propose a complete remedy.

Sacred and profane history are equally silent respecting the origin of the custom of interment: the first mention of a grave occurs in the book of Genesis, when Abraham purchased the cave of Machpelah as a place of sepulture for his family. It appears from the history of this transaction that the dead were deposited in some of the natural caves which abounded in Palestine, but that they were not covered over with earth; and the history of Lazarus and the Resurrection show that bodies continued to be deposited in natural or artificial excavations, secured by a great stone at the entrance, up to the time of the Christian era. The early Christians appear to have adopted the practice of burying their dead in or near the sacred place where they met for religious worship. This was particularly the case with the bodies of the martyrs, or such relics of them as could be rescued from their persecutors. There grew up in consequence of this custom a feeling of religious communion with the departed, which gradually increased in strength, until the desire became universal to have bodies placed in some consecrated spot, either in the church itself or in the ground immediately adjoining. This has created the principal difficulty which the reformers of burials have to encounter; importance is attached to the locality of graves, and every plan of amendment must be so arranged as to accord with this feeling. Mr. Loudon says:—

"The *main object* of a burial-ground is, the disposal of the remains of the dead in such a manner as that their decomposition, and return to the earth from which they sprung, shall not prove injurious to the living; either by affecting their health, or shocking their feelings, opinions, or prejudices. A *secondary object* is, or ought to be, the improvement of the moral sentiments and general taste of all classes, and more especially of the great masses of society."

The decomposition of the dead can be most safely effected, consistent with existing usages, by interment in the free soil at a distance of from five to six feet below the surface, where no body has been buried before or is to be deposited afterwards. But we have here another difficulty; fashion has introduced modes of sepulture by which the decomposition of the body is delayed and its union with the earth prevented; whilst on the other hand the increased value of ground in cities has rendered it necessary to place coffin over coffin in the same grave.

If it were determined that no second interment in the same grave should be allowed, the space of ground required for burials would soon become a source of perplexity; London and its suburbs would require thirty-three acres of single graves annually. Mr. Loudon proposes that graves should be sunk as deep as wells, and that an interstice of earth five feet in thickness should be interposed between the several coffins. At present graves in the London cemeteries are dug fifteen feet in depth, and the bodies of ten poor persons are deposited in each. The common charge is twenty-five shillings for each coffin, or at the rate of the enormous sum of 45,375*l.* per acre! It is no wonder to be told that a vast amount of vested interest is connected with the abuse.

The remedies which Mr. Loudon suggests are the establishment of a receiving house for the dead—the laying out of cemeteries in the poor soils on the great lines of railway—and an arrangement for sending funeral trains at certain stated periods. There is no doubt that land may now be had along the line of the Southampton railway, at Woking, Perbright, and other places, for three or four pounds per acre, which would

Digitized by Google

afford a cemetery sufficient for the rich and poor of London for centuries to come. If all the city parishes combined to effect this object, bodies might be conveyed to the receiving house in carriages similar to Shillibeer's funeral cars, at a cheap rate, and thence conveyed to the place of interment by steam-boat or rail-roads. We do not agree with his suggestion that some cemeteries should be permanent and monumental, and others temporary and non-monumental. Such an arrangement would make that distinction between the rich and the poor in death which he has elsewhere deprecated; in one class of cemeteries the monuments would be so crowded together that their effect would be lost, while the total absence of monuments in the other would destroy the moral influence which the sight of the memorials of the dead is so well calculated to produce.

Mr. Loudon's plan for the cemetery at Cambridge, now in process of formation, is well calculated to suggest moral sentiment and improve the general taste. To this point our attention has been painfully directed by what we have seen in many burial-grounds, both in Scotland and England. In some places, sheep, horses, and even swine, are turned in to feed in the church-yard; other burial-grounds are allowed to become places of public nuisance, and in parts of Scotland remonstrances against such desecration have been treated as remnants of popish and superstitious feeling. Nowhere, indeed, has the abuse of burial-grounds proceeded to such length as in Scotland; at the same time we must add, that nowhere has a keener desire been awakened for amendment; and the new cemetery at Glasgow is very tastefully designed and admirably kept.

It is not our purpose to enter into any details of the architecture or system of landscape gardening desirable for cemeteries; we wish merely to keep the general question before the view of the public, and to impress upon our readers the importance of applying a remedy to the increasing evils arising from the crowded state of grave-yards, more especially in London; and there is little chance of amendment until public opinion be thoroughly roused and strongly expressed: these are not the days when men are to be expected to resign without a struggle abuses worth 40,000*l.* per acre.

Letters from Madras during the Years 1836—1839. By a Lady. Murray.

THESE Letters are full of lively graphic narrative, and unaffected familiar detail, which bring the scenes very vividly before the reader. They consist, as the preface informs us, and as the book plainly proves, of first impressions; and first impressions, though not always the truest, are ever the most vivid. We will not, however, stop to say more of them than that they are unsophisticated in style, full of quiet humour and unadulterated enjoyment of "all the varied scenes of life;" to prove which assertions we will present our readers with some extracts. The writer found, as most persons before her have done, the voyage very long and very dull—at the Cape, however, she was introduced to some Indian officers, whose character is thus lightly outlined:—

"The passengers we took in at the Cape were chiefly officers in the Indian army, who went out as Cadets before they had learnt much, and since that time had pretty well forgotten the little they knew. They might have been divided into two classes—those who knew their declensions, and those who did not. They were particularly fond of grammatical discussions, and quite eager about them,—such as whether any English words were really derived from the Latin; whether *regiment* is to be considered as a word of three syllables or two; whether *lunatic* comes from the French, because '*loon*' is French for moon, &c. They used also to extend their acquirements by the study of navigation. After breakfast the Captain and officers always took an observation of the sun, technically called 'taking a *sight*.' Then the passengers all began doing the same, privately called 'taking a *look*.' They were a capital set, poor things! in their attitudes, with their glasses, all peering up into the sky, *à la chasse* for the sun and moon. However, they were all very civil, and inoffensive, and unobjectionable; and I hope they are all as happy on shore as we are."

Our next scene shall be in the Madras Roads:

"The scene in the Madras Roads is the brightest and liveliest possible. The sea is completely studded with ships and boats of every size and shape, and the boats filled with crews even more quaint and picturesque than themselves. But none can compare to the catamarans, and the wonderful people that manage them. Fancy a raft of only three logs of wood, tied together at each end when they go out to sea, and untied and left to dry on the beach when they come in again. Each catamaran has one, two, or three men to manage it: they sit crouched upon their heels, throwing their paddles about very dexterously, but remarkably unlike rowing. In one of the early Indian voyagers' log-books there is an entry concerning a catamaran: 'This morning, six A.M., saw distinctly two black devils playing at single stick. We watched these infernal imps above an hour, when they were lost in the distance. Surely this doth portend some great tempest.' It is very curious to watch these catamarans putting out to sea. They get through the fiercest surf, sometimes dancing at their ease on the top of the waves, sometimes hidden under the waters; sometimes the man completely washed off his catamaran, and man floating one way and catamaran another, till they seem to catch each other again by magic. They put me in mind of the witch of Fife's voyage in her cockle-shell:—

> And aye we mountit the sea-green hillis,
> Till we brushed through the clouds of the hevin;
> Then sousit downright, like the star-shot light
> Frae the liftis blue casement driven.
>
> But our taickil stood, and our bark was good,
> And sae pang was our pearly prowe,
> Whan we could not climb the brow of the waves,
> We needilit them through below."

Our authoress seems soon to have become acquainted with the characters both of Europeans and natives, and describes them in her own amusing way. She found the Indian domestics very lazy and helpless:—

"I often tire myself with doing things for myself rather than wait for their dawdling; but Mrs. Staunton laughs at me, and calls me a 'griffin,' and says I must learn to have patience and save my strength. (N.B. *Griffin* means a freshman or freshwoman in India.) The real Indian ladies lie on a sofa, and, if they drop their handkerchief, they just lower their voices and say, 'Boy!' in a very gentle tone, and then creeps in, perhaps, some old wizen, skinny brownie, looking like a superannuated thread-paper, who twiddles after them for a little while, and then creeps out again as softly as a black cat, and sits down cross-legged in the verandah till 'Mistress please to call again.' We have had a great many visits from natives to welcome A—— back again, or, as they say, 'to see the light of Master's countenance, and bless God for the honour!' One—a gentleman in his black way—called at six in the morning: he left his carriage at the gate, and his slippers under a tree; and, then finding we were going out riding, he walked barefoot in the dust by the side of our horses till 'our honours' were pleased to dismiss him. Another met us, got out of his carriage, kicked off his shoes, and stood bowing in the dirt while we passed; then drove on to the house, and waited humbly under the verandah for an hour and a half, till we were pleased to finish our ride. One paid me a visit alone, and took the opportunity to give me a great deal of friendly advice concerning managing A——. He especially counselled me to persuade him *to tell a few lies*. He said he had often advised 'Master' to do so; but that he would not mind *him*, but 'perhaps Mistress persuade Master. Master very good—very upright man; he always good: but Master say all the same way that he think. Much better not! Mistress please tell Master. Anybody say wrong, Master's mind different: that quite right—Master keep his own mind; his mind always good: but let Master say all same what others say; that much better, and they give him fine appointment, and plenty much rupees!' I said that that was not English fashion, but my visitor assured me that there were 'plenty many' Englishmen who told as many lies as the natives, and were all rich in consequence: so then I could only say it was very wrong, and not Master's fashion nor mine; to which he agreed, but thought it 'plenty great pity!'"

Here is a description of an Indian Rajah, from whom she received a visit of ceremony:—

"At the appointed hour, we heard a queer kind of twanging and piping, like a whistle and a jew's-harp. This was the Rajah's music, played before his palanquin: then came his guards,—men with halberds; then his chief officer, carrying a silver mace; then his principal courtiers, running by the side of his palanquin to keep him 'pleasant company.' When they all arrived, the halberdiers grounded their arms, and the whole cortège stopped at the military word of command, '*Halt! Present! Fire!*' but the *firing* consisted of the old gentleman's getting out of his palanquin, and quietly shuffling into the house, between two rows of his own servants and ours, salaming him at every step. He was dressed in a clear muslin pelisse, with all his black skin showing through; the hems of his ears stuck full of jewels, gold bracelets on his arms, and a diamond locket hung round his neck. I call him 'Penny Whistle Row:' if that is not quite his real name, it is so like it, I am sure it must mean that. When he came into the drawing-room, he stopped at the entrance (N.B. we have no doors) to make us most profound salams, which we returned to the best of our ability: then he presented us with an orange each, and there were more salams on either side. At last, when we had all done all our mopping and mowing, he sat down and began his chirp. He paid a variety of set compliments, as they all do; but, those over, he was more curious about European matters than the natives in general are. In particular, he wished to know whether it was true that our King was dead, and that we had a woman to reign over us. This was quite beyond his comprehension—how she was to contrive to reign, and how *men* were to agree to obey her, he gave up in despair. He asked whether the King's death would make any difference to us: he was in hopes it might have given A—— a step in the service. He invited us to come and spend a week with him, which we fully intend to do as soon as the weather allows. When he had sat about an hour, he took his leave with the same ceremonies as at his arrival: salams on all sides, pipe whistling, jew's-harp twanging, guards recovering arms, courtiers putting on their shoes, and all marching off to the word of command as before, '*Halt! Present! Fire!*' At parting he shook hands to show how European his manners were, and he took leave of *me* in English: 'My Lady, I now to your Excellency say farewell: I shall hope you to pay me one visit, and on one week go (meaning *hence*) I shall come again to see the face of your honour civilian.'"

The natives, it seems, are always on the look-out for government situations, which gives our authoress opportunity for several amusing scenes; we may quote the following, and subjoin her commentary, which occurs in a subsequent letter:—

"Besides the Rajahs, there are a number of natives of lower rank who are very fond of calling to keep themselves in remembrance in case of an appointment falling vacant. Some only come as far as the gate, and stand there to make salam when we go out. These never speak, but they put on some part of the dress belonging to the situation they want, in order that we may understand their meaning. A Court writer in expectance holds writing materials in his hand; a Peon sticks a dagger in his belt, &c. Others of rather higher pretensions come to the house and pay a visit. One of them calls regularly twice a-week, and the same dialogue takes place whenever he comes. —*Visitor*. Salam, great chief!—*A*. Salam to you. —*Visitor*. Your Excellency is my father and my mother!—*A*. I am much obliged to you.—*Visitor*. Sar, I am come to behold your honourable face.—*A*. Thank you. Have you anything to say to me? —*Visitor*. Nothing, great chief!—*A*. Neither have I anything to say, so good morning; enough for to-

Digitized by Google

day.—*Visitor.* Enough; good morning, sar: great chief, salam. * * Some of them are very sensible and agreeable; and when I have them alone, they talk very well, and I like their company, but as soon as three or four of them get together they speak about nothing but 'employment' and 'promotion.' Whatever subject may be started, they contrive to twist it, drag it, clip it, and pinch it, till they bring it round to that; and if left to themselves, they sit and conjugate the verb 'to collect:' 'I am a collector—He was a collector—We shall be collectors—You ought to be a collector—They would have been collectors;' so, when it comes to that, while they *conjugate* 'to collect,' I *decline* listening."

Of the partial success of missionary exertion in India, what she says confirms the general report:—

"I wish I could, as you ask, tell you any pretty stories for your schools, but I am sorry to say they are not at all plentiful: there are very few natives whoare even nominal Christians, and still fewer whom we can reasonably believe to be anything but what is here called 'curry-and-rice Christians.' In England, I think people have a very false impression of what is done in India. That is not the fault of the Missionaries, who write the real truth home; but the Committees seem to publish all the good and none of the bad, for fear of discouraging people. In fact, it is unreasonable to expect more to be done without more efficient means. Suppose thirty clergymen to the whole of England,—what could they do? and that is about the proportion of the Missionaries in Madras, and they have to work amongst Heathens. Perhaps about half of them know the language well, and the rest speak it like school-French."

The accession of Queen Victoria seems to have afforded a general subject of conversation. We quote one remark, made by an old barrack-sergeant, who used "to sit and prose with her, for half an hour, every Monday":—

"He takes particular interest in the young Queen, thinking she has a troublesome life before her. Yesterday he said to me, 'Only think, ma'am, of such a young person for to be Queen of the realm! And in these times too, when the oldest hand could hardly keep them in order. She'll have a tough job of it, poor young lady! I pity her from my heart, indeed I do! This paper says Lord Durham is to be called to Her Majesty's councils. I hope his Lordship is a fatherly kind of gentleman, ma'am, who will help her Majesty in some of her difficulties.'"

Indian nomenclature gives occasion for a few amusing anecdotes, as for instance the following:—

"This morning I was told that 'a cat had run away with a child.' I was horror-struck, and thought it must have been a hyæna; but on inquiry I found the child was nothing but a young pigeon,—'pigeon-child,' as they explained it. The ducks laid a number of eggs, which were brought for us to see. 'You must make little ducks,' said the Master: 'Sar, I shall do so,' said the butler. I laughed at the order; but a hen was caught, put into a basket with the eggs, and the lid shut down upon her; and in a little time I was told there were 'four babies' in the poultry-yard. I have just received a letter from the Madras Moonshee, who begs to express 'the concern I have for your happiness as my matron, your state of health, and the state of my rising matron, your child.' I suppose he thinks *matron* is the feminine of *patron*."

We will conclude with one or two sensible hints to all classes in India, and a description of a Brahminical religious service:—

"We are reading Shore's 'Notes on Indian Affairs,'—very clever, true, and amusing. He complains much of the English incivility to the natives; and I quite agree with him: it is a great shame. A—— says he exaggerates, but I really do not think so. A——, being an old Indian, is grown used to things that strike us griffins. The civilians behave better than the military, though all are bad enough. The other day an old Bramin of high caste called on us while the Prices were in the house; Captain Price, hearing his voice, sauntered out of the next room with his hands in his waistcoat-pockets, and planted himself directly before the poor old creature, without taking any other notice of all his salams and compliments than 'Well, old fellow, where are you going?' in a loud, rude voice. The Bramin answered with the utmost apparent respect, but I saw *such* an angry scowl pass over his face. A little politeness pleases them very much, poor things! and they have a good right to it. The upper classes are exceedingly well bred, and many of them are the descendants of native princes, and ought not to be treated like dirt. A new magazine is just advertised as coming out at Madras. It is to be conducted by some of the clergymen, in opposition to another periodical, conducted by some others of the clergymen. The first number is to contain strictures on a review which appeared last month in the other magazine. I grudge the waste of time and thought upon such useless work. The writers come out here, they themselves, and every body else, believing they will work among the Heathen; and while the Idol services are going on all round them, they sit writing their reviews and anti-reviews to the sound of the Pagoda bell! The other night I was sitting in my Tonjon sketching a pagoda, when I saw a long procession of Bramins go in, and suddenly the service began. I could hear it all, through the walls. The first part sounded exactly like a Roman Catholic Mass. There was music, and the mumbling chant of the old priests who could not sing, and the shrill voices of the choir-boys, and at intervals a little bell tinkling; till it was all interrupted by violent screams from girls' voices—perhaps they were meant for singing, but they sounded very horrible: then came loud beating of drums and ringing of bells, and it was all finished."

OUR LIBRARY TABLE.

Magic and Mesmerism; an Episode of the Eighteenth Century, and other Tales, 3 vols.—The principal story is based on a trial in 'Les Causes Célèbres,' where a Jesuit is exhibited as having gained an influence over the younger and fairer part of his flock for the vilest of purposes, by magnetic means. Though it be at once delicately and forcibly treated, the subject is too repulsive for the legitimate uses of Fiction. 'The Old Man of Haarlem,' which follows, is a capital legend, to be read with breathless pleasure by all true lovers of romance. What scene, indeed, lends itself better to a tale of wonder, than the 'Haarlem Zee'—with its traditions of submerged towers and towns? The main figure of the legend, too, is one of those avaricious and stony-hearted nobles, whom we oftentimes encounter, in a Flemish picture gallery, staring from panel and canvas, with a cold and calculating gaze; at once repulsive and picturesque. Here he is surrounded by gentle and generous spirits whom he crushes and defies, in pursuit of his own selfish ends—the fate of these is pathetically told, and the retribution which overtakes their tormentor as well narrated as it is imagined. The third story, 'Margaret Lambrun,' is founded on that well-known passage of Queen Elizabeth's reign, in which the virgin monarch was menaced with assassination by a fanatical adherent of poor Mary Stuart's. The glimpses of old London, are so well given as to recall, we need not add "with a difference," the pictures of Alsatia and Paul's Wharf in 'The Fortunes of Nigel.' On the whole, these three volumes are well worth the notice of all who are romantically disposed.

The Iliads of Homer, prince of Poets, never before in any Language truly translated, done according to the Greek, by G. Chapman: a new Edition, with Introduction, &c. by W. C. Taylor, L.L.D., 2 vols.—If the re-appearance of this sterling version of the "prince of poets" might be received as a sign of the times, it would be most welcome. Old George Chapman is rugged, and occasionally tedious, but in faithfulness and power his translation is far superior to the smoother and vague paraphrase of Pope. Chapman entered on his task with the inspiration of a kindred mind, and he has given back in pure and vigorous English the noble thoughts and images, which, unlike Pope, he drank in fresh at the fountain head. We may well say with Keats,—

> Oft of one wide expanse had I been told,
> That deep-browed Homer ruled as his demesne;
> Yet did I never breathe its pure serene,
> Till I heard Chapman speak out loud and bold;

Loud and bold as a poet should be when expounding a poet. To those who cannot read Homer in the majestic original we recommend this translation, as likely to convey a far better idea of the Iliad than Pope's more polished version. Dr. Taylor devotes his preface to pleading the cause of Chapman *v.* Pope, and to our mind has well argued the superior claims of the former. In this view he is supported by the opinion of Charles Lamb, who says, "Chapman would have made a great epic poet, if indeed he has not shown himself to be one; for his Homer is not so properly a translation, as the stories of Achilles and Ulysses rewritten. He makes his readers glow, weep, tremble, take any affection which he pleases, be moved by words or in spite of them, be disgusted and overcome that disgust." This new edition has been got up with excellent taste, and is illustrated with forty wood-engravings, done with great spirit after Flaxman.

The Evolution of Light from the Living Human Subject, by Sir H. Marsh, Bart., M.D.—An abstract of a paper on this subject, by Sir H. Marsh, appeared some years since in the Transactions of the Irish Academy. The original essay is here enlarged, with additional information and the results of more recent researches. It consists, for the most part, of an elaborate enumeration of the *instantiæ convenientes*, in which light is emitted by organic and inorganic bodies, and some statements of luminous appearances preceding the death of consumptive patients. These statements are not very satisfactory, nor do they lead to any result as to the cause of the presumed phenomena. Those interested in the question had therefore better refer to the pamphlet itself, which contains some curious matter, though not enough to add any additional information on a point yet involved in great obscurity.

The Jesuits, their Principles, and Acts, by E. Dalton.—Mr. Dalton is secretary to a body entitled the Protestant Association, the members of which have raised a fund for "printing standard Protestant works by popular writers," and intrusted the compilation of the one before us to their secretary. As a specimen of what is considered by the parties as a "standard Protestant popular work," we shall quote the following passage:—"They loved darkness rather than light, because their deeds were evil. Like bats and owls, and creeping, crawling, slimy things, night suits them better than the day. Unlike the soaring eagle, which bathes its splendid plumage in the golden light of heaven, the vulture brood cower on folded wing in the dark caverns of the earth. Unlike the honest-hearted Christian, who soars upwards on the wings of faith and love, and bathes its spirit in the beams of the Divine radiance, drinking in the glorious light which emanates from the Sun of Righteousness, courting too the scrutiny of the world, and letting his light shine before men, to the glory of his Father and his God: the Jesuits grovelled low in earthly pursuits, shunned the light of day, courted disguise and obscurity, or revelled in the murky glare of false opinions and a vicious philosophy, and hid their principles and their objects from the gaze of mortal man in fear and trepidation." What are we to think of those who subscribe to purchase and circulate such tissues of mischievous absurdity and calumny?

Life and Times of Reuchlin, by F. Barham, Esq.—Reuchlin was one of the early German reformers; he is here, indeed, called the Father of the Reformation. The work is essentially a translation of a well-known German work, by Mayerhoff, and contains a clear review of the state of religion and literature in Germany immediately before the Reformation, and well deserves the attention of those who are interested in Ecclesiastical History. It is too condensed already, for us to give an analysis of its contents; and a formal examination of its statements would involve discussions on subjects of controversy which ought not to be too lightly provoked.

Introduction to the Study of the Works of Jeremy Bentham, by J. H. Burton.—*Benthamiana, or Select Extracts from the Works of Jeremy Bentham*, by J. H. Burton.—Mr. Burton was one of the editors of the collected edition of Bentham's works lately published. He enters into all the views of his author, and in his introduction defends him, to a certain extent, from the charge of obscurities in style and nomenclature so frequently brought against him, and classifies his labours according to their nature, extent, and success. 'Benthamiana' is, as the title imports, a selection from the works of Bentham, forming a kind of outline of his opinions on most of the subjects which he discussed. The Introduction

Digitized by Google

and the extracts will be useful to those who wish to acquire some general notion of Bentham's peculiar style and opinions.

One Hundred Romances of Real Life; selected and annotated by Leigh Hunt.—A reprint from the London Journal. We know no writer who can cater more pleasantly for the public or tell a story better than Mr. Leigh Hunt—and here we have stories enough, not merely for a winter's night, but a whole winter. The volume forms one of the "Popular Library of Modern Authors."

Godfrey Malvern; or the Life of an Author, by Thomas Miller, Vol. II.—The conclusion of this story gives us no cause to reverse the judgment on its earlier portion, last year delivered, (*Athen.* No. 789.) Mr. Miller is happier in his country than in his town sketches. There are powerful things in the chapter "in which we go to the workhouse," but the subject is a hateful one, and loses none of its squallid wretchedness, in his hands.

School Books.—We are somewhat in arrear with works of this class, and must therefore make an effort to clear our shelves of them. But what are we to say?—they are each and all represented to be the best of their class, and guides to the only or the easiest way of learning the language or subject to which they relate. Most of them appear mere advertisements of the several teachers and professors, possessing no distinctive character. Here, however, we present them to our readers, *en masse*:—*The French Teacher*, by D. Pontet.—*Trésor de l'Ecolier Français: Complément du Trésor*, by L. F. De Porquet.—*Easy French Lessons*, by Charles Gerrard.—*A First Grammar of the French Language*, by C. Smyth.—*A Self-Instructing French Grammar*, by D. M. Aird.—*French Language in Four Months*, by M. de Beauvoisin.—*A New French Grammar: Lectures Grammaticales et Historiques*, by A. F. Guillerez.—All of these may possess some merit; but the market is already so overstocked, that unless there is a distinct and marking feature of originality, we must consider them as so many forms of advertisement, or mere bookselling speculations.

Klauer's Miniature German Grammar: German Exercises for Beginners: Deutsche Amaranten (Nos. IV, V.), are works of some merit. The exercises, however, are inaccurately printed, and not written in very pure English, and the selections of German poetry and prose are not always well chosen.

Spanish without a Master, by A. Monteith, can best be tested by trying it. Notwithstanding all the author says, we are sceptical as to the result of this *Masterless* teaching.

Eclogæ Lucretianæ, by R. Gibson, are selections from Lucretius, with English notes, possessing an average amount of ability.

Riddle's Diamond Latin and English Dictionary, is an abridgment of Mr. Riddle's excellent work, which has been already noticed in the *Athenæum*.

An Elementary Etymological Manual of the English Language, by W. Ross, does not seem to develope any new principle, and is too short to be very sound or very useful.

In *An Attempt to Simplify English Grammar*, by R. Sullivan, the author, in his haste to remove unnecessary distinctions, omits some necessary ones: a very common fault with correctors of abuses. The same author's *Exercises on Orthography and Etymology* are, on the whole, tolerably well executed, but his derivations are often fanciful. *Geography and History*, by the same author, is more dry and dull than most books of its class.—*The Keystone of Grammar*, laid by T. C., is a work that was not wanted, as the subject has often been treated as well or better by previous labourers in the same field.—*European Geography made Interesting*, by J. Gaskin, must be left to the consideration of the readers. To us the subject appears more dull than usual.—*A Companion to the Celestial Atlas*, by J. Middleton. An entertaining and useful little book.—*A System of Modern Geography*, by J. White. A useful collection of facts, too closely condensed for anything but reference.—And now that we have completed our task, we may set our youthful learners of French, German, &c., free from the musty atmosphere of the school-room, and dismiss them to their sport with—*Practical Hints on Cricket*, by a Wykhamist, whose company they will probably relish better than that of any of those who have offered to lead them along the thorny paths of learning.

List of New Books.—Productive Farming, by Joseph A. Smith, 12mo. 3*s.* 6*d.* cl.—The United Irishmen, their Lives and Times, by Dr. R. R. Madden, 2nd series, 2 vols. 8vo. 21*s.* cl.—Poems, by Alfred Tennyson, 2nd edit. 2 vols. 12mo. 12*s.* bds.—Songs and Ballads from the German of Uhland, Körner, Bürger, &c., post 8vo. 8*s.* cl.—Lake's Officium Eucharisticum, a Preparatory Service to the Lord's Supper, 31st edit. 32mo. 2*s.* cl.—Randall's (Rev. James) Sermons on the Books of Joel, Jonah, Micah, &c., 8vo. 10*s.* 6*d.* cl.—Sermons on Christian Experience, by Rev. F. G. Crossman, crown 8vo. 6*s.* cl.—Biblical Cabinet, Vols. XLI and XLII., 'Life of Justin Martyr, translated by Ryland,' 2 vols. fc. 8vo. 15*s.* cl.—The Truth as it is in Jesus, by Job Upton, 12mo. 5*s.* 6*d.* cl.—Flora Odorata, a Characteristic Arrangement of Sweet Scented Flowers and Shrubs, by J. T. Mott, 12mo. 3*s.* cl.—Astronomy and Scripture, by Rev. T. Milner, fc. 8vo. 7*s.* cl.—Huber's English Universities, edited by F. W. Newman, with 52 illustrations, 3 vols. 8vo. 2*l.* 10*s.* cl.—Eusebius on the Theophania, translated into English by S. Lee, D.D., 8vo. 11*s.* cl.—Knight's Library Edition of Shakspere, Vol. VIII., Tragedies, 8vo. 10*s.* cl.—The Life of a Fox, with illustrations, by T. Smith, Esq., post 8vo. 8*s.* 6*d.* cl.—Extracts from the Diary of a Huntsman, by T. Smith, Esq., 2nd edit. post 8vo. 10*s.* 6*d.* cl.—Tales of the Colonies, or the Adventures of an Emigrant, 3 vols. post 8vo. 31*s.* 6*d.* bds.—Marmaduke Wyvil, or the Maid's Revenge, by the Author of 'Oliver Cromwell,' 3 vols. post 8vo. 31*s.* 6*d.* bds.—Book of Sports, British and Foreign, Vol. II., 4to. 16*s.* cl. gilt.—The Charcoal Burner, or the Ruins in the Black Forest, square, 2*s.* 6*d.* cl.—The Million of Facts, by Sir R. Phillips, new edit. 12mo. 12*s.* cl.—The History of Etruria, Part I., by Mrs. Hamilton Gray, post 8vo. 12*s.* cl.—Dr. M'William's Medical History of the Niger Expedition, with plates and map, 8vo. 10*s.* cl.—Dr. Prout on Stomach and Renal Diseases, 4th edit. with plates, 8vo. 20*s.* cl.—Hack's Grecian Stories, new edit. 12mo. 6*s.* cl.—Paget's Registration of Voters Act, 12mo. 3*s.* bds.—Mental Hygiene, or an Examination of the Intellect and Passions, by W. Sweetser, 12mo. 7*s.* cl.

ROYAL ACADEMY.

[Concluded.]

The Landscapes this year are of especial beauty and interest: we do not find any new names disputing the palm of excellence with those of known and established reputation, but our old favourites are in great force. As painters of home scenery, Lee and Creswick, and as painters of foreign scenery, Stanfield and Roberts, continue to distance all competition.

We have so often entered our protest against Mr. Turner's flagrant abuse of his genius and his palette, that we can find no new terms of reprehension, and *he* remains incorrigible and incurable. His is not "a green and yellow melancholy," but a green and yellow madness. What shall be said of him?—for there is a poetical *idea* dimly descried through the prismatic chaos, which arrests the attention and excites the fancy; we think there *must* be something, somewhere, if we could but make it out. Then his style of dealing with quotations is as unscrupulous as his style of treating nature and her attributes of form and colour;—as in the motto to his Venetian *galimathias*, entitled the *Sun of Venice going to Sea* (129).

> Fair shines the morn, and soft the zephyrs blow a gale,
> Venicia's fisher spreads his painted sail,
> Nor heeds the demon that, in grim repose,
> Expects his evening prey.

In our younger days the passage used to run somewhat differently,—we have no recollection of the "zephyrs blowing a gale"—*mais passons là-dessus*. Mr. Turner exhibits six pictures this year: the largest and the most intelligible is No. 14, *The Opening of the Walhalla in* 1842,—or rather a cloud and rainbow vision of the same; the others we forbear to particularize.

The very antipodes to Turner—false as he is to nature and himself!—is Lee, with his truthful, homely simplicity, his thoroughly English sentiment. 25, 182, and 546, *Scenery on the River Teign, in Devonshire*, and, yet more, the large picture (415)—*Figures crossing a Ford*, or rather, we think, a milldam,—are full of unaffected beauty. Then Creswick—whose cool depths of foliage, touched with such an exquisite lightness in detail, and such breadth of general effect, give him a claim to the title already bestowed on him of the "English Hobbima,"—charms us with a feeling for nature wholly different. Of his five pictures this year, we think (249) *The Welsh Glen*, with its dewy seclusion, and (209) *Scene on the Conway*, the finest. Stanfield has also five pictures; all but one are Italian scenes; and it must be said of him, that when he returned from Italy, like most of our English artists—Wilkie and Collins, for instance—quite Italianized in taste, he brought back a portion of the Italian atmosphere with him, and seems to have the power of breathing it on his canvas. No one paints air and light and water like this gifted artist: for instance, in (37) *Maxorbo and Torcello, Gulf of Venice*, and (192) *The Castle of Ischia, in the Kingdom of Naples*, what transparency of effect, what clearness without hardness in the outlines, and what careful finish in the details of the foreground! We object, however, to Stanfield in a general way, that his views from nature have often the look of compositions, as if arranged for scenic effect. Roberts gives us, as usual, more of his Oriental reminiscences and Egyptian wonders:—(53) *Ruins on the Island of Philæ, in Nubia*, and (219) *Gateway of the Great Temple of Baalbec*, are, from association as well as their intrinsic beauty, of particular interest. In all the works of this painter we must regret the want of relief,—a certain flatness of effect, which may possibly be characteristic of the sandy, sultry lands he depicts, but which is not pleasant to the fancy or to the eye. His interiors of churches and architectural views have not this fault. 73, *Sorrento*, and 205, *Mæcenas's Villa, Tivoli*, W. Havell, are, as usual with him, full of the *sunniness* and luxuriance of Italy.

352, *The last Moment of Sunset*, F. Danby, A., is one of the most lovely and poetical landscapes in the Exhibition—full of the solemn feeling of repose—the red glow of the clouds, overtaken, as it were, by the shadowy twilight; and the whole conception is not only beautifully felt, but the painting is most true and careful, particularly the shallow brook in the foreground, touched with the receding light.

92, *A Waterfall and Torrent by Sunset*, R. R. Reinagle, R.A., is charming, and has a look reminding us of the wondrous Dutchmen, the Ruysdaels and Vanderveldes of old.

113, *A Study from Nature, near Hayes, in Kent*, W. F. Witherington, is a beautiful bit of wood scenery.

432, *Shrimpers and Mentors*—(what *are* Mentors in wooden shoes and red nightcaps?)—*on the Sands of St. Michael, Normandy*, E. W. Cooke, has all the beauty, truth, and transparency of his finest sea views: we cannot praise so highly his other picture, 577, *The Thames*—it is rather heavy.

We might point out other landscapes of great merit, did time and space allow it; but must pass on to the Portraits, such as they are.

We have had this year the usual outcry and lamentation on the predominance of portraiture over every other class of art; but, as it appears to us, without just cause. The number of portraits is this year less in proportion than in former years; but it must be conceded that two whole sides of the great room are nearly covered with portraits; that all the large pictures, with two or three exceptions, are full-length figures of ladies and gentlemen—over-dressed women dandling over-dressed children, and men standing bolt upright trying to look dignified, or seated in arm-chairs trying to look easy;—besides those which are obtrusive in vulgarity of treatment, there are a vast number of very respectable portraits—good likenesses no doubt, and well painted: the most distinguished among our portrait painters by profession—Philips, Shee, Briggs, Grant, Rothwell, Faulkner, are not below themselves this year; yet we think of the days of Lawrence, and sigh. The number of portraits, of which the interest and value can hope to outlive two generations, either as historical records of distinguished characters, or for their intrinsic beauty as works of art, is *very* small indeed—less, we think, than usual. There are two full-lengths of the Queen, which, in courtesy, must take precedence. 15, *Her Majesty the Queen*, in white satin, seated, and wearing her coronet, painted for the United Service Club, F. Grant; and *The Queen in her Royal Robes*, standing, Sir M. A. Shee: as likenesses both these pictures are decidedly failures, in feature, in figure, in character; but that of Sir Martin Shee by far the worst;—that of Grant has the lady-like elegance which distinguishes all his female portraits, with the same sketchy facility of execution, and, we must add, the same want of finish and power in the details. We must point out, among other portraits of this elegant painter, the very charming little full-length of *Lady Margaret Littleton* (519), and the *Heads of two Children* (307). Grant is not so successful in his male as in his female portraits; yet the large full-length of *Lord Wharncliffe*, seated, (211) is very good.

But the portrait here of greatest merit as a picture—requiring no name to lend it a value, and destined to live some hundreds of years hence, even as it now lives before us, is the *Portrait of the Honourable Ashley Ponsonby*—Edwin Landseer (100). A young, fair-haired boy, mounted on a rough pony, has been

Digitized by Google

out rabbit-shooting; the game hangs at his saddle; he has just dropped his cap, which one of a group of dogs around him has picked up, and holds in his mouth. In this picture the vivacity of the momentary action; the easy, graceful turn of the boyish figure; the exquisite mastery of hand and truth of character displayed in the painting of the animals, and all the minor details in the foreground, are beyond all praise. Edwin Landseer is one of the very few painters—we include ancient as well as modern—who accomplishes that which he aims at, and thus gives to the true lover of art—and, we may add, the lover of nature—a pleasure complete in its kind. Edwin Landseer's only fault is a want of vigour and transparency in his flesh tints; which, considering his marvellous skill in the imitation of every other texture, appears to us unaccountable.

Two little cabinet pictures in oil, by Mrs. Robertson, must also be pointed out for their intrinsic beauty and value as works of art; 425, *Full-length of Miss Herbert*, and 426, *The Baroness Lionel de Rothschild and Children*.—These are really perfect in their way, painted with breadth and power, as well as the utmost delicacy and finish. A hundred years hence, these little pictures may possibly be estimated as we now estimate a Mieris or a Metzu.

447, *Cleopatra*, Mrs. Carpenter, evidently a portrait, and of a very beautiful woman, has great merit. There is nothing *effeminate* in the style of this excellent artist; her portraits of gentlemen are as manly as her portraits of ladies are elegant. Why should not Mrs. Robertson and Mrs. Carpenter be members of the Royal Academy, as well as Angelica Kauffmann, or Mrs. Moser, the flower painter?

523, *Portrait of Professor Wilson*, R. W. Lauder, full length, seated in a chair. An interesting picture of one of our most distinguished men. We can, happily, testify to the truth of the likeness in this fine, poetical head.

528, *The Chevalier Bunsen*, J. Severn, is another portrait of a celebrated man, very admirably painted.

449, *Portrait of Mrs. Coningham*, J. Linnel. Very beautiful: the best portrait by this artist we recollect to have seen, and *life-size*, which is not usual with him.

Among the miniatures, we must point out those of Thorburn; which, for firm, masterly drawing and depth of effect, emulate cabinet pictures in oil; such, for instance, are 752, *Mrs. Gladstone and Child*—802, *The Honourable Mrs. Percy*—and, above all, 876, *Mr. and Mrs. Hope Johnstone*, the *chef-d'œuvre* in the miniature style. Then, for finish, delicacy, and brilliance, we have nothing like Sir William Ross. Among his miniatures here, eight in number, that of *Lady Le Despencer* (723) may be pointed out for its consummate elegance, and that of *Sir Henry Hardinge* (754) for its manly truth as a likeness. The miniatures of Sir William Newton, of C. Durham, and the drawings of Richmond, and of T. Carrick, are also excellent. By the latter is a portrait of *Lord Morpeth*, a very free and animated likeness of that accomplished nobleman.

The drawings of Chalon have the same merits and defects as usual—the merits of great elegance and facility of execution, and the defects of being mannered and monotonous, and made up in point of character. 987, the *Portrait of Lady Clementina Villiers, as Undine*, but more lady-like than nymph-like, is a very perfect specimen of his peculiar style.

By John Hayter, whose drawings of ladies are also most particularly lady-like, there are four drawings of Adelaide Kemble, in the characters of *Semiramide*, *Norma*, and *Caroline*, in the 'Secret Marriage,' which have the rare merit of being faithful transcripts of action and expression, rendered with exceeding delicacy, and without any alloy of the theatrical or the mannered. 1101, *Semiramide in the Scene with Assur*, and 928, *Caroline in the Scene with the Count*, are, perhaps, the best; the latter giving all the tragic pathos, and the former all the comic archness, with which the last of the Kembles graced our lyric drama during her short reign: so—

Star after star decays!

And here we close our series of notices of the present Exhibition, which, in spite of the absence of some of the leading names of the last ten or twenty years, we must pronounce, in a general way, the best—the most promising within our own memory.

OUR WEEKLY GOSSIP.

At the last meeting of the Paris Academy of Fine Arts, M. Raoul-Rochette communicated some particulars addressed to him by Signor Grisi, a young Roman antiquarian, respecting a recent discovery of a tomb in the ancient city of the Veii. "It is composed of two chambers, in form an oblong square, cut in the soft sandstone of the place. The first of these presents, on its back wall, through which the second is entered, two orders of painting—the one exhibiting the figures of symbolical animals, such as sphinxes, lions, chimæras, &c., painted in blue, yellow, and red, of those conventional tints which are not, properly speaking, imitative—the other representing men on horse and foot. The style of these paintings, greatly resembling those of Corneto, announces, however, a still higher antiquity—in accord with the archaic manner of all the objects in bronze and clay, which this tomb contains. This ancient city having been taken and destroyed by Camillus, in the year of Rome 360, the monument in question must belong to an earlier date—probably to a period in which the influence of Greek art had not yet been felt in Etruria. The same letter furnishes some particulars referring to the present condition of the excavations going on at Pompeii: and which have now, it is stated, reached the middle of the Street of Fortune. An excavation made on the 29th of March, in the presence of the Grand-Duchess Dowager of Tuscany, brought to light a number of vases and domestic utensils of many kinds, in bronze, iron, glass, and clay, all remarkable for their forms, and many for the workmanship—some quite novel, and of purpose unknown to the antiquary. On the same authority, M. Raoul-Rochette further announced the discovery of an entire cemetery of the poor at Puzzuoli, filled with a prodigious quantity of lamps, for the most part of good workmanship and a high Roman period, wrought in subjects both varied and curious.

We are glad to observe that the Trustees of the British Museum have at last adopted the suggestion of a committee of the House of Commons, and published their Synopsis in sections. These sections are now sold at prices varying from one penny to threepence, in the entrance hall of the Museum. They have done wisely, too, in affixing a public notice of the fact to the gates of the institution, and thus cautioning the public against purchasing what are called "handbooks," published by a notorious pirate, but which are nothing but *verbatim* plagiarisms of the Museum Synopsis, seasoned with a singular amount of typographical *errata*. It were to be wished, that the Trustees would direct a compilation to be made descriptive of the most remarkable portions of the Museum, which should address itself in the simplest and most popular form to the most uninformed of country visitors. The present Synopsis is essentially a catalogue for the use of the learned, and must be almost unintelligible to the great majority of visitors. It would be no very difficult matter for Mr. Hawkins and Mr. Gray to imagine themselves conducting an unlearned person through the rooms. We advise them to catch a countryman or two, and make the experiment.

Notwithstanding the unpropitious state of the weather, more than 6,400 persons passed through the state rooms at Hampton Court on Whit Monday; being the greatest number ever known to have visited the palace in one day.

Respecting the prize offered by Mr. Webster for the best comedy, a correspondent observes, "The decision is promised to be given on the 1st of January next, though the time when the comedies are to be sent in is not named. Six months is but little time for the production of a sterling comedy; and if, as is not unlikely, forty or fifty competitors should enter the field, their productions, however unpromising, must be read by the board of critics, and the merits of the few best productions must be discussed; a proceeding requiring time and patience, as well as discriminating judgment. This difficulty is easily obviated by a better-considered arrangement; and I advert to it, believing Mr. Webster's announcement to be *bond fide*, and being desirous that his good intention should have the best possible chance of fulfilment."

Wednesday the 7th inst., was the latest day allowed for the admission of works to the Cartoon Exhibition, in Westminster Hall; and the hour for closing, which had been fixed at five in the afternoon, was, considerately, deferred till nine, for the convenience of parties who had been unable to get their productions in before the former hour. The number of competing works is said to be about 170; all conceived and executed within eleven months: and, according to report, the British School has nobly answered the call made upon it, and satisfied the expectations of its friends. The interest of exhibitions connected with the fine arts, is likely to be, for a time, absorbed by this one, which may have so important an influence on the future destinies of the English School. The judges commenced their labours with a view to awarding the premiums on the following day: and it has been suggested, that the amount of talent displayed, and the difficulty of deciding between the pretensions of its rival expressions, are likely to send the Committee to Parliament for a further grant, with a view to increasing the number of the premiums. We give these things but as rumours, till we can make our own report on a subject in which the *Athenæum* has all along taken no common interest.

The Order of the Legion of Honour has been conferred on M. Jouffroy, the sculptor; Messrs. Thuillier and Cabat, landscape-painters; M. Guénepin, architect; M. Saint-Jean, flower-painter; M. Colas, engraver; M. Jacobber, painter at the Sèvres porcelain manufactory; and M. Girard, leader of the orchestra at the Opéra Comique.

Two or three Sales of Pictures which have taken place at Messrs. Christie & Manson's since our last week's report, exhibited nothing but the low taste, or purse, of those who collected the materials. A fourth sale of artistical hardware—bronzes, mosaic cabinets, or-molu commodities, marbles, &c.—would have been almost beneath notice, save for a few works of sculpture more or less important. Among these we were somewhat surprised to find an 'Amorino,' by Canova, from the collection of Lord Cawdor. What it is that has brought this palatial chattel under the auctioneer's hammer we cannot say: as far as our small knowledge in fashionable life extends, no ostensible cause exists:

The thane of Cawdor lives a prosperous gentleman.

However, such consideration apart, the Cawdor 'Amorino' passed into Mr. Isaacs the dealer's hands last Friday, at the insignificant (we do not allege inadequate) price of 290 guineas. Canova was never a modern Phidias with us, but he would seem to have fallen a step or two from his once proud station even with the world that idolized him. Yet if ever he deserved a high place in the Pantheon of Sculpture it was—not for his Men statues, which always wanted genuine manliness, nor for his Women statues, which always wanted the pure and chaste spirit essential to elevated loveliness—it was for his *pretty Boys*. These were just on a level with his semi-virile genius, and Amorinos (the *Italian*, distinguished from *Greek* Cupids), the *ne plus ultra* attainable by his powers. He executed numerous such figures, the Cawdor one being meant as somewhat beyond a mere pretty boy, and idealized into a *Cupid* after Canova's notion. It is nevertheless nothing but at best a *very* pretty boy—it does not possess a single characteristic of the little Olympian god, except his bow and arrow. It has the Belvedere Apollo's chevelure, indeed, which may be called an anti-characteristic, because no more appropriate than St. Peter's grizzled locks to a St. John: each Heathen divinity, in Greek art, had his own distinct coiffure, harmonized so well with his peculiar function, that it would declare at once, even if seen by itself, his name—as the foot of a Hercules, or the claw of a lion, would the said demigod or animal. We mention this for the behoof of other sculptors who, when they steal from the antique, might wish, perhaps, to "steal wisely." Canova's soul was situated in his hand: the Amorino displays much elegant, though effeminate workmanship. 'A Sleeping Beauty,' by *Gott*, 125 guineas, very beautifully wrought, and well composed, the head without style even as good as Canova's. 'Bust of Nollekens,' by *Chantrey*, 81 guineas, and a bronze 'Bust of Horne Tooke,' by ditto, 30 guineas, both life-like and clever of course, but we thought neither fine.

The sale of pictures of the late bookseller Reimer, of Berlin, which we announced some time since, has taken place; and the German papers mention that Sir Robt. Peel, and several English noblemen and gentlemen, had agents present. Many of the paintings are said to have been very valuable. Several were found begrimed with dirt and dust in cellars and cupboards,

Digitized by Google

and were sold for a mere trifle; but, on being cleaned, have turned out to be by the best masters. Professor Krause, himself a known artist, bought one of them, which is thought to be a capital Murillo: a Correggio, too, was found in an old lumber room. All this the reader must take on report: we have no great faith in priceless treasures stowed away wholesale in cellars and lumber rooms.

The daily papers mention that a tablet has been erected on the walls of All-Hallows Church, in Watling Street, to the memory of Milton, with the following inscription,—

> "Three poets, in three distinct ages born,
> Greece, Italy, and England did adorn.
> The first in loftiness of thought surpassed,
> The next in majesty: in both the last:
> The force of nature could no further go,
> To make a third she joined the other two.

"John Milton was born in Bread Street, the 9th day of December, 1608, and was baptized in the parish church of All-Hallows, Bread Street, on Tuesday the 20th day of December, 1608."

We have to record the death of the Rev. Samuel Kidd, A.M., Professor of Oriental Literature in University College, London, whose 'Illustrations of the Symbols, &c. of China,' were noticed two years ago in this Journal (No. 726). Professor Kidd died suddenly, aged 42, in a fit of epilepsy.

Our autumnal musical festivals are this year to be held at Birmingham, Hereford, and Edinburgh. At the former meeting—contrary to all precedent—no great novelty, we believe, is to be introduced. On the other hand, the Sacred Harmonists move in a body from Exeter Hall to furnish the chorusses. We should prefer to see each of our provincial towns capable of providing for itself in this important requisite. Madame Cinti Damoreau is spoken of as the *star* singer engaged: on her way, we presume, to America.

We have received with great pleasure tidings from Manchester, of an immense musical celebration which took place there on Saturday last: this being a performance executed by sixteen hundred of the working class trained on the Wilhem method, and attended by upwards of six thousand persons. The music went excellently: and it was a pleasant evidence of the moral effect of these meetings, that at the close of the holiday, when a large portion of the singers had to be dispatched per railway to their respective homes in the neighbourhood, those detained at the station by the necessary confusion attending the transit of such a multitude, spent the time of waiting pleasantly, by singing part songs till their turns of departure came.

The Minister of Public Instruction has succeeded, after considerable opposition, on the ground of the expense, in obtaining from the Chamber of Deputies a vote for the removal of the *Bibliothèque de Sainte-Geneviève*, from the fine, but ruinous, gallery which it occupied over the Collège Henri IV., to a new building to be erected for its reception. The sum demanded was 1,820,000 francs.—A demand has been likewise made on the Chamber for a sum of 200,000 francs, for the purchase of the Hotel Cluny, and the collection of the late M. Dusommerard, by the State. Several circumstances combine to give weight to the application at the present moment. The street improvements in the neighbourhood are increasing the value of the locality; while the cession, by the city of Paris to the state, of the *Palais des Thermes*, in the Rue de la Harpe, communicating by the interior with the Hotel Cluny, affords the means of a junction of two collections, "presenting," says the Projet de loi, "a contrast which doubles the historic value of each." The Gallo-Roman fragments, collected by M. Alexandre Lenoir, will find an appropriate repository in the Roman palace of the Rue de la Harpe, while M. Dusommerard's museum of the Middle Age monuments will continue the series in the adjacent edifice of the Hotel Cluny.

Our readers will remember that we introduced to their notice, some time ago, a self-made naturalist, Gaston Sacaze, whose revelations had come to him in his humble and solitary occupation of a shepherd, in the valley of Ossau, amid the Pyrenees, and led him, without the aid of books or instruments, over a large portion of the naturalist's field of knowledge. Gaston Sacaze has been brought under the notice of the French Minister of Public Instruction; who, seeking to honour him without disturbing the current of his happy life, and to contribute to his studies by the act that rewards them, has presented him with a variety of instruments adapted to meteorologic observations, and of botanical works selected from the best authorities on that subject.

ROYAL ACADEMY OF ARTS, TRAFALGAR SQUARE.
The EXHIBITION of the ROYAL ACADEMY is NOW OPEN. Admission (from 8 o'Clock till 7), 1s. Catalogue, 1s.
HENRY HOWARD, R.A., Sec.

BRITISH INSTITUTION, PALL MALL.
The Gallery is OPEN DAILY, from Ten in the Morning until Six in the Evening, with one Room containing the Works of Sir Joshua Reynolds, the next those of Ancient Masters, and the third with those of Deceased British Artists.—Admission, 1s.; Catalogue, 1s.
WILLIAM BARNARD, Keeper.

The NEW SOCIETY of PAINTERS in WATER COLOURS.—The NINTH ANNUAL EXHIBITION of this Society is NOW OPEN, at their GALLERY, 53, PALL MALL, next the British Institution, from 9 till Dusk, daily. Admittance, 1s. Catalogue, 6d.
JAMES FAHEY, Secretary.

EXHIBITION.—Sir GEORGE HAYTER'S GREAT PICTURE of the HOUSE of COMMONS, painted on 170 square feet of canvas, and containing portraits of all the Members, a portrait of the Queen, and various other historical pictures, in which are more than 800 portraits of eminent men of the present day, is OPEN for EXHIBITION, from 10 o'clock till dusk, every day, at the Egyptian Hall, Piccadilly. Admission, 1s. each person.

DIORAMA, REGENT'S PARK.
JUST OPENED, with a NEW EXHIBITION, representing the CATHEDRAL of NOTRE DAME at Paris, with effects of Sunset and Moonlight, painted by M. REMOUX, and the BASILICA of ST. PAUL, near Rome, before and after its destruction by Fire, painted by M. BOUTON. Open from Ten till Five.

THE CHINESE COLLECTION, Hyde Park-corner.—This UNIQUE COLLECTION consists of objects *exclusively Chinese*, and surpasses in extent and grandeur any similar display in the known world. The SPACIOUS SALOON is 225 feet in length, and is crowded with rare and interesting specimens of virtù. The Collection embraces upwards of SIXTY FIGURES AS LARGE AS LIFE, portraits from nature, appropriately attired in their native costume, from the MANDARIN of the highest rank to the wandering Mendicant; also MANY THOUSAND SPECIMENS in Natural History and Miscellaneous Curiosities, the whole illustrating the appearance, manners, customs, and social life of more than THREE HUNDRED MILLION CHINESE.—Open from 10 till 10.—Admittance 2s. 6d. Children under 12 years, 1s.

AERIAL NAVIGATION.—ROYAL POLYTECHNIC INSTITUTION.—A LECTURE on this subject, illustrated by MODELS of several kinds, which elevate themselves by MECHANICAL FORCE alone, is delivered at Two o'Clock daily, and on Monday, Wednesday, and Friday Evenings, at Eight o'Clock. The Exhibition of the COLOSSAL ELECTRICAL MACHINE, the DIVER, DIVING BELL, NEW DISSOLVING VIEWS, and the other varied and instructive Objects of the Institution, continue as usual. The original CRAYON DRAWINGS, from the CARTOONS at HAMPTON COURT, by the late Mr. Holloway, with numerous other WORKS of ART, have recently been placed in the Gallery.—Admission, One Shilling. Schools, Half-price. Open Mornings and Evenings, except Saturday Evening.

SCIENTIFIC AND LITERARY

GEOLOGICAL SOCIETY.—*May* 24.—The President, Mr. Warburton, in the chair.

The following communications were read:—

1. 'On the Geology of some Points on the West Coast of Africa and of the Banks of the River Niger,' by Dr. Stanger.—The localities noticed were: 1. Sierra Leone, where ferruginous sandstone and hypersthene rock were found; 2. Liberia, greenstone and ferruginous sandstone; 3. River Sinoo, gneiss and greenstone; 4. Cape Coast Castle, which stands on a mass of granite, containing imbedded masses of hornblende slate; 5. Accra, built on sandstone; 6. Grand Sesters, where the rocks are gneiss cut through by granite; and, 7. The banks of the Niger. No rocks appear on the Niger until we reach Iddah, 100 miles above its Delta, which is a flat, swampy tract—and 220 from the sea. At Iddah, cliffs of sandstone, 185 feet high, appear. This sandstone composes a great part of the country, as far as was explored. It is almost horizontal, and only one obscure fossil was detected in it. At Ikosi mica slate appears, resting on the granite composing Mount Soracte and the neighbouring hills, which do not attain a greater height than 1,200 feet. The granite extends to Adda Kudda, where it is mixed up and complicated with gneiss, which dips 60° south. The granite appears to be the central axis, mica slate and gneiss occurring on both sides, and dipping at great angles. The granite forms the line of the so-called Kong Mountains, which in no case were observed higher than 1,200 feet.

2. 'On the Classification of Granitic Rocks,' by Mr. R. Wallace.—The author divides the granitic rocks into two classes, the first of which contains granites, in the composition of which the alkaline earths form no essential part; whilst in the members of his second class, they are essential ingredients. His first class is divided into two orders: the first, called by Mr. Wallace *perfect granite*, is a ternary compound of quartz, felspar, and di-axial mica, universally diffused, and generally coarse-grained when found in mass; the second order he calls *imperfect granite*, including the compounds of felspar and mica without quartz, and of quartz and felspar without mica. He believes there is no binary granitic compound of quartz and mica, as such would be incapable of assuming the granitic structure. In his second class he includes three divisions:—1st. *Hornblendic granite*; 2nd. *Talcose granite*, or protogine; and 3rd. *Schorly granite*. Each of these orders includes several varieties. Of these various granites the author regards the ternary, composed of quartz, felspar, and binaxial mica, as the lowest accessible rock of the earth's original crust, uplifted and protruded through sedimentary strata at different periods, from the earliest to the latest age of igneous disturbance. The fine-grained varieties of ternary granite, which are often found in veins, have probably been fused a second time. The seat of the binary granites was probably below that of the ternary rock, but higher than that of the granites which contain alkaline earthy substances. In general, the conclusion of the author is, that the absence of mica or the presence of minerals abounding in magnesia or lime, or that of metallic oxides, or a transition into syenite, porphyry, basalt, or volcanic rocks, are indications of an origin of later date than that of ancient granite.

3. Mr. Austen read a note, explanatory of some points in his paper, 'On the various Subdivisions of the Cretaceous Series.'

4. 'Observations on Part of the Section of the Lower Greensand at Atherfield, in the Isle of Wight,' by Dr. Felton.—The object of this paper was to show that the beds referred by Mr. Austen to the Neocomien, are the lowest beds of the lower greensand, and that their equivalent exists at Atherfield, in the Isle of Wight, where the junction of the greensand and Wealden had formerly been concealed when Dr. Felton published his account of the sub-cretaceous formations, but was now exposed, showing the unexamined space to be under three feet,—much less than was supposed; and that the stratum occupying that space is of the same geological character, and contains many of the same marine fossils as the stone immediately above it. The beds exposed by the Atherfield section are, in ascending order:—1st. Weald clay, towards the junction containing oysters and spiral univalves, mingled with fresh-water shells. 2nd. An alternation of sand with portions of clay, separated by lighter coloured greenish matter for six or eight inches, forming the junction. 3rd. Sandy greenish clay, of a muddy aspect, forming a bed generally about 2½ feet thick, containing fossils, some of which, including *Perna Mulleti*, are species lately described as Neocomien by M. Leymerie, and others, such as *Pecten 5-costatus*, range through the lowest portions of the greensand up to the highest sub-cretaceous strata. 4th. Sub-ferruginous rock, which, in 1826, was the lowest visible member of the greensand. It contains numerous fossils, including some of those new to Britain, lately detected in Surrey by Mr. Austen, accompanied by others having a considerable upward range. 5. Fuller's earth, not less than thirty feet thick, and containing fossils. The author then describes certain fossilliferous ranges, principally of concretions, containing more or less calcareous matter, found throughout the space between Atherfield and Black Gang Chine, and notices the correspondence of the association of species in these with that observable at Hythe, near the top of the middle division of the lower greensand; on the shore east of Shanklin Chine, in the Isle of Wight, and at Parham Park, in Surrey. He also remarks the correspondence of the Atherfield section with others near Redhill, near the South-eastern Railroad, in Surrey, at Pulborough, in Western Sussex, at Hythe, and at Sandown Bay in the Isle of Wight. Dr. Felton concludes, by observing, that since he has shown that the stratum which contains the fossils enumerated by Mr. Austen belongs to the lower part of the greensand, it is obvious that if these fossils are characteristic of the *Terrain Neocomien*, the deposit itself, which has received that name, as well as its various equivalents upon the Continent, must be geologically the same; and that the hypothesis, which supposes the Neocomien contemporary with the Wealden, can no longer be sustained. At the same time, he does not deny the probability of the existence of a marine equivalent of the Wealden.

GEOGRAPHICAL SOCIETY.—*June* 12.—G. B. Greenough, Esq., V.P., in the chair.—A donation of *50l.*,

MUSIC AND THE DRAMA

CONCERTS OF ENGLISH MUSICIANS.—*Mr. Mudie, Miss Binckes, Mr. Holmes, Mr. Cipriani Potter*, and *Mr. Willy*, have taken advantage of the week between Epsom and Ascot to hold their entertainments; the two last, to their honour, with the attraction of a full orchestra. These five concerts very fairly represent English talent in composition and in performance, and not discreditably. Orchestral works—chamber music, both vocal and instrumental, were not wanting, on the strength of which we might boldly challenge our friends the French (the domain of operatic music reserved), though we do not yet equal our cousins the Germans. The average of executive is below that of inventive merit. But the great want is judgment: not a *programme* among the five but displayed some flagrant instance of power, the true direction of which was mistaken, or of self overrated! At Mr. Mudie's third meeting, his graceful setting of Beattie's canzonet to 'Rosalind' deserves mention; as does also Mr. E. Loder's version of 'The Wandering Wind,' by Mrs. Hemans; a chamber duet, to be inquired for by all who fancy that no two-part trifles exist worth singing; save the *duetti di camera* of Blangini, Gabussi, &c.—In the *programme* of Miss Binckes's concert, we were startled by a somewhat audacious piece of piracy; a song, the words of which, set by Mr. Aspull, are claimed by a Mr. S. Mullen; whereas, they are Lady Blessington's 'Letrilla,' long since quoted in this very journal (No. 579), with a word or two stuck into the lines, to make them *un*musical.—The concert of Mr. Holmes gives us an opportunity of offering a tribute of respect to his intentions as a composer. A MS. quartett contained a very creditable first movement; in which, though the instruments *concertanti* with the piano-forte were too timidly treated, the construction was symmetrical, and the melody of good quality. But the performance of the overture to 'Semiramide,' by sixteen pupils on eight piano-fortes, was one of the blunders, which, for principle's sake, must be denounced. That Mr. Holmes knows better, he gave proof at Mr. Willy's concert, on Monday evening, when he joined the *beneficiaire* in Beethoven's Kreutzer sonata, and though often unfinished, was always sensible.—We have always thought highly of Mr. Willy's violin-playing, for the feeling he displays in it. Few of our young men *read* the music of classical writers so well; and he is therefore one of our best *violini primi* for quartett, or other concerted piece. For *solo* performance, the accomplishments demanded by the present advanced state of musical execution are wanting. We should not finish soon, were we to record all the speculations upon the state of English vocalism to which these concerts gave rise. One thing, however, must be reiterated; we have never before been at once so poor in English male singers, nor so sensible of our poverty.

M. BENEDICT'S CONCERT.—The *programme* of this entertainment exceeded all former exceedings, both as to extent and novelty, in the music selected, and multitude of executants. We, however, can only dwell on a point here and there; beginning with the excellent singing of Mdlle. Nissen, one of the most accomplished artists, who has recently appeared in a concert room; as much at home in Handel's tranquil 'Lascia ch'io piango,' as in the coquettish duet from Mr. Balfe's new French opera, where she took the part destined for Madame Persiani. The music, by the way, of this composition is fresh and piquant—the very thing for the Boulevards. The next step to pause at, is the serenade from Donnizetti's 'Don Pasquale,' sung by Signor Mario, with chorus, and *encored*. This surpasses in elegance (if that can be) the *barcarole* in 'Marino Faliero,' and is one of the most fascinating of those modern tunes, which, having "crept into the ear," are not to be dislodged thence. There is nothing half so natural in the 'Linda.' A much-talked-of quartett, from 'Don Pasquale,' was more common-place; but the *buffo* duet, between Lablache and Grisi, had a lively success. All who desire to hear the lady in perfection, should take an opportunity of listening when she sings the 'Inflammatus,' from Rossini's 'Stabat.' In this, her splendid voice, and the energy of her style (more theatrical, however, than devotional), are exhibited to great advantage. One interesting portion of M. Benedict's concert—and the last we can here mention—was devoted to selections from his own MS. opera. A grand *aria* with *corno obligato*, and a *cabaletta* of rich sweetness, was sung by Mrs. Shaw—a ballad for *basso* by Herr Staudigl—a very charming romance by Miss Clara Novello—and a *villanella* (or chorus in the old style) by all the singers, with an arranged accompaniment for the principal instrumentalists, which wanted the stage, and a trifle more certainty in performance. But of all this music we hope to have a legitimate opportunity of speaking some future day.

DRURY LANE.—The closing of this theatre was postponed until Wednesday, in consequence of the Queen having commanded the performances on Monday. This was the first time that Her Majesty has gone in state to Drury Lane since Mr. Macready has had the management. The royal visit drew an immense audience to the theatre. The play was 'As You Like It,' with the farce of the 'Thumping Legacy,' Keeley's drollery in which the Queen enjoyed as much as her grandfather used to do Grimaldi's fun in the pantomime. An audience, scarcely less numerous and enthusiastic, assembled on Wednesday to greet Mr. Macready on the termination of his managerial career, anxious to hear from his own mouth an explanation of the cause of his retirement. Some time necessarily elapsed after the conclusion of 'Macbeth,' before Mr. Macready could appear, having to change his dress, and the burst of enthusiasm with which he was then received, defies description. We shall give the more important passages of the address, which he delivered with constrained calmness, being evidently affected. This statement was responded to by the audience, who listened with eager attention; and at the close he retired amid renewed manifestations of sympathy and applause. "It has been currently reported (says Mr. Macready), and generally believed, that the want of encouragement from the public, and the consequently low nightly receipts, are the causes of my resignation. I beg to contradict the assertion. By a reference to my accounts of Covent-garden and Drury-lane Theatres, I find that, even in this year of unprecedented depression and increased taxation, the average of our nightly receipts is only a trifle below that of my last Covent-garden season, which, with profit to the management, paid 7,000*l.* rent to the proprietors; and that it exceeds the average of my first Covent-garden season, which paid a rent of more than 5,500*l.* If not at present amounting to a remunerating return, such a result at such a time may, in my opinion, be confidently taken as an earnest of future and permanent success. It certainly has not discouraged me. The question that obviously arises as to the application of such receipts is answered, I think, by the property itself. Upon taking possession I found it—I may without exaggeration say—a poor and scanty collection of lumber. The entire female wardrobe would have been dearly valued at 40*l.* Not one scene fit to be placed on the stage, not even a rope in the whole building to work a scene! The condition of my occupancy, that the theatre should be put into a tenantable state, could not be fulfilled. A very inadequate sum in annual deduction from rent was allowed towards its fulfilment, and thus the burden of restoring the various departments of this large establishment from decay and ruin to their present state has really fallen upon myself. I do not urge these facts in accusation of individuals; but against the law, which gives to persons utterly unacquainted with the drama, and with all appertaining to the dramatic art, an irresponsible power over it, every impartial voice should be lifted up. * * At Drury-lane Theatre my exertions and my sacrifices have been much greater, and proportionately larger results have been obtained, inasmuch as the drama has been re-established in this patent theatre, from which the patent-holders themselves had suffered it to be excluded. The principal performers, ladies and gentlemen, have testified *their* confidence in my system by consenting to hazard one-third of their incomes for its support, and I have volunteered still further sacrifices myself towards perfecting what is so far advanced; but as I cannot subject myself to the liabilities required of me, I have reluctantly and with deep regret resigned my charge. The consequence is, both these large theatres are now untenanted. The holders of their patents are themselves unable to present the glorious works of Shakspeare to an English audience, and yet are armed by the law with power to forbid their representation elsewhere."

That such a manager as Mr. Macready should be compelled to retire by the treatment of the proprietors, whose property and patent rights he has done his utmost to uphold, cannot but excite surprise and regret, if not indignation. The case against the "patent" monopoly of the two great houses has never been so strongly urged before; and Mr. Macready has given it "a heavy blow and great discouragement"—let us hope it will be fatal.

Yet, without disputing the general correctness of Mr. Macready's statement, we may be allowed to question the grounds of his hopefulness as to the future prosperity of the drama under such circumstances as the present. Mr. Macready may not feel personally discouraged, and may look upon the public support of his management as an earnest of success; but why is he forced to resign his office a considerable loser? and why did the performers "consent to hazard one-third of their incomes" in order to "support his system"? These questions will naturally arise in the minds of the most careless observer; and there is but one answer to them: to use Mr. Macready's own words, the return is not a remunerating one. The necessary expense of maintaining these immense theatres in the state of splendour and completeness, both of decorations, stage appointments, and representations, is so great, that nothing short of an amount of popular encouragement greater than can now be calculated on, will insure the manager from loss, and the proprietors a fair interest for their capital. All parties have made sacrifices to keep open the theatre, though they cannot agree as to the share of loss each ought to bear, and the public has not been slack in attendance; yet the result is unprosperous. This is not the fault of any one man, or set of men, but of the system. Enormous theatres will not pay; they never have paid; and it is hopeless to expect they ever can pay. If some astonishing genius should arise, to draw all the town to the theatre, the concern might flourish for a time; but even then, as was the case with Miss Kemble, the loss on the "off nights" would be proportionate to the gain. Managers and proprietors have made the mistake of supposing that large and magnificent theatres add to the dignity and importance of the drama; and that, because five hundred pounds have been taken at the doors on nights of extraordinary attraction, it might always be the case. If they have not found out their error by this time, nothing will convince them of it. As for the drama, that has been destroyed by the operations of the patent monopoly, which has diverted dramatic genius into other more open, more honourable, and less perilous channels. Strike off its fetters, give it free scope, and there must be life enough left in it to attain vigour and character; though not, perhaps, of the same kind, or in the same forms, as of yore. Manners and habits change; yet it is attempted to preserve the drama, whose office it is "to catch the manners living as they rise," in a certain fixed shape! The result is, feeble and constrained efforts to imitate what is inimitable; copying the forms of old times only to cramp and stifle the spirit of the present day. Why, if Shakspeare himself were living now, he would not construct his plays on the old model; he would not imitate either Massinger and Ben Jonson, or Congreve and Wycherly: for what we know, he might have written immortal libretti for operas, or

Digitized by Google

pathetic melo-dramas, or farces to convulse the town with laughter.

HAYMARKET.—Mr. C. Kean commenced an engagement of twelve nights, on Monday, during which he is to repeat the "round of his characters," as it is called; meaning some six or seven: but if they numbered twenty, instead, the absurdity of nightly engagements for an actor of moderate pretensions would be no less. It is a stale device to give the semblance of undue importance to an individual performer; and the sooner Mr. C. Kean abandons the attempt to keep up a factitious celebrity the better: it only injures his reputation.

ST. JAMES'S THEATRE.—*French Plays.*—That Déjazet should be deified, while Bouffé is calmly received, is an anomaly difficult to understand, and calculated to discourage the now all but desperate hopes in a future for the English drama. It might have been augured, from our present preference for what is literal and familiar in art and letters, that the startling truth and simplicity—the homely but never sickly pathos—the exquisite finish of Bouffé's personifications, would have furnished to the appetite of our public that aliment which, beyond all others, it loveth. But more curious still is the lukewarmness of our playgoers, when it is recollected that, whereas Déjazet was always Parisian—belonging to the Courtille and the Palais Royal, or, at furthest, the Pays Latin, and therefore often (happily) unintelligible to our delicate ladies—Bouffé, as often, appeals to those feelings which are universal—belonging no more to the Strand than to the Corso, the Alameda, Lustgarten, or Boulevard. To take his *Père Grandet*, for instance—who ever thinks of the miser's country while witnessing that wondrous picture of avarice? Bouffé shows us the tragedy of the passion. The intensity of his agony, when he finds his chest rifled, is sublime. The voice is hoarse and broken: the hale man, by one stroke, has been rendered decrepit and hopeless. His angel has left him. Thus, again, while costume and *making-up* mark the country in 'Le Père Turlututu,' what a picture is it of universal senility, with its suspicion and its irritability:—a *second* childhood indeed! To go further, for those who restrict themselves to what is merely local and characteristic, there is no contemporary personation equal to 'Le Gamin.' Levassor is witty, Vernet is capital, Achard is droll, Ravel quaint, Odry coarsely whimaical, in their several assumptions of Parisian humour; but these are all mere *farceurs* when measured against Bouffé. What are their tricks, their litheness of limb, their most metallic sauciness of tongue, to his? Which of them could, like him, so humanize and harmonize the gifts and graces of the *quai* and the blind alley, by showing the devoted courage and the wholesome affection which good angels allow to grow even in the strangest companionship, that the spectators' laughter becomes a genial flow of sympathy towards a noble spirit moulded in grotesque forms, unconsciously revealing its divine nature through rags and tatters? If we have the shadowing forth of modern French cynicism in *Robert Macaire*, we have in *Joseph* the antidote to the poison. We know well, that there is no *dragooning* public taste, which will ever and anon desert even Shakspeare's self for "the musical glasses;" but we should be glad if our few words, penned earnestly, did something towards warming up the people of England to the most remarkable actor on the stage.—On Wednesday evening, M. Filtsch made his first public appearance here as a pianist—in a *fantasia* by Liszt, some *notturni*, and a waltz by Chopin,—with the success which might have been augured from such matured attainments in one so young.

MISCELLANEA

Colchester Town Hall.—I beg to correct an error which appeared in your journal of last week, naturally arising from a mistake in the catalogue of the Royal Academy, which is now set right, with reference to the design for the Colchester Town Hall. No. 1241 should have been described as follows, 'Premium Design for the New Town Hall, Colchester,' being one of the three selected by the Committee, from 73 designs in the first competition in 1842. No. 1249 should have been described as the 'Design for the Town Hall, Colchester,' about to be erected. I am associated in each of these designs with Mr. J. Blore.—I am, &c. RAPHAEL BRANDON.

Brompton Crescent, June 13.

Statistics of Pauperism.—The Ninth Annual Report of the Poor Law Commissioners, recently presented to Parliament, contains some interesting information relative to the statistics of pauperism. The following table exhibits the number of paupers relieved in England and Wales during the quarters ending at Lady-Day 1840-1-2, and the amount of money expended for their relief:—

Quarters ended.	Number of Paupers relieved.	Proportion per cent. on Population in 1841.*	Years ended Lady-Day.	Expenditure for Maintenance.	Rate per head of Expenditure on pop. in 1841.	Average price of Wheat in the year.
				£.	s. d.	s. d.
1840	1,199,529	8	1840	3,739,414	4 8	68 6
1841	1,299,048	8	1841	3,886,213	4 11	65 3
1842	1,429,356	9	1842	4,036,453	5 1	64 0
Average	1,309,311	8 3/100		3,887,360	4 11	65 11

* Population in 1841....15,906,829.

The increase in the expenditure for the relief of the poor has, with the exception of the county of Westmoreland, been confined to the manufacturing and mining counties. Although the poor law expenditure for the parochial year 1842 exceeds that for the parochial years 1836 to 1841 inclusive, yet that it falls short of that for 1834, the year immediately preceding the passing of the Poor Law Amendment Bill, by 1,405,757*l.*

Gaulish Antiquities.—There has just been discovered in the ground excavated for the Railroad, between St. Leu d'Essevens and Montalnir, a girdle of solid gold, wrought to imitate a cord, having a hook at each end. The weight is 342 grammes, and the gold is valued at 880fr. It was found within 2½ feet of the surface, and no other article was discovered near it. It is supposed to belong to the Gaulish period, about Julius Cæsar's time.

Progress of Lotteries.—"Art-Unions and Literary Lotteries.—Among the various schemes with which London has teemed, in the laudable endeavour to refine the taste and improve the intellect of the higher grades of society, the middling and industrious classes have been almost wholly overlooked. To remedy this evil Messrs. ——, Booksellers and Publishers, —, Strand, have determined upon a Distribution of Popular Works upon a scale that will meet the circumstances of the Millions. Shares to consist of 1,000!! Prizes 1,000!!! And no Blanks!!! So that every one who becomes a Subscriber will be certain to have a Complete Work for his Subscription, with a chance of obtaining a 10*l.* or a 5*l.* Prize of the most popular and standard novels and romances! List of Prizes:—1 prize at 10*l.*, 2 at 5*l.*, 4 at 3*l.*, 6 at 2*l.*, 10 at 1*l.*, 25 at 10*s.*, 30 at 5*s.*, 60 at 2*s.* 6*d.*, 800 at 1*s.* Price of Subscription only 2*s.* 6*d.* The Drawing to take place on the 31st of August."

Roman Antiquities.—In September, 1838, a valuable piece of mosaic, representing Orpheus and Ceres, with her attributes, was discovered in the forest of Brothonne, in Normandy. Since then the Archæological Society of Caen have extended the researches, and found a long suite of Roman apartments, and several baths. One of the rooms is splendidly decorated, and on the walls are the finest specimens of mosaic work, representing various aquatic birds. On one side is a large stove, with flues to convey the heat, and on the hearth were charcoal and ashes, as fresh as if newly brought there. Another room was entirely paved with mosaic, but unfortunately only a few fragments remain entire, the rest having been crushed by the falling in of a wall. There were also found coins, with the profiles of Nero, Antoninus, Gallienus, Claudius, and other Roman Emperors, with bricks, tiles, double-headed nails, vases of terra cotta of different colours, pieces of stone, marble, and glass, and several articles in iron, bronze, and ivory. There were also numerous stags' horns, boars' tusks, and bones of animals.

Earthquakes.—A communication has been made by the French Minister of War to the Academy, being the letter of an inhabitant of Guadaloupe, dated March 7, which gives an account of a phenomenon apparently connected with the catastrophe of February 8. The gentleman relates, that between the eastern point of Mariegalante and Guadaloupe, and in mid-channel, a column of water, black in colour, and of large diameter, arose from the sea with great force. All around it, to a considerable distance, a quantity of vapour covered the sea. This appearance lasted about half an hour. No doubt was entertained by him of its being the effect of a submarine volcano.

TO CORRESPONDENTS.—S. T.—S. Z.—Stz.—Philo-Byron—received.

We have considered the subject referred to by Y. H., and fear we should do harm, rather than good, by adverting to it.—Mr. Venedey's letter having already appeared in the *Morning Chronicle*, we do not feel bound either to republish it or to advert to the subject.

NEW EDITION OF TENNYSON'S POEMS.

In 2 volumes, price 12*s.* boards,

TENNYSON'S POEMS. Second Edition.

In a few days, in 1 volume,

Chaucer's Poetical Works. With an Introduction and Notes. By Thomas Tyrwhitt.

Edward Moxon, 44, Dover-street.

Now ready, 8vo. 8*s.*

SELECTIONS from the DRAMAS of GOETHE and SCHILLER. Translated, with Introductory Remarks, by ANNA SWANWICK.

"In our judgment she has done full justice to the great artists whose works she has now placed within the reach of every English reader."—*Inquirer.*

Sold by John Murray, Albemarle-street.

University Press, Oxford.

Four Vols. Octavo. Price 2*l.* 8*s.* in Sheets.

EUSEBII PAMPHILI EVANGELICÆ PRÆPARATIONIS LIBRI XV. Ad Codices Manuscriptos recensuit

THOMAS GAISFORD, S.T.P.

Ædis Christi Decanus necnon Linguæ Græcæ Prof. Reg.

Accedunt FRANC. VIGERI Versio Latina et Notæ, et L. C. VALCKENÆRII Diatribe de Aristobulo.

Parker, Oxford: Payne & Foss; and Gardner, London.

Published this day, No. 1, price 2*d.*

HORSE-SHOE NAILS; or, NEW IDEAS on OLD SUBJECTS.

By MINOR HUGO.

"For want of a nail the shoe was lost,
For want of a shoe the horse was lost,
For want of a horse the rider was lost,
Being overtaken and slain by the enemy,
And all for want of care
About a horse-shoe nail."—*Poor Richard.*

London: G. Earle, 67, Castle-street, Berners-street, Oxford-street.

BISHOP MARSH'S THEOLOGICAL LECTURES.

SECOND SERIES.

Just published, in 8vo. price 8*s.* in boards, a new edition of

LECTURES on the AUTHENTICITY and CREDIBILITY of the NEW TESTAMENT; and on the AUTHORITY of the OLD TESTAMENT: with an Appendix, containing, 1. A summary Statement of the principal Evidences for the Divine Origin of Christianity; 2. An Essay on the Usefulness and Necessity of Theological Learning to those who are designed for Holy Orders; 3. The Authenticity of the Five Books of Moses vindicated.

By HERBERT MARSH, D.D.

Late Lord Bishop of Peterborough.

Rivingtons, St. Paul's Churchyard, and Waterloo-place.

Of whom may be had,

The First Series, On the Criticism and Interpretation of the Bible. New edition. 8vo. 12*s.*

Royal 8vo. cloth lettered, 7*s.* 6*d.*

PARERGA: Poems by E. S. CREASY, M.A., Fellow of King's College, Cambridge, Professor of History at University College, London, Barrister-at-Law.

HENRY COLBURN, Publisher, 13, Great Marlborough-street.

PELICAN LIFE ASSURANCE OFFICES, 70, Lombard-street, and 57, Charing-cross.—Established 1797.

Directors.

Matthias Attwood, Esq. M.P.	Sir W. Heygate, Bart.
W. Stanley Clarke, Esq. F.R.S.	Kirkman D. Hodgson, Esq.
John Coope, Esq.	R. Henshaw Lawrence, Esq.
William Cotton, Esq. F.R.S.	J. Petty Muspratt, Esq.
Sir William Curtis, Bart.	George Shum Storey, Esq.
William Davis, Esq.	C. Hampden Turner, Esq.
J. A. Gordon, Esq. M.D. F.R.S.	Matthew Whiting, Esq.

The Plan of this Office will be found to comprise all the Solid Advantages of Life Assurance.

Persons have the option of insuring upon the Return or Non-Return Systems; and the Tables, which include Ascending and Descending Scales of Premium, have been framed to suit the convenience of all parties.

The Rates have recently been reduced agreeably to the most approved calculations; they are also verified by the experience of the Office during Forty Years, and are as low as consistent with safety; those adapted to the RETURN SYSTEM entitle its assured to an equitable participation in the surplus premium, according to the plan detailed in the Company's prospectus.

The Assured under both Systems will possess the guarantee of a large PAID-UP Capital, and the further security of a responsible body of Proprietors, without being exposed to the liabilities of partnership.

Policies are purchased on liberal terms when the object of an assurance is effected;—or, loans will be granted thereon to the extent of five-sixths of such purchase-money.

Prospectuses and every information obtained on application at the Offices as above, or to the Agents of the Company appointed in every City and principal Town in the Kingdom.

R. TUCKER, Secretary.

BRITANNIA LIFE ASSURANCE COMPANY, 1, Princes-street, Bank, London.

This Institution is empowered by *Special Act of Parliament*, (4 Vict. cap. 9), and is so constituted as to afford the benefits of Life Assurance in their fullest extent to Policy-Holders, and to present greater facilities and accommodation than are usually offered by other Companies. The decided superiority of its plan, and its claim to public preference and support, have been proved incontestibly, by its extraordinary and unprecedented success.

Assurances may either be effected by Parties on their own Lives, or by Parties interested therein on the Lives of others.

The effect of an Assurance on a person's own life is to create at once a property in reversion, which can by no other means be realized. Take, for instance, the case of a person at the age of thirty, who by the payment of 5*l.* 2*s.* 4*d.* to the Britannia Life Assurance Company, can become at once possessed of a bequeathable property, amounting to 1000*l.*, subject only to the condition of his continuing the same payment quarterly during the remainder of his life,—a condition which may be fulfilled by the mere saving of EIGHT SHILLINGS weekly in his expenditure. Thus, by the exertion of a very slight degree of economy —such, indeed, as can scarcely be felt as an inconvenience, he may at once realize a capital of 1000*l.*, which he can bequeath or dispose of in any way he may think proper.

Detailed Prospectuses, and every requisite information as to the mode of effecting Assurances, may be obtained at the Office.

PETER MORRISON, Resident Director.

A Board of Directors attend daily at 2 o'clock, for the dispatch of business.

CORPORATION of the LONDON ASSURANCE. Established by Royal Charter, A.D. 1720, FOR FIRE, LIFE, AND MARINE ASSURANCES.

Offices, 19, Birchin-lane, Cornhill, and 10, Regent-street.

John Clark Powell, Esq., *Governor.*
Abel Chapman, Esq., *Sub-Governor.*
Lestock Peach Wilson, Esq., *Deputy Governor.*

Directors.

Robert Allen, Esq.	Richard Drew, Esq.
John A. Arbuthnot, Esq.	John Furse, Esq.
George Barnes, Esq.	Edwin Gower, Esq.
Henry Blanshard, Esq.	Samuel Gregson, Esq.
John Watson Borradaile, Esq.	Edward Harnage, Esq.
Edward Burmester, Esq.	Robert King, Esq.
Henry Cayley, Esq.	William King, Esq.
Aaron Chapman, Esq. M.P.	John Ord, Esq.
Robert Cotesworth, Esq.	George Probyn, Esq.
Charles Crawley, Esq.	John Rees, Esq.
John Deffell, Esq.	Daniel Stephenson, Esq.
James Dowie, Esq.	Thomas Weeding, Esq.

Persons effecting Life Assurances with this Corporation have the choice of two plans:

The one entitling them to an annual abatement of premium after five years' payment;

The other at a lower fixed rate without abatement.

The leading features which distinguish the first of these plans from those of other Life Assurance offices are—

The guarantee of the Corporation for the full payment of the sums assured:

Annual abatements of premium, commencing after five full years' payments:

Total absence of partnership of any kind whatever:

Absolute exemption from the possibility of being called upon to contribute towards making good any losses:

And freedom from all charges of management.

The abatement of premium for the year 1843 on policies of five years' standing, under the first of the above plans, was 31*l.* 10*s.* 3*d.* per cent.

It may be here sufficient to state, as an example, that under the above system a person having effected a policy on or before the 1st of January, 1838, at an annual premium of 100*l.*, had, on the 1st of January, 1843, only the sum of 63*l.* 9*s.* 10*d.* to pay as that year's premium.

The future annual abatement must vary according to the success of this branch of the Corporation's business.

In the Fire Department assurances are effected at the lowest rates.

Attendance daily, from Ten till Four, at both Offices, where prospectuses and every information may be obtained.

ABEL PEYTON PHELPS, Esq.,
Superintendent of the Office in Regent-street.
JOHN LAURENCE, Secretary.

The Corporation having determined to increase the number of their agents, are desirous of receiving applications for appointments from parties of respectability and influence residing in the several towns and districts of England and Wales.

ECONOMIC LIFE ASSURANCE SOCIETY, No. 24, Bridge-street, Blackfriars, London: established 1823. Empowered by Act of Parliament, 3 William IV.

Lower Rates of Premium than those of any other office that entitle the assured to participate in the profits.

The bonus declared in 1834 amounted upon an average to 16*l.* per cent. on the premiums then paid; and in 1839 a second bonus was awarded, amounting on the average to 31*l.* per cent. on the premiums paid during the preceding five years.

Prospectuses and other particulars may be obtained at the Office, between the hours of ten and four, or will be forwarded to persons resident in the country, on application.

CAMPBELL JAMES DOWNER, Sec.

BRITISH EMPIRE LIFE ASSURANCE, ANNUITY, and ENDOWMENT COMPANY, 5, Whitehall, and 26, Old Jewry, London.

Directors—Sir George Staunton, Bart. M.P. *President.*
Sir Herbert Compton, *Vice-President.*

Charles Forbes, Esq.	Arthur Helps, Esq.
James Mackillop, Esq.	Thomas E. Headlam, Esq.
J. Phillimore, Esq. D.C.L.	Robert J. Grigg, Esq.
W. Wilkinson, Esq.	G. Bicknell, Esq. (Resident).

Bankers—Messrs. Coutts & Co.

Solicitors—Messrs. Ogle & Younghusband.

The peculiar advantages offered by this Company are:—

1st. That where the assurance is for life, one-half of the premiums may remain unpaid for seven years.

2nd. A Table peculiarly fitted for policies for loans, the premiums commencing very low, and varying every three years.

Age.	1st period of 3 years.	2d period of 3 years.	3d period of 3 years.	4th period of 3 years.	Remainder of Life.
27	1 3 7	1 8 7	1 15 9	2 4 6	2 14 10

3rd. For Survivorship Annuities, on a principle peculiar to this Office, avoiding the loss of the premium paid, if the party does not survive to take the annuity.

Every information may be obtained at the Offices, at Whitehall, and 26, Old Jewry.

The usual Commission to Solicitors and Agents.

GEO. BICKNELL, Resident Director.

UNITED KINGDOM LIFE ASSURANCE COMPANY, 8, Waterloo-place, Pall Mall, London.

Division of Profits among the Assured.

Earl of Stair	

Directors—Jas. Stuart, Esq. *Chairman.*
Hananel De Castro, Esq. *Deputy Chairman.*

Samuel Anderson, Esq.	Charles Graham, Esq.
Hamilton Blair Avarne, Esq.	F. Charles Maitland, Esq.
Edw. Boyd, Esq. *Resident*	William Railton, Esq.
E. Lennox Boyd, Esq. *Assist. Resident*	John Ritchie, Esq.
Charles Downes, Esq.	F. H. Thomson, Esq.

Secretary—Patrick Macintyre, Esq.

This Company, established by Act of Parliament, affords the most perfect security in an ample paid-up Capital, and in the great success which has attended it since its commencement in 1834. In 1841, the Company declared an addition to the Shareholders of one-half of their Stock, and also added 2*l.* per cent. per annum, from the date of the policies to those parties who had insured with profits. The premiums, nevertheless, are on the most moderate scale, and only a moiety need be paid for the first five years, where the Insurance is for life.

The amount of bonus added to policies since the commencement of the Company in March, 1834, to the 31st Dec. 1840, is as follows:

Sum Assured.	Time Assured.	Sum added to Policy.
£1000	6 Years 10 Months	£136 13 4
1000	4 Years	80 0 0
1000	3 Years	60 0 0
1000	1 Year	20 0 0

Every information will be afforded on application to the Resident Directors, Edward Boyd, Esq. and E. Lennox Boyd, Esq., of No. 8, Waterloo-place, Pall Mall, London.

Frederick Hale Thomson, Esq. *Surgeon*, 48, Berners-street, attends at the Office daily, about half-past Two o'clock.

ROYAL BANK of AUSTRALIA, 2, Moorgate-street, London.

Directors.

B. Boyd, Esq., *Chairman.*
J. W. Sutherland, Esq., *Vice-Chairman.*

W. P. Craufurd, Esq.	John Mitchell, Esq.
George Webster, Esq.	J. P. Robinson, Esq.
Mark Boyd, Esq.	Adam Duff, Esq.
John Connell, Esq.	

Bankers—Union Bank of London, 8, Moorgate-street, Argyle-place, Regent-street, and Pall Mall East.

Standing Counsel—P. Laurie, Esq.

Solicitors—Messrs. Parken and Webster, and Messrs. Johnstone and Farquhar.

The Directors grant Letters of Credit and Bills at 30 days' sight, on Sydney, Port Phillip, Hobart Town, and Launceston, free of charge. Bills transmitted for collection.

By order of the Board, G. H. WRAY, *Manager.*

Agents: R. Allen, Esq., 8, St. Andrew-square, Edinburgh; Messrs. H. Thompson & Co., Dublin; and John Harrison, Esq., Belfast.

METCALFE'S NEW PATTERN TOOTH-BRUSH and SMYRNA SPONGES.—The Tooth-Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose—1*s.* An improved Clothes-Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-Brushes, with the durable unbleached Russian Bristles, which do not soften like common hair. Flesh-Brushes of improved graduated and powerful friction. Velvet-Brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment, Oxford street, two doors from Holles-street.

CAUTION—Beware of the words "From Metcalfe's" adopted by some houses.

MAGNETS, ELECTRO-MAGNETIC and ELECTRICAL MACHINES, Improved Batteries, Callan's Coils for giving powerful shocks, Dissolving Views, Cameras, and all kinds of Optical and Philosophical Apparatus, made and sold by C. W. COLLINS, Instrument Maker and Accurator to the Royal Polytechnic Institution, No. 3, Wardour-street, third house from Oxford-street, London.

IMPORTANT PATENT IMPROVEMENTS in CHRONOMETERS, WATCHES, and CLOCKS.—E. J. DENT, sole patentee, has OPENED his West-end PREMISES, 33, Cockspur-street, Charing-cross, in addition to 82, Strand, with an entirely new stock of Watches and Clocks, Ladies' Gold Watches, 8 guineas each; Gentlemen's ditto, 10 guineas; and Silver Levers at 6 guineas each.—A new edition of Dent's Lectures, price 1*s.*, but to customers gratis.

MESSRS. BARRY & SON, Stationers and Engravers, beg to inform the Nobility and Gentry that they are now enabled to PRINT ARMS, CRESTS, &c., for book plates, in their proper heraldic colours, and at very moderate prices. Crests engraved on visiting cards in the first-rate style, 6*s.*; without the crest, 2*s.* 6*d.*; and 100 cards, 2*s.* 6*d.*: also every description of elegant engraving. Specimens of the above may be selected from a large and fashionable assortment, at their warehouses, Egyptian Hall, Piccadilly, and 132, Bishopsgate-street Within, or sent on application any distance free of expense. Superfine letter papers, 27*s.*, 22*s.*, 20*s.*, 18*s.*, 17*s.*, 14*s.*, 12*s.* and 8*s.* per ream; Note ditto, 18*s.*, 16*s.*, 13*s.*, 8*s.*, 6*s.* and 4*s.* per ream. An additional charge is made for stamping either of the above with arms, crest, coronet, or initials. Their miscellaneous stock, which is very large and particularly adapted for presents, consists of dressing cases, writing desks, inkstands, envelope cases, albums, blotting-books, bibles and prayers, gold and silver pencil cases, penholders, toilet and smelling bottles, souvenirs, ladies' companions, sachets, card and glove cases, pocket-books, papeterie, and envelopes suitable for invitations, complimentary notes, weddings, &c. Either of the above articles may be had plain, or of the most costly description, with every description of useful stationery. Postage stamps and envelopes at Government prices. Messrs. Barry & Son are also the West-end Agents for Mr. Robert Best Ede's Perfumery.

WATCHES by WEBSTER & SON, Chronometer Makers to the Lords of the Admiralty (Established 138 years), 3, BIRCHIN-LANE. The largest assortment of fine Second-hand Watches of any house in London, by the most eminent makers—many nearly equal to new, and at little above half their original cost, all of which W. & Son warrant. They consist of fine Repeaters, Duplex, Lever, and Horizontal Escapements, all of superior manufacture. New Watches of the most elegant patterns upon the principle of their Chronometers, to which the Government awarded the prizes three years in succession, with compensation balances to counteract the variations of temperature. Also a large assortment of Lever and elegant Horizontal Watches, for Ladies and Gentlemen, at considerably reduced prices. Old Watches taken in exchange. The most experienced workmen are employed on the premises in the repairing department.

Webster & Son, 3, Birchin-lane, Cornhill.

MOULD CANDLES to BURN WITHOUT SNUFFING.—KEMPTON'S PATENT.—These candles do not require snuffing; they burn longer and are cheaper than any other candle; the flame is steady and brilliant. No metallic or deleterious matter is used in the manufacture. Price 8*d.* per lb. Sold by G. E. Parish, agent for exportation, 91*b*, Bread-street, City, and by Slodden & Stocking, 43, High-street, Marylebone; W. Gethem, Broadley-terrace, Blandford-square; W. Evans, Italian warehouse, Greenwich; John Hawkins, grocer, High-street, Whitechapel; George Hawley, grocer, Pitfield-street, Hoxton; S. Game, Fish-street-hill; J. Pain, grocer, Bethnal-green-road; G. H. Hudson, 229, Blackfriars-road; C. H. Nicholas, 19, Bolingbroke-row, Walworth; and at the manufactory, Old Bargehouse, Christchurch, Surrey.

NORTON'S CAMOMILE PILLS are confidently recommended as a simple, but certain remedy, to all who suffer from Indigestion, Sick Headach, Bilious and Liver Complaints; they act as a powerful tonic and gentle aperient, imparting strength to the stomach, and composure to the nervous system. Sold in bottles, at 1*s.* 1½*d.* or 2*s.* 9*d.* each, by A. Willoughby & Co., late B. G. Windus, 61, Bishopsgate Without; and nearly all Medicine Vendors.

DELICACY OF COMPLEXION.—The use of GOWLAND'S LOTION is speedily followed by the disappearance of every species of cutaneous defect and discolouration, and the establishment of a pure surface of the skin, accompanied by the brilliant circulation which constitutes the tint of beauty; whilst as a refresher it preserves the most susceptible complexion from the effects of heat, freckle, and sallowness, and sustains in all cases to a protracted period the softness of texture and vivacity peculiar to earlier years.—'Robt. Shaw, London,' is in white letters on the Government stamp, without which it is not genuine.—Prices, 2*s.* 9*d.*, 5*s.* 6*d.*; quarts, 8*s.* 6*d.* Sold by all Perfumers and Medicine Venders.

ROWLAND'S ODONTO, or PEARL DENTIFRICE.—This is an efficient White Powder for the Teeth, solely prepared from *Oriental Herbs* of the most *delightful odour*, and of sovereign virtue for *strengthening, preserving, and thoroughly cleansing the Teeth.* It eradicates *Tartar* from the Teeth, removes *spots of incipient decay, polishes* and *preserves* the enamel—to which it gives a *pearl-like whiteness*; and, above all, from its *disinfecting* properties, gives SWEETNESS TO THE BREATH. As an *anti-scorbutic*, the *gums* also share in its transcendant powers. *Scurvy* is eradicated from them, a healthy action and redness are induced, that offer to the notice of the medical practitioner the most indubitable signs of their *healthful state.* Price 2*s.* 9*d.* per box, duty included.

☞ NOTICE.—The Name and Address of the Proprietors, *A. ROWLAND & SON, 20, HATTON GARDEN, LONDON,* are engraved on the Government Stamp, which is pasted on each. Be sure to ask for "ROWLAND'S ODONTO." Sold by Chemists and Perfumers.

TWENTY YEARS' LOSS of HAIR, and WONDERFUL RESTORATION. Church-street, Whithy, Oct. 19, 1841.—Gentlemen—Of the last supply of Oldridge's Balm of Columbia every bottle was sold immediately on receipt, and I have many more bespoke, only waiting for a further supply, which I hope you will send without the least delay. Orders have poured in more than ever since the powerful effects of the Balm have been so decisively demonstrated in the cases of several credible and respectable inhabitants of the town. One instance, among others which have attracted particular attention, is the case of a gentleman who had had little or no hair for twenty years: he had tried numerous preparations in vain, and ultimately had his head shaved and wore a wig. At my recommendation he tried the Balm; and after using it according to the directions for a short time, the young hair appeared, and he has now as fine a head of hair as any person in Whitby.

Yours, &c. JOHN KILVINGTON.

To Messrs. Kennaby, Brothers, 10, Westmoreland-buildings, Aldersgate-street, London.

OLDRIDGE'S BALM prevents the hair turning grey, produces a beautiful curl, frees it from scurf, and stops it from falling off; a few Bottles generally restore it again. Price 3*s.* 6*d.*, 6*s.* and 11*s.* per Bottle. *No other prices are genuine.* Ask for OLDRIDGE'S BALM of COLUMBIA, 1, Wellington-street, Strand.

LADY CHATTERTON'S SPAIN AND THE PYRENEES.
Now ready, in 2 vols. with numerous Illustrations,
THE PYRENEES; with an EXCURSION into SPAIN. By LADY CHATTERTON, Author of 'Rambles in the South of Ireland,' &c.
"Lady Chatterton's writings ever reflect back upon the world her own pure gratifications.... We seem to see the scenes here described in gone-by times in the actual moment. They breathe of to-day, and yet are redolent of departed ages.... The admirable illustrations of these volumes offer another proof of the talents of this accomplished lady. They are marked by artistical skill as well as most felicitous choice of subject. Indeed, the whole work is one of the richest productions of our golden age of literature."—*Metropolitan.*

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 817. LONDON, SATURDAY, JUNE 24, 1843. PRICE FOURPENCE (Stamped Edition, 5d.)

For the convenience of Subscribers residing in remote places, the weekly numbers are reissued in Monthly Parts, stitched in a wrapper, and forwarded with the Magazines.—Subscriptions for the Stamped Edition for the Continent, for not less than Three Months, and in advance, are received by M. BAUDRY, 3, Quai Malaquais, Paris, or at the Athenæum Office, London. For France, and other Countries not requiring the postage to be paid in London, 28fr. or 1l. 2s. the year. To other Countries, the postage in addition.

[JAMES HOLMES, TOOK'S COURT, CHANCERY LANE.]

UNIVERSITY OF LONDON.

THE FIRST EXAMINATION for the DEGREE OF BACHELOR OF MEDICINE, for the current year, is appointed to commence on MONDAY, the 7th of AUGUST.

The Certificates required must be transmitted to the Registrar fourteen days before the Examination begins.

Somerset House, 16th June, 1843. By order of the Senate, R. W. ROTHMAN, Registrar.

ROYAL COMMISSION OF FINE ARTS.

Whitehall, 16th June, 1843.

HER MAJESTY'S Commissioners hereby give notice:—

1. That whereas various windows in the New Palace at Westminster will be decorated with stained glass, artists are invited to send specimens in this department of art, to be exhibited for the purpose of assisting the Commissioners in the selection of persons to be employed.

2. The specimens are to be sent in the course of the first week in March, 1844, to a place of exhibition hereafter to be appointed.

3. The specimens are required to be designed in general accordance with the style of architecture and decoration adopted in the New Palace. Outlines in lithography, showing the dimensions of the windows, may be obtained at the Architect's offices in New Palace Yard.

4. Each exhibitor is required to send one and not more than two coloured designs for an entire window, drawn to the scale adopted in the outline, *viz.*, two inches to a foot; and one specimen of stained glass, not exceeding six feet in the longest dimension, representing a part of such design in the full proportion. Such specimen of stained glass to be glazed up in lead, and framed in wood.

5. The objects forming the details of decoration may be either figures or heraldic devices relating to the Royal Families of England, or a union of the two, and may be accompanied by borders, diapered grounds, legends, and similar enrichments.

6. The invitation to send specimens for the proposed exhibition is confined to British artists, including foreigners who may have resided ten years or upwards in the United Kingdom.

7. Artists who propose to exhibit are required to signify their intention to the Secretary on or before the 1st of January, 1844.

By command of the Commissioners,
C. L. EASTLAKE, Secretary.

ROYAL COMMISSION OF FINE ARTS.

Whitehall, 16th June, 1843.

HER MAJESTY'S Commissioners hereby give notice:—

1. That whereas carve-work in wood will be required for various parts of the New Palace at Westminster, and in the first instance for the doors of the House of Lords, artists are invited to send specimens in this department of art, to be exhibited for the purpose of assisting the Commissioners in the selection of persons to be employed.

2. The specimens are to be sent in the course of the first week in March, 1844, to a place of exhibition hereafter to be appointed.

3. The specimens are required to be designed in general accordance with the style of decoration adopted in the New Palace. Outlines in lithography, showing the dimensions of the principal door of the House of Lords, may be obtained at the Architect's offices in New Palace Yard.

4. Each exhibitor is required to send one and not more than two designs for an entire door, drawn to the scale adopted in the outline, *viz.*, two inches to a foot; and one carved panel, or part of a panel and frame-work, not exceeding four feet in the longest dimension, representing a part of such design in the full proportion. The objects forming the details of decoration, in conformity with the conditions above expressed, are left to the choice of each artist. The material of the carved specimen is to be oak.

5. The invitation to send works for the proposed exhibition is confined to British artists, including foreigners who may have resided ten years or upwards in the United Kingdom.

6. Artists who propose to exhibit are required to signify their intention to the Secretary on or before the 1st of January, 1844.

By command of the Commissioners,
C. L. EASTLAKE, Secretary.

CLASSICAL—LONG VACATION.

A GRADUATE of CAMBRIDGE, who ranked high in the first class of the Classical Tripos, would be glad to TAKE PUPILS IN LONDON during the Vacation, either Cambridge men, or preparing for that University.—Address J. G., care of Mr. Wright, Bookseller, 60, Pall Mall.

HANWELL COLLEGIATE SCHOOL, MIDDLESEX. Principal, the Rev. J. A. EMERTON, M.A., Curate of Hanwell.—Parents and Guardians desirous of selecting a School in a beautiful and healthy situation, combining, on fixed and liberal terms, the intellectual advantages of a Collegiate Course, with religious instruction, moral and physical training, and domestic care, may obtain Prospectuses on application to the Rev. T. T. Walmsley, D.D., Rectory, Hanwell; J. D. Macbride, Esq. D.C.L., Principal of Magdalene Hall, Oxford; or of the Principal, at the School.

EDUCATION.—HOFWYL HOUSE, STAMFORD HILL, MIDDLESEX.—At this Establishment YOUNG GENTLEMEN are EDUCATED on plans founded on the principles so successfully practised by Pestalozzi and De Fellenberg. The most assiduous attention is bestowed on the culture of the feelings, the developement of the mental faculties, and the general improvement of the health and physical capabilities.

Knowledge is presented in its simplest form, and every exertion is made to render its acquirement a source of pleasure, and a means of further progress in virtue and intelligence.

The Course of Instruction includes:—

The English, French, German, Latin, and Greek Languages.
The Mathematics, Experimental Philosophy, and Chemistry.
The Elements of Natural and Civil History, Geography and Astronomy.
Writing, Drawing, Singing, Gymnastics, &c.

To facilitate the acquirement of knowledge, and furnish means of general improvement, a select library is provided, and an extensive collection of philosophical and chemical apparatus, with cabinets of minerals, shells, &c. A laboratory, bath, workshop, &c.

TERMS, including every expense, from SIX to EIGHT GUINEAS per Quarter.

A Prospectus may be obtained at Messrs. Jones & Co.'s, 30, Lower Holborn; or at the Establishment.

SCHOOL, FAMILY, and CLERICAL AGENCY, 30, SOHO-SQUARE.—Mr. HINTON, late of Trinity Hall, Cambridge, Author of 'Stenography for Schools, &c., respectfully states that he forwards the views of Principals of Schools, Families, Clergymen, Tutors, and Assistants, in any changes they may contemplate; also in the transfer of Scholastic and Clerical Property.—Mrs. Hinton, who has resided many years on the Continent, can introduce superior English and Foreign Governesses, with good references. Letters must be free.

QUEEN'S COLLEGE for LADIES, GLASGOW.—This INSTITUTION will re-open on Tuesday, 1st August, for the PREPARATORY COURSE; and on Tuesday, 3rd October, for the WINTER SESSION.

Programmes are now ready, and may be had at the Institution, or by letter, post paid, addressed to the Secretary.

The Directors are prepared to recommend several Ladies, with whom Pupils from a distance may be placed as Boarders.

By order of Committee,
ALEX. J. D. D'ORSEY, Secretary.

SIR JOSHUA REYNOLDS'S WORKS.—A SET of ENGRAVINGS from the Works of Sir Joshua Reynolds, comprising upwards of 300 Portraits and other Subjects, published at Thirty Guineas in Parts, to be sold for Sixteen Guineas, Half-bound Calf, forming three handsome Folio Volumes. Apply at R. & W. Swales, Booksellers, 21, Great Russell-street, Bloomsbury.

TO ARTISTS.—ART-UNION of LONDON.—SIXTY POUNDS will be given for the best consecutive series of not less than TEN DESIGNS IN OUTLINE (Size, 12 inches by 8). The subject is left at the option of the Artist, but must be illustrative of some epoch in Sacred or British History, or be taken from the work of an English author. Simplicity of composition and expression, severe beauty of form, and pure, correct drawing, are the qualities which the Committee are anxious to realize in this series. If it should be deemed expedient to Engrave the compositions selected, the Artist will receive a further remuneration to superintend the publication. The Drawings, accompanied by a sealed letter, containing the name and address of the Artist, must be forwarded to the Honorary Secretaries on or before Lady-day, 1844.

GEORGE GODWIN, } Hon. Secretaries.
LEWIS POCOCK, }

4, Trafalgar-square, June 20, 1843.

TO ARTISTS.—The notice of those Painters and Amateurs who have not yet had an opportunity of inspecting a picture painted exclusively with Silica Colours and Glass Medium is respectfully directed to No. 288 in the present exhibition of the Royal Academy. The subjoined are extracts from the *Art Union* of June, 1843, relative to this picture. "No. 288. 'The Hindoo gentleman, Dwarkanauth Tagore,' F. R. Say. Painted by subscription for the Town Hall, Calcutta. An admirable subject for a pictorial portrait. This celebrated person is painted in the full costume of the Hindoo of condition: he is turbaned and shawled; and so successfully has the artist met the spirit of his subject, that he has not only left his work a meritorious portrait but a valuable picture. *The colouring is wonderfully brilliant. In this respect, indeed, it is beyond all question the most remarkable work in the exhibition.* * * * " It is only just to state that this picture is painted with the medium and colours prepared by Mr. Miller, of 56, Long Acre, London, and for which he has more than once challenged a trial in the advertising columns of the *Art Union*. Few who look upon this work will hesitate to believe that its peculiar brilliancy is derived from some unusual means; what those means really are, it is the duty of every artist to inquire and ascertain."

TO THE PROPRIETORS of EAST INDIA STOCK.

LADIES and GENTLEMEN,

Having returned from India, after a course of service in the Bengal Presidency of Thirty-four years, which terminated in the Council of India, I am induced to offer myself as a CANDIDATE for A SEAT in the COURT OF DIRECTORS for the Affairs of the East India Company. I make this early announcement, in order that my intentions may be generally known, and shall more fully submit my claims and pretensions when personally soliciting your suffrages and support.

I have the honour to be,
Ladies and Gentlemen,
Your most obedient humble servant,
H. T. PRINSEP.

London, June 15, 1843.

PEACE CONVENTION.—A PUBLIC MEETING will be held at EXETER HALL, Strand, on MONDAY, June 26, 1843.

CHARLES HINDLEY, Esq. M.P., President of the Convention, will take the Chair at 11 o'clock precisely.

Admission by Tickets only, which may be had at the Society's Offices, 6, New Broad-street; Thomas Ward & Co. 27, Paternoster-row; Harvey & Darton, Gracechurch-street; C. LOW RATES.—PARTICIPATION IN PROFITS.

THE MANAGERS OF THE SUN LIFE OFFICE beg leave to inform the public that their Rates, on Young Lives, are much lower than those of many other Offices, and that the Assured are entitled to a participation in the Profits of this Society.—Persons having Life Interests, such as Clergymen, Medical Men, and others deriving Incomes from their Professions or Trades, also those holding Estates on Lives, will see the advantage of effecting Insurances in the Sun Life Office.

Tables of Rates may be had at the Sun Life Office, in Cornhill, at the Sun Fire Office in Craig's-court, and at No. 63, Welbeck-street, Cavendish-square, London; also of any of the Agents for the Sun Fire Office.

ARGUS LIFE ASSURANCE COMPANY, 39, Throgmorton-street, Bank.

Empowered by special Act of Parliament, 5 & 6 Will. IV. c. 76.

Thomas Farncomb, Esq. Alderman, *Chairman.*
William Leaf, Esq. *Deputy-Chairman.*

James Cliff, Esq.
Rt. Hon. J. Humphery, M.P. Lord Mayor of London
Rupert Ingleby, Esq.
Thomas Kelly, Esq. Ald.
Jeremiah Pilcher, Esq. Sheriff of London and Middlesex
Lewis Pocock, Esq.

Physician—Dr. Jeaffreson, 2, Finsbury-square.

Surgeon—W. Coulson, Esq. 2, Frederick's-place, Old Jewry.

Consulting Actuary—Professor Hall, of King's College.

Advantages of the Argus Life Assurance Company.

Low Rates of Premiums.

In addition to the subscribed Capital of 300,000*l.* the assured have the security of the Company's Income of nearly 60,000*l.* per annum, yearly increasing, and an accumulating Assurance Fund invested in Government and other available Securities, of considerably larger amount than the estimated liabilities of the Company.

The Rates of Premium are reduced to the lowest scale compatible with the safety of the Assured and the stability of the Company, thereby, in effect, giving to every policy-holder an immediate and certain bonus without risk, in lieu of the deferred and frequently delusive prospect of a periodical division of profits.

Annual Premium to Assure £100.

Age.	For One Year.	For Seven Years.	Whole Term.
30	£0 17 8	£0 19 1	£1 11 10
30	1 1 8	1 2 7	2 0 7
40	1 5 0	1 6 9	2 14 10
50	1 14 1	1 19 10	4 0 11
60	3 2 4	3 17 0	6 0 10

One-third of whole-term Premiums may remain unpaid at 5 per cent. comp. int. as a debt upon the Policy for life, or may be paid off at any time without notice.

In Assurances for advances of money, as security for debts, or as a provision for a family, when the least present outlay is desirable, the varied and comprehensive Tables of the Argus Office will be found to be particularly favourable to the assured.

A Board of Directors, with the Medical Officers, attend daily, at a quarter before 2 o'clock.

EDWARD BATES, Resident Director.

A Liberal Commission to Solicitors and Agents.

In demy 8vo. price 8*s.* 6*d.* cloth, with a Map,

THE NEGROLAND of the ARABS EXAMINED and EXPLAINED; or, an Inquiry into the EARLY HISTORY and GEOGRAPHY of CENTRAL AFRICA.
By WILLIAM DESBOROUGH COOLEY.

"A truly classical work....This work, well considered, is historical rather than geographical and ethnographical; it is unquestionably the only truly critical work hitherto undertaken and completed on the subject."—Count Gråberg da Hemsö, in the *Rivista Europea*, May, 1842.

"The additions thus made to historical, as contradistinguished from conjectural geography, can be at once seen and appreciated....The gain for geography as subordinate to historical inquiry, which results from Mr. Cooley's essay, is equally great. ....The book is characterized throughout by acuteness and sound judgment."—*Royal Geogr. Society's Journ.* Vol. XII.

"We owe all our accurate knowledge of the early movements of the Moors and Arabs in Negroland to the researches of the judicious Cooley. 'The Negroland of the Arabs' well deserves perusal."—*Friend of Africa.*

"Un travail consciencieux, et qui demandait de grandes connaissances acquises."—*Bulletin de Soc. Geogr.*

London: J. Arrowsmith, 10, Soho-square; and all Booksellers.

ENGINEERING SCHOOL CLASS-BOOKS.

In cr. 8vo. 4*s.* 6*d.* bd. with 220 Diagrams engraved for the work,

EUCLID'S ELEMENTS of PLANE GEOMETRY: with EXPLANATORY APPENDIX, and SUPPLEMENTARY PROPOSITIONS for Exercise. Adapted for the Use of Schools, or for Self-instruction.
By W. D. COOLEY, A.B.
Author of the 'History of Maritime and Inland Discovery,' 'The Negroland of the Arabs,' &c.

"This is the best edition of the Elements which has yet appeared."—*Athenæum*—"which, for brevity, clearness, and discerning attention to the wants of learners, cannot be easily surpassed."—*Dublin University Mag.*

Uniform with the 'Elements,' price 3*s.* 6*d.*

COOLEY'S GEOMETRICAL PROPOSITIONS DEMONSTRATED; or a Supplement to Euclid: being a KEY to the Exercises appended to the 'Elements,' for the use of Teachers and private Students. Upwards of 120 Propositions deduced from the First Six Books of Euclid, are illustrated in it by new Diagrams.

"Will be found of considerable value as an aid to teachers of the Mathematics."—*New Monthly Mag.*

In fc. 8vo. price 1*s.* 6*d.*

COOLEY'S FIGURES of EUCLID; being the Diagrams illustrating the 'Elements,' with the Enunciations, printed separately for Use in the Class-room.

PRINTED FOR
TAYLOR AND WALTON,
Booksellers and Publishers to University College,
UPPER GOWER-STREET.

DARLEY'S
SCIENTIFIC LIBRARY,
FOR THE USE OF
SCHOOLS, PRIVATE STUDENTS, ARTISTS, AND MECHANICS.

It is the purpose of this Work to furnish a Series of Elementary Treatises on Mathematical Science, adapted to the wants of the public at large. To youth of either sex at public and private schools; to persons whose education has been neglected, or whose attention has not been directed in early life to such studies; and to Artists and Mechanics these little works will be particularly suited. The principles of the various Sciences are rendered as familiar and brought as near to our commonest ideas as possible; the demonstrations of propositions are made plain for the mind and brief for the memory; and the Elements of each Science are reduced not only to their simplest but to their shortest form.

I.
FOURTH EDITION,
A SYSTEM
OF
POPULAR GEOMETRY;

Containing in a few Lessons so much of the Elements of Euclid as is necessary and sufficient for a right understanding of every Art and Science in its leading truths and great principles.

By GEORGE DARLEY, A.B.
Price 4*s.* 6*d.* cloth.

II.
NEW EDITION, (just published,)
COMPANION
TO THE
POPULAR GEOMETRY;

In which the Elements of Abstract Science are familiarized, illustrated, and rendered practically useful to the various purposes of life, with numerous Cuts.

By GEORGE DARLEY, A.B.
Price 4*s.* 6*d.* cloth.

III.
THIRD EDITION,
A SYSTEM
OF
POPULAR ALGEBRA;
WITH
A Section on PROPORTIONS and PROGRESSIONS.

By GEORGE DARLEY, A.B.
Price 4*s.* 6*d.*

IV.
SECOND EDITION,
A SYSTEM
OF
POPULAR TRIGONOMETRY,
Both Plane and Spherical;
With POPULAR TREATISES on LOGARITHMS, and the Application of Algebra to Geometry.

By GEORGE DARLEY, A.B.
Price 3*s.* 6*d.* cloth.

"For students who only seek this limited knowledge of these sciences, there are perhaps no treatises which can be read with more advantage than Darley's Popular Geometry and Algebra."—*Library of Useful Knowledge, article 'Mechanics.'*

FELIX SUMMERLY'S
RECREATION HAND-BOOK GUIDES,
Corrected for the Season of 1843.

"Recreation is a second creation, when weariness hath almost annihilated one's spirits. It is the breathing of the soul, which otherwise would be stifled with continual business....As for those that will not take lawful pleasure, I am afraid they will take unlawful pleasure, and by lacing themselves too hard grow awry on one side."
FULLER'S HOLY AND PROFANE STATE.

"All work and no play makes Jack a dull boy."
OLD ENGLISH PROVERB.

Now ready, price 3*s.* 6*d.*
In an Ornamental Cover of the 16th Century,
HAND-BOOK FOR THE NATIONAL GALLERY,
WITH FIFTY REMINISCENCES OF THE MOST CELEBRATED PICTURES, DRAWN EXPRESSLY FROM THE ORIGINALS, BY MESSRS. JOHN JAMES AND WILLIAM LINNELL.

(Open daily, from Ten to Four, except Friday and Saturday.)
Other Editions, price 6*d.*, 3*d.*, and 1*d.* Also,

'Catalogue des Tableaux qui se trouvent dans la GALERIE NATIONALE, suivi par la Chronologie des Peintres.' Prix 6*d.*

HAMPTON COURT PALACE.
(OPEN DAILY, EXCEPT FRIDAYS.)

Being a Guide to the Architecture, Tapestries, Paintings, Gardens and Grounds of Hampton Court: with numerous Embellishments on Wood engraved by Ladies; and Plans of the Palace and Grounds from Official Surveys. The Illuminated Cover is taken from a design for a book-cover produced by Hans Holbein for Cardinal Wolsey. Second edition, price 5*s.* in cloth, and Holbein's cover in gold, with Maps and Plans; and 2*s.* 6*d.* not gilt, and with plan only.

"Decidedly the best popular guide to the picturesque beauties of Hampton Court of any extant."—*Spectator.*

"A charming specimen of a Hand-book, literally crammed with information."—*Atlas.*

FREE PICTURE GALLERIES;

Being a GUIDE to all the PICTURES in the NATIONAL GALLERY, the DULWICH GALLERY, the SOANE MUSEUM, the SOCIETY of ARTS, and the BRITISH MUSEUM. Price 1*s.* 6*d.*

"These Catalogues are more raisonnés and correct than the correspondent official ones; are more portable, and to their limits every way commodious, whilst they cost together much less than several of the latter cost separate."—*Athenæum.*

HOLIDAYS; or, a Guide to London Sights.

Giving details of the Locality—Means of Access—Nature of Admission—Time when Open—Principal Objects, and Descriptive Catalogues of all the Permanent Sights. Notes for Days' Excursions out of the Metropolis. Price 6*d.*

WESTMINSTER ABBEY.

(The Abbey opens at 9 A.M., and closes, in the Summer, at 6 P.M. The Tombs are shown until half-an-hour before, and about an hour after, Divine Service, which commences at 10 A.M. and 3 P.M. Entrance to Poets' Corner, free; to the Nave, alone, 3*d.*; with the Chapels, 6*d.*)

A Guide to the Architecture, Sculptures, Tombs, and Decorations, with 56 Embellishments on Wood, engraved by Ladies, 4 Etchings, a Specimen of Encaustic Tiles in the Chapter House, and an Illumination. Price 7*s.* Cheaper Editions, 3*s.*, 1*s.* 6*d.*

"Its pages are not disfigured by the usual Guide-book sentimentality, rambling on without method, and mixing inaccurate if not false information with indiscriminate and nauseating praise, but it gives a well arranged and correct description, neither too popular nor too pedantic, of the Sacred Edifice."—*Ecclesiologist*, published by the Cambridge Camden Society.

"A volume got up in excellent taste, and written in a right spirit; critical so far as criticism could be allowed, but always suggestive, and testing opinions by reference to principles. As if to perfect the interest of the work, its fifty-six illustrative engravings have all been executed by women; and some amateurs, Lady Callcott and Lady Palgrave, amongst others, have gracefully contributed drawings, and thus associated their names with their sister artists."—*Athenæum.*

Also, for Foreigners, GUIDE A L'ABBAYE DE WESTMINSTER. Par Félix Summerly. Prix 1sh.

TEMPLE CHURCH.

With Eight Illustrations. Printed in three colours, in novel combinations of lithography and type, with Ornamental Cover of the pattern of the Encaustic Tiles. Second Edition. Price 1*s.*

A HAND-BOOK for CANTERBURY; with 35 Illustrations and a Map, bound in an Illuminated Cover, price 3*s.*

Will be ready in a few days,

KING ERIC AND THE OUTLAWS;

Or, the THRONE, the CHURCH, and the PEOPLE, in the THIRTEENTH CENTURY.

Translated from the Danish of INGEMANN, By JANE FRANCES CHAPMAN.

3 vols. post 8vo. 31s. 6d. boards.

IV.

De Pombal's Portuguese Memoirs.

THE MEMOIRS OF THE MARQUIS OF POMBAL.

By JOHN SMITH, Esq.

Private Secretary to the Marshal Marquis De Saldanha.

2 vols. 8vo. with Portrait and Autograph, 21s. cloth.

These Memoirs comprise an Account of the Earthquake at Lisbon in 1755—energy of Pombal in restoring order, and rebuilding the city—the establishment of the Oporto Wine Company—the suppression of the order of Jesuits—Aveiro's Conspiracy—the rupture between Portugal and the Court of Rome—the Jesuit Malagrida, his extraordinary hallucinations, trial, and execution—the disputes with Spain—Pombal's university and educational reforms—his resignation after the death of Joseph—his examination—the sentence passed upon him—his illness and death.

V.

Low's Agriculture, improved.

ELEMENTS OF PRACTICAL AGRICULTURE;

Comprehending the Cultivation of Plants, the Husbandry of Domestic Animals, and the Economy of the Farm.

By DAVID LOW, Esq. F.R.S.E.

Professor of Agriculture in the University of Edinburgh.

Fourth Edition, greatly enlarged, 8vo. with nearly Two Hundred and Forty Illustrations on Wood, 21s. cloth.

*** This edition contains large and interesting additions on the chemical constitution and geological relations of soils—on the effects of climate and altitude—on the nature, uses, and action of manures—on the principles of tillage and the succession of crops—on the theory and practice of draining, &c.

The following NEW WORKS are nearly ready:

I.

New Work on Sindh.

PERSONAL OBSERVATIONS ON SINDH,

The Manners and Customs of its Inhabitants, and its Productive Capabilities; with a Narrative of the Recent Events.

By CAPTAIN POSTANS,

Bombay Army, late Assistant to the Political Agent, Sindh.

8vo. with Map and Illustrations.

II.

The Countess of Blessington's New Novel.

MEREDITH.

By the COUNTESS OF BLESSINGTON.

3 vols. post 8vo. [*In a few days.*

III.

THE EMPIRE OF THE CZAR.

By the MARQUIS DE CUSTINE.

Translated from the French. 3 vols. post 8vo.

Messrs. Longman & Co.'s CATALOGUES of NEW WORKS in GENERAL LITERATURE and SCIENCE, of MEDICAL and SURGICAL WORKS, of SCHOOL BOOKS, and of SECOND-HAND WORKS, reprinted for 1843, may be obtained GRATIS. Also the Prospectus of an important New Work on ORNITHOLOGY, by Mr. G. R. Gray, of the British Museum, about to be published by subscription:—and 8vo. price Half-a-Crown, boards, a Comprehensive CLASSIFIED GENERAL CATALOGUE of Modern Works, in every department of English Literature, corrected to March.

Erratum.—The forthcoming Half-Volume of the Biographical Dictionary of the Society for the Diffusion of Useful Knowledge (Half-Vol. 5), will be ready early in AUGUST, and not in October, as erroneously announced in the *Athenæum*, No. 815.

BOOKS FOR YOUNG PEOPLE,

PUBLISHED BY

JOHN W. PARKER, West Strand.

TALES and STORIES from HISTORY. By AGNES STRICKLAND. 2 vols. with numerous Illustrations, bound and gilt, 7s.

PETER PARLEY'S UNIVERSAL HISTORY, on the BASIS of GEOGRAPHY. With Two Hundred Illustrations. 7s. 6d.

THE CARDINAL VIRTUES; or, Morals and Manners connected. By HARRIETTE CAMPBELL, Author of 'The Only Daughter.' 2 vols. 7s.

THE LITTLE BRACKEN-BURNERS, a Tale; and LITTLE MARY'S FOUR SATURDAYS. By the late LADY CALLCOTT; with a Frontispiece by Sir Augustus Callcott. 3s.

FABLES and MORAL MAXIMS, selected by ANNE PARKER. With One Hundred Woodcuts. Bound and gilt, 3s. 6d.

ROADS and RAILROADS, and the Vehicles and Modes of Travelling in all Parts of the World, popularly described. With a Hundred Woodcuts. 5s.

POPULAR POEMS for YOUNG PERSONS. Selected by ELIZABETH PARKER. 3s. 6d.

BIOGRAPHICAL SKETCHES, selected from the *Saturday Magazine*. With Illustrations. 1s. 4d.

THE YOUNG LADY'S FRIEND: a MANUAL of PRACTICAL ADVICE and INSTRUCTION to Young Females on their entering upon the Duties of Life after quitting School. By A LADY. 3s. 6d.

MINERALS and METALS: their Natural History and Uses in the Arts; with Accounts of Mines and Mining. With Illustrations. 2s. 6d.

EASY LESSONS in MECHANICS; with Familiar Illustrations, showing the Practical Application of the various Mechanical Principles. With Illustrations. 3s.

THE HOUSE I LIVE IN; or, Popular Illustrations of the Structure and Functions of the Human Body. Edited by T. C. GIRTIN. With Illustrations. 2s. 6d.

CONVERSATIONS ON GARDENING and NATURAL HISTORY. By the Author of 'The Elements of Botany.' With Illustrations. 2s. 6d.

THE ELEMENTS of BOTANY. With many Illustrations. 2s.

SISTER MARY'S TALES in NATURAL HISTORY. With many Illustrations. 2s. 6d.

FIVE HUNDRED CHARADES, from History, Geography, and Biography. By ELIZA WAKEFIELD. 1s. 6d.

PRETTY LESSONS for GOOD CHILDREN; with some Easy Lessons in Latin. By SARA COLERIDGE. 2s.

PERSIAN STORIES illustrative of EASTERN MANNERS and CUSTOMS; and PERSIAN FABLES, for Young and Old. By the Rev. H. G. KEENE, M.A. With Illustrations. 1s. each.

INSECTS and their HABITATIONS: a Book for Children. With many Illustrations. 1s.

THE BOOK of TREES, describing the Principal Timber Trees, and the larger species of Palms. With numerous Illustrations. 1s.

BOOK of ANIMALS; BOOK of BIRDS; BOOK of FISHES; BOOK of REPTILES; BOOK of SHELLS. With numerous Illustrations. 1s. 6d. each.

REVIEWS

The United Irishmen, their Lives and Times. Second Series. By R. R. Madden, M.D. 2 vols. Madden.

With feelings of heart-sickness we turned to this second series of Dr. Madden's narrative; and every additional page has added bitterness to the retrospect. Whether, in the perusal, we are called upon to contrast the circumstances of Ireland in 1798 with those of the present epoch, or to trace the sameness of sentiment and aspiration pervading both eras, we are equally impelled to doubt the progress of civilization, and to abate something of the high hopes we have cherished concerning the ultimate destinies of humanity. Nearly half a century has elapsed, since the civil war was waged which Dr. Madden has undertaken to illustrate; and the interval has been occupied by one long discussion (senatorial and popular) on the state of Ireland. Much legislation has been expended on the adjustment of its difficulties; and two measures of great importance—great in the conception, but narrowed by unskilful working—have been contemporaneous with a marked and progressive improvement in the agricultural face of the country and its physical resources. Yet what have been the results? an increase of proletarian pauperism, and deeper discontents—passions exasperated, disgraciously yielded prejudices more fondly cherished, concessions untenable, oppositions absurdly protracted, and (to sum up the whole) Ireland as disturbed, and as formidable a source of weakness to the empire, as at the day when 70,000 lives had just been sacrificed, and nineteen millions of money wasted for its *pacification*.*

At the present moment, when the eyes of all England are turned anxiously westward, the publication before us must attract more attention than was accorded to the former series; and the reader who can estimate the facts, and deduce from them his own inferences, is likely to derive from it much desirable knowledge to assist in forming an independent judgment concerning existing contingencies: for though the author himself has generally abstained from drawing direct parallels, or casting the lights of experience forward upon the passing scenes of to-day, the occasions for apposite reflection perpetually arise in the course of his narratives.

The case of Ireland lies in a narrow compass; and we will once again trace its outline, for the benefit of our younger readers. The overflowings of the Norman invasion of England passed over to the sister country. Its leaders, after their wont, took possession of as much soil as they could occupy, and settled themselves, an armed camp, in the midst of a hostile and relatively barbarous population. From that time to the reign of Elizabeth, the story of Ireland traces one long succession of petty contests, carried on, native chief against native chief, feudal baron against feudal baron, Irishman against Norman, and all in turn, and sometimes together, against the authority of the kings of England. Elizabeth, at length, contrived to reduce the greater part of the country to some comparative obedience to her sceptre. Up to this period, the predominant evil was the natural result of such protracted anarchy—the ceaseless devastation of the land, the check to industry, to commerce, and the uncertainty of tenure, both to proprietor and to occupant. With Elizabeth came in the additional curse of religious dispute, and the forcible intrusion of a Protestant priesthood into the pulpits and the pockets of a Catholic population. But the elements of confusion, compressed by the strong grasp of the Virgin Queen, were never eliminated; and resistances, on a smaller scale, were repeated, with various fortunes, till the overthrow of the monarchy brought Cromwell's victorious armies into the country, accompanied by renewed destruction; when another vast confiscation of properties introduced a new element of strife, in the persons of a race of sturdy Presbyterians, morally and temperamentally as different from the Norman lords, as those were from the aboriginal chiefs. Next followed the Revolution of 1688, when the Catholics, taking part with James, again drew on the country invasion and conquest, with fresh forfeitures; the whole consolidated and confirmed by the penal laws of Anne. From that time, the supremacy of England was complete: the whole kingdom (to use an Irish phrase) "took English order;" and the nation was governed by a viceroy and a parliament, imitating the English in form, but possessing no reality, either of national independence or popular representation. The Catholic population, meantime, the vast numerical majority of the people, were, by a fiction of law, not supposed to exist; and being cowed and overborne, they endeavoured, as much as possible, to escape from observation. A small but wealthy Protestant minority thus possessed whatever of political power was permitted to the Irish subject, and it domineered over the masses in a Protestant parliament, which could move only in subordination to the English minister for the time being. From this period to the reign of George the Third, peace, however, prevailed; the tide of desolation was checked; population increased; agriculture advanced with rapid strides; a considerable import and export trade commenced; the seaports and the capital saw a race of merchants and citizens called into existence; and the nucleus was formed of a class capable of understanding and appreciating the injuries, under which they and their country laboured. Thus something like a national feeling was developed, and even in the servile parliament an opposition arose—an heirloom probably from the Cromwellian republicans. To this the ascendancy party occasionally adhered, as a means of increasing their own importance; and the American war, by crippling England, enabled the Irish parliament to secure its own independence of the English senate. Meanwhile the Catholics became wealthy and influential enough to obtain a repeal of some of the more offensive and debasing enactments against their religion, and a considerable start was given to every species of industry. It does not appear that at this period the labouring population, though miserably poor, and without the resources of manufacture to take off superfluous hands, was so numerous as to be pressed upon as severely for the means of sustaining life as it has since become.

The declaration of independence, in 1782, was an unsubstantial victory. It imposed new duties on the English minister, obliged, at all costs, to maintain his influence in Ireland. He was thus thrown upon a most extensive and demoralizing system of corruption, and on a variety of petty and unjust expedients for mastering the newborn independence both in parliament and people. The Protestant proprietors, in possession of the pocket boroughs, and dividing between them the representation of the counties, were naturally prone to legislate, under a double fear for their religion and for their lands; and therefore to strengthen the executive, on whose support they mainly depended, and to repress the spirit of liberty, so hostile to their own sway. But corruption reduced this tendency to a system: in a very few years the Revolution of 1782 was rendered a practical nullity, and the supremacy of the English minister was again complete.

The tacit compact was thus confirmed, and all but officially recognized, between the English minister and the ascendancy party, by which the latter was to absorb all power, and be permitted to employ a vigour beyond the law, the better to subdue the rest of the nation; and all this upon the strict condition of using that power for English purposes. In reference to the resistance of 1798, Dr. Madden observes on this combination—

"In England we all know that treason means 'conspiring and intending the death of the king,' &c.; but in Ireland it meant, and is by a party still understood as, 'conspiring and intending the overthrow of the English interest and the Protestant ascendancy.' Hence Charles II. confirmed the forfeitures of the loyal Irish lords, who had taken up arms to support his own cause against the usurpations of Cromwell; because Cromwell, though a regicide in England, was the representative of the English interest in Ireland. Hence James II., while the Irish were spending their best blood to maintain his rights, deliberately professed sympathy only for the English, who hurled him from his throne. * * Their pecuniary interests taught the faction of the ascendancy to maintain and propagate the delusion, that through them only could the connexion between England and Ireland take place; they were so far justified as to prove, that except by such an unpatriotic party, a connexion of obvious inferiority could not be perpetuated. There is an immense difference, if people could be brought to see it, between a connexion or union of inequality, based on maintaining monopolies for one country at the expense of misery and degradation in the other—and a connexion or union of equality, in which both countries should enjoy the same civil rights, the same religious privileges, and the same commercial advantages."

But during the very brief existence of an independent Parliament, a great change had been effected in the aspirations and desires of the people; and the advent of the French Revolution found a large body of Irishmen disgusted with the wide-spread corruption, and prepared to adopt the principles of their neighbours, and to follow in their wake.

At this time, the nation was divided into three parties: the resolute adherents of British rule; the Catholic malcontents, seeking religious emancipation, and little else; and a party (principally Presbyterian and mercantile) seeking practical reforms and redress of grievances, which, as despair of success increased, were gradually dropped, to pursue separation from England, and a domestic republican form of government. It was in the bosom of this party that the association of United Irishmen was formed, which took the initiative, and for a long time almost exclusively worked the popular resistance in 1798. For the story of this resistance, we must refer to the volumes of Dr. Madden.

During the long interval from 1688 to the time we are now speaking of, the peasantry had existed in a state of continued revolt against the law, which was in all things against them: they were the victims alike of legislative one-sidedness, and of personal and administrative injustice; but they could neither understand their position, nor combine for redress; and their secret and midnight associations for revenge and self-assertion, kept the landowners in perpetual alarm.

The history of one of these outbreaks is given by Dr. Madden, by way of introduction to the present series, as a necessary clue to the share ultimately taken by the peasantry in the resistance to the King's forces. On this subject, the writer thus generalizes:—

"The various outbreaks of popular discontent

* See Appendix, No 5, vol. 2, of this series.

which took place between 1760 and 1790, and got the names of insurrections and Popish rebellions, can only be regarded as agrarian outrages, the result of oppressive measures taken for the collection of exorbitant rents, the exaction of tithes, and the conversion of the small holdings of the peasantry into pastures. The destitution attendant on those measures, and especially the latter practice, in a country where the unfortunate people turned adrift had no manufacturing districts to fly to for the means of support, drove the persons thus beggared, and deprived of house and home, to those acts of violence and desperation which usually follow in the footsteps of distress and ignorance. The same interests which reduced the people to misery, were exerted in representing their condition as the result of their own turbulent and lawless proceedings, and the conduct of any of the gentry of their own persuasion who sympathized with their sufferings, or dared to attempt to redress their wrongs, as influenced by seditious and disaffected motives. Wherever agrarian outrages were committed, and their causes were inquired into by such persons, the landlords and the tithe-owners never failed to raise a clamour against their character for loyalty; and even the writers of the day, who ventured to espouse the cause of the parties who had the courage and humanity to interfere in behalf of the unfortunate people, represented their advocates as well-meaning 'but giddy and officious men.'"

This standing agrarian revolt was distinct, in all respects, from the political movements; and is still so far so, that it would continue unabated, though all other resistances were put down, so its own causes remain unredressed.

Here, then, we discover many corrupt instincts struggling for supremacy, and combining to supersede the one only legitimate end of all government, the common good of all. The English government, fearful lest Ireland should slip from its grasp, and become an engine of annoyance in the hands of enemies, struggled first for military supremacy, and afterwards for legislative influence. The ascendancy party, fearful alike of a substantial political reform, and of Catholic resistance, strove to impose on the credulity of England, and to represent the country at all times as on the eve of rebellion. Thus they were encouraged in their violences and their prejudices, as much for the sake of preserving the Irish crown in union with that of England, as from a No Popery fanaticism, which it may confidently be asserted few English ministers really shared. The landed proprietors, the occupants of confiscated properties, lived in equal fear of the descendants of the original proprietors; while the clergy of the Establishment dreaded the excluded Catholic clergy; and both truckled to the English, on whose overruling force they depended for their security. The peasantry, lastly, at war with the law itself, (that obedient handmaid of the oppressing interests,) stood opposed to order, and to all civilization which depended on law. This condition of things was obviously not formed for permanency; but its destruction was hastened by events.

Notwithstanding the corruption of the Irish parliament, it had pursued a course of its own on the great question of the Regency, which tended directly to the separation of the two crowns; and this danger drew the attention of statesmen to the pressing necessity for a political union of the legislatures. It can scarcely be doubted that the narrow escape from separation by the defeat of the rebellion in 1798, also hastened that consummation; but had the rebellion never occurred, a union would still have been inevitable. The means of controlling the people in their own parliament were felt to be slipping through the fingers of the British government; and it was taught to know that the "English interest," in Ireland, was a force, too demoralizing and too expensive to be longer maintained. Hence many have thought that the rebellion was encouraged and fomented by the English minister for the purpose of necessitating the Union: it is more probable that encouragement (if encouragement there was) was the act of the local government, for bringing discontent to a head, and chopping off that head by a single blow. It is not too much, then, to suppose that the Union was adopted in England with a remote view of carrying on the administration of Ireland more honestly, of really (and not professedly only) carrying a Catholic relief bill, and reducing the landed autocracy within the rule of authority, and to a practical obedience to the laws, from which they had long emancipated themselves. If such were the case, the end was again sacrificed to the means. The ascendancy party, during the negotiation of the Union, were erect and hostile—and were bought piecemeal and by retail to subscribe to it. That measure, therefore, was a compromise, in which the most corrupt interests were spared; the national injuries were, for the most part, left untouched; and little was directly changed, except the seat of legislature. Thus it happens that, at the present day, after forty years of union, the legislation for Ireland is still exceptional.

Of the evils created under this combination of causes, the giant ill (proletarian misery and agrarian revolt) has been even increased; and that notwithstanding the vast improvement which has taken place in the physical resources of the country. To explain the apparent anomaly, it might be enough to refer to the doubling of the Irish population within the last forty or fifty years; but another cause demands notice. On the concession to the Catholics of liberty of representation, in 1792, the forty-shilling freeholder became a convenient tool in the hands of parliamentary jobbers; and the multiplication of these voters was increased by the ill-judged policy of the landlords, till they swarmed like vermin in the land; and this state of things continued till the class of voters was swamped by the Reform Bill, when landlords suddenly discovered the injury done to their estates by a pauper tenantry; and they commenced clearing their lands with too little feeling for the destitution of their tenants, thus turned adrift on the world. By such measures, the condition of the labouring population was rapidly reduced; and to all their other evils was added the necessity for a struggle for the bare right of earning their bread. At this moment when we write, the process of expulsion is still going on, and hundreds of families are wandering about the country without shelter, or forced to seek an unwelcome retreat within the walls of a workhouse. This is the one cause for all those horrible assassinations which seem so unaccountable to Englishmen, and which are chiefly done upon the in-coming tenant, who has taken the land from which the murderer has been expelled. This, too, is the fact, that gives its meaning to the new phrase of "fixity of tenure," with which the repeal party canvass for recruits; and there can be no doubt that the one-sided legislation, in favour of the landlord and to the depression of the tenant, should be promptly and completely reformed, and that the labour of the latter should be rescued from the thraldom under which it now practically languishes. In this history there is nothing singular, nothing beyond the most ordinary play of cause and consequence; and we fully subscribe to Dr. Madden's remark:—

"Let us not be accused of libelling the Protestants of Ireland; every ascendancy, wherever and however established, must, of necessity, exhibit the same course of evil action, whether the distinction of class be founded on creed, race, or colour. The Turks and the Greeks, the Normans and the Saxons, the Franks and the Gauls, the Moors and the Goths, the whites and the blacks of the United States of America,—are, or were, ascendancies of essentially the same nature as that which existed amongst the Protestants and Catholics of Ireland; they all exhibited equally strong proof that in such a state of things the demoralization of the dominant class is equally extensive with the degradation of the oppressed; they have shown that unjust superiority is always attended by that feeling of insecurity which generates savage cruelty and barbarous contempt for the restraints of Divine and human law; and they all point to a period when the ascendancy must sink under the weight of its own iniquities, unless its fall be averted by timely concessions. Ever since the day that the Egyptian Pharaoh established an ascendancy over the Hebrews, a law of nature has begun to ensure the final deliverance of the servile class—'The more they afflicted them, the more they multiplied and grew.' The masters do not keep up their numbers; the serfs increase with a rapidity which it is impossible to check. In spite of penal laws, and bribes, and all species of honourable and dishonourable legislative contrivances, the Catholics of Ireland have increased in a far more rapid ratio than the Protestants; and had these laws continued, the latter must have been reduced to a minority so inconsiderable, that the reins of government must have fallen out of their hands, from sheer inability to retain them any longer. But though this system was iniquitous in its principle, destructive in its operations, and most ruinous to the very party it was designed to serve, yet all history and all experience show us that men will cling to the banner of ascendancy, so long as any of its rags can be held together; and even when they fall to pieces from their own rottenness, multitudes of bigots and blockheads will be found offering an idolatrous veneration to the naked staff."

From this our statement, brief though it be, and divested of all illustrative details, the causes of the existing discontents must become evident. The Union has brought no return to national government; the ascendancy party, though no longer necessary to English policy, still holds together, strong in its wealth and its close combination of will and purpose. By rank and by riches it might have been entitled to a large influence and participation in the government of Ireland; inveterate habits, English distrust, and party intrigue, have made it almost the sole and exclusive possessor of power. But laws change institutions, without changing the dispositions of men; and the most admirable reforms must have suffered in their utility, by being committed to such administrators; while those actually attempted have almost all been stripped of their most valuable clauses, in their passage through Parliament, by the intervention of the ascendancy party and its English allies. This consideration leads us to one wide-spreading and irritating evil hitherto unnoticed—the maladministration of law incidental to all ascendancies. Without pursuing the evil in its endless ramifications, from the judge on the bench to the juryman in his box, it is enough to state, that where party is concerned, and sometimes beyond that, justice is to this day practically denied, or, when not absolutely denied, is thought to be so. That the late government struggled hard to break down this harassing usurpation—brought home to every cottage and every transaction of domestic life,—was their one great merit in the eyes of the Irish people: that the present administration has favoured it by its legal and clerical promotions, is the one circumstance that has done more to raise the storm of repeal than all its persevering resistance to reform while in opposition. Had a return to national government, and the suppression of ascendancy occurred at the Union, the moral and physical antecedents of that event would, for half a century, have sufficed to prevent Ireland from rising to an equality of general condition with the sister country: as it was, all such obstructing causes have acquired strength and consistency; and they have been rendered more manifest even by the partial improvement which has been

Digitized by Google

developed. That improvement has *not* turned to the account of order, but *has* called into activity resistances. Still, however, though Ireland gained little control over its own affairs by the transference of its parliament to England, it did gain immensely by the public discussions of its case in the eyes of all Europe, incidental to its new connexion. It derived the whole benefit of publicity, and of an alliance with English opposition and English dissent. Thus encouraged and instructed in the arts of constitutional resistance, the people acquired, during the long struggle for emancipation, a mass of political knowledge and resource, which has been shared by the lowest among them, and is acted upon by the humblest voter. This is a positive and an important fact, for it has produced the transfer of the votes of the tenants, from the oppressive landholder to the sympathizing priest; and the consequent rise of a Radical Irish majority in Parliament that has often decided the fortunes of the great English parties. In point of fact, the Union has raised the Irish people in consideration and power; and they cannot fail to see and to appreciate the importance of that fact in their cooler moments. From that circumstance it may reasonably be concluded, that the repeal agitation is an accident, not destined to continue; and that it would be stifled by any earnest attempt to grapple with those acknowledged evils which partial and stinted reforms have not yet touched. Hitherto the prevailing influence of legislation for that country has been fear; and fear is notoriously the worst and most dangerous of counsellors.

Orion: an Epic Poem. By R. H. Horne, Author of 'Cosmo de' Medici,' &c. Miller.

We are not of those whom Sir Philip Sidney classed quaintly as "poet-whippers,"—we are not of those who despair of the republic,—or commit monarchical treason by imagining a king's death,—or sing dolefully their 'De Profundis' over the poetical literature of their country and day. With one hand upon the heart of our poetry, we feel the living pulse; and use the mirror which sad critics, more "melancholy and gentlemanlike" than ourselves, have denied to the triumph and the vanity, to prove at least, and by the very cloud on it, the breath which goeth upwards from the living mouth, and will articulate presently. True it is that another sort of gentlemen—"the gentlemen parcel-poets"—have increased and multiplied in an inverse ratio to the glories of the art they practise . . . against. True, indeed, it is, that Mr. Carlyle's "Sham" is especially observable in our poetical literature; and that the False has done its usual work in depreciating the True with the public. Men ask, like jesting Pilate, "What is truth? what is poetry?" and do not wait for an answer. But the answer will follow them; the answer will overtake them; leaping from one bare crag to another, it will be up with them before they reach home: there are piercing voices which the world must hear, be it ever so grey and deaf. That the world is too old for chivalry, we have been told; that it is too old for Spartan morals and Ægyptian short-hand, we can guess; that it will hereafter be too old for comfortable population and coal fires, for class prejudices, church establishments, wars, and corn laws, we may fear or hope, according to our degree of nervous susceptibility; but that it is or ever will be too old for Poetry, the nature of our humanity forbids, and the stars of God, not inaudibly, do deny. We scarcely need, at this hour of the day, to write treatises in proof of the immortality of the soul; but a "Phædon," in favour of the non-mortality of soul's song, may enter with a grace into our dialogues. In which, if we individually took a part, we should say, after a Socratic *μα κυνα*, (stroking passionately the ears of our dog till the sparks seemed to come,) that we believe in an infinite succession of divine lyrics, didactics, dramas, and epic poems,—*εἰς τους αἰωνας των αἰωνων*—to the end of this world, and beyond it.

No degree, however, of sanguine expectation could prevent us from being a little startled by this new announcement of 'Orion, an epic poem, in three books, price one farthing!' In the first place, we had lost the habit of epic poems; they have gone out of fashion like the toga; and for a generation which reads and writes running, to draw a long epic breath seemed tending to prodigy. If, in the apprehension of many, the Drama is dead, the Epopœia is buried; and there is something ghastly in the stir of an epic poem,—it is as if the Black Prince's armour moved of itself, and rode away from the Tower on one of Her Majesty's cream-coloured horses.* Nor is this the whole of the marvel. For, in the second place, that an epic poem in three books should be sold for a farthing, is likely to remain a singularity through all possible vicissitudes of anise and cummin. We began by an absolute Pyrrhonism on the existence of any poem whatever; and having seen, tasted, and handled the hundred and thirty-seven pages, of which the poem doth consist, we end in a state of dreamy surprise as to what the author and the publisher can mean by it. Perhaps—if Sphinx will let us guess—a mere antithesis?—perhaps, a royal generosity?—perhaps, a practical sarcasm on the generous patronage of poets accorded by the public? "An epic poem in three books for one farthing!"

At last, the scepticism hangs by us. The poem, although a true poem, is scarcely a true epic; and we cannot recognize it as belonging to that class. The essence of the epopœia is action. *Event evolving itself from action* may pass as a description of the epos; whereas, in 'Orion,' the action is subsidiary to the philosophy, and the whole consists of a philosophical problem worked out by typical or allegorical figures. Mr. Horne is known by his dramas: to strike the epic end of the gamut was worthy of a comprehensive ambition. "Yet, once more, O ye laurels." But he has missed the epic; and we cannot, while we admire the poem, miscall it. If epical in anywise, it is a spiritual epic, (and that may be the right name for it,) bearing the same relation to the common epic, as Homer's *εἰδωλον* of a hero does to the heroic body, and putting soul's experience in the place of life's experience. The subject appears to be the growth of a poet's mind; and the design, to show how—the interruption making surer the ascent, the obstacle developing the power, the very error increasing the ultimate triumph,—such a soul graduates upwardly, with a completed work, into the clear height and daylight above all. The poet casts his abstract ideas in the old classical forms, so that the poem is very "Heathen Greek" in its nomenclature, while the signification is rather Christian than classical: according to his own words, in the prefatory note, it has been his "object to create new associations, founded upon those of the antique age, which are the most purely poetical and suggestive." He opens his fable in Chios, and takes for his hero Orion, the builder, (meaning the artistic mind), who is a giant, simple, rude, sincere, occupied with the elements of life, and consorting with other giants; Biastor, the forceful; Rhexergon, the breaker down; Akinetos, the unmoved; all opposed in actual nature to the builder, but his "wood friends," on the authority of the poet, by accidental association. It is morning in Chios, and Orion, hunting on the hills, is approached by Artemis, with no friendly gesture:—

> Her bow, with points drawn back,
> A golden hue on her white rounded breast
> Reflecting, while the arrow's ample barb
> Gleams o'er her hand, and at his heart is aimed.

She relents, however:—

> The goddess paused, and dropt her arrow's point—
> Raised it again—and then again relaxed
> Her tension, and, while slow the shaft came gliding
> Over the centre of the bow, beside
> Her hand, and gently drooped, so did the knee
> Of that heroic shape do reverence
> Before the goddess.

She looked with favour upon the "heroic shape," and he loved her.

> And he was blest
> In her divine smile, and his life began
> A new and higher period, nor the haunts
> Of those his giant brethren ever sought,
> But shunned them and their ways, and slept alone
> Upon a verdant rock, while o'er him floated
> The clear moon, causing music in his brain,
> Until the skylark rose. He felt 'twas love.

But Orion's association with Artemis (perhaps speculative imagination) is imperfect, and soon broken. She is high and pure, and his nature, though improved, is not spiritualized enough for such exclusive intercourse. False, therefore, to Artemis, he loves Merope,—falling from imagination into human passion,—upon which the crescent goddess revenges her wrong, by striking him with blindness, and Merope deserts him; and he sits alone by Akinetos, the great unmoved, who preaches to him the impotence of all aspiration and all work, and the sufficiency of his blindness. Rising above this moody influence and his own desolation, he has recourse to Eos, the goddess of the morning and of religious cheerful practical philosophy, and she restores his sight and hope, inspiring him with an undying love towards herself.

> "Eos! blest goddess of the morning, hear
> The blind Orion praying on thy hill,
> And in thine odorous breath his spirit steep,
> That he, the soft gold of thy gleaming hand
> Passing across his heavy lids, sealed down
> With weight of many nights, and night-like days,
> May feel as keenly as a new-born child,
> And, through it, learn as purely to behold
> The face of nature. Oh, restore my sight!"
> His prayer paused tremulous. O'er his brow he felt
> A balmy beam, that with its warmth conveyed
> Divine suffusion and deep sense of peace
> Throughout his being; and amidst a pile,
> Far in the distance, gleaming like the bloom
> Of almond trees seen through long floating hails
> Of pale ethereal blue and virgin gold,
> A Goddess, smiling like a new-blown flower,
> Orion saw! And as he gazed he wept:
> The tears ran mingling with the morning dews
> Down his thick locks.

We are tempted onward, but must break off, in order to secure the description of the palace of this gracious benefactress:—

> Level with the summit of that eastern mount,
> By slow approach, and like a promontory
> Which seems to glide and meet a coming ship,
> The pale gold platform of the morning came
> Towards the gliding mount. Against a sky
> Of delicate purple, snowbright courts and halls,
> Touched with light silvery green, gleaming across,
> Fronted by pillars vast, cloud-capitalled,
> With shafts of changeful pearl, all reared upon
> An isle of clear aerial gold, came floating;
> * * * *
> From the bright peak of that surrounded mount,
> One step sufficed to gain the golden floor,
> Whereon the palace of the morning shone,
> Scarcely a bow-shot distant; but that step,
> Orion's humbled and still mortal foot
> Dared not adventure. In the goddess' face
> Imploringly he gazed. "Advance," she said,
> In tones more sweet than when some heavenly bird,
> Hid in a rosy cloud, its morning hymn
> Warbles unseen, wet with delicious dews,
> And to earth's flowers, all looking up in prayer,
> Tells of the coming bliss. * * *
> * * * *
> Forward Orion stepped: the platform bright
> Shook like the reflex of a star in water
> Moved by the breeze.

The jealousy of Artemis strikes him dead in the midst of his new happiness and glory and expansive schemes for the good of the human race; after which, having stood in melancholy and remorse before Eos, who reproaches her for the deed, the rivals unite in supplication to Zeus, and receive from the supreme god, not indeed

Digitized by Google

Orion's restoration to earth, but his exaltation into the heavenly cycle.

So fares it ever
With the world's builder. He, from wall to beam,
From pillar to roof, from shade to corporal form;
From the first vague thought to the temple vast,
A ceaseless contest with the crowd endures,
For whom he labours. * * *
* * * *
He who will do and suffer, must—and end.
Hence, death is not an evil, since it leads
To somewhat permanent, beyond the noise
Man maketh on the tabor of his will,
Until the small round burst, and pale he falls,
His ear is stuffed with the grave's earth, yet feels
The inaudible whispers of eternity,
While Time runs shouting to Oblivion
In the upper fields.

We must transcribe one noble passage, which embodies the philosophy of the whole work, and entreat our country's poets to lay to heart the persuasion of its conclusion:—

The wisdom of mankind creeps slowly on,
Subject to every doubt that can retard
Or fling it back upon an earlier time;
So timid are man's footsteps in the dark,
But blindest those who have no inward light.
One mind, perchance, in every age contains
The sum of all before and much to come;
Much that's far distant still; but that full mind,
Companioned oft by others of like scope,
Belief, and tendency, and anxious will,
A circle small transpierces and illumes:
Expanding, soon its subtle radiance
Falls blunted from the mass of flesh and bone.
The man who, for his race might supersede
The work of ages, dies worn out—not used,
And in his track disciples onward strive,
Some hairs' breadths only from his starting point:
Yet lives he not in vain; for if his soul
Hath entered others, though imperfectly,
The circle widens as the world spins round,—
His soul works on while he sleeps 'neath the grass.
So, let the firm philosopher renew
His wasted lamp—the lamp wasted not in vain,
Though he no mirrors for its rays may see,
Nor trace them through the darkness;—let the hand,
Which feels primæval impulses, direct
A forthright plough and make his furrow broad,
With heart untiring while one field remains;
So let the herald Poet shed his thoughts,
Like seeds that seem but lost upon the wind.
Work in the night, thou sage, while Mammon's brain
Teems with low visions on his couch of down;—
Break, thou, the clods, while high-throned vanity,
'Midst glaring lights and trumpets, holds its court;—
Sing, thou, thy song amidst the stoning crowd,
Then stand apart, obscure to man, with GOD.
The poet of the future knows his place,
Though in the present shady be his seat,
And all his laurels deepening but the shade.

We would willingly follow the beautiful with further extracts, but the reader must seek for himself Orion's anguish after his blindness, and his ultimate beatification, not omitting his morning hunt of shadowy stags in Chios—

There 's always morning somewhere in the world;

and the fine scenic descriptions which abound in the poem. Here is a pastoral revel not unworthy of Theocritus:—

Rhexergon tore down boughs, while Harpax slew
Oxen and deer, more than was need; and soon
On the green space Orion built the pile
With cross logs, underwood, dry turf and ferns,
And cast upon it fat of kine, and heaps
Of crisp dry leaves, and fired the pile, and beat
A hollow shield, and called the Bacchic train,
Who brought their skins of wine, and loaded poles
That bent with mighty clusters of black grapes
Slung midway. In the blaze Orion threw
Choice gums, and oil, that with explosion bright
Of broad and lucid flame alarmed the sky,
And fragrant spice, then set the Fauns to dance,
While whirled the timbrels, and the reed-pipes blew
A full-toned melody of mad delight.
Down came the Mœnads from the sun-brown hills,
And flocked the laughing nymphs of groves and brooks;
With whom came Opis, singing to a lyre,
And Sida, ivory-limbed and crowned with flowers.
High swelled the orgie; and the roasting bulk
Of bull and deer was scarce distinguishable
Mid the loud-crackling boughs that sprawled in flame.
Now richest odours rose and filled the air,
Made glittering with the cymbals spun on high,
Through jets of nectar upward cast in sport,
And raging with songs and laughter and wild cries.
* * * * *
The wine ran wastefully, and o'er the ears
Of the tall jars that stood too near the fire,
Bubbled and leapt, and streamed in crimsoning foam,
Hot as the hissing sap of the green logs;—
But none took heed of that nor anything.
Thus song and feast, dance, and wild revelry,
Succeeded; now in turn, now all at once
Mingling tempestuously. In a blind whirl
Around the fire Biastor dragged a rout
In color bands and garlands; Harpax fiercely
The violet scarfs and autumn-tinted robes
From Nymph and Mœnad tore; and, by the hoofs,
Autarces seized a Satyr, with intent,
Despite his writhing freaks and furious face,
To dash him on a gong, but that amidst
The struggling mass Encolyon thrust a pine,
Heavy and black as Charon's ferrying pole,
O'er which they, like a bursting billow, fell.

With regard to these "wood friends," we cannot follow their significant misfortunes. Akinetos, the unmoved, who is in his great shapeless lumbering calm so striking to the imagination as to deserve well of the memory, after an interview with Chronos on the "ribbed sea-sand," perishes worthily, but as poets, alone—or, for aught we know, geologists—can understand—by gradual petrifaction and adhesion to the rock.

The reader will infer from our analysis and extracts, that neither in its intention, nor in its execution, is this an ordinary work; and, indeed, for a work to show unity in its design, and labour in its developement, distinguishes it sufficiently from what is called work in our days, to justify some protraction of critical attention. That it will ever be a popular poem (notwithstanding the announcement which just reaches us of a second edition), is a different question; and it is hard to believe that the very author of it thought sanguinely of a popular reception, even while he was adjusting the eccentricity of a popular price. To thoughtful minds the poem will be welcome for its original cast and elevated cheerful teaching; and by poetical minds it will be received cordially as a poet's gift. If to either it should occur, as it certainly does to ourselves, that the personal in the work trenches too closely on the allegorical, and fades too dimly and coldly away into the mere symbolical; that the action becomes contemplation, the epos a vision, and the reader a riddle-guesser, unstartled (though he began with hunting in Chios) by meeting Father Time upon the sands; the answer to the objection lies, we suppose, in the fact that the author has written no epic, but a *spiritual* epic; and in the illustration, that such as seek for warmth and colour, or anything besides a grand design and outline, will not go for satisfaction to the new Cartoons in Westminster Hall. A gift horse is not to be looked too narrowly in the mouth, far less a horse of the divine breed of Pegasus—far less when we hope for other fountains to be struck forth into silver beneath his hoof; and when we ourselves, with all our self-respect, are unconscious of miraculous Borrow-skill in the breathing of our critical whispers. Enough, that Mr. Horne has obliged us to believe in his power where we least believe in his epic; and that we recommend his poem to the public, pointing significantly to the fate of Akinetos, the great *unmoved*, which adorns it.

The Harmony of Form. By D. R. Hay.
(Second Notice.)

We thank God for having placed in the human breast a soul full of beautiful thoughts and high conceptions, longing for and loving all that the works of God contain of the pure and the lovely, delighting in all the high creations of minds most noble in its own sphere, and continually striving to form, out of the innate beauties of its own high nature, that ideal of the absolute perfect, the want of which is the strongest mark of present imperfection, and the desire after it the sure pledge of an immortal destiny. It is this yearning of the heart after that ideal being, that all loveable, all beautiful, all perfect being, which most surely preaches the divine origin of the soul, and most unerringly leads us up to Him, the most beautiful and best, the origin and end of all beauty and of all love.

They are, indeed, the diviner and nobler elements of human character, which are developed in the enjoyment of whatever is most beautiful in Nature, and in Art most perfect. The Works of an artist embody his character, his ideas, his powers, the attributes of his mind; and it is by the sympathies of a common nature that we enjoy and interpret his works. By the power of the divine artist, unconscious matter is clothed with proportions, forms, and beauties which reflect his wisdom and love: we see in them that to which our own nature responds, something which we also esteem to be good and beautiful; and we apply to them those faculties, and recognize in them those principles which are common to our own and the divine mind.

This is the theory of Beauty in Nature and in Art, both in the highest ancient schools of æsthetics, and in the best modern philosophy. Beauty in Nature is a manifestation of the high attributes of the divine mind in the forms, proportions, arrangements of the material world. "Before then the heavens were arranged in order there existed form and matter, and God the *bild-werker* of The Better—and since that which is invented is better than what is *without design*—God being good, and seeing that matter was *without Form*, and *confusedly fluctuating*, and *without Method*, he vehemently longed to *reduce it to Order*, and out of undefined chaos establish it in *fixed proportions*, so that the *resemblances and distinctions* of different bodies might be produced." A passage which expresses the whole theory of the beautiful in nature. To "want design" or plan, to be "without method," to be "confusedly fluctuating," are precisely the errors which stigmatize an inferior production of art.... to exhibit "method," "order," "definite proportions," "resemblances and distinctions" of parts, are high attributes of a classic composition. And again, elsewhere, Plato.... *θέμις δὲ οὔτ' ἦν οὔτ' ἔστι τῷ ἀρίστῳ δρᾷν ἄλλο πλὴν τὸ κάλλιστον*.... and elsewhere, *νομίσας μυρίῳ κάλλιον ὅμοιον ἀνομοίου*.... and again, *τὸ πᾶν ξυνετεκταίνετο ὅπως ὅτι κάλλιστον εἴη κατὰ φύσιν ἄριστόν τε ἔργον ἀπειργασμένος*. The beauty of nature he thus accounts for:—"There was no reason, nor could be any, why the *best of beings* should produce aught but *the most beautiful*." He continues,—"that, reckoning manifold more beautiful the *symmetrical* than the *unsymmetrical*".... "he constructed everything so as to unite the *most beautiful* with the *best*." Thus did the philosophers of Greece, in her most glorious period of art, reason concerning the nature and origin of beauty.

Be it observed, then, that these were the opinions which then occupied the minds of the great and good men who reared at once the Temple of Science and the Temple of Art with the truth and beauty of high souls since unsurpassed and unsurpassable. In the soundness of their generalizations and the justness of their principles of art worthy all imitation. In their temples we see how they wrought, in their books we see how they reasoned. Let us examine a little further their principles of criticism in Art,—their theory of the beautiful.

Beauty in Nature (argued the Platonists) is the manifestation of the one great and good mind of the great form-worker of the Universe. No reasons can possibly be assigned why this one great, one good mind should make anything otherwise than good, and the best possible. The manifestation of the goodness and excellence of this supreme mind in the material universe is its beauty, and excellence, and perfection. Let us inquire how a good and great mind, versant about the forms of matter, must necessarily proceed. The operations of such a mind must be guided by certain principles; these principles must be the principles of beauty and perfection.

To discover the laws of material beauty is,

Digitized by Google

therefore, first of all to determine the laws of mind: for the laws of the divine mind we must examine our own. The only type of intellect and goodness we possess is that furnished us by human nature. "God"—says an eminent Christian philosopher—"God is another name for human intelligence raised above all error and imperfection, and extended to all possible truth." —"We discover the impress of God's attributes in the universe (continues the same author) by accordance of nature, and enjoy them through sympathy."—This we conceive to be the true theory of the enjoyment of nature; we see the developement there of a high, and good, and glorious, and loveable mind—of a mind resembling all that is best in our own, refined and purified above all error and imperfection; and in our enjoyment of the works of the Divine Artist, sympathy is a principal element.

We conceive that this reason equally applies to the production of works of art. We admire a work of art in so far as it manifests in the forms and arrangements of matter the ideas and feelings of a good and great mind, and we enjoy them through sympathy. In so far as these are manifested by the works of art, we love and admire them, and no further.

It is then to gratify human nature the artist works—human nature as he finds it developed in his own breast—human nature, it may be, elevated and spiritualized; it may be, sensualized and debased. He speaks to intelligence, virtue, affections, of which his own are the type; he expects from the spectator a response to, an appreciation of, his powers and motives,—in short, he wishes to obtain the approving sympathy of his spectators. A great and good mind in the spectator accords to the high-minded and virtuous artist that intelligent sympathy, appreciation, and approbation which is the highest reward of his art. There are, unhappily, men who cater even in art, for minds of a vulgar or vicious taste, even men whose intellectual powers gave them capabilities of achieving greater ends; to them we attribute a low standard of virtue—they fail in the end of achieving the sympathy of great and good minds; others fail of a good end by poverty of idea, feebleness of intellect, meagreness of conception, or imbecility in execution: these also fail of the approving sympathy of the accomplished spectator. Sympathy is, therefore, a condition of the enjoyment of beauty; it is the law which connects the artist with the spectator. Thus does the companionship of the arts demand, on both sides, the existence of similar good principles and high parts, as the condition of that sympathy which is so powerful an element in the gratification of both.

The Platonists tell us what some of the conditions of matter are which are not good, which are not beautiful, which do not manifest the working of mind, and out of which has come the beautiful of universal nature. To want definite and intelligible figure—to fluctuate confusedly—to manifest no design, intention, or proportion—to be without method—to have no resemblances or relations of one to another—to be in this condition, was a state of being which excited the vehement longing of the great and good God, and out of which He brought the design of the universe, endued with definite and intelligible form; manifesting design, method, definite proportion, symmetry. So also Moses. The heavens and the earth were without form, and void, and in darkness of chaos, and they were afterwards bounded, defined, proportioned, symmetrized, made all very good. Intelligible form, defined, proportioned, manifesting method, order, symmetry, purpose, is beautiful and accomplished in the highest degree—is the best and most beautiful.

Let us begin with the most elementary conceptions of form, and the relations of which these are capable.

Form consists in the assemblage of separate parts of matter into one whole. This assemblage is the first condition of order. The relation between a whole and its parts, is the first great conception of the intellect versant about matter: it is essential to our conception of form. Let us call it *the law of Unity*. To the construction of any work of art, the first condition is that it possess unity, and manifest in all its parts a definite relation to a whole. Let, then, there be a mass before us of unformed matter; let it be the clay of the sculptor, or the stone of the architect (or "the clay in the hand of the potter"); its parts must all assume some intelligible relation to some unit or whole, as a necessary condition of beauty, or the manifestation of mind. That the figure be a triangle, a globe, a pyramid, that its parts assume such relations as to belong to one intelligible whole, is to conform to the first great law of beauty, unity—the subordination of all the parts to the completeness of the whole.

The second element of beauty, after the relation of the parts to the whole, is—let us call it the *law of Symmetry*—the relation of these parts to each other. That individual parts may belong to the same whole, they must have a definite proportion to each other: they must be homogeneous, or by some relation homologated to each other in the relation of parts of that whole. Now, if the whole be made up of parts, we may have regard to the number of those parts, or their nature. The composite (or whole) may consist of parts which are identical each with the other; that is to say, each may form the precise half of the whole; and this identity of parts constitutes the closest degree of relationship—the nearest bond of connexion. Hence beautiful objects in nature and art are composed of identical halves—the human body, the human face, a Greek temple, a Gothic church, being compositions of two identical halves around a given mesial line or axis. This is the first degree of symmetry or proportion—the most perfect and intimate and simple of relations. Let us call it the binary proportion or relation—the *symmetry of the first degree*—the first great relation of proportion.

But we may add to this closest relation of identity of two halves with each other, another relation essentially distinct from, although of the same genus with the former. From the binary composition, the mind passes forward to a ternary composition. A ternary symmetry is also a conceivable idea: a whole composition, or figure, may be such as to arise out of the perfect unison of three identical and equal parts, and these may be united in a whole as perfectly as the two identical halves. A proportion of three to one is thus recognized as a condition of symmetry; and compositions of three figures, or parts, or elements, each identical with each, is a relation of recognized and universal beauty. Let us call it *symmetry of the second degree*, or the ternary proportion or relation.

Thus flow directly and necessarily from the great laws of unity of composition, the proportions of one, two, and three—the symmetry of parts in the first and second degrees; and hence we see that the elementary numbers are necessarily introduced as elements of beauty in form.

But these parts, besides resemblance of form, must be connected with each other, either in fact or in idea, in order to conspire and form a unit; that is, they must be united to form a whole. Three things, or forms, may be perfectly identical, and yet not form a whole. To unite them some bond of union is necessary, some cement, some manifest relation, not only of each to each, but of each to each and to the whole. Three identical circles, three identical balls, three identical lines, three identical figures, form not necessarily a whole, a composition, a group. There is necessary a bond of union. To be beautiful, this bond must exist and be manifest. The same bond which unites one part to the whole, must unite each and every part to the whole. Let us call the identification of each part with the other and the whole, *the law of Continuity*.

Unity, Symmetry, Continuity, are the three ruling principles of composition in design—the great relations of form; the perfect manifestations of which are at least essential conditions of beauty. They are necessary elements of the human mind in regarding the forms of matter.

To show that the minds of all great artists have compelled their obedience to these great laws of human nature, would not be difficult. That these principles are implicitly or explicitly recognized by the founders of the Greek schools of beauty and the Greek schools of philosophy, it would not be difficult to prove. It is more to our present purpose that they are recognized in existing art.

Does not the reader at once see that we have exposed the true foundation of the celebrated aphorism of Michael Angelo, that the artist should always make his compositions "pyramidal, serpent-like, and multiplied by one, two, three"? "In which precept," says his pupil, Marcus de Sciena, "(in mine opinion) the whole mystery of the art consisteth." To which opinion have subscribed in their works all the great masters of composition. Who does not see that the word "pyramidal" expresses our condition, unity—the "one, two, three" our second condition, symmetry—and the word "serpent-like" is an emblem of that union of parts with the whole, by which they incorporate as indissoluble parts of the same whole by our third great law of continuity. Witness the connecting lines of the three figures of the Laocoon and the Graces:—(1.) A complete whole—(2.) Each part perfect in itself—(3.) Each necessary to, and indissolubly bound up with the perfection of the whole.

Such are the great principles of proportion and relation which are necessary conditions of beauty. Without carrying out, at present, the further developement of this subject, we turn to the treatise of Mr. Hay on Harmony of Form.

To the expression "harmony of form," and the laws it is designed to indicate, we have no objection, provided the word harmony be used only in a metaphorical sense, and provided there be no further use made of the analogy of sound than as a suggestive or illustrative analogy. If, for example, it be said, that harmony of form resembles harmony of sound, in this respect, that even as there are certain sounds which alone are agreeable, when sounded simultaneously, so there are certain forms, the combination of which with each other is more agreeable than that of certain others; then we admit the analogy as an illustrative analogy, and as such it holds good. Or further, if it be employed as illustrative, thus, that there are certain forms which agree when combined simultaneously, and others, which disagreeing simultaneously, are yet agreeable when regarded successively; that is, though they do not unite, yet do agreeably relieve each other; just in the same way as the notes which, sounded simultaneously, form unpleasant discord, and yet form a pleasing or melodious variety in succession; if, in this way, we use the words harmony and melody of sound, to illustrate varieties of agreeability in forms, then we do not much object to the term. It is often so used, and when we have no fit words in one region of ideas, we are compelled to transplant

Digitized by Google

those of another congenial region into a new soil, where they soon become modified and naturalized. But Mr. Hay proposes more than this by his harmony, and, therefore, at this point we stop short.

"The same numerical proportions which regulate the physical phenomena of sound (says Mr. Hay) regulate the relations of forms, and if a musical third or fifth have a given proportion, any figure having this proportion must, therefore, be beautiful."

That there is such a thing as a harmony of forms, that is, that the elements of certain forms may be associated in such wise as to be more or less agreeable, no one can doubt—to this agreeability the word harmony may be very appropriately applied, especially for this reason, that the Greek word *harmonia* originally meant symmetry, and was only metaphorically applied by the Greeks to sounds, while, in our own language, it has been applied primarily to sounds, and metaphorically only to colours and to forms. Hazlitt says, in one of his Essays, "There is a harmony of colours and a harmony of sounds unquestionably; and an original harmony of forms as the principle of beauty and source of pleasure"—most unquestionably there is. We adopt the phrase "harmony of form" with pleasure. Again, speaking of the beauty of the Antique Statues, the same critic says, that their beauty "may be found to resolve itself into a certain symmetry of form, answering, in a great measure, to harmony of colouring, or of musical sounds." So far Hazlitt and Hay are agreed, and we with them, and with most enlightened critics.

But now Mr. Hay must speak for himself. "There are, says he, as in sound, so in form, only three simple primitive homogeneous parts—(in sound the elements of the common chord, and in form as corresponding to them) the circle, triangle and square"—thus

DO	MI	SOL	do
Circle	Triangle	Square	circle

Now we have seen that the numerical relations of the common chord are

DO	MI	SOL	do
4	5	6	8

And Mr. Hay continues, "these figures—a circle, its inscribed equilateral triangle, the square of its radius, and a circle of half the diameter of the first, are quantitatively and in every way in the numerical proportions of these chords." Now we do not at all see this: if we consider the *areas* of these three figures, they are as the numbers

Circle	Triangle	Square	circle
0.7854	0.3247	0.2500	0.19635

These areas are only approximate, the areas of the circle and square of the radius being well-known to be incommensurable or inexpressible by finite number.

If next we take the *perimeters* of the figures, they are as the numbers

Circle	Triangle	Square	circle
3.1416	2.598	2.000	1.5708

still incommensurable with each other, and still *not* the relations of the harmonic sounds.

Finally, if we take the number of the sides we have the triangle represented by 3 instead of 5, as in sound, and the square by 4, instead of by 3, as in sound.

Finally, if we take Mr. Hay's own favourite system of genesis, by chords of a circle, dividing the circumference of the circle into twelve equal parts, the side of the equilateral triangle is the chord of an arch of 4 such units, not of 5, as harmony requires, and the inscribed square has its side the chord of 2 such parts, not of 3, as the dominant requires, so that this would give us

Circle	Triangle	Square	circle
12	4	2	6

In no way, therefore, do the circle, triangle, and square correspond to the elements of proportion of the common chord in music in their numerical or physical relations.

Yet, are not the circle, equilateral triangle, and square, elements of beauty? doubtless—and all the figures of Mr. Hay are beautiful intrinsically. The principles of his own good taste have kept him right in spite of his theory, and his elements of beauty are all beautiful. Thus far his treatise will instruct and can mislead no one.

We now proceed to show that the principles we have previously developed as the Greek doctrines of beauty and proportion, give us precisely Mr. Hay's elements, along with many others which his system excludes. They are given in the Timæus of Plato. And the fact that Mr. Hay, by an independent process of his own mind, versant about proportion and beauty, has arrived exactly at some of the identical proportions of the Platonic theory, as we understand and apply it, is to be reckoned as an important physical phenomenon, demonstrating the inherence of certain fixed and essential principles of proportion and beauty in the human soul.

Mr. Hay's harmonious forms are the following:—A circle of a given diameter; an inscribed equilateral triangle; a square described on the radius; a rectangle whose halves are halves of the equilateral triangle; a lozenge whose halves are equilateral triangles; an ellipse, inscribed in the harmonious rectangle, a regular hexagon.

We should waste words to prove the beauty of the circle; all writers consider that axiomatic; unity, continuity, and symmetry exist there in absolute perfection.

The whole of the rest of Mr. Hay's figures are most beautiful. But this beauty is all reducible to the Platonic elements. The two symmetrical triangles of Plato are, 1, that triangle which is half of the square, and, 2, that which is half of the equilateral triangle: let us examine their elements.

The first Platonic triangle, considered in relation, both to the proportion of its sides and the proportion of its angles 18—this elementary figure is to be found composing all most beautiful combinations. Its angles are thus related: that each angle is either equal to any other, or half of it, or double of it. Each angle is the eighth part, or the fourth part, of the whole angular space around a point; and as regards the sides, there are two sides equal, and in reference to the third side, they are such, that the square of each is represented by half the square of the third. All the elements of this figure have a necessary relation to the number two.

The second Platonic triangle: the first exemplifies the relations of the number two, and the second Platonic triangle adds to these the properties of the number three. Calling the least angle one, the magnitude of the next is two, and of the next three. Also, these angles are such, that in angular compositions this triangle may be combined with itself, round a given point, in groups of four, or eight, or of twelve. In its sides the triangle has the proportions of one, of two, and of the mean proportional between one and three.

If then we try these triangles by the canon of criticism of Michael Angelo, we find them bearing, in the highest possible degree, the combinations of his numbers, one, two, and three.

Now then, Mr. Hay's Do is the circle, his Re is the parallelogram, which is composed of a pair of triangles of the *second* species of Plato, his Mi also consists of a pair of the same, with this largest side outermost; his Fa is a group of four of these triangles; his Sol is a pair of the first species of Plato; his La is an ellipse, whose axes are in the proportion of two of the sides of the second species of triangle, and his Si is a group of twelve of these triangles ranged round a point.

All Mr. Hay's proportions are, therefore, good. They exist in the best specimens of perfect architecture; they are necessary elements in judicious decoration. They give rise to symmetry and simple numerical proportions in angular compositions. They pervade the works of the Greek artists; but they are the identical principles taught by the philosophers, who gave wisdom to the times of Pericles and Phidias. We might go on to show, that the properties resulting from their combinations are manifold and beautiful. But, for the present, our readers have had enough; and we conclude by recommending the study of harmony of form, not as a deduction from the phenomenon of sound, but as a doctrine resting on the innate principles of the human soul, and necessary to the developement of forms, beautiful in the perfections of unity, symmetry, and continuity.

Tales of the Colonies, or the Adventures of an Emigrant. Edited by a late Colonial Magistrate. 3 vols. Saunders & Otley.

THIS is *a book*, as distinguished from one of the bundles of waste paper in three divisions, calling themselves "novels." We suspect, however, that some portions of it have already appeared in print. Be this as it may, it is alike full of adventure for the fireside—and alas! we may talk of our firesides in a summer which set in, as Horace Walpole described it, "with its usual severity,"—and of information for the man worn down with the burdens of the old country, who longs for some retreat where tax-gatherers can no longer trouble, and where it is not necessary for Five Hundred a-year to ape the "purple and fine linen" of Five Thousand! The manner, too, is as good as the matter. The opening scenes of 'Jonathan Jefferson Whitlaw' are not more graphic than one we shall presently exhibit—the delightful prosing of 'Sir Edward Seaward's Diary' not more agreeably minute than our Emigrant's details of disaster, and the gradual growth of his prosperity. The first pages of the first volume are the only dreary ones. They tell of difficulties in England in 1816, at the end of the long war, of means daily lessening, and that discouraging sight, a rising family, without hope of provision, or means for education. Then come the rumours of a new Canaan—and the inevitable struggle undergone, ere old ties can be utterly severed, and old habits shaken off, for the ruder modes of occupation and endurance, which distinguish life in the wilderness. The voyage, too, is wearisome. But we are at last at Hobart Town, which was then (in February 1817) but an infant capital: while land up the country was to be had for the asking,—and the choosing. The aspect of scenery and society was wild enough, it is true. Every inhabitant of Hobart Town kept a kangaroo dog, and there was "a barking and tearing" all night, anything but consolatory to the sea-wearied nerves of anxious folk from the old country. Then the gangs of yellow-jacketed convicts were not a sight calculated to inspire confidence—especially when it was recollected how largely it was necessary for the settler to depend on the convict class for his domestic servants. But our Emigrant was too stout-hearted to be daunted. So he started at once alone and in search of land. By good luck, no later than noon on the first day, he fell in with one of those inveterate grumblers, who are for ever talking difficulties, but never making any. This worthy, yclept Crab, was ostensibly on his way to leave a country where, betwixt bushrangers and savages, queer soil and queer weather, an English settler could neither hope for such neighbourhood nor crops as he had at home. In secret, however, Crab was very glad to stumble upon Thornley, our journalist: and the two became fast friends—the latter picking hope out of the complaints of the former. Yet that the former were not wholly visionary, the first evening's proceedings gave abundant proofs. We recommend that the following extract

Digitized by Google

should be circulated widely among such of our milk-maids as are discontented with their lot:—

"We strolled on leisurely through the bush, and were within a short distance of New Norfolk, when our ears were suddenly assailed by a confusion of sounds that startled the quiet wilderness, and made us wonder what outbreak or disorder could occasion such a furious outcry; presently we descried a horseman riding with all his might through the trees beside us, now jumping over fallen timber, then ducking his head to avoid the branches of trees, but in spite of the dangers which he seemed ever to avoid by some special miracle, still keeping at the top of his speed, and urging on his horse, which seemed to be as much excited as the rider. Presently the cracking, it seemed, of innumerable whips, making sharp reports like small fire-arms, was heard around, and a straggling multitude began to encircle us. * * My kangaroo-skin friend seemed to regard with a sort of scornful glee the hurly-burly around us. * * 'Now,' said he, 'master, you'll see how they manage some matters in this beautiful country.' 'What *can* the matter be?' said I. As I pronounced these words, a sudden crash of dead boughs and dry bushes, at no great distance from us, excited in me apprehension of danger. Instinctively I turned to the quarter whence the threatening sounds proceeded, and stood ready with my fowling-piece against accidents. I saw my friend Crab give a grim smile at this movement, as I was inclined to do myself, had I not been, I must confess, rather frightened; for at this moment I beheld a mad bull, as it seemed to me, making right to the spot where we stood. The animal appeared to be in a state of the most intense excitement, with its mouth covered with foam, its nostrils dilated, eyes wild, and its tail twisted into that corkscrew figure indicative of a disposition to mischief. I jumped aside as the creature made a plunge at me, glad enough to escape. 'It's a mad cow,' said I. 'I suppose this climate makes cattle very savage when they get worried?' 'Not madder than the people that are after her,' said Crab; 'however, wait a bit till you see the end of it.' By this time we were in the midst of the crowd which was chasing the cow, but I could not yet divine their particular object. 'What do you want to do with her?' said I to a tall thin man, who had ceased for a moment to crack his whip; 'she seems terribly wild.' 'Wild!' said he, 'the brute is always wild, but she's one of the best milkers I've got, and have her in the stock-yard I will this blessed evening, if I raise all New Norfolk for it.' 'I shall be glad to lend a hand,' said I, 'but I'm not used to the ways of the country yet, and perhaps I might do harm instead of good.' But my aid was not wanted on this occasion, for at this moment a general shout in the distance proclaimed that the victory was won."

But the best was to come, when the scene of triumph was reached:—

"There were about thirty people assembled, among whom were one or two women. I observed that some of the men were provided with ropes made of bullock's hide twisted together, of great strength. I was still puzzled to know what was intended by all these preparations. Presently a farming man appeared, with a tin pannikin of a half-pint measure, and a stool with one leg. The stool with one leg looked like a design to milk the animal, but what the tin pannikin was for was a mystery to me. Had there been a milk-pail, I should have made out their object at once; but this piece of machinery was as yet but little known in the colony. I continued to watch the proceedings with great interest, when presently a man advanced with a stoutish long stick, or a small pole, with a hide-rope forming a large loop at the end of it; the other part of the rope he held in one hand in a coil. Climbing over the rails of the stock-yard, which were formed of the solid trunks of trees placed lengthways, about six feet high, he stood within the space. The cow eyed him as if she was used to the game, and without waiting to be attacked, made a dart at him ferociously. This did not disconcert the man with the pole and loop, who, stepping aside with the most perfect coolness, and with infinite agility, let the animal knock her head against the rails, which she did with a force that made the massive pile tremble. This process was repeated several times, to the great amusement of the spectators, some of whom applauded the pole-bearer's nimbleness, while others were inclined to back the cow. 'That was a near go,' said one, as the beast made a sudden plunge at her tormenter, tearing off, with her horn, a portion of his jacket; 'she'll pin you presently, Jem.' 'Never fear,' said Jem, 'a miss is as good as a mile. She *is* the most cantankerous varmint I ever seed: but I'll have her yet.' 'What are you going to do,' said I, 'kill her?' 'Kill her!' exclaimed my tall friend; 'what! kill the best, the nicest, and sweetest-tempered creature of the whole herd; she's so tame, she'll almost let you pat her, only she doesn't like to be milked; that always put's her out. Now for it, Jemmy, that's the way; haul in quick, keep it up—don't slack—hold her tight; now we've got her. Where's the foot-rope?' Watching his opportunity, the man with the pole had succeeded in throwing the loop over the animal's horns, and two or three men on the outside of the yard, quickly gathering the end of it, hauled it taut, as seamen do a cable in getting up the anchor, round the thick stump of a tree."

All this while Crab looked on, with a visage severe enough to threaten buttermilk:—

"The cow, however, was not milked yet; to arrive at that conclusion, some further steps were necessary. The animal was now standing with its legs firmly planted before it, its neck elongated, its tongue hanging out of its mouth, and kicking with its hind legs continuously. These refractory members were now secured by a loop, into which they were dexterously insinuated, and half a dozen men catching up the end, hauled it out, and kept it on the stretch, to prevent her from plunging about. The creature, it seems, was now in a correct posture to be milked. Crab gave me another look. The man with the one-legged stool and pannikin now advanced, speaking soothingly to the animal to be operated on, and using much ceremony and caution on his approach. Seizing a favourable opportunity, he contrived to squeeze a few drops of milk into his pannikin; but the sensitive cow, outraged, it seemed, at this indignity on her person, gave a sudden plunge, which upset the heel-rope holders, and, recovering her legs, she kicked man, stool, and pannikin over and over. Shouts of laughter proclaimed the amusement of the bystanders, and numerous were the gibes and jeers lavished on the occasion. And now, the pride of the stockmen being roused, and their honour being piqued by the presence, besides, of two strangers, the witnesses of their manœuvres, they set-to again to manacle the almost spent animal; and he of the pannikin, discarding the stool as a womanly encumbrance, boldly kneeling down, with the determination of a hero, and undaunted by the moanings and writhings of his victim, contrived to exude from her about half a pint of milk. This triumph achieved, the cow was set at liberty, the poles of the gateway were withdrawn, and the animal bounded into the bush."

The distractions of this occupation did not make the men of New Norfolk forget their hospitality. In fact, houses of "entertainment for man and horse," were then as rare as at Squampash Flats. There is, however, a compensating charm in the following picture of the farm-house into which Thornley and Crab were bidden for supper and lodging:—

"I cannot easily describe the feelings of interest and curiosity with which I approached the place. I regarded it as a mirror into which I was about to look for the reflection of the condition which in a little time I was myself to assume. * * I beheld before me a low building, which I afterwards ascertained was built of the logs of the stringy-bark tree, split in half, and set on end. The building was about thirty feet long, and whitewashed. Its roof was composed of shingles; that is, of slips of wood about nine inches long, four inches broad, and a quarter of an inch thick. These shingles had acquired a bluish cast, from exposure to the atmosphere, and had a slatish appearance. At one end of the house was a rough-looking piece of stone-work, formed of irregular pieces of stone procured near the spot, and forming the end wall and chimney. At the back of the building was a tolerably large stack of wheat, enclosed with trunks of trees, forming an occasional small stock-yard. At one side was a garden, paled in with palings of the stringy-bark tree split into irregular rough boards or pales. I could see in this garden the aspect of the most luxuriant vegetation. In front of the house a small tree was left standing, from one of the boughs of which was suspended a sheep newly killed. At the sight of our approach, it seems, an attack was instantly made on the carcase, as a man was busily employed in cutting it up. At the same time, a sun-burnt, but very pretty face became visible at the door of the house, and instantly disappearing, a hissing sound was immediately heard within, proclaiming that some culinary preparation was put in progress. At a little distance was heard the bleating of a small flock of sheep, for evening was now set in; and from another quarter a team of bullocks, urged on by a strange-looking driver, with an immense cracking of his whip, and a prodigious deal of expostulation, slowly drew near with a huge load of wood for fuel. We were in the act of entering the house, when our passage was impeded by a tiny swarm of little children, the eldest about seven—the youngest of the six being held up by the eldest to greet its father. Each was provided with a thick lump of 'damper,' which had been served out to amuse them until the more substantial repast should be prepared. The clothing of these urchins was of the lightest possible description consistent with decency, and mocassins seemed to be the prevailing fashion. They were clean, however, and cheerful, but inclined to have a lanky appearance, like little weeds running to seed. This, I ascertained afterwards, was the general appearance of the children born in the colony. * * We entered the habitation, which consisted of one spacious apartment, opening into the air. At the end opposite the chimney a space was divided off into two small bedrooms. Opposite to the entrance of the house a door led to a skillion, which served for a kitchen; and it was from that spot that the hissing sounds, now become more violent, proceeded. In the middle of the principal apartment was a rough table of boards, on which were disposed sundry tin pannikins, a few plates, with some odd knives and forks. A gigantic green bottle, containing rum, graced one corner of the table, and in the centre was set, as a place of honour, the pannikin of milk which had been obtained by the united efforts of the establishments within reach. And now the hostess emerged from the back recess, bearing in her hands an enormous dish of mutton-chops, which was quickly followed by another dish, in which appeared a sort of doughy cake. 'I thought,' said the lady of the house, 'you would like a cake in the pan better than a damper, so here it is. Edward, help the gentlemen; they have had a long walk, and must be hungry.' This hospitable intimation was responded to by her husband, who forthwith thrust out of the large dish three or four of the chops into a plate, and handed them to me. 'Help yourself,' said he to my companion; 'you're used to the ways of the place. Where's the salt? No mustard?'—'The mustard's out; we must have some from camp. And the salt! Well, that is unlucky. I declare there's not an atom left. Well, you must do without it, or we can send to Conolly's farm, not three miles off. I know they've got salt there, for they were to salt down a bullock to-day.'—'Don't trouble yourself,' said Crab; 'I've got some salt in my pocket—in this kangaroo jacket, which the bushrangers gave me for mine. I dare say they've missed the salt before now, confound them.' With this he inserted his fingers into a recess of his hairy garment, and produced a small quantity of a blackish and gritty substance.—'Ah!' said our hostess, 'that's come from Saltpan Plains. Well, any is better than none. And so, friend, the bushrangers have had hold of you; did they treat you ill?'"

Of course the dearly-procured milk was too slender in quantity to go round at supper: so the farmer washedd own the coarse and plenteous meal with rum, while the children were treated with tea. For spare beds, a heap of crackling kangaroo skins were rummaged up; but happy those who were then allowed to sleep out the night in the wilderness. Having bedded up the party, we will leave them for the present, with the chance of narrating, hereafter, how they awoke in the morning.

Reports of Special Assistant Poor Law Commissioners on the Employment of Women and Children in Agriculture.

IN December, 1842, four commissioners were appointed to make a special inquiry into the employment of women and children in agriculture. The districts selected and appointed were—to Mr. A. Austin, the counties of Wilts, Dorset, Devon, and Somerset; to Mr. Vaughan, Kent, Surrey, and Sussex; to Mr. S. Denison, Suffolk, Norfolk, and Lincolnshire; and to Sir F. Doyle, Yorkshire and Northumberland. The commission was rapidly carried into effect; indeed, with more rapidity than would seem desirable, only thirty days, inclusive of travelling, being allowed to Mr. Austin to pursue his inquiries in four counties! The principle adopted appears to have been to take a particular district in each county, inquire carefully throughout that district, and hence infer the state of the county. The result arrived at by all the commissioners is much the same. They did not find that the amount of vice differed materially from that existing among the manufacturing population; nor, indeed, was it to be expected, for with the same amount of ignorance, and nearly the same amount of temptation, it may fairly be assumed that effects will be pretty nearly the same. As regards the health of the labourers, those employed in agriculture seem better off than those engaged in lace or button making, or the small manufactories of the district. The most objectionable part of the system, in this respect, is the over-working of young girls, before their frames are sufficiently set or their constitutional strength established. The immorality which prevails to a great extent throughout the agricultural districts seems, at least, as much attributable to the insufficiency of the accommodation of the cottages (where whole families are often compelled to sleep in one room, and where, consequently, even the decencies of society cannot be observed,) as to the fact that men and women are employed together in the fields.

Among the parts of the agricultural system that seem most objectionable, is the truck system, which is found in Devonshire and Somersetshire, where women, and even young children, are obliged to take part of their week's wages in cider. Of course, the result is that children and women are early accustomed to drink to excess; indeed, children from seven to eight years old swallow from a pint to a pint and half of rough strong cider a-day. Another effect of the employment of very young children in agricultural labour, is to deprive them of the advantages they might derive from schools, and, by constant interruptions, to render even the time they spend there ineffectual. In Northumberland, as in the southern counties of Scotland, a system of bondage exists, which, as it may be unknown to many of our readers, we shall explain in the words of Sir F. H. Doyle:—

"In the absence of villages (which are rare), to supply occasional assistance, each farm must depend upon its own resources; a necessity is thus created for having a disposable force of boys and women always at command, which is effected in the following manner:—Each farm is provided with an adequate number of cottages having gardens, and every man who is engaged by the year has one of these cottages: his family commonly find employment more or less; but one female labourer he is bound to have always in readiness, to answer the master's call, and to work at stipulated wages: to this engagement the name of bondage is given, and such female labourers are called bondagers, or women who work the bondage. Of course, where the hind (as such yearly labourer is called) has no daughter or sister competent to fulfil for him this part of his engagement, he has to hire a woman servant; and this, in some senses of the word, may be a hardship to him; but, in the first place, this is not very common; and, in the second, the advantages of the system, even with this drawback, are unquestionable. This system, as a whole, is as follows:—Each man, instead of working for weekly wages, is hired for a year. He is, as I have already said, provided with a cottage and small garden upon the farm, for himself and family, several of whom, in many cases, are engaged for the year, as well as himself. The wages of the hind are paid chiefly in kind; those of his sons, &c., either in money, or partly in money and partly in kind: the conditions of this engagement vary slightly in different parts of the county, but a woman to be found by the hind as bondager is universally one of them."

On the merits of this system there is much difference of opinion. Sir F. Doyle approves of it, and brings forward some fair-sounding arguments in its favour. We are inclined, however, on the whole, to think that this, and every other system which impedes the free movements of the labourer, is an evil; and, after all, a defence of the bond system is no defence of the payment "in kind" system, which is not essentially different from the truck system. The bond system, however, is not confined to Northumberland and Scotland, or to agricultural labourers; the system of lending money which can never be repaid, which is not uncommon in some of our manufacturing districts, converts the labourer, to all intents and purposes, into a bondman. To those who take an interest in the state of our working classes, these Reports will be acceptable, though they bear manifest evidence of a hurried and insufficient inquiry; and how could it be otherwise, when, as we have stated, only thirty days were allowed, travelling included, for researches to be carried on in four counties?

OUR LIBRARY TABLE.

Marmaduke Wyvil; or, the Maid's Revenge, an Historical Romance, by Henry W. Herbert, Esq., author of 'Oliver Cromwell,' 3 vols.—Our recorded commendation of 'Oliver Cromwell' has been trumpeted far and wide, through the medium of the press: it gives us great pleasure, therefore, to find that the author has produced, in his second effort, a still better work. Faults there are, no doubt: he is too fond of the *minutiæ* of scenery and of costume; and thus elaborates some of his figures till they have the stiff air of old Flemish portraits. So, also, *tirades* which do not belong to Nature have crept into his scenes of passion. The sweet, the simple, the generous Alice Selby, however stirred by her own conscious virtue, however hard pressed by wrong, would not have expatiated at the length which she is made to do in some of the most trying passages of her career. But these are merely specks on a very brightly-coloured and animated work of art. We especially thank the author for sparing us any historical detail, in a tale of the times of the Commonwealth. He opens his story, spiritedly, with the incident of a Malignant received and concealed in an old English hall, by a second Sir Henry Lee and his daughter. This is described with all the minuteness of Cooper, and is the best third of the novel. But how are men to forgive the disgrace thrown on their sex by the mean ingratitude of the hero, Marmaduke Wyvil? Sheltered, befriended, and saved, as he has been, the return he makes is to engage the affections of the delicate and beautiful maiden of the Manor, and to involve the fortunes of herself and father to an extent making exile necessary to them. Further we will not go in disclosing the incidents of the tale. Henry Chaloner, however, the antidote and avenger of this baseness, brings a redeeming light into the picture; while, on the other hand, the feminine grace of Alice Selby is charmingly relieved by the daring and the courage of Isabella Oswald. The charm of contrast, too, is further wrought out by the introduction of old Paris, and the soldiers of Turenne, to relieve the rich and tranquil pictures of English scenery, and to alternate with the sober-clad figures of the Protector's Ironsides. We say, further, in recommendation of this interesting romance, that it is as carefully finished as it is forcibly conceived.

Arts, Antiquities, and Chronology of Ancient Egypt, by G. H. Wathen, Architect.—Mr. Wathen has added no positive information to the accounts of Egyptian Arts and Antiquities published by Sir Gardiner Wilkinson, Rossellini, &c. The great novelty of his work is a chronological theory, by which the erection of the Pyramids may be fixed at a date sufficiently recent to allow of the expense of their construction being defrayed by the spoils of the Temple of Jerusalem, which was plundered by Shishak, in the reign of Rehoboam. This conjecture has not even the merit of plausibility, and may therefore be dismissed without further examination.

Some Account of Cretinism, by W. Twining, M.D.—The dreadful disease called Cretinism, which, at least since the times of Juvenal, has continued to afflict the inhabitants of the Alpine valleys, has been, we believe, generally regarded as incurable, while its origin has remained equally unknown. One theory attributes it to the use of snow-water, while another regards it as the result of the stagnant condition of the air in these valleys. To both views there are objections, but the latter seems the more probable. The pamphlet before us gives an account of Cretinism in its several forms, from the simple *goître*, or swelling of the throat, to its perfect developement in swollen head, tongue, and throat, frequently of new-born infants, accompanied commonly by absolute idiotcy. There is no country in Europe in which Cretinism is so prevalent as Switzerland. It was calculated that in 1812 there were no less than 3,000 sufferers in the Canton of the Valais alone; 1,350 in Berne; and in Argau 28 villages, where Cretinism was endemic. Dr. Twining advocates the claims of an Institution on the Abendberg, near Interlachen, established for the cure of those unfortunate persons, who, under the influence of this disease, resemble brutes rather than human beings. It is conducted by a Swiss physician, Dr. Guggenbühl, who has devoted himself to the cause of those miserable creatures with a zeal beyond praise, and who is said to have obtained some successful results when very young persons have been placed under his care. This institution it is wished to extend; and Dr. Twining has undertaken to advocate its claims in England, which he does in the pamphlet before us.

Letters written during a Journey to Switzerland in the Autumn of 1841, by Mrs. Ashton Yates. 2 vols.—The fulfilment of the author's promise to transmit, for the amusement of her younger children, an account of the various places she should visit during her journey, was the foundation of these unpretending volumes. The letters pleasantly describe the sights she saw, the historical recollections they elicited, and the morals to be drawn from them; and are likely, we think, to interest young people. Mrs. Yates fell in, at Lucerne, with one of the Swiss Guards—one of the few (fourteen only) who escaped the massacre at the attack on the Tuileries in 1792. He was, however, too stout to be sentimental; and "his sombre recollections did not seem to fling their long shadows over his declining years." On the lake of Brienz she met a person of some note, through his relationship to Sir W. Scott. We will let the authoress tell the tale:—"Shortly after we got on board the packet which took us up on the Lake of Brienz, heavy rain coming on, we went down to the cabin. The captain, a very fine-looking young man, spoke German so fluently that I took him for a Swiss. On hearing us talking English, he accosted me in that language, and after a little conversation he said, 'It is most surprising that the English should come in such numbers to this country, when the scenery in Scotland is so much more beautiful.' After this speech, I had no difficulty in knowing that the gentleman came from north of the Tweed. He continued, 'What is there here but lakes, rocks, trees, and mountains? and all these are in far greater perfection in Scotland.' I put in a word as to the grandeur of the mountains covered with snow, to which he said impatiently, 'They are not to be compared to ours, covered with purple heather; *that* exceeds every thing in beauty, and here you don't find it;' which is the fact—it is seen very seldom, and only in the smallest quantities. Perceiving it was in vain to dispute the vast pre-eminence of purple heather over snow-clad mountains and their glaciers, I spoke of the waterfalls of this country: to which he replied, that 'it was plain I had never been in Scotland, or I could not compare the Giesbach and the Reichenbach, nor even the Handig (which is still greater), to the Granich, near Aberdeen, or to the Dunstan, near Glasgow.' I listened without being convinced—however, I respected his nationality, and wishing to change the subject to one equally gratifying to his *amor patriæ* on which we might agree, I asked him if he was not proud of Sir Walter Scott: he answered very coolly, 'He was my uncle.' You may guess my astonishment: he was communicative, and told me that his mother was a daughter of Sir Walter's brother John, who died, after acquiring a considerable fortune, leaving to seven daughters 7000*l.* each; but that by a law process they lost nearly all his property, including several large houses in Dundee, where his mother still resides, a widow of the name of Croll. She had many children. The captain

never remembers having seen his father, who died when he was an infant. He came to England when he was thirteen years old, to learn the business of an engineer, and has been in Russia, Prussia, and Silesia, and only once for a short time in Scotland since his first leaving it; but he knows all that is passing there, for he said his mother writes to him every week, and sends him 'The Perth and Cupar Advertiser.' He has, I suspect, been too much occupied to allow of his having time to read many of his uncle's writings, and of his Life by Mr. Lockhart he knows nothing. On my recommending it as a deeply interesting work, he said he would get it. He could scarcely believe me when I told him a subscription was made some years ago to keep Abbotsford in the family: this circumstance I mentioned merely as a proof of the high estimation in which the late owner had been held by the nation at large. His nephew was quite sure I was mistaken, and that subscriptions were raised for no other purpose whatever than to erect monuments in different places. His conversation convinced me that Sir Walter's character and fame, though touching him so much more nearly, are not half so dear to him as the beauties of Scotland, of which he has known little since childhood. And should he never see them again I will venture to predict, that true as the needle to the Pole, his heart will ever turn to his own, as the first, best country in all the world." With this incident we shall take leave of this little work, which is especially designed for the information of the young, and will, we think, both instruct and entertain them.

Rambles in the Isle of Wight: during the Summers of 1841–2, with Miscellaneous Additions—

Oh! this is the region for all that's inviting,
Green valleys, bright hills—magnificent seas,
Huge cliffs by their beautiful colours exciting
The wonder of sceptics not easy to please;
Here woodbines are wantonly clasping the roses—
Here Science may find the most musical streams—
And, where Inspiration unshackled reposes,
The spirit be wrapt in the sweetest of dreams;
Here, also, are haunts for the fondest of lovers,
The richest of blooms for the wildest of bees,
Nooks fashioned for nightingales, cuckoos, and plovers,
And walks overhung with the greenest of trees!

Dedicated to the Right Honourable Charles Anderson Pelham, Earl of Yarborough, by John Gwilliam.—There can be no need, after transcribing this title-page to review these 'Rambles'—the reader being aware that the Isle of Wight, among its other curiosities, possesses a poet who may pair off with the *Minnesinger* of Toronto, introduced to them by Captain Marryat, or the versifying Victor Hugo of Freyburg Minster, commemorated by Mrs. Bray.

The Notabilities of Wakefield and its Neighbourhood, by J. Cameron.—A tolerably thick octavo, devoted professedly to the apotheosis of seven gentlemen living in or near Wakefield, but really to the thoughts and opinions of Mr. Cameron on every subject under the sun. Mr. Cameron is evidently a German student, and affects that mysticism which is a marking characteristic of all half-thinkers, whether German or English, though few but Germans assume it premeditatedly, and of malice aforethought. His ambitious style, however, halts lamentably, and not unfrequently breaks down altogether; and his constant employment of scriptural language on the most trifling subjects, savours of irreverence. We must leave to the inhabitants of the neighbourhood to decide on Mr. Cameron's selection of his notabilities: we scarcely think the public in general will feel disposed to make him the eighth in his own "Walhalla of Wakefield."

An Efficient Remedy for the Distress of Nations, by J. Gray.—*The Perils of the Nation*.—The first of these works has for its object to show "why so much unmerited poverty exists, and by what means the existence of unmerited poverty at all, in well civilized nations, may speedily be rendered matter of history." It is a resumption of an argument adopted in a previous work of the author's, entitled 'The Social System,' wherein he proposes "the establishment of a rational method of exchanging one thing for another," so that it will be "as easy to sell for money, as it is to buy with money."—The latter work states the grievances under which the lower classes labour, referring them to the accumulation of capital into few hands, and the grasping, illiberal spirit consequent thereon. The remedy proposed is education, religious and moral, and self-reformation among the higher and more influential classes of society—catching sparrows by putting salt on their tails.

Light and Life for the People, by J. C. Symons, Esq.—*Equity without Compromise*, by E. Swaine.—*A Calm Inquiry*, by C. Lloyd.—*The Judgment of Solomon*, by the Rev. C. Girdlestone.—These pamphlets all refer to the late engrossing subject—the educational clauses in the Factory Bill. All the writers are strenuous advocates for education, general, systematic education—what a change has come over the public mind, in reference to this subject, even within our recollection!—but they differ as to the merits of the particular measure. Mr. Lloyd defends the Bill—Mr. Symons attacks it, and incidentally touches on other questions affecting the condition of the labouring population. Mr. Swaine has a Bill of his own, which he recommends; and Mr. Girdlestone, with whom we agree, is of opinion that—"when we weigh the awful alternative awaiting these poor children, the utter ungodliness to which they must be left, the death, the spiritual and eternal death, to which they must be consigned, unless some comprehensive measure be adopted, with all the energy of the State, for making them wiser and better; we shall not hesitate one moment in deciding, that we had rather they were trained up in any form of Christianity whatsoever, than in none at all. Though the Christian nurture of these little ones were claimed by such as have the least right to it of any, yet rather than have them left in heathen ignorance, and worse than heathen wickedness, we should say, with the true mother, 'O my lord, give her the living child, and in nowise slay it.' There is no professing Christian community in the land, likely to have any weight in this question, that would not aim to train such children, if intrusted to its care, in principles and practices, in doctrines and duties, as much better than those habits in which they now grow up, as life is beyond comparison better than death."

Scientific Wanderings, by the Rev. R. Fraser.—This should have been called the Boy's Own Book of Natural Philosophy. A rational, cheerful little book of gossip; clever, ingenious, sincerely meant, and simply expressed.

List of New Books.—Braithwaite's Retrospect of Medicine, Part VII., January to June 1843, 12mo. 5*s.* 6*d.* cl.—Cæsar, with Vocabulary, Notes, and Map, by W. M'Dowall, 12mo. 3*s.* bd.—The Rule, Based on the Word of God, for the Calculation of Time in the Prophecies of the Old and New Testament, 8vo. 3*s.* 6*d.* swd.—Murray's Hand-Book for France, 12mo. 12*s.* cl.—Markland's (J. H.) FOREIGN CORRESPONDENCE.

Carlsbad, May 20.

IF I recollect right, I promised to send you what I had picked up of the customs, traditions, and amusements of the people in this neighbourhood. I have nothing to tell you about literature or art. We, in these parts, don't pique ourselves on being more enlightened or more refined than our neighbours, and are not prepared to set you right on any "high argument" whatsoever. Instead of a review of a new poem, I send you some fragments of the old poetry of the people, which is becoming a forgotten language. The innocent, good-natured, light-hearted girl from whose lips I have collected the greater part, looks half-amused and half-ashamed at my inquiries—fancies I am laughing at her or her countrymen, and thinks it necessary to say that this and that is "*dummes Zeug*," (nonsense) and that only the peasants here and there believe it.

Let us begin with *Sylvester-Abend* (the last night of the year). Nanni (of course she is a Nanni), how do you find out who is to be your husband?

At midnight the girls go to the river to fetch the silent water (*das still-schweigende Wasser*); each must go alone, and must, on no account, speak, nor even turn her head if spoken to, nor look behind her. She dips her jug into the river, and brings it home, always silent (*immer schweigend*), and pours it into a basin. Then she melts lead, and taking an *Erbschlüssel* (how *am* I to translate this *hereditary key?*)—an old family key—she pours the melted lead through it, saying, three times, "*Ich giesz, ich giesz, durch einen Erbschlüssel; Ich möchte gern mein Schatz seine Handthierung wissen;*" which means, young ladies, that she wishes to know the calling of her *Schatz*, a word I shall not insult your penetration by translating. We have all, I hope, melted lead in our day, for one purpose or another; and know that the forms it takes are very like a whale, or a weasel—very like, no doubt, a hammer or a last, a spade or a trowel. [Here Nanni gravely assures me that it is *blosz um einen Spasz* (only for a joke). I nod, and say, *Versteht sich* (of course). *Und nun*, Nanni.]

Why, then, the girls (I observed she never said *we*) go out at dusk, and fetch three logs of wood from the wood-stack; in the morning early they make a fire with them, and while they are burning, go out to walk: the first man each meets is of the trade or calling of her future husband.

The casting of lead or wax into water, as a means of divination, is, I believe, common to all parts of Germany. Even in enlightened Berlin, my pretty young hostess consulted this oracle; and, I have no doubt, discovered with a beating heart, all the emblems of the art of the young *Baurath*, or, as we might say, inspector of works, to whom she is since happily betrothed.

On New Year's Day there are the usual greetings. I can find no peculiar custom, except that the people eat rice that they may grow rich.

I need not trouble you with carnival. Italian travellers have tired one of the name. I must, however, mention the tragical and ignominious end of the *Fasching*. At the magnificent carnival at Cologne (which really deserves to be described), I saw him, represented by Hanswurst, rocked in a cradle and put to sleep for the year. Here the *Fasching*, represented by a man of straw, is thrown into a ditch, stabbed with pitchforks, and left for dead. If I were a German, I should either trace the historical origin of this divergence of views, or construct a theory philosophical or poetical upon it; but, as I am an Englishman, I can tell you nothing but the fact. You make a bow, and thank me for this compliment to England. Alas, no! I am a degenerate son, and not half so proud as I ought to be of our inaptitude for speculation, and our disdain of minute research. How often does it strike me, what an admirable barter of qualities might England and Germany carry on, if only pride and prejudice were not! In how many things are the two nations born to complete each other! In how many has the one in excess, precisely what the other wants! But there is a "protective system" in both, which will long prevent this—long, but not for ever. *Veniet felicius ævum.*

Enough of Germanism has penetrated into England, think, to make it unnecessary for me to speak of Easter eggs—here called red eggs (*rothe Eier*), as they are all dyed of that colour, and not, as on the Rhine, many-coloured. *Pfannkuchen* are eaten during Lent and Easter. These are not our pancakes, but are baked: they are about the form and size of a goose's egg, with preserved fruit in the middle. They are served at or after tea, in all companies. Minced pies, by the bye—those triumphant foes of prudence and digestion—are not known in Germany; unless, perhaps, among the denationalized, corrupted Hamburghers.

April fools are like all other fools—ubiquitous.

May Day used to be observed with nearly the same idyllic festivities as in England. A stationary May-pole did not exist, nor an elective queen. Each village lad did obeisance to the queen of his own heart. For this purpose he went by break of day to the wood, and cut down "a pretty slender young tree," says my informant, "fir or pine." The branches were then partly stripped, the top was left, and handsomely adorned with green and red ribbons. This the youth planted before the door of his *Schatz*, and in the afternoon the villagers danced round it, to the *Dudelsack* (bagpipe, the national instrument of Bohemia). [Here I demur to the number of May-trees in one village: Nanni wisely replies, "*Ach Gott! jedes Mädchen hat nicht ihren Geliebten*" (every lass has not a sweetheart), to which I sadly assent.]

The number was, however, sufficiently great to alarm the foresters, and to lead to the abolition of the custom. The havoc among "the pretty slender young trees" was the reason, real or ostensible, for its prohibition. Firing off guns, which was a part of the amusement, I have already told you is forbidden.

On Rogation Monday, and the two following days (the *Bitt-tage*), the ceremony of blessing the fields takes place. After early mass, the priest and people go in procession to altars erected and prettily adorned, at several charming spots around the town, where the prayers and benedictions are pronounced. It is always immensely and devoutly attended, as are all religious ceremonies here. My mind naturally travelled back to the kindred ceremony of blessing the sea at the commencement of the herring fishery, at Boulogne; the only procession which, at the time all were forbidden in France, was granted to the urgent wishes of the poor fishermen and their wives. A smart, well-behaved young sergeant, who stood next me in the crowd, assured me, with an air of the politest condescension, that it was "*une cérémonie tres peu en harmonie avec nos institutions actuelles*," to which I could only humbly assent. But I thought, it will be a good while still, before "*institutions actuelles*," or to come, will wean these poor people, who live in daily converse with the elements, who sleep under the stormy heavens, and on the tossing sea, from the sense of immediate dependence, which they express thus, as they can, poor things. They help out their untutored reason and rude imagination with symbols, and they mean something which we have other language for. And so do these poor peasants, whose lives depend on the former and the latter rain, and who, after the way of their fathers, implore Heaven not to withhold it. But you will bring *your institutions actuelles* into the field against my poor *Bauers* and their heathenish rites. I have done.

On *Walpurgis-nacht*, the peasant women dig a hole before the door of their house, or cow-stall, line it with moss, which they gather in the wood, and in this moss bury an old broom, to keep off witches. I must add another proof of the inoffensive nature of the people in this neighbourhood. They believe in witchcraft—as every peasantry does, more or less—but they never, that I can find, attempt to hurt the wretched old women who are suspected of practising it. I asked what they did to them. "*Sie gehen ihnen aus dem Weg*" (they get out of their way), was the answer; given, as it seemed, in utter unconsciousness of the inhuman practices of other countries.

On St. John's Eve, a bonfire used to be lighted in a field, or open place, in every village; all the old brooms, which were carefully hoarded the whole year, were then brought out; the young men set fire to them, and flourishing these blazing brooms, jumped, one after the other, over the bonfire, "which," says Nanni, "was very pretty." I don't doubt it; but in a country of wooden houses and pine forests, I cannot blame the government for forbidding that. People who saw the hundreds of acres of Prince Clary's forests blazing, at Herrnskretchen, on the Saxon border, last year, will not want any justification of such a measure.

I can find no trace of the St. Martin's fires, so beautiful around Bonn. On the other hand, the *Martini-Gans* (St. Martin's goose) is as indispensable here as the one we eat in honour of St. Michael the Archangel. On St. Martin's Eve, the little children go and visit their godfathers and godmothers, and have apples, and nuts, and presents of clothes, in memory of the saint's mantle.

On St. Andrew's Eve, the girls seat themselves with their backs to the door of the room, take a shoe between their teeth, and throw it over their heads with a jerk. If it falls with the toe outwards, it is a sign of a wedding; if with the heel, of staying under the father's roof.

Another way the girls have of deciding this question, is "*dass Sie horchen gehen*" (by going a listening). They listen outside a house till they hear the word "*Ja*," or "*Nein*." This is the utterance of the oracle.

But by far the most precious relic, I have found in the *Abendgebet* (evening prayer) for this evening. I can only give it in German; for what do such bits of exquisite *naïveté* turn to in a translation?—

Deus meus;
Lieber Sanct Andreas,
Lass mir erscheinen
Mein Herz allerliebster mein;
Soll es ein Reicher seyn,
Lass ihn erscheinen bei Bier und Wein;
Soll ich mit ihm leiden Noth,
Lass ihn erscheinen bei Wasser und Brod.

And then, says Nanni, "*sie geben Acht was sie träumen*" (and then they mind what they dream). My fair readers—I expect to have fair readers this time—must know, that the prayer to St. Andrew is to permit or cause the sweetheart to appear; if rich, with the goodly accompaniments of beer and wine; if poor, with the uninviting ones of water and bread. This, dear young ladies, done into your pretty English, means, the one with an opera box and diamonds; the other with two maids and a hackney coach—in short, a bad match.

Others write—for all *can* write here, in some fashion—three names on three slips of paper, and lay them under their pillow. In the night, when they wake, they draw out one slip, and lay it on the bed, and as soon as it is light, they read the fated name. The condition annexed to this—that of waking in the night—I rather shook my head at, as not likely ever to be fulfilled, judging from observation. But it seems they *do* wake. Well, great must be the excitement to disturb these tranquil nerves and untroubled brains.

Again—they make two little garlands, one of green sprigs, and one of straw; these are laid under two plates reversed, and the maiden has to choose between them, like Portia's lovers. What the wreath of straw betokens, I shall leave to the imaginations of my readers.

St. Nicholas, the terror to small evil-doers in France, exercises the same influence here. Some neighbour "dresses up" hideously on St. Nicholas's Eve, and goes about from house to house, with a rod in one hand and a bag of nuts and apples in the other; thus making justice *anschaulich* to heedless little eyes. The children are desired to go down on their knees, and say a "*Vater unser*." If they say this well, they are immediately rewarded with the contents of the bag; if ill, they have a taste of the rod. This test of moral and intellectual excellence, is a little like some we are in the habit of using, but we have none equal to it for simplicity. We complicate and disfigure everything. The following morning certain little cakes, called *Kollenschelln* (a Bohemian name), are given to the children.

Of Christmas I need not speak. Since Germany began to be a little known to the English, the Christmas-tree and its splendours—the Bethlehem, with the manger, and all the holy festivities of Christmas Eve—have been the subject of so many descriptions, that I need not add to them. They are everywhere alike in the main. In Berlin, they have lost in simplicity what they have gained in magnificence. The Christmas fair, lasting a week, and lighted every evening; the splendour of the illuminated confectioners' shops, which all Berlin throngs to see on the two or three last evenings before Christmas; the sums of money expended in gifts, astonish a Londoner, so little accustomed to observances of days and seasons. But this deserves a chapter to itself, and not a mere allusion.

Digitized by Google

It may be, that the other customs I have related, are not less diffused over Germany than the Christmas-tree; yet, I believe, not all. Whether these have received any Slavonic tinge, is a question which it would require time and research to make out. There are very few traces of the Slavonic element to be found in this part of Bohemia. The type of the population is German, and the language exclusively so. I have not met with a Carlsbader who speaks Bohemian.

Most of the customs in question are, indeed, European, and are rather connected with the history of the Catholic Church, than with that of any particular people. With some modifications, they prevailed in "Merry England."

After so much oral tradition, I must give you a pretty custom on the more questionable authority of a *Taschenbuch*. If it is not true, it deserves to be. The scene is laid in this part of the world, but the author does not give the name.

In a village in *Deutsch-Böhmen* (German Bohemia), the feast of the consecration of the church, called the *Kirda* (Kirmesse, on the Rhine) is kept with great solemnity. Two or three days before Kirda Sunday, a young man who wishes to make a declaration of love to a girl, sends her his hat. If she sends it back, his suit is rejected; if she requites his affection, he receives it on the eve of the feast, decorated with a wreath of rosemary. Sometimes this is so profuse as almost to cover the crown of the hat. The wealthier maidens display their magnificence in the quantity of silver wire, little golden hearts, artificial flowers, tinsel, little doves, &c., which they fasten on the sprigs of the rosemary. On the Sunday morning the lads go to church, triumphantly wearing these tokens of successful wooing; and, except in the sacred place, will hardly consent to lay them by all day.

In the same village, when a peasant dies, the body is laid out on the bed. By the bedside stands a burning lamp and a cup of holy water. The neighbours come in softly, one after another, step slowly up to the bed, and, kneeling down, say a *Vater unser*. They then dip a little bunch of six ears of corn, bound together, into the holy water, sprinkle the winding-sheet, and having turned it down to take one more look at the face of the departed, they stand a few minutes in melancholy contemplation, and softly retire.

Can anything be more poetical than this last greeting of the friendly hand to the weary husbandman who has laid him down to rest? The six ears of corn and the cup of holy water—how perfectly do they embrace the whole significance of his life, his beneficent labours on earth, his simple, unquestioning hopes of heaven.

Too true is it, as is remarked by a writer whose sympathy with human woe, and whose lofty genius and eloquence, seemed to fit her for a far different vocation from that which she has followed, that, generally speaking, nothing can be more false than the poetical colours in which travellers and phrase-makers have dressed up the life of the peasant, and that whatever of poetry there is in it, "*nous frappe sans se révéler à lui.*" Yet the originators of such customs as these must have had within them a spring of unconscious poetry, manifesting itself, like their religion, rather in symbols than in language. These symbols were instantly understood and felt by the less imaginative, and, like the genuine poetry of a simple age, were soon incorporated into the life of the people.

I cannot quit these good people, to whom, for want of politer themes, I have introduced you, without one word of the deep tragedy of prose. Let nothing make us lose sight of the awful truth, that, whatever be the occasional exceptions, the life of the mass of the people is, in all countries, one of toil and want; of suffering caused by others; of still greater suffering brought upon them by their own ignorance. Were this hopeless, it would be gratuitous cruelty to those who are at ease to bring so painful a thought continually before them; but it is rendered hopeless only by our ignorance, indolence, and selfishness; and though positive good will ever be far enough above our reach, everybody who takes the trouble to reflect, must see that a great mitigation of existing evils is practicable.

It is the fashion to write as if want and misery were unknown in Austria;—as if Henry IV.'s wish for his subjects was accomplished in this favoured land, only that the *poulet au pot* is translated into *Backhähnel*. This may possibly be true of the Hereditary States, though it would require very extensive and nice observation to convince me of it, but it is far enough from being true of Bohemia and Hungary. Do not imagine that I say this in the way of detracting from the merits, whatever they are, of the Austrian government. That would be just as absurd as giving it the credit of the imputed prosperity. The influence of governments on the *physical* well-being of their subjects is slow and indirect; generally only to be attained by an influence over their *moral* condition, which rulers (taking the word in its largest sense) have neither sufficient virtue to acquire, nor sufficient wisdom to use rightly if they had acquired it. In this respect Austria is no worse than her neighbours, as witness Ireland.

The peasants in this immediate neighbourhood are considered remarkably well off. They eat bread—rye bread, that is—never wheat—and potatoes; and, in tolerable times, a bit of meat on a Sunday. But in *Stock-Böhmen* (Bohemia proper) their fare is the same as that of the Irish,—bad potatoes, and not enough of them. The wages of an agricultural labourer are 10 or 12 kreutzers a day, I believe often less (30 kr. = 1 sh.). The suffering this year from the failure of the potato crop has been beyond description, especially in the Erzgebirg, the mountain range which separates Saxony from this country, where, as its name denotes, are situated the mines which formerly made Freyberg the mining capital of Europe. The frontier lies nearly at the summit of the ridge. The mines on both sides seem to have long been in a state of decay. The population, thus gradually deprived of its labour, has not decreased or been drafted off to other districts, but has betaken itself—men, women, and children—to the miserable resource of lace-making. This, ladies, is the secret of the cheap Saxon and Bohemian lace you are so happy to obtain, and a fearful secret it is. When I first heard that all these miserable men had usurped the miserable occupation of their wives and daughters, I felt more horror than I should have done at a field of battle. Husband and wife engaging in this fearful competition for a wretched morsel of dry bread! And these men, too, once miners! I had known only the noble-looking, intelligent, manly Cornish miners. To fancy them sunk into these haggard spectres and making lace, was more than heart of flesh could bear. Never, even in Ireland, did I see hunger—dire, enduring hunger—so strongly marked in the human face, as in these groups of people who came down from Joachim's-Thal to be fed and clothed by the good charitable burghers of Carlsbad. In Dresden, and indeed Saxony generally, all the resources and expedients of charity have been exhausted upon this unfortunate class. There the word *Gebirgsleute* (mountaineers) means people sunk in abject poverty. I see in the Prussian *Staatszeitung* of the 10th of August, an explanation of the remarkable decay of the mines which causes this distress. According to that journal, many of them have formerly been let by the government to individuals who, not having sufficient capital to erect the necessary machinery for exhausting the water from the deep mines, have abandoned them, and worked only those near the surface. If this be the case, there is, I suppose, no alternative but for the government to take them into its own hands again. The formation of companies and the risk of capital, after the English fashion, would hardly be possible in Saxony.

This wretched population, like all others sunk in abject and hopeless want, is conspicuous for the rapidity of its increase. You are continually told, with a sort of wonder, of the swarms of children in the mountains. The other day I was looking at a ragged, half-starved woman, attempting to quiet a babe at her breast, and on observing her more nearly, I saw she could not be above seventeen or eighteen. I pointed her out to an excellent charitable Carlsbad woman, and she said, "Oh! you will see plenty of such mothers. They have no thought for the poor children." How different is this brutal recklessness from the decent pride and virtuous forethought of the Saxon peasant girl I told you of, with her indispensable "*Ausstattung*," which must be worked for and waited for, till it reaches the amount suited to her station. That the wretched offspring of such unions are thinned by the want they are born to there is no doubt. But what a relief! what a result! This and other kindred results, which the most benevolent man in the world brooded over with a pain that goaded him to inquiry and speculation, people have actually the wickedness to describe as the very remedies he sought. Is this ignorance? That does not excuse the imputing to a writer principles the very contrary of those which it was the labour of his life to expound.

There is another most wretched portion of the population of the Austrian Empire, specimens of which come wandering hither. They are the Slowacks who inhabit the north-west of Hungary, and have the dark eyes and sallow complexion of most of the Slavonian tribes. The first time I saw one in his tattered garment of the coarsest brown woollen, which forms their sole covering, his low, large-brimmed hat, and his un-German physiognomy, I could not imagine to what nation he belonged. The complexion, and the half-oriental eye, made me think him a gipsy, and the coils of wire and the mousetraps in his hand (the usual stock in trade of these wanderers) confirmed me in this idea. But the bold and cunning look of our gipsies was not there; on the contrary, never did I meet so subdued, so imploring, so melancholy an eye. The whole face bore the unmistakeable stamp of gaunt hunger. I have seen many of them since, and they all have this expression. The boys are generally very handsome, slender as Arabs, and quite without the coarse features of the lower classes of Germans. Beggary is not only prohibited here, but *really* prevented, so that they ask nothing; but the appeal made by their pale face and pathetic eye is not to be resisted. Still more painful is the look of gratitude with which they receive the smallest gift. That look, meet it where one will, smites on the heart as the bitterest reproach.

In short, the Prater is not the Austrian Empire—though I by no means intend to deny the comparative *bien-être* of a great part of it.

The Slavonic nations, Bohemia at their head, will ere long compel the West, spite of her long contemptuous indifference, to turn her eyes to a portion of Europe, less known to the rest than Persia or India. The great movement going on in Bohemia is like the course of a deep and tranquil river. It has nothing to alarm the most timid, and everything to encourage those who can care about the destinies of regions they do not inhabit, and times they will not live to see. It is hardly too much to say that purer patriotism, less adulterated by any self-regarding interests, was never displayed than is now at work in these long-neglected countries. The labourers are not numerous, but they are equal to their high calling.

Lordly, stormy, indomitable Hungary, is at work, too, in its own way, and not a very gentle one. Five hundred thousand nobles, all with equal rights and equal swords, are troublesome subjects and ruthless masters. The vast majority are only distinguishable from the Slavonian peasants by their privileges; and their name, Bocskoros (*tied-shoes*), from the rude pieces of leather, bound on with thongs, which they wear for shoes, sufficiently shows their condition. They have all the rights of voting in their counties (*comitati*). If for noble we read freeman, we may find many curious and amusing analogies with England—especially with the turbulences of our elections; and if for Magyars and Slowacks, we read English settlers and native Irish, we have a little further insight into the relations of things. The Emperor is just gone to open the Diet in person. If I understood Magyar, I should like well enough to go and hear the young Hotspurs of the Diet thunder. But there are, amidst all the noise, far better things to be heard, and they, though not the loudest, will be heard the longest.

THE EXHIBITION OF ANCIENT MASTERS, PALL MALL.

[Second Notice.]

THE North, or principal Room, is occupied with the works of *Sir Joshua Reynolds*, which thus gives a tone virtually modern to this year's "Exhibition of Ancient Masters." We cannot censure or regret it; nothing less, however, than Reynolds's genius could reconcile us to such a perversion of the essential principle that the British Institution first adopted—because fine ancient pictures will seldom be contributed, if their legitimate throne-room be usurped. In a word, we never saw this Saloon look more grand, nor can imagine it to do so, unless it were panelled by

chefs-d'œuvre of Titian himself. The splendour is perfectly awful! On his entrance from the blank hall and cavernous mouth of the staircase, a spectator feels he has shut out the grovelling world, and as if he had ascended to some region nearer the sun, when he finds himself at once in the warm atmosphere which breathes all around him from the glowing pictures. It raises the very temperature of his blood, his animal, and thence his intellectual spirits, makes his eye kindle and his thoughts burn—we appeal to every spectator, who has not an impetrified heart and brain, whether our tropes be hyperboles. Such, however, is the mellow, deep-toned lustre of this grandly-minded Painter's colouring, that it seems to soften daylight, and produces an effect like that of a gorgeous summer-eve, when the broad shadows throw a solemn reflex over the spaces and spots most illuminated. We can liken his massive chiaroscuro to nought whatever but a horizontal sun-burst, seen at that time through opening clouds, or through the stems and expansive umbrage of huge forest-trees. Verily, Sir Joshua was a great artist, far greater than his countrymen yet believe. A portraitist, forsooth? a mere face-taker? Why his portraits are more historical than the historical-pieces of many another painter! We do not rank him with Raffael or Titian, yet make no scruple to assert that his portraits, *in this respect*, excel theirs; in this respect, he enlarged the domain of portraiture, or kept it enlarged, most after Vandyke, and improved it enough to deserve the title, which some critics begrudge him, of an Imaginator. It is a futile objection that he borrowed his line from Michaelangelo—did Michael himself never borrow from Signorelli and Masaccio? Was not every great artist thus far a plagiarist? It is a still more suicidal argument against him that he took ideas from prints and obscure sketches: for the pettier the source the powerfuller his invention to make it yield abundantly: what was this but a human version of the divine productiveness which could create a world of splendour and beauty out of nothing? But we say again, the genius of Sir Joshua Reynolds is not comprehended *yet*. Wherefore? We will clear up the mystery. He discovered no new light in Baffin's Bay, where sealskins and tippet-furs were comentable —*that* our discerning countrymen could have appreciated: no new oyster-bed, or bank where codfish, herrings, or pilchards abounded—no newer Newfoundland from whence Hull Whalers might return overflowing with blubber-oil, and bristled with cetaceous bones, for the use of umbrella manufacturers and staymakers: he discovered no hand-loom, nor spinning-jenny, not so much as a patent corkscrew, or save-all, or kitchen utensil. Things like these Englishmen could understand—could award them full meed of praise, heaped, above measure: for these come home to Englishmen's business, and bosoms, and backs, and bellies. Nay, this most judgmatical people can estimate so much of Sir Joshua's genius as serves to adorn their house walls with *furniture-pictures*—handsome succedanea for French paper—or to eternalize their family vanity by family portraits:—perhaps even so much as enables them to illumine their minds with the reflection of his golden colours and the glittering coinages of his brain. Their taste in Fine Art has its turn from their bias towards the precious metals, and when they patronize they must see their money on the canvas—its hue and beloved gleam at all events; they buy splendid pictures that they may still gloat upon gold under another shape—the riches of the palette. 'Count La Lippe' is probably the grandest portrait here—but who would waste eyesight surveying it? And if any one did, what grandeur would he detect about a pallid, plain man, without either gold lace to his coat, or gold edge to his hat—a mere bronze cannon beside him, not even burnished in dear delusive semblance of the absent ore,—and behind him a leaden sky, through whose dense clouds, alas! there does not peep as much sun as would gild an infinitesimal pill, not one star the size of a sixpence! Sir Thomas Lawrence would have double-gilt the walking-stick at least—peradventure, given a neat silvery touch to the nose-tip and knuckles and tuckers, &c. for "effect;" his brilliant genius would have played gloriously over those black-leather boots, flashed its lightnings along every wrinkle, and flung the varied charms of his chiaroscuro on their undulous surface, like moonshine on a ripple. Alas, here is nothing of the kind! all is sober dignity and calm impressiveness. It shows, indeed, how very little Reynolds was dependent on what many persons deem his mainstay—dazzling colour—and how potent he could be without that spell of the Modern English School. Even this portrait, however, manifests him a supreme colourist, as that term, in its proper acceptation, means one who can harmonize the tone of his work with the character of his subject—not sacrifice the intellectual charm to the sensual. A picture which images itself on the spectator's retina alone, without penetrating further towards the brain, goes but half way to the seat of his soul, and never gets into the mind's "presence-room," but merely into its antechamber. Yet how many spectators will recognize this portrait's pretensions on the score of characteristic colour? how many appreciate its fine, grave tone so much in keeping with the stern and stately figure, his thoughtful mien, and his austere vocation? That gray and vaporous background symbolizes the smoky atmosphere of War—that colourless flag-sheet, the pale and terrible aspect of the battle-field. Yet few will account this work a masterpiece of our great Colourist, though modulated throughout its immense details like the smallest, softest *Terburg* and its voluminous masses combined with a breadth of effect like the gradual melting of clouds into each other. No! the public cannot discern any power of coloration in a picture, unless it glare as if gallipots of ruddle and gamboge, and all the florid pigments had been spilt over it! But let us repress our rage and examine the 'Marquis of Granby' opposite. This, indeed, is neither splendidly rich nor sublimely severe: it is coarse and gross, but perhaps therefore characteristic of the original: he appears just the Hero to decorate every second alehouse sign, and Reynolds's portrait, perhaps, was the prototype of those which swung from the various sign posts in the days of our Immortal Trainbands. A duplicate, we believe, exists at Paris. Next the Marquis are two magnificent portraits: one of 'Lord Rodney,' the other of 'Admiral Keppel,' both brilliant, but their brilliance has a majestic grandeur (as Reynolds's always has), like that of the sun when—

Clouds upon his western throne attend.

By his 'Keppel' Sir Joshua first broke a broad high way through the Chinese Wall, which had long surrounded and confined the Empire of Art—he became sovereign there at once. Critics will detect a certain trust-to-fortune about its composition and workmanship—the rocks and skies huddled together accommodate themselves as well as they can—there is mental rack manifest in the tormented manipulation, that bespeaks want of complete foreknowledge how all was to come right: but grandiose general effect was secure—he had not to grope out that—it was no god-send, or rather it was, for it came from Heaven. Observe that prodigious anchor-fluke, and the way it magnifies upon your mind the impression of a *Naval* theme. 'Rodney' is a full stride to perfection—character, colour, composition, and workmanship are all here: of course we mean Sir Joshua's perfection; he never drew well, perhaps never even conquered an unsureness of touch that often breaks into blind audacities, through sheer self-distrust. The present work, however, exhibits much less chance-medley than the preceding—more intention and veritable invention: but the chief advance is made in Sir Joshua's real forte—character; Keppel, a respectable elderly gentleman in a white wig, has nothing specific of the gallant Admiral about his expression; save for his naval uniform he might be any other respectable elderly gentleman who chose to totter along the seashore, and cool his head as he pondered the tonnage of an anchor. Now a portrait which relies on its symbols, or costume, to explain its character, wants character—and this a good painter can always give, however insipid the features (as Keppel's are *not*), if there exist any mind within, by learning what it may be, and then bringing it out *ad libitum*. Thus, it is neither Rodney's "ship-shape" apparel, nor double-anchor, nor sea-fight depicted in the distance, that betokens the Ocean Hero, but his peculiar cast of countenance and attitude; those are just the brows to meditate Breaking the Line—he takes the precise posture of a man determined to remain master of a battle-field. Rodney may never have meditated upon breaking a cobweb, he may have staggered every step between cradle and grave, but his portraitist had a right to characterize the boldness and firmness of his deeds by his demeanour. On other principles a portrait is often faithful, never fine: it was thus that Reynolds proved himself an idealist, not a bare *scimia di Natura*. We shall, with all reverence for him, point out a ludicrous oversight in the composition of these four pictures, because the fault is common among portrait-painters:—every one of the heroes *turns his back* on the scene of his heroism! Rodney, if the fleet engaged behind were paper-boats, would not have "rumped" them after this contemptuous fashion; were the distant shock of armies a sham fight, Granby would not have presented his own rear to it; La Lippe stands breech to breech with a gun, as though he said, let the battle proceed how it will so that my front-face prosper; Keppel walks away from the sea, like a land lubber, whom the sight of it made qualmish. Had the backgrounds been merely emblematical, they might pass, but they are here realities, united with the figures they illustrate. Modern artists, we submit, ought to compose a little more in the spirit of Greek propriety. All the above-said pictures are contributed by our Royal Mistress, to whom we are grateful for the pleasure they afford us, and for the good example besides, which she sets to less liberal proprietors of collections. Sir Joshua's own Portrait, No. 1, is his famed presentation-piece on being made an Academician, and far transcends every other we have seen, even that of the Florence Cabinet. It breathes splendour all around, but still it is not as the faint face seen in the sun drowned amidst brightness; its character, the light of mind and of genius, shines through, predominates! 'George III.' and 'Queen Charlotte' fill space—we can say nothing else in their praise. But from the Royal Academy comes another resplendent portrait, 'Sir William Chambers,' No. 15; one might almost warm one's hands at it, the frigidest heart must glow —yet we may remark that Reynolds's strongest reds are never *hot*—the glow here mentioned, albeit fervid, is bland, refreshes more than the verdure of many a greensick performance; like the lustre of Cordelia's eyes, it "comforts and not burns." Chambers's architectural masterpiece—Somerset House—makes an emblematic background admirably incorporated with the subject. Two triple-headed portraits, 'Lord Lansdowne, Lord Ashburton, and Colonel Barré,' No. 13, sent by Sir Thomas Baring, and 'Lord Edgecombe, George James Williams, and George Selwyn,' No. 40, sent by the Rt. Hon. H. Labouchere, we noticed at Strawberry Hill sale—(*Athen.* No. 755). A portrait from Devonshire House, 'Lord Richard Cavendish,' for delicate painting, falls little short of a Vandyke, and, for beautiful colour, of Titian, while its characterism has a force distinctive of Reynolds himself—compared with whom even Rembrandt loses individuality amidst the depth of his touches and devotion to picturesque general effect: there is a consent between that clenched hand laid upon the rock, and that arm shouldering off the world, and those eager eyes, and proud-swollen ill-humoured lips, which shows how the one spirit pervades and informs the whole tenement of clay, with an individualism quite marvellous. 'Lady Cockburn and her Children,' No. 16, sent by Sir James Cockburn, is the picture, that, when first exhibited at the Royal Academy, drew forth a spontaneous, unanimous shout of applause from the Members. Its powerful impasto, and pure "carnations," and forms looking as round and solid as bas-relief, yet elastic as flesh itself, we admire most—for Reynolds, like Pope, gives ladies, except his favourites, "no character at all," and children can evince but little. 'His Royal Highness the Duke of Gloucester,' No. 42, rather a slight and sketchy work, bestows upon the boy-prince an air as sovereign as if he were born to a kingdom—he stands like Charles the First, instead of William-Henry the Cipher, and holds his Spanish *sombrero* with august graciousness like that monarch. It belongs to the Princess Sophia. Earl Amherst contributes three good portraits and two other capital pictures. *Wang Tong*, a Chinese youth, No. 14, brings to mind Tintoretto's love of bizarre effect, and his triumphant, tyrannic amalgamation of violently-opposed colours—the list-like strokes of his pencil, also. 'Madame Schindelin,' No. 36, is coloured as freshly and brightly as a maiden-blush rose, than which, however, she smiles with much less virgin bashfulness. Her look would bespeak her, in truth,
